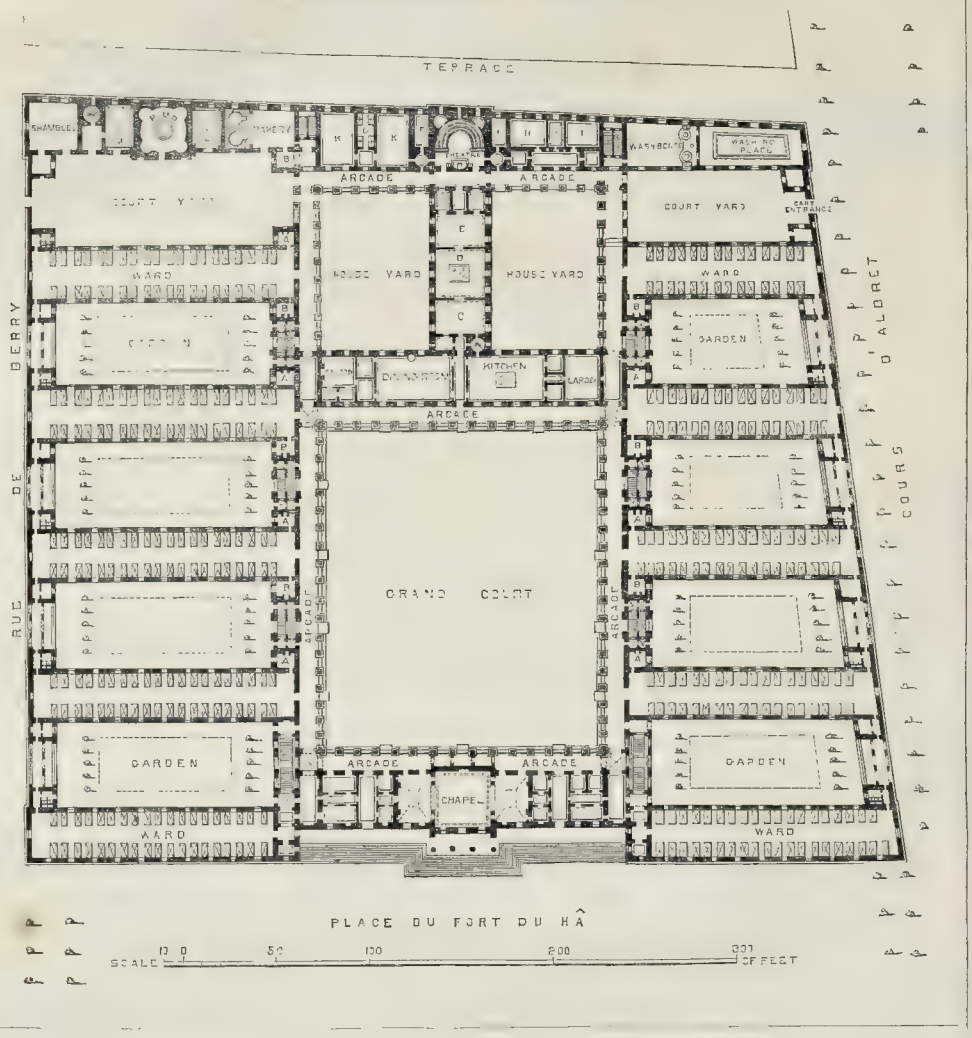
We may mention, as an advantage connected with this kind of arrangement, that there is no limit to the size of the hospital or the number of beds: only enlarge sufficiently the court, and multiply the separate tiers of building, and you may lodge thousands of patients without the risk of engendering an hospital atmosphere.

The principles carried out in the arrangement at Bordeaux were laid down seventy years ago, after long investigation, by a number of skilful medical men in France so as best to unite health and convenience in such an edifice. "One of the conditions," says Mr. Gwilt, "prescribed by their programme, was the complete insulation of each apartment, as well as an easy communication by covered galleries round the building, and these were required to be of such extended dimensions, that the air around should be unobstructed and circulating in every part with freedom, thus affording a wholesome promenade for the patients."* Durand, in his *Parallèle d'Edifices*, gives the plans of many of the finest hospitals in Europe, and amongst them the plan of the Hospital de la Roquette, the designs for which were made by Poyet, about 1788, on the instructions referred to. "In this design each room, as well those on one side of the establishment for the males, as those on the other side for the females, is appropriated to one particular disease. Each of these rooms is about 32 feet wide, and 30 feet 6 inches high. Behind the beds (which are in two rows in each room), runs a passage, about 3 feet 4 inches wide, which removes them so much from the walls, and allows therefore of the necessary waiting on the invalids, and hides the wardrobe attached to each bed in the window recesses. Above these passages, which are about 6 feet 6 inches high, is arranged on each side a row of windows, by which ventilation as well as light is obtained."

It would be better if the open gardens between the wards at Bordeaux were wider, so as to ensure a visit from the rays of the sun.

In the new hospital at Malines, built from the designs of M. Chas. Drossaert, the same principle of arrangement is followed, but the open lawns between the projecting wards are wider: they are made in all cases twice as wide as the height of the buildings, which enclose them on three sides; and further, a small apartment or anteroom is interposed in every case between the wards and the "latrines,"—a much more important matter than some in England seem to think. The first stone of this hospital was laid by the King of the Belgians on the 3rd of July, 1854, and it was roofed in at the end of last year. Complete illustrations of it will be found in the *Journal Belge de l'Architecture*, seventh year.

The Hospital *du Clos St. Lazare*, in Paris, built under the direction of M. Gauthier, architect, exhibits the same arrangement as that of Bordeaux,—indeed, the latter seems to have influenced all that have been built since in France. M. Gauthier's hospital contains 600 beds, and, including the land, cost rather more than 560*l.* per bed!



Returning to Mr. Robertson's clear and intelligent paper, we may educe the following recommendations:—

1. That the site of an hospital be an elevation to the windward of a city; that it be of ample space, on a soil naturally dry or of easy drainage; and, that no inconvenience may arise from distance, there should be "accident rooms" in the larger thoroughfares, as there are in Paris, where sufferers can be carried at once and obtain assistance.

2. That every sick ward of an hospital occupy

* Cyclopædia of Architecture.

THE BORDEAUX HOSPITAL: GROUND PLAN.

the breadth of the floor, and have *windows facing each other on the opposite side-walls*, through which, when they are thrown open, the air may circulate and purify the apartment. When a ward has windows on one side and a dead wall on the other, it cannot be healthful.

3. Modes of ventilation called "scientific," which may answer for mere dormitories, fail in an hospital; where effluvia from the bodies of the sick, and fætor from ulcers, wounds, burns, and vitiated excretions pollute the atmosphere, so as no ventilation can dissipate other than nature's, namely, the ceaseless flow of the external air through the ward.

4. As, however, in stormy weather, an unrestrained circulation of the atmosphere, by open windows, even though moderated by curtains and blinds, is not always desirable, the air-currents, by means of finely perforated zinc-plates, can be made to percolate into the wards, as in the Middlesex Hospital, in so subtle a manner as to be entirely robbed of sensible draughts, and thus the blessing of pure air be obtained, as it were, by stealth.

5. The cubic air space for each patient in a ward ought not to be less than 2,000 feet, or nearly double the average space found in most provincial hospitals.

6. The windows in a ward, not only for ventilation, but for another most important object—the admission of light—ought to be tall. In nearly all country hospitals the windows are short, not reaching to within a number of feet of the ceiling, on which account the upper stratum of foul air, supposing the windows thrown open, does not escape.

7. The heating of wards by other means than open fire-places or stoves is injurious, because heat both promotes the rapid decomposition of foul excretions, and also increases the discomfort of the feverish sick, by surrounding them with an unnaturally dry, hot atmosphere. And

8. The bedsteads to be of iron, having light curtains without tester, and so arranged along the walls as in no case to stand opposite a window. In many hospitals, if you open the windows the air rushes upon the patient, and that, too, when they are unprotected by curtains. The convalescents to have a separate eating-room. Every fouled article to be passed from the ward by a discharging shaft in the wall; and nurses and other attendants, as well as the patients, to observe the strictest habits of cleanliness.

Last month we gave the ground-plan and a view of the Victoria Military Hospital, now in course of erection near Southampton. Considerable pains were taken, there is reason to believe, in the preparation of the designs for this building, and in many respects we have no doubt it will be found satisfactory. The committee to whom the arrangements of the building were referred, show, in their report, how widely they inquired for information. Nevertheless, as it seems to us, some very serious mistakes have been made: we would especially refer to the placing of the baths and the "latrines" together, and the position of the latter between sick-wards! It may not be too late to remedy this. Should the proposed arrangement be carried out, whenever this hospital shall be full of patients, more disease will be

generated there than cured. This is a strong assertion, but we speak with the results of actual experience before us, and we trust Mr. Mennie will take it into consideration, and make an alteration in his plan. On another point, although not one affecting life and death, we feel very strongly, and that is as to the employment of "cement dressings." Surely, in a national building, intended to last for ages—at least it should be so—this miserable sort of patchwork ought not to be used. Away with it altogether, and let us have good honest brickwork in its stead.

ENGLISH AND FRENCH CITIES AND TOWNS.

CESSPOOLS *versus* SEWERS.

COMPARISONS have recently been made betwixt London and Paris,—English towns and French towns; the conclusions drawn being generally in favour of France; the English climate, coal fires and smoke, having numerous evils laid to their account. That Paris is a cleaner-looking city than London, we will not deny: that a French atmosphere is brighter and clearer than a British atmosphere, we will not dispute; but we are not prepared to acknowledge any large balance, either of natural or of artificial advantages against Old England. Home comfort is to be preferred before external grandeur; and health, with foul weather, is better than disease with bright days.

The great test (as far as man is concerned) of any climate, country, or city, is the Registrar-General's return. Not that such a return proves one climate to be better than another, but merely that it proves the existence of facts of more importance to the human race than a comparative amount of sunshine.

Paris contains many grand buildings, well placed; fine streets, open boulevards, noble monuments, a clear atmosphere, a clean surface, and an uncontaminated river. London also contains many grand buildings, but they are ill placed. There are some fine streets, but no boulevards: there are, however, unrivalled parks. The atmosphere of London is not very clear, neither is the Thames very clean. But would Englishmen, as the price for these "blessings," give up coal-fires, the tides of the Thames, and the commerce? Men must be contented with possibilities. The river Thames will never be freed from tidal mud, however well the Metropolitan Board may "intercept" and "sewer:" the atmosphere will never have a continental brilliancy, even should coal-fires be abolished, or all the smoke be consumed.

Notwithstanding all that has been written on sanitary science, very little of that subject is really understood and acted upon. Paris and the Seine are named as superior to anything English. The city, its public buildings, its streets, its fountains, its sewers, its river and quay walls are set before us as examples to be imitated. It is true, fine buildings are only grand objects when well placed; and if we could induce thought as to site, we should not again expend millions in raising a pile of carved stones where the whole basement, and even the ground-floor, are below the surface level of river tides. Improvement in British architecture is possible, and even with our free institutions, is practicable; but we must confess to the necessity for a little wholesome despotism now and then to direct, if not to overrule, local freedom. Can the metropolis of Great Britain be well governed by numerous local Boards? We shall see! Up to this time several of the district Boards have paid in salaries about 100 per cent. for the actual work done: that is, the rates are about equally divided betwixt salaries and works. We may be told the Boards are in their infancy, and that there has not been time to devise and commence works. There may be truth in this. How long would it have taken the Emperor of the French and his council to have settled preliminaries?

As it is not our intention to open up the question of Despotism *versus* Freedom, holding to freedom, even with its defects, we propose contrasting English and French practice in sanitary works. Paris, to the eye, is a very clean city: London, judged by sight alone, is very dirty. We must, however, again refer to the returns of the Registrar-General for practical results; and then we find that, although the metropolis of Great Britain numbers more than double the population of Paris,—though we have a damp, dull-looking, smoke-laden atmosphere, and a foul river,—we nevertheless have a lower rate of mortality. There must be reasons for such a result, if we can find them. Let us examine one set of works, and analyze the regulations under which they are used, striving to see if anything useful can be learned. The River Seine is not contaminated by sewage as the River Thames is, although there would be no tidal return and oscillation. The buildings of Paris do not drain into sewers, but the whole of the house-soil and slop refuse is passed into *pseudo*-hermetically-closed cesspools. These cesspools are constructed under regulations, and the superintendence of the municipal body or their officers. They are also emptied by the same authorities, and a very large return is obtained by sale of the manure after it has been deodorized. The system is considered perfect by its supporters: it has been lauded by public writers; and those who only judge from surface appearances conscientiously think the Paris plan of cesspool sewerage should be imitated. But these gentlemen have probably never lived long in Paris; or if they have resided there, it has not occurred to them that the sharp and subtle stench now and then met with can have anything to do with the cesspools; neither are they conscious that such a stream of gas may be more deadly than a wound by a naked sword. The French pay a terrible penalty for their cesspool system. Their clear atmosphere and clean river do not save them from the subtle, unseen, but most deadly gases of decomposition. This cesspool taint must have something electric in it, as it pervades all available space. On a bright warm day the doors and windows of a house may stand open from morn to night without bringing relief: it is not to be blown out. The boasted hermetical sealing is only a delusion and a snare. Fermentation takes place, and the gases of decomposition force a passage through every chink and cranny, as also back along the pipes and ducts which convey the refuse. There is no such thing as a "stench-trap" in existence, nor ever will be. As previously stated, the Paris cesspools are emptied by servants of the municipal body, and no doubt many persons consider that to empty a cesspool is, for a time, to remove the cause of contamination. This, however, is not so. The sides of a cesspool are foul from infiltration, the bottom is never entirely cleared from sediment, and there is soon a covering of liquid, so that there is a larger area of decomposition, and more cubical space for the deadly gases generated. A cesspool must be a foul abomination, if near a human dwelling, under any management.

London is not without cesspools: there are thousands beneath dwelling-houses, and connected with them; but, fortunately, they never became municipal property. The small area covered by the City, and the defective powers of parish boards beyond City limits, have probably saved the English people from constructions so fatal to health and life. Better all the soil refuse of a city in the gutters, on the surface, or in the river, where the sun may dry it, the air ventilate it, the rain wash it, and the river dilute and remove it, than stored in cesspools, to undergo continuous fermentation and decomposition; but better still the instant removal of all soil and slop refuse (before decomposition commences), by means of drains and sewers, to some common outlet, where it can be applied at once to land for agricultural purposes. To obtain such results will be worth almost any pecuniary cost, supposing the whole outlay to be a loss; but, like all true improvements, such plan is the most economical.

Sewers were constructed in the remotest antiquity: they are found in ancient Rome, on the sites of cities of Etruria, and Layard has bared them amidst Assyrian ruins. Some of the City and metropolitan sewers are centuries old, but the greatest number and length have been devised and completed within the memory of men now living. The oldest sewers of London were not constructed to remove soil refuse, but to lead below the surface the contents of street gutters. What these consisted of is forcibly told by Swift in "The City Shower."

The first sanitary commission, however, proved the evils of cesspools, and advantages of sewers. The first General Board of Health aided in spreading information and in forming local boards, so that there have probably been more sewers formed during the last seven years than at any previous period in the world's history—taking the metropolis and the provinces. There has been opposition—violent and most unscrupulous class prejudices have been offended—monopoly has been assailed, and, as usual, there has been reaction. The oldest and most earnest workers in sanitary science, are repudiated—turned adrift, and the heads of the opposing faction are triumphant. It is one thing to gain a victory: it is another thing to profit by it. Time will bring results, and men free from partialities and prejudices will give judgment. As to the social value of cesspools and sewers, the mortality returns must be the test. There are other regulations and conditions necessary to health: no city having a cesspool system can be healthy, however grand or clean. Sewers and drains can alone remove the greatest cause of disease, however perfect. There must be ventilation and cubic air space within habitable rooms. Architecturally Paris may be grander than London—the Seine is no doubt cleaner than the Thames; but in sewerage and drainage, although there is much still to do in the British metropolis, yet Englishmen must not learn what to do in Paris, but what to avoid doing. Cesspools must be abolished: sewers and drains of transmission are alone admissible.

ENDEAVOURS AT EDMONTON.

ANOTHER great offshoot of London will, before long, have been established in the green fields of Hornsey and Tottenham. Towards Edmonton, along the "Seven Sisters Road," from Holloway to Tottenham, many villas have been already completed, and on almost every plot of land is a notice that it may be had on a building lease; so that not many years will pass ere the great coach road through Edmonton will have reacquired its former consequence. The neighbourhood at present, however, presents a curious appearance of change. Many of the dwellings in the old-fashioned houses in the pleasant little parks have moved farther from the range of bricks and mortar. From Edmonton, where a local Board of Health has been established, we have received a few particulars respecting the dwellings of the poorer part of the inhabitants. There, as is the case with other similar neighbourhoods, rows of small cottages closely abut upon the open streams, which, as a matter of course, soon become putrid ditches. We are told, however, that at Edmonton the whole of the cesspools have been got rid of, and that the Mosell ditch, or river, as some call it, now flows clearly and cheerfully along below the numerous wooden bridges which lead to the cottages. This stream was formerly the means of carrying off all the refuse of the closets. It is now clear of pollution, and the place is drained by a sufficient fall to where the matters are solidified, and, in the shape of English guano, spread upon the surrounding fields. "Some thousands of tons of this valuable material will be available," say our informants, "and we think that the important consideration of drainage has been now taken up in an enlightened manner."

It is creditable to those concerned to look so far ahead. The bulk of the inhabitants, however, complain of the expense; and it is, unfortunately the case that some of them cannot be made to appreciate the advantages of good, or the danger of bad, conditions of drainage.

There is sufficient reason for complaint of the water supply of this neighbourhood at present. To a considerable extent the people had depended for this necessary upon the wells which were sunk in almost every garden. The greater portion of them were shallow, and would, in a great measure, be impure, in consequence of the filtration from the surface. All the surface wells, like the cesspools, have been closed; and it unfortunately happens that a deep well, lately sunk, on which the authorities had depended for a supply, is partly a failure. This, it is hoped, will soon be remedied; but in the meantime the people are sadly off. Some of the wells of water from the chalk are allowed to be used; and one of them was the only water supply available for use for a long row of cottages. Too great exertions cannot be made to remedy this evil, for a short water supply is liable to make people look with impatience at the means in progress, however wise.

SOCIAL HISTORY OF PAST TIMES.*

THE past is the great teacher of the present, whether by warning or by example, and even where no useful inference can well be drawn from the experience of our ancestors, it is always interesting to become acquainted with their general habits and practices, their laws and customs. The provincial literary talent of the country could not well be exercised to better purpose, or in a way more interesting and instructive to the public of the present day, than in researches amongst the documentary and other records of every county in the kingdom, and in the consequent preparation, from such materials, of popular treatises on their social and general history. A good deal, indeed, already has been done towards this desirable end in some of our counties, but an immense field remains untouched. As a basis for the general history of the country, such materials—so arranged—would be invaluable; but the history that is to be extensively based on such foundations yet remains to be written, and, indeed, its materials yet to be collected.

Two valuable contributions towards this important end have just been published, and we propose to take a hasty dip here and there into these, leaving it to the accidental upshot to determine whether what we may have fished out shall be useful, either for warning or for example, or for neither; but in the latter case, at all events, we cannot fail to find some little matter of curiosity and interest to our readers worthy of perusal. "Mankind," as Mr. Roberts, in his "Social History of the Southern Counties of England," truly remarks, "will ever, while civilization is retained, delight in learning what their ancestors did (especially) in periods remarkable for striking incidents. They may not always desire to know of precedents for imitation, but may seek for facts that will furnish a good subject for comment, perhaps for censure, often for glorification of the present day; while the admirers of everything bygone will continue to the end of the chapter to see in the past superiority over the passing age."

In the south-west of England, where the red marl abounded, mud houses, or mud mixed with chopped straw, called cob, were of old constructed upon a stone foundation. In other parts, a stone foundation, carried up of the same material, was succeeded by a wooden framework, with mud between, and the whole whitewashed.

"In towns," says Mr. Roberts, "few houses were built of stone. The expense was so much greater than was incurred for those of wood or timber framework [illegible] found in Bristol and most of our country towns. The stories projected, so that the upper rooms were the longest; and in narrow streets persons could almost shake hands out of the topmost windows. The plasterers filled up the space between the framework. The souterrain or cellar had no groined roof, as in the more costly buildings of cities: it was entered from the street by steep steps, which encroached upon the roadway. Low doors and a trap secured the entrance. The shop was on the ground-floor, with stalls or bulkheads (a word often contracted into *bulks*) open to the street, in which were no glass windows—another reason why our ancestors hailed the return of summer. The framework of the Vicarage of Lyme, destroyed in the siege of 1664, was rebuilt at a cost of 12*l*.

When houses were constructed of wooden framework, we can understand why aldermen were provided with a proper hook and cord. In case of fire these were used to pull down the wooden framework buildings in flames. * * * *

In ordinary residences there was no ceiling. The under side of the planking of the floors was whitewashed, and this was the ceiling, so to speak, of the lower room. A ceiling to rooms raised the character of the house.

The plaster was spread upon reeds as well as upon laths, and was mainly composed, in the towns near the greensand formation, of *Fox mould* sand or earth. Near Lyme people dug pits close to the king's highway, which were very dangerous, and the material thrown about made the way almost impassable."

Chimneys were rare in the country towns in the reign of Queen Elizabeth. Leland had expressed some wonder at a chimney in Bolton Castle. Fireplaces and chimneys were built very often of plaster only.

The burning of limestone in a kiln was not practised. Neither coal nor culm was used for the purpose. A skilful lime-burner used wood and frith upon the hills to calcine a mass of stone, very ingeniously disposed so that all should feel an equal degree of heat. Lime-burning was a trade—an art. Very little lime was used.

The Somersetshire churches have been famed. They were constructed of an inferior oolite from Hamden-hill, commonly called Ham-hill, near Crewkerne. Beer-stone for interiors, a free-stone where the chalk and greensand pass insensibly the one into the other, was much used.

"Portland, Purbeck, and Petworth quarries were early known; but the expense of conveying the material to a distance, except for churches and great houses, kept the use of it within very narrow limits. Caen stone was imported, as its excellence justified. The use of stucco as a protection to buildings constructed of perishable stone is very recent.

Healing or healm stones, indurated flags used by helliers for covering roofs, were from well-known localities, such as Horsham, where the quarries are said to be worked out. Slates may occasionally be meant; they were, however, generally called slatt-stones."

The fashion of building towers about the middle and close of the fifteenth century extended into the country.

"A merchant named Borough built a goodly one in the butter-market of Lyme. The merchants in the towns had their merchandize stored in their own residences, the country not being so secure as to warrant storehouses being away from the owner's own eye. The tower was at the entrance, and had to do with the security of the building, as we may suppose. A portcullis let down at night shut out the public from the inner court.

There was a great fondness for these towers, which honest Stow viewed and felt offended at. He judged some afflictions into which the possessors had fallen to have been judgments sent for their desire to overlook their neighbours. Thus in almost every instance we find a novel introduction, however useful and harmless, to have been designated by one class or the other as positively sinful."

At a time when there were only two or three chimneys in a town, and when these certainly useful adjuncts of a house were at length becoming general, Courts of Hustings books ever treated abundantly about "mantels,"—"dangerous mantels," &c. A mantel, sometimes entered as *caminus sive mantella, mantella caminata*, so often presented by court-leet and other juries, was a projecting fireplace (hence mantel-piece), which had sometimes a great deal of wood in it, while the rest was mud or plaster. When this became ruinous from neglect, there was great danger of fire; and the houses themselves, except the basement, were of wood and plaster. Neighbours trembled, and acted upon their fears in a way here deemed worthy of being set forth:—

'3 Elizabeth, 1561, at Lyme. 'It was commanded to John Somer to amend his mantalle, payne of v shillings.'"

Around the spacious cupola, over the French and Italian fireplaces, is a ledge to which are affixed pegs, on which the postillions straightway proceeded to hang their wet cloaks to dry. We call the stone or wooden shelf over our fireplaces *mantel-pieces*, or *mantel-shelves*; but we no longer hang our mantles upon them to dry. In some of the old places of Rome, the *mantel-pieces* are applied to the similar original purpose.

The hole to allow the escape of the smoke at the back of the projecting fireplace was often so placed that there was great danger. Another source of no less danger, both to house and town, is thus instanced by Mr. Roberts:—

"Widow Gaye, in the heart of Wimborne, carried on a very thriving trade as a tipler, and brewed her own beer and ale. The situation probably required a draft, and a somewhat elevated exit for the smoke; so Widow Gaye had erected a FLUE, or CHIMNEY of TIMBER, as others in so many instances had mantels of wood. This, or some part of the said house, by the nature of its construction and materials, had taken fire, and very likely to have adventured the whole town. Widow Gaye was to be prevented from henceforth selling beer or ale, or from tipling or brewing in the said house; and the constables of the town of Wimborne were to bring her before some justice of the peace, to give bond not to tiple any more, nor to brew for her own use in the said flue, [illegible] by the constables to be sufficient for her own use."

The wages of artificers and servants were fixed by the magistrates, under the famous statute of labourers, A.D. 1352. In the south of England wages were fixed annually at the Dorset easter sessions; and it was not only the operative journeyman and skilled workman who had their wages so fixed, but the master mechanic, and the tradesman as well. The rates did not much vary from year to year. Mr. Roberts gives us those for the year 1633. The following are a few extracts:—

"XI. A master mason, a master carpenter, a master joiner, a master plumber, a master thatcher, every one of them to take, with meat and drink, 6d. and without meat and drink, 12d. and not above. [Mason, 4d.; master carpenter, 5½d.; master tiler, 3d. to 4½d.]

XII. A master ship-carpenter, from Candlemas to Michaelmas, shall not take above 12d. the day, with meat and drink, and 20d. the day without meat and drink."

* * * *

"XIV. None shall be accompted a master workman in any of the occupations aforesaid but such as have good skill of the work, and shall have working under them one or two journeymen, and one apprentice at the least.

XV. Every other carpenter, mason, rough-layer, bricklayer, tiler, slater, plumber, glover, tailor, painter, joiner, plasterer, lime-burner, brick-burner, tile-burner, cooper, tinker (!), every of them (!) shall not take by the day above 5d. with meat and drink, and without meat and drink 10d. and not above. Every apprentice to take by the day, with meat and drink, 3d. and without meat and drink 6d. A pair of sawyers to take by the day, with meat and drink, 8d. and without meat and drink, 16d. or else to take for every hundred sawing of boards and planks, 20d. and of housing timber, 2s. and not above.

XVI. No artificers under the age of sixteen years shall receive any wages, but meat and drink.

XVII. Every artificer and workman aforesaid to find himself tools for the work and art of his science."

Thus far we are indebted to Mr. Roberts's very interesting volume on the "South of England." No less interesting and varied are the researches of Mr. Noake, in Worcestershire.

In alluding to the recess in the chancel wall of St. Michael's Church, at Worcester (as in the chancel walls of most old churches), Mr. Noake thus describes the known purpose of such recesses:—

"Among the ceremonials of the unreformed Church the most conspicuous was that at Easter, when the Resurrection was represented. For this purpose a tomb or sepulchre was arranged in the chancel (a recess still to be seen in the chancel wall of most old churches), in which the effigy of the Saviour was laid, and watched day and night by persons appointed for the purpose, as well as by religious devotees, till it was raised out of the tomb on the morning of Easter Sunday, when the previous darkness in the church suddenly ceased, and a flood of light, together with the richest music, incense, and every sign of rejoicing, celebrated the event."

* The Social History of the People of the Southern Counties of England in Past Centuries: illustrated by a series of extracts from municipal by-laws, civil progress, &c.; from the researches of [illegible] London: Longman and Co. 1856

Notes and Queries in the Province of Worcester. By J. Noake, author of "The Rambler," &c. London: Longman and Co. 1856.

How curiously such practices of the Romish Church remind one of certain Pagan and other mystic rites, such as the death and revival of the god Adonis, and the hierophantine ceremonial of the Egyptian temples, where, after certain rites had been performed in the vestibule, the great gates of the temple were *suddenly* thrown open, and a flood of radiance issued forth from the penetralia, mingled with incense and music, and the virgin devotees as suddenly took flight into the sanctuary, preceded by the sacred Ibis!

The older records of St. Clement's Church, Worcester, had an odd fate: they are believed to have been washed away, or to have perished through the effect of floods, to which the old parish church, formerly situated on the upper quay, was exposed. The existing books appear to have been completely soaked. Early even in the present century, the incumbent yet in office, as he informed the author, during a great flood,—"passed up the aisle of the church in a boat, and for some weeks was obliged to borrow another church to accommodate his parishioners. An old tale is told in this parish that on one occasion a clergyman found a salmon left by the subsidence of the flood in St. Clement's Church, and hence the presentation to the living was supposed to include the valuable privilege of catching all the fish that can be secured in this way."

Another of the Worcester churches, that of St. Swithin, should have been the edifice reared upon this ancient site of St. Clement's. The older records of St. Swithin's seem to have been lost, as well as those of St. Clement's, but the only waters of which there is any record at St. Swithin's, appear to have been certain "strong waters," the use or purpose of which is not very clear, as for example,—

"For a gall. of strong waters to send Jones, of St. John's, away, to save him from arrest, 3s. 4d."

And this was not the only instance in which the "strong waters" were given to some poor devil to float him off in "heavy wet," or in other words, "to send him abroad that he may not be too chargeable" to the parish. These are "Notes," that in truth require some "Queries." Were the "strong waters" a bribe to induce Jones and his unfortunate confreres to "move on" to another parish?

The following particulars as to the Dineley manuscripts are worthy of note in the *Builder*, and will interest some of our readers:—

"The Dineley Manuscripts (now in the possession of Sir T. E. Winnington, Bart. M.P.) consist of three volumes, written between 1670 and 1680 by Thomas Dineley, esq. a member of one of the oldest Worcestershire families. One of the volumes contains accounts of his visits to many churches in this county, as also to adjacent towns and about a dozen cathedrals; pen and ink sketches of monuments, coats of arms, dresses, &c. many of them exquisitely done; copies of inscriptions, both quaint and curious; tracings of pedigrees, &c.; showing the compiler to have been a gentleman well versed in ecclesiastical antiquities, a classical scholar, acquainted with heraldry, and an accurate draughtsman. The second volume is entitled 'Observations in a Voyage in the Kingdom of France, being a collection of several monuments, inscriptions, draughts of towns, &c.'—date 1675; and the latter part of this volume is devoted to a similar description of Ireland, with a curious dissertation on the manners and customs of the Irish. The filthy habits of that people in the seventeenth century are treated of in rather broad language, not adopted for the present day. The third volume has the following title,—'The Jovrnall of my Travells through the Low Countreys, Anno D'ni 1674.' It appears that in December, 1671, Mr. Dineley went in the suite of 'Sir G. Downing, Knt. and Bart. Ambssador from his most sacred Ma'tie to ye States Generull of the United Provinces.' His journal is written in a minute but beautiful caligraphy, and denotes habits of judicious observation."

We had noted many other passages, both in Mr. Noake's volume, industriously compiled and pleasant, and in that of Mr. Roberts, but we must conclude with the following from Mr. Noake's "Notes and Queries:"—

"A cast-iron slab may be seen on a grave in Himbleton Church, having an inscription to Philip Fincher and his wife, who died, the former in 1660 and the latter in 1690. Is any earlier instance known of the use of cast iron for such a purpose?

Answer.—In Mr. Lowe's paper in the Sussex collections is a description of a cast-iron grave slab of the fourteenth century, existing in Burwash Church. It has an ornamental cross, and inscription in relief, and is considered as unique for the style and period, being probably the oldest existing article of the kind produced by our foundries."

PERSPECTIVE WITH ONE VANISHING POINT.

IT frequently occurs in drawing buildings in perspective, that one vanishing point is at a great distance, and thereby causes inconvenience to the draughtsman. The following plan enables the draughtsman to dispense altogether with the distant vanishing point, using only the nearer one.

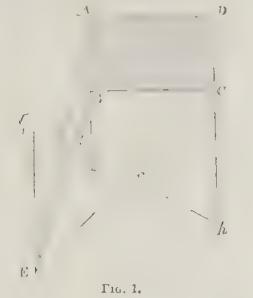

FIG. 1.

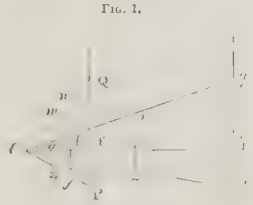

FIG. 2.

Let ABC in fig. 1 represent the plan of a right solid; fig. 2 the same in perspective. In fig. 1 let V, H*h*, be the picture plane; E the situation of the eye: produce AB and DC to meet the picture plane in H and *h*; then H and *h* will be two lines of heights in fig. 2. To find the ground line of the building, take HP and *hp* on these two lines of heights, each representing the height of the horizontal line above the ground. Draw P*yx*V, and *pz*V; join *yz*, then *xyz* is the ground line of the building. In the same way the sky-line may be found, taking HQ and *hq* equal to the height of the building above the horizontal line, and drawing Q*nm*V, and *qo*V, then *mno* is the sky-line of the building. In the same way may be found any other lines that may be required.

ON THE INTRODUCTION OF MOULDED AND COLOURED BRICK INTO STREET ARCHITECTURE.

AT the annual meeting of the Leicestershire Architectural and Archæological Society, held on the 9th of September, Mr. W. Millican read a paper on this subject.

My present purpose, he said, in the course of it, is to give a rapid sketch of the necessity for, and desirability of, introducing (with a view to improvement) moulded and coloured brickwork into our present flat and lifeless street architecture, particularly the cottage buildings, which, from their plainness, are so undesirably abundant in Leicester and other manufacturing towns. You are doubtless aware that this our town stands on, and is surrounded by, extensive beds of clay of the most excellent description, and of several varieties; but all equally adapted by Nature for the purposes to which it is my present endeavour to promote their application, requiring only the assistance of man's hand, and the evidence of his mind impressed upon them—the life of the living clay infused into the shapeless mass of dead clay,—to render that clay fit ornament for the cottages or palaces of men, or the adornment of temples even set apart for the worship of our Creator. Leicester, therefore, being undoubtedly possessed of the material (hitherto neglected) for supplying the lack of animation so deplorably prevalent throughout the brick buildings which line the streets, from the humble home of the toilsome artizan through whom her wealth is acquired, to the more aspiring and pretentious residence of the manufacturer, who seeks retirement from the hurry and turmoil of business, in the goodly squares and terraces which are rising in her suburbs; it becomes the part of man—of the artist, the architect, and the producer—to render it fit to be employed as ornament. It must, in fact, receive from man a portion of the life he has the power to impart to it. Is it, therefore, owing to the want of men who can impart this life, that the clay of Leicester has so long remained cold and inanimate? That this is not the case is most convincingly manifested by the beautiful carvings and other art-works which have been and are daily produced by natives of this town; though it is a source of regret that many of them have left the place of their birth, and the town which they would most gladly have decorated with the riches of their own imaginations, for other places, where the carver's art is—I will not say more fully appreciated—but more extensively encouraged; for artists of all kinds, though undoubtedly not the most mercenary of the human race, cannot live on the admiration alone of their genius and their works.

But further, the clay may be wrought in so simple a manner, as, the designed pattern having been once moulded, it may be multipled to an unlimited extent by workmen of ordinary abilities, without requiring the aid of an artist, except in the invention of the original design; indeed, for this purpose, those workmen who are daily employed in casting in plaster and cement, the perishable ornaments with which so many of our public and private buildings are meretriciously decorated, might be induced to turn their attention to the production of ornament in burnt clay, that would be as lasting as the buildings in whose walls it might be imbedded. Having both the material and the artists necessary for its manipulation so plenteously provided to our hand, what (will be asked) is the reason we do not see so valuable a material properly applied, and its capabilities developed to their fullest extent? It is not that it is impracticable, for of the fallacy of this idea we have incontestable evidence in the great number of Italian buildings wholly indebted for their decoration to this neglected material, of which the Great Hospital at Milan is a surprising and magnificent example, its principal façade being covered with most elaborate and beautiful ornaments—foliage, heads, &c. &c.—rivalling the best sculpture in stone, or princely marble. Hundreds of other existing specimens, too, will be found in Street's "Brick and Marble Architecture of Italy," from the plain square dentil (the humblest form of all) to the most beautifully enriched frieze or string course, alive with a spirited foliation, peeping at intervals from out of the shadow of the overhanging moulding, by which it is protected from accident or the tempest's unsparing influence. The reason is, I am reluctant to confess, the all-powerful utilitarian spirit of our age, which condemns tacitly (though, too frequently, not the less effectually) most things which will not afford either convenience or a profitable return on the outlay involved in their production; and as these are looked on as two indispensable requisites in the homes of the humber classes (and other houses built for mere speculation), which are usually run up at the least possible outlay, to produce the greatest possible return; I fear to that engrossing spirit must we principally attribute the utter absence of redeeming features in the ugly blank walls, with square windows in them, which have grown to be considered the *ne plus ultra* of our street architecture. I need not, I am sure, occupy your time with a long argument endeavouring to prove that ornament is necessary, for that would be fruitless; but that if not necessary, it is at least desirable, you will, I am sure, on a little reflection, readily admit; for who, in the interior of his house—however sumptuous or however humble—would

be satisfied without some attempt at decoration, either in furniture, pictures, or the innumerable trifles which form so unnecessary, yet so pleasing a part of our house attractions? Do not all, according to their means, aim at making the interiors of their homes more attractive than as the builders leave them? Is it not almost instinctive? for do not even insects and animals regard these matters in *their* architecture? If you will admit the desirability of ornament on the outside as well as the inside of our buildings (and I cannot think many will deliberately dispute it) I will endeavour to show in what manner and by what means it may be accomplished, not forgetting too the principal point—the expense. In those buildings wherein, from being of a temporary nature, or from their purpose, ornament is needless, or thought to be so, the plain surfaces may be relieved—at literally no extra cost—by merely selecting bricks of different shades of colour, and placing them to form lines or patterns in the walls. It is true this would require a little thought, but considering what thought is wasted continually on schemes of folly, or dishonourable pursuits, surely that element will not be deemed too valuable to be made use of. In the next class of buildings, I would suggest that string courses and cornices may be introduced of different coloured or different shaped bricks and quarries, imbedded in the work, of which the additional cost would be so trifling as to be comparatively unappreciable. Beyond this stage we must venture into patterns of moulded and ornamented brickwork, either simple bricks with moulded ends, flat ornament produced by sinking the ground round the well-designed outline, or imitations of the productions of Nature herself, each and all of which (the design and model being once made) would be most easily multiplied, and at no more expense than in cement; only requiring that for general use the mouldings and patterns should be of such sizes and character as would admit of their introduction into large as well as small buildings; also of several parts, in order that variety may be obtained in their disposition, and then would be opened a field for enduring and truthful decoration, the limits of which are not to be foreseen or prescribed.

The most ordinary workman, having them habitually under his notice, would acquire a facility and variety in their application, which even accomplished architects scarcely attain with the complex ornaments to which they have until lately been limited. The workmen, too, from having other than their physical abilities exerted, would be advanced to a more intellectual position than is now too generally their lot; acting as machines, building tasteless walls by mere mechanism (as it were) from morning till night, and from the morning to the evening of their existence.

Our streets, instead of being but gloomily-fenced highways, to be trodden only for the convenience of business, or when paced in the pursuit of pleasurable companionship, to be hurried through without a glance of interest, would, with the improvement of public taste and spirit, become panoramas of the imagery of men's minds, and storehouses of thoughts and ideas as varied and valuable as they now are of objects unvarying and valueless. We should then linger as we passed along to mark where a more skilful hand had left its impress, or to recall, possibly, the memory of some of those who, having in their lifetime animated the lifeless earth, had sunk back into its cold solitude, leaving behind them these faithful witnesses of their superiority over the brutes that perish.

DALBY-HALL.

MANY of the members of the Leicestershire Architectural and Archæological Society visited on Wednesday last, amongst other places of interest, Dalby-hall, the seat of Mr. E. B. Hartopp. The visitors, as reported in the local *Journal*, bestowed their admiration upon the additions now being made to the mansion by Mr. Broadbent: the new dining-hall was an especial object of attention. Now, any one not acquainted with the circumstances, would suppose that Mr. Broadbent is the architect for the works referred to, whereas he happens to be the builder only. The architect is Mr. Alfred Bell, of London, who was a pupil of Mr. Scott. The dining-hall of the mansion referred to is an elaborate work, especially as regards the wall-decorations, which were painted by Mr. Castell, of London, from cartoons designed and prepared by Mr. Bell. There are fifteen figure subjects, painted in oil colours, on the walls, by the architect himself, from his own designs, illustrating the German stories of "St. George and the Dragon," the "Wild Huntsman," and "William Tell." The furniture is also being executed from the architect's designs; in short, Dalby-hall affords a rare modern example of everything being executed from the actual designs of the architect, whether it relates to the fabric, sculpture, decoration, or furniture. Few young architects have had the opportunity of commencing in their profession under such liberal patronage as that of the owner of Dalby-hall.

VERITAS.

THE YOUNG WORKMEN OF LONDON.

IT is a noticeable circumstance that so many eminent in the various walks of science, men famous in literature, presidents of societies, editors of newspapers, managers of large establishments, and even aldermen of London, are from the provinces.

Considering the immense population of London, and its constant increase, it becomes necessary to consider the causes which tend towards this state of things.

The deteriorated condition of the atmosphere, the great cost of rent and living, and the want of good and sufficiently cheap education for the industrious classes in this wonderful community, to a certain extent make it difficult for a large portion of the youth of London to gain the amount of physical energy and proper knowledge so necessary in first commencing the business of life. Those acquainted with the condition of the London artizans even of the better class, know the trouble there is in getting their sons put to a good and useful trade: in many instances either premiums are required, or else a considerable portion of the time is given for small sums: often two or three years without wages at all. The expense of this to persons of limited income is great, and the only chance of rearing the family frequently is to get one or two of the eldest apprenticed, and the rest sent to situations as errand-boys, and to other positions from which they seldom rise to much usefulness. There are many other circumstances which in London prevent thousands from being provided with that valuable fortune,—the means of earning a livelihood by the possession of skill in an honest trade,—which we must pass over, in order to direct attention to one chief cause of the advantage which the youths of the provinces have over those of the metropolis: this is, the means of association amongst those following similar pursuits of the ages between fourteen and twenty-one.

In London, such is the state of society that it is often the case that people are not known to their next-door neighbour; and the writer of this paper has often met with young men learning ornamental trades, such as glass-painting, carving, &c. who showed good ability, but were completely at a loss to know how to employ the spare hours of the evening in improvement. In the country towns, bands of young men, similarly circumstanced, find each other out: they meet at each other's houses, get attached to the Mechanics' Institute, and, by a friendly rivalry, effect a power of good.

We know that some thousands of persons now in influential positions in London will be able to trace their success to the proper cultivation of the seven years after leaving school; and we could mention numerous instances of the valuable effects of association amongst young men during the years above mentioned.

The want of the opportunity of meeting, the want of convenient libraries and such like institutions, is no doubt a chief cause of the condition of affairs to which we are so anxious to direct attention; and it becomes, therefore, a matter of importance to consider by what means the evil can be remedied.

Much might be done by the young men of London themselves, particularly in establishments where half a dozen or more are employed. In many instances the proprietors of manufactories could, without much trouble, allow a room as a place of meeting for the apprentices, three or four evenings a-week. Masters ought to direct the attention of their lads to the importance of the improvement of their leisure hours. We know of some masters who have taken a little trouble, and have not only reaped benefit themselves in consequence, but have also had the satisfaction of being carefully remembered by those who have thus received a large amount of good. We have met with young carvers at the Architectural Museum, whose masters had paid for their admission, and spared them so much time to attend at this place; and we believe they will not be out of pocket by the act. But what is chiefly required is some organized plan by which this unwieldly metropolis can be managed, so that by division each might in a measure be capable of some superintendence, and thus receive those aids which they would be likely to meet with in most provincial towns. The subdivision of the large metropolitan parishes into districts affords an excellent opportunity for a movement in this direction. In many of these, infant and national schools have been erected, and with very little trouble excellent libraries might be established in connection with these district schools, and evening schools and places of meeting for those youths who, living in the district, might feel disposed to avail themselves of the means of improvement.

We should be glad to hear that the clergymen and other leading persons in each of the new divisions had given careful consideration to the extent of the amount of education required amongst the young workmen of their neighbourhood; and in what way they could assist self-supporting places. They could then learn the general feeling by visits throughout the districts, and by calling public meetings of the working classes in school-rooms and in other convenient places.

THE CRYSTAL PALACE, SYDENHAM.

THE directors of the Crystal Palace are not standing still, but are striving still further to increase the attractions of this noble rendezvous of beautiful things. The Indian Court, in the gallery, contains a very large number of curious and interesting objects illustrative of the people of that country, and, to some extent, of its buildings. Near this, a collection of models of architectural and engineering works is being formed, which will be valuable. A library of reference, too, under Mr. Shenton, is fast approaching to a respectable size, and will tend to make the Crystal Palace, what it really should be,—a place for study. The picture-gallery has been greatly improved, and is of itself worth a journey.

The flower-show held last week, late as it was in the season, had many points of interest wholly its own, in the shape of dahlias, ferns, German asters, and the composite shows of cottagers and individuals working with one gardener only. The day was pleasant, and the company numerous.

To render our illustrations of the fountains and grounds more complete, we add to the engravings we have already given (including plan showing all the fountains, a view of the Water Bower, and a general "prospect" of the grounds*), a view of one of the lofty water-towers, and a portion of the main building. A technical description of the water-towers, by means of which the lower jets may be made to play to the extraordinary height of 250 feet, will be found on a preceding page (337). The extreme height of these towers is 282 feet from the ground: each of them swallowed up about 1,000 tons of iron, and from them branch off 13 miles of large iron pipes.

ANCIENT REMAINS DISCOVERED AT LEICESTER.—A subterranean vaulted passage was discovered a few days ago near the lower end of Trinity Hospital, Leicester. It is 11 feet wide and 10 feet high, and extends some distance underground. It is 8 or 10 feet below the surface. The upper part is arched, and the whole is built of stone.

* See pp. 337, 338, 343, 355, &c.

WATER-TOWER, CRYSTAL PALACE, SYDENHAM.

CHURCH-BUILDING AND PROVINCIAL NEWS.

Barholme.—The church of St. Martin, Barholme (situate about five or six miles from Stamford) was re-opened, after its complete restoration, on Tuesday in week before last. The restorations (under the superintendence of Mr. Edward Browning, of Stamford, architect) have been carried out at a cost of nearly 1,000*l.*—a considerable portion of it contributed by the incumbent, the Rev. Wm. Turner, M.A. aided by subscriptions from the parishioners and others. Previous to the restoration, unsightly roofs covered both church and chancel, having horizontal plastered ceilings; and the walls, the ancient chevron work of the nave arches, the pillars, and the freestone work of the chancel arch, and windows, were covered up with successive coats of whitewash. The ground floor, including church and chancel, was filled with deal enclosed pews, of various heights and sizes. The new chancel roof is of equilateral pitch, open timbered, arranged with hammer beams and wall pieces springing from carved stone corbels. The windows and sedilia have been entirely restored. The floor is of encaustic tiles, by Messrs. Minton. On each side of the chancel are carved stalls of English oak, with poppy-head terminations. A low screen of oak, with crocketted tracery panels, separates the nave and chancel. The nave and north aisle have been restored. The nave roof is of equilateral pitch, arranged in waggon-head form, and divided into panels with carved bosses at each intersection: the roof springs from a continuous cornice, battlemented. The seats of the nave are all open, and of English oak, with moulded elbows and sunk tracery panels with double featherings. The tower arch has been opened, and the space underneath appropriated to the Sunday-school children. The tower has been raised another stage. The accumulation of earth round the walls of the church has been removed, and the churchyard drained. The ancient Norman remains of the south wall have been preserved, and the Norman doorway of the south entrance, with its sculptured tympanum, restored. The works have been executed by Mr. Hy. Bradshaw, of Stamford.

Long Sutton (Lincolnshire).—The first stone of the new Corn-exchange, market-house, public rooms, &c. for this place was laid on Monday before last.

Newbury.— The corner-stone of the Sunday School-room, in connection with the Congregational Chapel, was laid by the Mayor last week. The site is near the chapel. Mr. J. B. Clacy, of Reading, is the architect. The building will be of a plain and simple character, in the form of a parallelogram, 70 feet long by 33 feet wide, with deep gallery class-rooms at one end, divided by moveable shutters, to admit of the entire space being thrown into the large room. The building will be chiefly lighted by glazed panels in the ceiling. The contractors are Messrs. Hopson, Adey, Toomer, and Gore.

Dorchester.—The foundation-stone of the new Congregational Church here was laid on Wednesday before last, by Mr. R. B. Sheridan, M.P. The site is in South-street, and was purchased by Mr. M. Devenish, who presented 1,000*l.* towards the object in view. A large sum has also been subscribed by other private individuals, and the amount is still accumulating. Messrs. Poulton and Woodman, of Reading, are the architects. Mr. Wellspring, of Dorchester, is the contractor for the works, and Mr. G. Slade clerk of the works. The church is to be in the Decorated style of Gothic architecture. The front towards South-street will be ornamental. In the centre the leading feature will be a large traceried window, with a gable and finial over it. On either side of the middle compartments will be an entrance porch, that on the south side forming the base of a spire, the height of which will be 85 feet. The church will be in the extreme clear length 76 feet, and the width 37 feet. It is to be a parallelogram in form, the back being apse-like in plan, with a centre recess for the organ. On either side of the recess will be the vestries and other apartments, and in the rear of these the school-room, 26 feet by 40 feet. There will be a side passage, from South-street, to the school and vestries, as well as an access from the street at the back of the premises. The church will have a gallery across the front. The floor of the church will be laid to a fall towards the pulpit. The woodwork of the roof will appear open, and is to be stained and varnished, but will comprise an inner ceiling (apparently the outer roof itself). The inner roof will be arched in form, and a series of glazed ornamental openings will be introduced in it along the sides and end. The accommodation of the whole church will be for 600 adults, and the total cost will be about 2,000*l.*

Dursley.—The following tenders were received for the re-building of Coaley chancel, near Dursley, Gloucestershire; Messrs. Jacques and Son, architects:—

Spire and Hook (Eastington)	369	12	0
Jackson (Uley)	320	10	0
Coleman (Chaxhill)	297	19	7
Hayes (Gloucester)	289	10	0
Watkins (Coaley) (accepted)	288	0	0
Niblett (Gloucester)	287	10	0

Nottingham.—The new Congregational Church, opened, as already noted, on 14th ult. at Nottingham, for the parish of Sneinton, is in the Italian style, with recessed Doric portico and Roman Ionic façade; and, when completed, will finish with a campanile. Accommodation is provided for 800 persons; and the contract sum, which did not include the boundary walls, palisading, warming-apparatus, and gas-fittings, was a little under 2,500*l.*

East Retford.—A stone reredos has just been placed in the parish church of St. Swithin, East Retford, from the designs and under the superintendence of Mr. William Kerby, of East Retford, architect. The design is in the Decorative style, and comprises five compartments, each having a traceried head supported by slender shafts, with foliated capitals (which have been picked out with gold, &c.), and the whole surmounted with carved crockets and finials. The centre surmounted has an O G canopy, beneath which there is a carved figure of an angel holding a band with the text, "He that hath the Son hath life," lettered on it. The groundwork at the back of the figure is diapered, and is to be pricked out with gold and colours. On either side of this are smaller compartments containing the Lord's Prayer and Apostles' Creed, and the end compartments on either side contain the Ten Commandments. The whole of the lettering has been cut into the stone, and illuminated with gold, red, and blue. There are four small canopies yet to be executed, which will contain figures of the four Evangelists. The work has been executed by Mr. Wm. Lee. The colouring is being executed by Mr. George Foster.

Coventry.—A new stained window to the memory of Colonel the Hon. Governor Hood (Grenadier Guards), who fell in the trenches before Sebastopol, is being placed in St. Michael's Church, by Messrs. Heaton and Butler, of Gloucester-place, New-road.

Hulme.—The Manchester and Salford Baths and Laundries Company are about to extend the usefulness of their undertaking by erecting new baths and wash-houses in Stretford New-road, opposite Holy Trinity Church, Hulme, on the site on which the old Chorlton union workhouse recently stood, and which has just been purchased for the purpose. When completed, this will make the fourth establishment of this kind in Manchester and the immediate neighbourhood.

Blackburn.—The corporation of this town have resolved to erect public baths adjoining the park. The baths will be extensive and commodious, with baths of different classes, including a set to suit the pockets of the poorest. There will be three plunge-baths, first and second class for men, and one for women. The cost is expected to be about 5,000*l.* which will be for the building only, the land costing nothing.

Glasgow.—The site of the extensive works for the tidal basin and graving dock at Meadowside, at the junction of the Kelvin with the Clyde, now presents a busy appearance, there being some hundreds of navvies engaged in the excavations. The land for the works is nearly thirteen acres in extent. Numerous lines of rails have been laid down, and there are half a dozen steam-engines, besides a locomotive, on different parts of the ground, and employed in the various processes of pumping, sawing, grinding mortar, driving the piles, and drawing up the trains of earth waggons. Large travelling cranes have also been put up for the stonework, and an extensive brickfield has been formed at the north end of the ground, for the conversion of the clay, which forms a large part of the excavations. The works will comprise an entrance tidal basin, graving dock, and a wharf running up the west bank of the Kelvin. The graving dock, which will be one of the largest in the country, will be entered from the north side of the basin, and will take in the largest screw steamships afloat. It will be 500 feet in length inside the gates, and 80 feet broad. The masonry will be of a massive description, the floor and walls being formed of large blocks of best Nitshill stone, and the copes and quoins of granite. The depth of water on the sill at high water will be 17 feet, and width of the gates 55 feet. The gates will be made of wrought iron. A steam-engine of 150 horse-power, and driving two pumps, each 50 inches diameter, is in course of construction at the works of the proprietors, Messrs. Tod and Macgregor, and will be employed for discharging the water from the dock when ships are to be taken in. The Kelvin will be deepened so as to allow of an easy entrance to the tidal basin, and to admit of large vessels lying at the wharfs. The wharfs round the tidal basin and along the Kelvin, upwards of 1,000 feet in length, will be used for vessels lying alongside and getting their upper works repaired, while the graving dock will be reserved for the examination and repair of the bottoms of vessels. Five or six steamships of the largest class may thus be under repair at the same time. These works are being executed by Messrs. York and Cowper, the contractors, from the designs and under the superintendence of Messrs. Bell and Miller, civil engineers.

Lincluden.—The *Dumfries Courier* directs attention to the neglected state of the interesting ecclesiastical ruins of Lincluden, on the banks of the Nith. The iron gate which was wont to protect the western door, the wall it divides having probably formed the stone screen of the church, has been removed, and cattle have in consequence free access, as also have idle and mischievous persons; and gipsies probably use it as a place of shelter during the night: at least, says our authority, the smoke-blackened walls show that fires have been lighted in the beautiful tomb of the Countess of Galloway and the fine stone stalls on the opposite side; while fresh chips of sandstone show that a good deal of carving has been recently mutilated.

TIMBER BENDING.

AN important invention has just been introduced, which is likely to produce a beneficial effect upon many branches of manufacturing industry in this country. It is a process by which timber of almost any size can be bent to any curve, with marvellous facility and expedition, and by which the chief qualities of the wood, it is considered, instead of being impaired, as has hitherto been the case by bending, are greatly improved: that is to say, the wood is rendered more durable and rigid, and the operation, instead of expanding and disintegrating the fibres, compresses the whole mass, and expels a great portion of the deleterious fluids contained therein, thereby preventing early decay. The inventor is Mr. Thomas Blanchard, of New York, and the process has been already adopted in the United States with great success, it is said, for ship-building purposes, and for the manufacture of furniture and wheels.

Experiments have been made with a view of testing the comparative strength of large timbers which have been bent and timbers of a naturally crooked form, the result of which shows greatly to the advantage of the former; and the opinion of Sir William Hooker, who examined microscopically some bent specimens, is also conclusive as to the improved condition of the wood after being operated upon.

On a recent visit we saw a piece of timber, 12½ inches by 7 inches, and 12 feet long, quietly and steadily bent into a semicircle. The timber

is steamed for a few hours before it is submitted to the action of the machine, and is kept attached to the mould for a similar period of time afterwards.

The difficulty which at present exists in procuring timbers for ship-building of a natural growth suited to the forms required for knees, futtocks, &c. will be overcome by means of this invention; and for purposes of furniture, &c. the saving of material (often of a very costly nature) must, we should think, insure its adoption by the trade, as the present method of cutting and shaping the wood will be thus superseded. Its applicability to architectural purposes is also very important, particularly for Gothic edifices, as it will of course reduce the cost of all curved work, and will, in many cases, give the artist greater freedom in his design, by allowing the introduction of lines which are now frequently avoided on account of the cost of execution.

FOREIGN INTELLIGENCE.

Aluminium an Object of Trade.—This metal has become already cheaper than silver, and is sold in Paris for 300 francs the kilogramme; but being very light, it will reach five or six times the extent of silver. Very nicely made tea and coffee pots, spoons, &c. are already to be seen in the shops of the jewellers of the French capital.

Rome. — The monument of Gregory XVI. which stands in the lateral nave, on the right hand side of St. Peter's, has been lately opened to public view. The symbolic figures of Prudence and Moderation are the only ones which have been put up, with the statue of the late Pope, as the want of means has prevented the execution of the complete group as intended. In the Vatican a large and splendid staircase is building, leading to the apartments of the Pope.

Scientific Congress at La Rochelle. — M. Baruffi, professor of Turin, said,—"The piercing of the Isthmus of Suez, connecting the two seas by an artificial Bosphorus, is an idea of *our* times. If realised, it will be one of its titles of honour and desert. No *combination* will succeed to elude such an enterprise." The congress, by a formal vote, acknowledged the great value of the undertaking.

THE PUBLIC OFFICES' COMPETITION.

Inquiries having reached us, it may be well to state, that the particulars of the Public Offices' competition are not yet ready. The Department have found it no easy matter, we understand, to prepare the details of the accommodation required for the War-office and Foreign-office. The papers will probably be ready for delivery next week. We believe we may anticipate, too, that the time for preparing the designs will be enlarged. A period of six clear months is the very least that should be given for the purpose: it should be remembered that architects must *live* as well as compete, and may not neglect all other business for the chance of obtaining even a noble prize.

THE VACANT DISTRICT OF NEWINGTON.

Allow me to suggest for the consideration of the Metropolitan Board of Works in the conduct of the election to vacant districts under the Metropolitan Building Act.

In any case of a vacancy there will always be a host of applicants, in proportion to the emoluments of the office, the number and variety of whose supposed claims must necessarily embarrass the choice. It would be well, therefore, if, in future, a limited period were to be fixed, beyond which no application should be entertained, regard being had to the facility of candidates procuring the necessary testimonials, which, of course, are not always to be obtained immediately. It would be wise also if some limit were assigned as to the age of a candidate,—probably the range should be between the ages of twenty-five to fifty; and no person with any physical infirmity should be allowed to be a candidate for an office requiring strength and activity. The examiners of the Institute of Architects will, no doubt, be careful not to send forth men not fully qualified in a professional point of view, whilst the Metropolitan Board should pay especial regard to the moral tone of the applicants as testified in their credentials, since it is of essential importance that a district surveyor whose duties may lead him into collision with all sorts of characters should possess tact, and exhibit a gentlemanly bearing to all.

In the present case there are opinions afloat that the district should be divided into two, if not into *three;* but it is undesirable, on many accounts, to split it up, since the smallness of the income would tend to lower the standing and authority of the surveyor with many whom he may have to deal with in the district, besides paring down that reasonable pecuniary return for his education which every professional man has a right to expect in accepting a public post.

From the high and impartial tone evinced by the Metropolitan Board of Works, there can be no doubt that, when the case has been duly sifted, the election will be conducted without personal predilections, and simply on the grounds of professional and moral merit.

COMPETITIONS.

Weston-super-Mare Town-Hall.—At a meeting of the Town Commissioners on the 10th, the clerk read the resolutions passed at a public meeting of the ratepayers and at the commissioners' meeting, that a town-hall was necessary, and that one be erected over the market-house, at a cost not exceeding 2,000*l.* Mr. Smith stated that he had advertised for plans and specifications as instructed, offering a premium of fifteen guineas for the best. Out of more than 100 applications for plans of the ground which he had received from almost every part of England, twenty architects had competed, and it would be for the Board to open and examine the several plans, &c. which had been sent in. According to the *Taunton Courier*, "The beautiful style in which many, indeed most of the plans were got up, struck the examiners with astonishment, especially when the very trifling premium offered was considered. The average size allotted for the principal room is about 65 by 45 feet, in addition to various ante-rooms and offices."

Lewisham Cemetery.—In answer to the advertisement, inviting designs for this cemetery, there were fifteen competitors. The Burial-board having met, set aside six for further consideration, and have finally decided upon those sent in by Messrs. Tinkler and Morphew, subject to the approval of the bishop, and to their plans being carried out for the stipulated sum. The designs are of the Early Decorated period.

NEWS FROM IRELAND.

Fermoy barracks are to be enlarged to contain 8,000 or more men. There are 120 acres of exercise-ground adjoining the barracks: water is abundant; and the situation is reckoned the healthiest for troops in Ireland.

The consecration of the new parish church of Kinneigh, by the Bishop of Cork, Cloyne, and Ross, took place on Wednesday in week before last. The church is situated close to one of the celebrated round towers of Ireland, which serves for a belfry, and in which a bell has been lately hung.

A pedestal for a statue of the late Daniel O'Connell has been erected at the Crescent, George-street, Limerick. The statue is to be cast in bronze from the model, and put up in a few weeks. Mr. Hogan is the artist, and has just completed the model. The statue is colossal,—nearly of the size of the one in the Royal Exchange, Dublin,—but the attitude is different as well as the costume, which in this case consists of the usual dress and cloak. The model was to be shipped to France; Mr. Hogan accompanying it, and returning thence with the bronze cast to Limerick.

The foundation-stone of a new church was laid on Thursday in week before last, according to the *Belfast Newsletter*, at Glencraig, a secluded spot, about three miles below Holywood. The site has been granted by Miss Symes, of Glencraig. It is surrounded by trees and commands a glimpse of the Lough, and the undulating outline of the county Antrim. The endowment, 1,600*l.* has been supplied by the Rev. Frederick Trench, Cloughjordan, and this sum has been supplemented by 500*l.* raised by private subscription. Mr. Francis Farrell, of Dublin, is the architect; and Mr. Nimick, of Holywood, the builder. It would appear from the drawings that the building will be in the Anglo-Gothic style, the roof being raised up in the Gothic fashion, and the windows arched in accordance with the characteristic of the Saxon period. The length will be 67½ feet, including the chancel; and the breadth 29 feet. The elevation of the side-wall above the plinth will rise 16 feet. There will be a tower 60 feet in height.

The foundation-stone of a Wesleyan Chapel about to be erected in the town of Newport, was laid on Friday before last, by Sir Richard A. O'Donnell, bart.

OPENING OF THE EXHIBITION OF ART AND INDUSTRY, AT MANCHESTER MECHANICS' INSTITUTION.

The opening of the Exhibition of Works of Art and Industry, in the new building of the Manchester Mechanics' Institution, took place on Tuesday in last week, under promising circumstances. The collection is regarded as a more extensive one than has ever appeared in the provinces. The assemblage at the opening was numerous. The hall on the ground floor is filled with the art-works contributed by the French Emperor. The lecture-hall on the first-floor contains sculpture and paintings, and other rooms on the same floor are filled with works in bronze and silver. On the second-floor are two picture galleries, containing a great many pictures. There are also rooms filled with photographic pictures, under the superintendance of the Manchester Photographic Society, and a Mediæval Court, a Crimean Court, &c. Mr. H. Walker presided at the organ, in the lecture-hall. An address was delivered by Mr. Oliver Heywood, the president of the Institution, and the company then distributed themselves throughout the various departments of the exhibition.

THE PRESERVATION OF STONEWORK.

Following out the opinion we have again and again expressed as to the importance of obtaining some efficacious mode of saving stonework from decay, we may mention that at the second meeting of the forthcoming session of the Royal Institute of British Architects, on or about the 17th of November, Mr. C. H. Smith has engaged to read a paper "On the various Methods now before the Public of Indurating and Preserving Architectural Stonework." We do so in order that the various patentees and others interested, being informed, may forward full particulars of their various plans. They will doubtless be invited to the meeting to hear what is said on the subject, and to afford such further information as may seem desirable. From the comparison and discussion advantage will doubtless result.

RESTORATION OF THE DOMES OF BAMBERG, ULM, AND REGENSBURG.

THE NEW VILLA OF THE KING OF BAVARIA, REGENSBURG.

The German cathedrals are the brightest jewels in the diadem of the people; and their restoration, at the present time, proceeds not from any puny interest or consideration, but from respect towards religion and art. If the huge buildings of Speyer, Worms, and Mayence, represent the simple German-Romanic style, the cathedral of Bamberg is one of the finest specimens of the transition from the round-arch style to the Gothic. Although its decoration belongs to the style of the former period, its plan and *ensemble* are Gothic, as the interior and the windows present already the pointed arch form. Its renovation, by King Ludwig's orders, has been in the main satisfactory. As all the successive renovations of plaster have been removed from the walls, the mere dull surfaces of the hewn stones, not modified by the reflected hue of stained windows, nor the diversion of mural paintings, either in the choir or naves, produce a dreary, bare appearance.—The restoration of the minster of Ulm presents, in the main, the same satisfactory features as that of Bamberg, the more so as no transeptal structure interrupts the imposing perspective, more than enough for the exigencies of religious worship. The dome of Ulm, however, presents the greater disadvantage, that it is threatening destruction. The lateral walls of the middle nave have no flying buttresses, the construction of which became, probably, interrupted, together with the completion of the whole structure. These lateral walls have, therefore, yielded to the pressure of the superimposed vaults, and deflect considerably from the perpendicular. If these walls were ever to yield, half of the cathedral would become a ruin.—Regensburg has been once the seat of a great school of sculpture, as some of the sculptures there found, from the thirteenth and fourteenth centuries, are amongst the finest specimens of German Mediæval art. Traces of this art-activity, although much dissimilar in style, are to be met with at all great cathedral building places (*Bauhütten*) in Cologne, Strassburg, Freyburg, Regensburg, Ulm, &c.; but they do not appear in the great Romanic workshops of the Middle Rhine, while they again appear in their finest

developement in the small Romanic churches of Upper and Lower Saxony.—At Regensburg, a villa for King Max. Joseph is now building at the east side of the city, close to the Danube, by the architect Professor Foltz. The plan consists of a right angle, the sides of which are directed towards the town and the Danube, and a fine view is afforded of the villa on passing the Lower Danube bridge. Projecting turrets at the corners, windows of varied shapes, with arched tops, an ornamented pediment over the chief cornice, and proportions of great lightness, impart to the whole an elegant and picturesque character. The view extends on the many-steepled old town, which appears on a clear summer sunset like an old painting on gold ground. M. Foltz has first tried here to make ornamental relievos of cement, and to paint in various colours of cement, a procedure which affords an ornamentation quite inaccessible to the vicissitudes and the influence of climate and weather.

Notices of Books.

Analysis of Ornament. The Characteristics of Styles: an Introduction to the Study of the History of Ornamental Art; being an Outline of Sixteen Lectures on that Subject, originally prepared for the Government School of Design in the Years 1848, 1849, *and* 1850. By Ralph N. Wornum. London: Chapman and Hall. 1856.

From week to week we have delayed noticing Mr. Wornum's book, from the feeling which leads one to postpone an unpleasant task. Remembering his instructive and well-illustrated course of lectures, many of which we reported almost *verbatim* at the time, we looked forward to the appearance of a more valuable book than we find, and are consequently disappointed. It professes to be but an abstract of the lectures: still, if this had been correctly illustrated, it would have been a very useful book. Its main object is to impress the characteristics that distinguish the styles, which could only be obtained "by dint of great labour in the comparison of many costly publications," and Mr. Wornum *says* the student will find the most essential and characteristic elements of the styles, perhaps adequately illustrated by the engraved cuts contained in the work. He can scarcely think this, however, for in truth the illustrations for the most part miss the characteristics altogether, and are quite worthless. Take, for example, the echinus ornament (egg and dart), its form is given quite wrongly: in the cut from the Erectheium, p. 45, it is a simple caricature. Look, too, at the Greek Terra Cotta, p. 25, and the Ionic Capital, p. 48. When we come to illustrations of Gothic art matters are even worse. The Early English spandril from Stone Church, Kent, the Tooth ornament, and the Early English Capital, p. 81, do not give the slightest idea of the characteristics of the style, and the pedestal from Henry VII.'s Chapel reminds us of the apochryphal Gothic illustrations of topographical works at the end of the last century. It is no reply to say these illustrations were chiefly executed by the female students of the wood-engraving class at Marlborough House. If so, it merely shows that the students have sadly retrograded, or that the best of them have not been employed. But here is a book on "Ornament," with V. R. on the cover, and though not published by the Government "Department for Art," still obviously connected with it, and which will go with this appearance to the Libraries and Art Schools of foreign countries; and it ought unquestionably to be—if not in advance of the ordinary illustrated works of our period—at any rate fully equal to anything that has been done before. The inference from the book as it now stands would be, that the art of engraving, as applied to architecture, had altogether fallen in England.

Notwithstanding the objection we are forced to take, there is much valuable matter in the work which may be studied with advantage. The author's remark on the anthemion, commonly called "honey-suckle," will serve as an example of his style:—

"In the anthemions we have a compound element, a succession or alternation of an harmonic group of curves, in a conventional adaptation of floral forms, as the name anthemion itself implies. In Greek examples we have a smaller and larger cluster alternated, sometimes reversed, sometimes enclosed in a curve, and generally connected by a band, by mere contact, or by some simple scroll. Every example of an ornament must have an individuality of detail necessarily, but it is a great mistake to adopt this detail as an essential part of the ornament: for example, no two Greek anthemions are alike, but there are some few which contain a member a good deal resembling the honeysuckle: the ornament is simple and beautiful, but modern imitators overlooking its principle have comprehended only the detail, assumed it to be an imitation, and have called it the honeysuckle ornament. Instead, therefore, of grasping the source of a thousand ornaments equally beautiful, they have acquired but one, and half the classical buildings of modern times are covered with honeysuckles, bringing the whole art of Greece into disgrace for its monotony and formality, while there is scarcely a weed in England that might not with equal skill have been substituted for the honeysuckle, with perhaps equal effect."

Let us add his observations on *style*:—

"Style is only another name for character. Every style, as such, depends, of course, upon what is *peculiar* to it, never on what it has in common with other styles. These peculiarities are what we term *characteristics*—the features by which it is distinguished.

Sometimes a style is merely a modification of, or peculiar elaboration of, the features of another style. It is, then, only a variety or a derived style; and such varieties are common, especially in later times, the natural result of the accumulation of materials. These varieties the student will discover without aid, and, indeed, may invent at pleasure, when he is once master of the essential characteristics of the great historic styles.

As a matter of course, the earliest styles are the most simple, and, perhaps, necessarily also the most original, as each successive style has been gradually developed out of its predecessor, —as the Roman from the Greek, the Romanesque from the Roman, and so on, with more or less affinity of character.

It does not follow, however, that an ornamental work is in a certain style because it belongs to the *period* of that style, for a style is defined not by its time or period, but by the prevailing peculiarities or characteristics of that period: and it is not at all the case that every work of a period possesses these peculiarities. It must be borne in mind, therefore, that while a genuine example of a style will always imply a certain time, a specimen of a certain time will only, as a general rule, illustrate the corresponding style. This is because no style is predetermined, but is, in its details, in all cases, incidental, notwithstanding a prevailing sentiment."

VARIORUM.

A volume on "The Duration of Human Life," by Mr. J. Pinney, author of a treatise on the influence of occupation on health and life, has been published by Messrs. Longman and Co. Its main feature is the advocacy of temperance, especially in drinking, although the author is not an advocate of the pledge. Any work devoted to the promotion of temperance in drink, and the removal of that stigma which so disgraces us as a nation in continental eyes as well as in our own, deserves a favourable notice, even were it not very cultivated in style; but the present treatise is pleasantly written, and contains a good deal of curious and interesting matter unconnected with the particular subject to which we have just alluded. It treats, in fact, of the three eras of human life,—the era before the flood, when men attained to more than 900 years of age; that immediately following the flood, when they still attained to 450 years of age; and that which has ever since prevailed in the "three-score-and-ten" life. The author is of opinion that life is again lengthening a little, and that the "three-score-years-and-ten" life, though a fact, is not a law nor a limit. He treats of the objections started as to the literal signification of the *years* during which the antediluvians lived, and shows that they must have been actual years such as our own; and indeed, had he reversed the line of succession in showing how gradually life was shortened, the probability of this would have still more distinctly appeared. Thus, in King David's time, men usually lived to the age of seventy; but in gradually retreating to previous eras we find it recorded that Jacob lived 147 years; Abraham, 175; Terah, 205; Peleg, 239; Salah, 433; Shem, 600; Lamech, 777, and so on; so that it would puzzle objectors to point out any precise epoch where the nature or description of the years lived can be said to differ from those preceding. On the contrary, we have here a species of unexpected evidence in favour of the idea that human life *has* gradually dwindled to its present limits from a time when it partook much more of that immortal vigour which must have actuated man before the curse of mortality befell him.——In the third part of a new periodical publication (Whittaker and Co. London, and Dunhill and Palmer, Manchester), titled "Manchester Papers," there is an able article by Mr. Hammersley, F.S.A. master of the Manchester School of Art, on the Exhibition of Art Treasures of the United Kingdom," to be held in that city next year. Mr. Hammersley expresses a hope in accordance with our own, that the exhibition will contain an architectural department, including not only drawings and sections, but models of a suitable description, and he indicates the sort of details, decorative and instructive, of which casts should be collected. Architectural and Archæological Societies would willingly contribute to such an object. Mr. Hammersley also urges the classification of the whole exhibition and its catalogue, and the introduction of well-considered lectures in illustration of the various objects of interest.—— "Practical Mechanics, including Mechanical Drawing, Strength of Materials, and Sources of Mechanical Power," by James Imray, C.E.; and "The Chemistry of Food and Diet, with a Chapter on Food Adulterations," by John Scoffern, M.B. London (two eighteenpenny Treatises from Orr's Circle of the Sciences), are now separately published by Houlston and Stoneman, of Paternoster-row.——Two very good little shilling school volumes have been issued by Gilbert, of Paternoster-row. They are titled "Ince and Gilbert's Outlines," and the one is on English History, by James Gilbert; and the other on Descriptive Geography, by Professor Wallace. Children, in our schoolboy days, had no aids of so sterling a description, that we can remember.——"The British Workman" is a wonderful pennyworth: indeed, it is almost given away, inasmuch as it is still 30,000 below the self-supporting point; but with its philanthropic supporters profit is not the main consideration, although it is exceedingly desirable that such a periodical should at least pay its own expenses. On its own merits, as a cheap illustrated monthly journal, it is well worthy of notice. Partridge and Co. of Paternoster-row; Cash, 5, Bishopsgate Without; and Tweedie, 337, Strand, are the publishers; and it can be had, post free, in packets of four copies, for 4d. or 4s. a year; or in larger packets at proportional rates. Employers would do well to advertise among their workmen a periodical which inculcates the principles of temperance, morality, and kindly feeling in a simple and effective way, by anecdotes, brief stories, and illustrations, as the "British Workman" appears to do: even taste is cultivated by a selection of engravings far above the average of such periodicals.

Accident to the Westminster Clock-bell.—In shipping the great bell, at West Hartlepool, for the Houses of Parliament, the crane by which it was suspended over the vessel, into which it was about to be lowered, gave way, and it fell into the hold, breaking the foremast into splinters and seriously damaging the hull of the schooner, but it was hoped, or believed, without injury to the bell. The master of the vessel was in the hold at the time, and had a narrow escape. The vessel, with its freight, being in a sinking state, was run aground in the inner basin of the dock where she lay.

Miscellanea.

THE ATLANTIC TELEGRAPH.—This great undertaking may be said to be already begun, since eighty-five miles of telegraphic line have been thrown across the Gulf of St. Lawrence to the Island of Newfoundland, which lies in the way of the projected line. At first it was contemplated that the line should go by Labrador, Greenland, Iceland, and the Ferroe Isles, and so to Europe by successive stages; but to such a round-about journey there were insurmountable objections. Ice has especially to be guarded against, and ground where anchors may catch in the line must be avoided; consequently, very deep water is a desideratum, and this presents itself at once at Newfoundland. 1,900 miles of ocean must then be crossed, and facilities for the undertaking exist, it is said, such as no equal extent of the globe can parallel. The cable, to allow for the inequalities of the ground and other exigencies, will be 3,000 miles long. The wires will be isolated in gutta-percha coatings; and all the improvements which modern science can afford will be applied to give durability, strength, and efficacy to the cable. Two ships will proceed to the mid-ocean, each carrying one-half of the line. Uniting the ends of the cable, the ships will then separate and continue to lay it out until they reach their respective destinations. The wires will enable them, during the entire process, to telegraph each other at will. The Government of the United States placed a war-ship at the disposal of the company for their survey, and we hope to see our own Government uniting with that of the States in each contributing a first-class steam-ship for the laying of the cable. It is to sailing-vessels towed only by steamers, it seems, that the loss of so many submarine telegraphic cables is attributable. The *Cork Reporter* states that "Dr. Whitehouse, one of the highest authorities on this branch of science, has demonstrated by more than 4,000 experiments that so far from the great length of line requiring a proportionally great circumference or diameter of wire, the very contrary is the case,"—a conclusion entirely at variance with that of Dr. Faraday. Dr. Whitehouse is also said to have invented an apparatus by means of which, should the line be damaged, the exact point of interruption can be accurately ascertained.

RAILWAY MATTERS.—M. Jobard, of Brussels, is of opinion that no insurmountable difficulties would be encountered in raising the ordinary speed of railway trains to 300 *miles per hour*, or five times the present velocity! He advises an extremely firm built carriage, three tubular boilers in front, supplying three of Potel's rotary engines, placed upon the axes of three large driving wheels, way 6 metres (20 feet) wide, wheels of 20 feet diameter, Dr. Boucheries' preserved sleepers, car of 30 or 40 metres length, central safety rail for sharp curves, Decoster's lubricator, Guerin's brake, and Verdié's steel-surfaced rails and wheels. He anticipates diminution of material and increase of speed, and that one carriage only would be necessary between Paris and Brussels.—The new railway train, or travelling palace, built by the Orleans Company for the French Emperor, is composed of five carriages. No. 1 forms a dining-room and saloon for the aides-de-camp, with kitchen and dressing-room. No. 2 forms a kind of terrace, and is all made of wrought iron, polished, and of elaborate workmanship. No. 3, which is the state carriage, or reception saloon, is surmounted by the Imperial crown: it is composed of an ante-chamber, with folding sideboards for refreshment. No. 4 is the sleeping apartment: it comprises a bed-room for the ladies of honour; bed-room for the Emperor and Empress, with a cradle for the Prince Imperial, dressing-rooms, &c. No. 5 is a waiting-room for the servants, place for luggage, and also has a cupboard containing every kind of tool that could be required in case of accident. All these carriages are decorated and furnished with the greatest elegance.—On Friday before last, a reservoir at Bogside, Glasgow, which received the waste water from the St. Rollox Chemical Works, burst its embankments on the side contiguous to the Caledonian Railway, and rushed out, entirely blocking up the line between that and Buchanan-street Station.

ACCIDENT ON THE WORKS OF THE IDMISTON BRIDGE OF THE ANDOVER AND SALISBURY RAILWAY.—When Mr. Strapp, chief engineer of the South-Western line, was inspecting the line, on Friday, the 12th inst. with his assistant engineer, Mr. O. Donaldson, under whose immediate superintendence the works are being executed, the latter, who is the son of Professor Donaldson, stepped upon a plank, or lagging of the centering, which was insecurely fastened, and was precipitated to a depth of 20 feet, on a mass of bricks and rails. He was at first supposed to have been killed, but providentially he had only two ribs broken, besides receiving severe contusions on other parts of his body, and is now progressing satisfactorily.

CLEARING OUT THE PIGGERIES AT THE POTTERIES, KENSINGTON.—The Hammersmith police magistrate was engaged on 12th inst. the greater part of the day in hearing summonses against pig-owners in the notorious Potteries, at Kensington, the piggeries of which were proved, by medical and other evidence, to be injurious to health as well as a public nuisance. Mr. F. Godrich gave evidence to the effect that while the average rate of mortality in the parish of Kensington as a whole for the last five years was 19 to 20 per 1,000, that of the Potteries was never lower than 25 per 1,000, and occasionally rose to 35 per 1,000. During the last eight months, 19 deaths per 1,000 had taken place in the Potteries, and only 13 per 1,000 in the whole parish. There are between sixty and seventy pig-owners, and, of these, eight had been summoned as a commencement to them all being brought up. The magistrate, in the first case, ordered the pigs to be removed and pig-keeping to be discontinued on the premises. Notice of appeal having been given on the part of the defendant, the other summonses were adjourned for a fortnight to enable the vestry to decide whether they would take the whole of the cases gone into, or have them stand over until the appeal case had been heard.——Before the parties retired, Dr. Aldis and Mr. Burge, the medical officer of health for Hammersmith, complained of the disgraceful and unhealthy state of the court. They made this statement publicly, as they heard that Mr. Reeves, the police surveyor, was in the court. Mr. Bodkin said it was a state of things that should not exist; but he heard that a new court was to be erected. Mr. Reeves, in reply, stated that the site for the new court had been decided upon, and the plans were now at the Home Office to be approved. He thought that they would commence building in about ten days. It was stated by one gentleman that he heard the very same statement made two years ago, about the plans, and still there was no court.

DISGRACEFUL CONDITION OF SOUTHWARK POLICE-COURT.—For some time past, says the *Morning Herald*, the smells in and about this court have been abominable. The court is not only badly constructed and ventilated, but the surrounding neighbourhood has several offensive trades. The drainage is also extremely bad, the flooring of the kitchen being much lower than high-water mark; so that the refuse from closets, &c. is hardly ever carried away: an escape of gas, too, has been about the court for some time. Some attorneys complained of all this last week as disgraceful in a public court; and Mr. Combe said he should at once write to Mr. Reeves, the surveyor to the police, on the subject.

KILKENNY ARCHÆOLOGICAL SOCIETY.—The September meeting of this society was held in the Tholsel, at Kilkenny, on Wednesday before last, Mr. P. O'Callaghan, in the chair, when ten new members were elected, and various presentations made; and the secretary, the Rev. Mr. Graves, announced the receipt of a transcript of a valuable family MS. from the Marquis of Kildare, for publication, and made various other communications to the society, on oghams, leather ordnance, ordnance survey records, &c. He also read a portion of the manuscript of Mr. Dineley's tour in Ireland in the reign of Charles II. as to which we happen to have given a quotation from Noake's "Notes and Queries for Worcester," in our present number; and the publication of which, Mr. Graves announced, has been undertaken by the Kilkenny Archæological Society, Mr. E. P. Shirley, M.P. having given the transcript, and a donation of 5*l.* towards the cost of printing it. The portions read are reported to have served to throw much curious light on the social condition of Ireland in the latter end of seventeenth century. Several other papers were received, and the meeting then adjourned.

EXHIBITION OF THE BIRMINGHAM SOCIETY OF ARTISTS.—This exhibition was opened on Wednesday in last week, to a numerous assemblage. It contains upwards of 450 pictures, but the local *Journal* states that there seem to be fewer great names represented this year than usual. There is as usual a great predominance of landscape: the portraits are less numerous; the general run of metropolitan artists more sparingly represented; the local contributions on the whole better; the downright rubbish rather more plentiful than last year.

GLASGOW CORPORATION WATERWORKS. — The contract for the cast-iron pipes for these works has been let out to Messrs. Edington and Sons, of the Phœnix Foundry, Glasgow. The contract is for about 24,000 tons. There were numerous tenders lodged. "It has been very currently reported," says the *Gazette*, "that upon a certain one-sided report from the corporation engineers, and through the partiality of certain active commissioners, the party entitled to the contract was elbowed out of it to make way for the firm of an active chairman of the election committee of a member of the Water Committee sitting in judgment on the tenders."

LECTURES AT THE ARCHITECTURAL MUSEUM.—The committee of the Architectural Museum, Canon-row, Westminster, have issued cards for a course of lectures on the Contents of the Museum, on the evenings of Monday, October 13th and 27th, and November 10 and 24th. A subscriber's recommendation is sufficient to secure admission to these lectures, which will be delivered by the Rev. Charles Boutell.

NARROW ESCAPE FROM FIRE AT THE LIVERPOOL AMPHITHEATRE.—A reckless and strange occurrence took place on Friday evening in last week, at the Royal Amphitheatre, Liverpool, during the performance, when the foot-lights suddenly went out, accompanied with a strong smell of gas; and immediately thereafter, a drunken scamp of a carpenter, who had just before been refused employment, was caught in the act of removing a jointed piece of gas-pipe below the stage, which he had just been coolly sawing off, putting out the foot-lights 18 inches above, and causing an escape of a body of gas capable of producing a flame 6 feet high, and certain in a few minutes to have not only been fired and set the stage in flames, but also to have produced an explosion in the midst of a crowded audience! The scoundrel has, of course, been committed for trial. Had fire and explosion occurred before the fortunate discovery was made, here would have been another mysterious case of theatre burning, about which there might have been many speculations, far astray from the true cause.

RAZING WALLS AT KNIGHTSBRIDGE.—At Hammersmith police-court, on 12th instant, Mr. Reeves, police surveyor, attended in support of a summons against the owner of the building called the Life Guardsman public-house, Knightsbridge, to show cause why certain walls should not be pulled down, as they were considered dangerous. This house, which has now been closed for some time, has been repeatedly under the notice of the public from its connection with the Duke of Wellington's stables. The building is shored up, the pathway has been obstructed for months by the piles, and the outside is completely covered with billstickers' broadsides. There appears to be some dispute as to the ownership, and the title cannot be made out to the satisfaction of his Grace to complete his purchases. The owner did not appear, and Mr. Dayman made an order for the walls to be pulled down, which is tantamount to the demolition of the whole building.

DISCOVERY OF A ROMAN VILLA IN SHROPSHIRE.—The remains of a Roman villa have just been found near Linley-hall, in Shropshire, the seat of the ancient border family of More. The site, near upon the boundary line of Wales, is not far distant from the mining district of the parish of Shelve, where numerous traces of the Roman lead mining operations are still visible, and pigs of lead, with the name of the Emperor Hadrian stamped upon them, have been found at no great distance from Linley.

EXHIBITION OF THE BRIGHTON AND SUSSEX SOCIETY OF ARTS.—This second Exhibition is said to be an improvement on that of last year: 116 artists have sent works, amounting in all to 262. Brighton contributes upwards of sixty paintings, the production of twenty-one resident artists. Chichester, Arundel, Hastings, and other Sussex towns have also forwarded contributions.

THE GOLDEN-SQUARE DISTRICT, LONDON.—Will you allow me, through the medium of the *Builder*, to call the attention of the vestry to the "pest-house" in Marshall-street, at the present time, as I hear application is made for a license to carry on the business? One blood-hole, two bullock-pounds, one dung-hole, three slaughter-houses, two cow-houses, one grain-hole, several stables, a tripe-boiling establishment, with large coppers, &c. form one huge "factory" to emit nauseous smells, poisonous vapours, and foul air to the inhabitants of a closely-packed and as closely confined neighbourhood. Notwithstanding the vigilance that has been taken by the sanitary officers, under Dr. Lankaster, these smells, &c. still continue. During the hot weather the door of the tripe-house is left open, to let out the effluvia, which, joined with what proceeds from the grain-hole, and slaughter-houses, &c. makes a delightful relish for the neighbours when they open their windows in the early morning. So confined is this "hot-bed of malaria," that some beasts were this summer in a state of putrefaction before the flesh could get cold, which I am told on authority I can believe, would not have been the case had a proper amount of air, unpolluted, surrounded them. All that is asked of the vestry is, to do justice to the poor who surround this "precious place" by refusing the license, and rooting out the main-spring of dissatisfaction that is so loudly proclaimed by a hardworking and justly complaining people. I had forgotten to state two new gullies were made just above the outlet of the drain in Marshall-street, some twelve months since, to cleanse the main sewer perfectly.—HOPE.

Metropolitan Board of Works.—At the last meeting, on the 12th, the chairman, Mr. Thwaites, said, he had been informed by the engineer that he hoped to bring up his report on the main drainage of the metropolis on the 26th inst.; and as there would be an interval of a fortnight between the present and the next meeting of the Board, he had to ask them, if the report was in a sufficient state of forwardness, that it might be printed, so that it might be placed in the hands of members before the day of meeting. Mr. A. Ware moved, and Major Lyon seconded, a motion "That when the engineer's report was ready, that it be printed," which was put and agreed to. The Chairman then stated that, in consequence of the state of public business, in the first week in October it would be necessary to have three meetings, and for these reasons. They had under their consideration, as most of them were aware, the formation of two new streets, and for one or both of them they might require the authority of Acts of Parliament, and as a great number of preliminaries must be gone through in the service of notices upon the owners of the property, he thought they ought to have as early a meeting as possible to consider this question. Then they might have to meet on the Wednesday to consider the report of their engineer on the main drainage, and there would be the ordinary meeting on Friday. If the consideration of these streets were thrown over for another week, it might possibly prevent them from proceeding for a Bill in Parliament in the next session.

Sewage Deodorisation.—Mr. Manning, from Edinburgh, has been consulted by the Southampton Special Works Committee, on the sewage of the town. Mr. Manning, says the *Hampshire Advertiser*, has two patents for his process of deodorising town sewage, and he asserts his ability to render sewage matters fertilising and remunerative. He has just been to Liverpool for the object which brought him here. His precipitant matter, by which sewage liquid is clarified, is a combination of alum and iron. A large glass jar, filled with liquid sewage from the impounding well on the Marsh, was rendered quite transparent in a few minutes, precipitation commencing in about two minutes from the mixing of the deodorising matter. There are several modes of precipitating and deodorising sewage matter. The question to decide is, which is the best and cheapest?

The Brussels International Congress of Improvement has been sitting during the past week. We shall revert to its proceedings.

Stained Glass for Cambridge.—Two new windows of stained glass are being now exhibited in Munich, which are destined for St. Peter's College, Cambridge. They are 7¾ Parisian feet in breadth, and 13 feet in height, the figures in the windows the size of life; the one relating to the life of St. Peter, the other to that of St. Paul. St. Peter is represented coming out of the Temple accompanied by St. John, whilst on the steps of the holy edifice lies the cripple begging for alms: close to this group is a rich man distributing charity, and a woman with a boy carrying doves as offerings are ascending the steps: the interior of the Temple is illuminated by burning tapers. In the other window, the better work of art of the two, St. Paul delivers his eloquent speech before Felix, the Governor of Cæsarea, and King Agrippa. Paul stands in chains upright, and inspired by the consciousness of right: he is guarded by soldiers: his accusers bow before Festus, who is represented seated on his throne, deeply moved by the stirring words of the bold convert, whilst Agrippa appears to be weighing in his inmost soul these new ideas so unexpectedly set before him. According to the *Literary Gazette*, the composition of both pictures is excellent: they are full of fire and expression, and are clearly and elegantly designed. They will form a very valuable addition to the artistic treasures of Cambridge.

Contracts for Sewerage.—A short time ago the Local Board decided upon adopting the system of contract in the construction of the sewerage of the town. On Thursday last, at a meeting of the Committee of General Purposes, the first portion of the work for which tenders were invited was let. It was for Pole-street and Park-road. Mr. Wrigg estimated the expense for Pole-street at 378*l.* 13s. and for Park-road, 377*l.* 7s. 6d. The following tenders were received:—

	Pole-street.	Park-road.
Jas. Richards, Adelphi-street	£135 5 0	£207 3 0
Cooper and Tullis, Orchard	261 0 0	264 0 0
D. Stevenson, Ely-street	248 0 0	285 0 0
W. Laxton, Hopwood-street	297 2 6½	291 9 2½
T. Saville, Chorley	291 0 0	332 0 0
J. Armstead, Hudson-street	510 0 0	555 0 0

On the tenders being opened, Mr. Richards was informed that he was the lowest, but it appeared that he had not included the providing of the pipes and flush-boxes. His tender was therefore incomplete. Messrs. Cooper and Tullis were then declared the contractors.—*Preston Chronicle.*

Improvements at Kingston-upon-Thames.—The "Corporation Slip" has been converted into a river walk, by the accumulation of refuse, mould, &c. on the river bank, by "the poplars," for the last few years, and other means, suggested and promoted by Mr. Gould, the late mayor, by whose exertions subscriptions were obtained, contracts entered into, and at length the new road formally opened by her Majesty at the end of last month, as the "Queen's-parade," at a cost of 670*l.* leaving a balance in hand. A design for a fountain also has been prepared by Mr. W. P. Griffith, to be erected on the aqueduct, at the cost of the subscribers, by permission of Sir Benjamin Hall. The corporation of Kingston, instead of a money contribution, have resolved to construct a wharf 150 feet long at the Rampier, and subsequently from the Anglers'-corner, towards Harris's Slate-works, instead.

A Suggestion for the Builder.—Mr. Bessemer has invented a process by which iron will be greatly increased and cheapened. His plan is to make the crude metal the solvent of its own impurities, and thus incalculably diminish the cost and labour of its manufacture. One of Mr Bessemer's atmospheric furnaces, it is asserted, will melt in half an hour as much metal as fifty puddling furnaces in two hours; so that, by its adoption, "the cooling and watching of forty-nine furnaces, the labour of nearly 100 hours, is dispensed with." To what uses is all the additional iron that may now be produced to be applied? To gun making, say those of a warlike tendency. To the railway and the steam-ship, says the pacific *Evening Star*. And not only to these two great engines of peace and goodwill, but to house-building and articles of domestic use and household furniture:—"Why should not tables and chairs be manufactured of a material at once so enduring, so cleanly, and so capable of ornamentation? These qualities especially point it out for use in a capacity hitherto unaccountably overlooked. We have often considered why builders, &c. should not fit up their houses with the principal articles of furniture—beds, tables, chairs, &c. leaving the tenant to dress and cushion them at his pleasure. How great would be the convenience is known only to those who have had occasion to move household stuffs up and down the country."—*Fife Herald.*

Recovery of Submerged Property.—A scheme, said to be based upon scientific principles, is about to be resorted to, with the view of regaining sunken ships, with other extensive property submerged, as along our own coasts. The apparatus is the patented invention of Captain Stephen Randoll Smith, who has entered into an arrangement with the Sunken Vessels Recovery Company, lately formed under the Limited Liability Act, for the carrying out of his plans. The apparatus requires a steam-tug and two large flat-bottomed ships, peculiarly constructed with regard to buoyancy and calibre. They are to contain machinery capable of giving a lifting power of 1,360 tons of submerged matter.

Iron Staircase.—A very large iron staircase has just been cast by Messrs. Cottam and Hallen, the extensive ironfounders in London, for the "go-downs," or warehouses, of Messrs. George and Frederick Hogg, merchants, of Shanghae, China. It is 30 feet high, and every step has the device of the Shamrock, Thistle, and Rose, gradually widening to the base, some 4 yards wide. It weighs about twelve tons, and cost nearly 650*l.*

London.—Heine, the German poet, speaking of our metropolis, says,—I have seen the greatest wonder which the world can show to the astonished spirit: I have seen it and am still astonished—and still there remains fixed in my memory the stone forest of houses, and amid them the rushing stream of faces of living men with all their motley passions, all their terrible impulses of love, of hunger, and of hatred: I mean London. Send a philosopher to London, but, for your life, no poet! Send a philosopher there, and stand him at the corner of Cheapside, where he will learn more than from all the books of the last Leipsic fair; and as the billows of human life roar around him, so will a sea of new thoughts rise before him, and the Eternal Spirit which moves upon the face of the waters will breathe upon him; the most hidden secrets of social harmony will be suddenly revealed to him; he will hear the pulse of the world beat audibly, and see it visibly—for, if London is the right hand of the world—its active mighty right hand—then we may regard the route which leads from the exchange to Downing-street as the world's pyloric artery. But never send a poet to London! This downright earnestness of all things, this colossal uniformity, this machine-like movement, this troubled spirit in pleasure itself, this exaggerated London, smothers the imagination and rends the heart. And should you ever send a German poet thither—a dreamer, who stares at everything, even a ragged beggar-woman, or the shining wares of a gold-smith's shop—why, then, at least, he will find things going right badly with him.

A New York Hotel.—The proprietors of the St. Nicholas Hotel have published a description of their immense establishment, from which we quote a few statistics:—The St. Nicholas has a front of 275 feet on Broadway, and a depth of 200 feet, thus covering an area of one acre and three-quarters in the most valuable part of the city. The building cost 1,200,000 dollars, and the entire cost of building, furniture, &c. was 1,900,000. The area of the front wall, which is of marble, is 18,000 feet. The building will accommodate 900 guests, and has frequently contained over a thousand. It was completely finished on the 1st March, 1844. The number of rooms in the house is six hundred, all well lighted, and provided with hot and cold water. These include one hundred complete suites of rooms, with baths, water-closets, &c. attached. The three largest dining-rooms in the house aggregate 9,000 superficial feet, and can accommodate six hundred guests. The cost of the mirrors distributed about the house was 40 000 dollars, and of the silver ware and plate, 50,000 dollars. The proprietors are Messrs. J. P. Treadwell, J. P. Acker, Peter Acker, and Virgil Whitcomb. The number of servants averages during the year about three hundred and twenty. The hours for meals range through nearly the whole twenty-four, excepting from midnight to five a'clock, a.m. There is a regularly organized fire department in the building, with steam-power for forcing water to any portion of it. Eighteen plugs, with 200 feet of hose to each, enable the engineers to flood the building in six minutes from the time the alarm is sounded. The house consumes 18,000 to 30,000 feet of gas nightly, from 2,500 burners. The gas is made on the premises. The laundry employs seventy-five laundresses, and can wash and iron 6,000 pieces per day. Steam is the great agent in this process, and is extensively used in the St. Nicholas for boiling, washing, mangling, drying, turning spits, heating water, &c. We are happy to learn that the talent and enterprise, as well as capital invested in this magnificent hotel, are being liberally rewarded. The proprietors are making both money and reputation.—*New York Mirror.*

Caution to Engineers and Machinists.—There is a clique of foreigners now in England going round the metropolis and some of our larger manufacturing provincial towns obtaining measurements and patterns of our machinery and other manufactured articles, for the purpose of transplanting the inventions and getting them patented in their own countries. They come chiefly from France, many from Belgium and Germany, but a larger portion from Russia.—Spy.

Liverpool Academy.—The annual exhibition of this Academy is now open. The number of pictures is 865, a proportion of which are by Liverpool and Manchester artists.

The Iron Duke's Monument. — Seeing that Sir Benjamin Hall intends this monument to be open to competition to the sculptors of England, why might not the material of the testimonial be formed of iron manufactured by the new process of Mr. Bessemer. Surely the advent of this great chemical discovery in the manipulation of iron of the present time, the dawn of the latter half of the nineteenth century, is worthy of perpetuating the glorious events of the first half of the nineteenth century. Then the above would commemorate the glorious advance of science, while delineating the victorious career of the deceased warrior; and not only might the present generation remember and venerate the household name of the Iron Duke, but the men of the future will also venerate the hero of war who was likewise a hero of peace, and shall say of us when we have passed away, that we still speak to them in the true spirit of symbolism; that our fathers were men of an iron age—men who scattered to the winds the tales of the middle ages, about the Satanic agency and power of the Prince of Darkness in the manufacture of the iron hinges of the doors of Notre Dame, at Paris; and that there were men in their own land, and of their nation, who could invent, design, adapt, and manufacture a work of art from the materials of their own island, in the spirit of the age in which they lived.

An Art-Workman.

TENDERS

For the chapels and lodge of the Basingstoke Cemetery. Messrs. Poulton and Woodman, architects.

BELSIZE-PARK, HAMPSTEAD.—A portion of this PARK WILL BE LET, on building leases to respectable builders. There are trees on the ground, and the roads and sewers are completed. Money, if required, can be advanced on mortgage.—Apply to Mr. WILLIAM THOMPSON, Architect, 3, Conduit-street West, Westbourne-terrace.

LARGE PLOT of GROUND, near the Angel, at Islington, TO BE LET, on lease, with stable and other buildings suitable for a workshop and residence.—For particulars apply by letter to Mr. LAING, Architect, 72, Regent-street

TO BUILDERS, CONTRACTORS, and OTHERS.—TO BE LET, on lease, for a long term, several PLOTS of FREEHOLD GROUND, well suited for manufactories, warehouses, or other building purposes. The property is within three miles from London. Land-tax redeemed and tithe-free.—Apply to Mr. W. H. DEAN, Surveyor, Stratford; or to Mr. GEORGE POWNALL, Surveyor, 3, Bloomsbury-square, London.

TO BE LET, on Lease, or TO BE SOLD, at a ground-rent, a capital FAMILY MANSION, within five miles of London and half-a-mile of a railway station, commanding an extensive view of Sydenham, Norwood, Streatham, the beautiful surrounding country, and the Crystal Palace. The house stands on a gravelly soil, in a large garden, with forecourt and carriage-drive, double coach-house, three-stalled stable, several rooms and loft over, and contains on the upper floor seven good sleeping apartments; on the first-floor, four excellent bed chambers, a dressing-room, and a bath-room; on the principal floor, a capital, well-proportioned, drawing-room, an excellent dining-room and study, good inner and outer halls; on the basement, a well arranged kitchen, housekeeper's-room, butler's pantry, strong room, and every domestic accommodation.—Plans may be seen, and particulars and cards to view obtained, at Messrs. ROBINSON and ROBSON'S, Upholders, &c. 28, Margaret-street, Cavendish-square.

THE PLANS of the HOLLOWAY ESTATE are now completed, and may be obtained on application at the Office; and the ALLOTMENT will commence on OCTOBER 13th, 1856.—BIRKBECK FREEHOLD LAND SOCIETY. Chief Office—London Mechanics' Institution, Southampton-buildings, Chancery-lane.

A PUBLIC MEETING will be held at the Angel Inn, Islington, on WEDNESDAY, SEPTEMBER 24th, 1856, at which a Ballot for thirty rights of choice on the Holloway Estate will take place. The chair to be taken at EIGHT p.m. precisely. All shares issued at or before the meeting will be entitled to participate in the ballot. Shares issued and members enrolled daily.
FRANCIS RAVENSCROFT, Manager.

TO BE LET or SOLD, several new substantial EIGHT-ROOMED HOUSES, well-finished, in a healthy neighbourhood, situate at Kentish-town, with a fine view of Highgate and Hampstead.—For full particulars apply at the Builder's, 21, Wilks-road North, Kentish town.

TO ENGINEERS, MANUFACTURERS, WHARFINGERS, and OTHERS.—TO BE LET, on Building Lease for 99 years, a large WATERSIDE FRONTAGE for building factories, wharfs, &c. with every accommodation by water and land carriage, within two miles from London-bridge.—For further particulars apply to WILLIAM RUSSELL, Ploughroad Rotherhithe.

TO ENGINEERS, BOILER-MAKERS, and OTHERS.—TO BE DISPOSED OF, the STOCK and PLANT of an ENGINEER and IRON-FOUNDER, situate in a large seaport town in the south of England. The premises are spacious and well arranged, with great facilities for land and water carriage. The plant now at work is capable of employing upwards of fifty hands. As the tools are all in good order, and the business is well established, this is a favourable opportunity for an enterprising person with a moderate capital.—Letters to be addressed to D. TAYLOR, Esq Kennington-park, Surrey.

TO PLUMBERS, PAINTERS, and BUILDERS.—TO BE DISPOSED OF, an old established BUSINESS, at the West-end of London, in the above line. This presents a very eligible opportunity to any person desirous of commencing business with a limited capital.—Particulars may be obtained (confidentially) by principals only, on application to Mr. CHAS. BRADLEY, Surveyor, 34, Nottingham-street, St. Marylebone.

BUILDER'S BUSINESS TO BE SOLD.—This is an excellent jobbing business, established above thirty years, and sold in consequence of the proprietor retiring from the business. Comprising stock, implements, goodwill, &c. &c. 600l.; rent of premises, 35l.—For particulars apply to Mr. C. BROWN, House and Estate Agent, West Croft place, Hammersmith

MAHOGANY and WAINSCOT seasoned by Szmuszton's New Patent Process.—JOHN COUMBE solicits an inspection of his stock. The above process enabling him to season his wood in a comparatively short space of time, he sells at prices generally charged for wet wood.—Address PATENT WOOD SEASONING WORKS, Lady Lake's grove, Mile-end-gate

FURTHER REDUCTION of PRICES.—SAMUEL PUTNEY has much pleasure in informing his numerous friends that he has made a further reduction in the price of Pine Planks, &c. and respectfully solicits an inspection of his large and well-selected stock of Pine Planks, &c.

Pine Planks, 12 feet by 3 in. by 11 in. from	£21 0 per 120.
Yellow Battens, from.....	11 10 "
Yellow Deals, from.....	20 0 "
Spruce Deals, from.....	18 0 "

Prepared Flooring, &c. equally low. A list of prices forwarded on receipt of a postage stamp.—N.B. All sawn goods delivered within two miles free of carriage.—Borough road, Southwark, and Elm-street, Gray's-inn lane.

FLOOR BOARDS, &c.—R. SLADE begs to inform Builders and the Trade, that he has now on hand a large assortment of FLOORING and MATCHED BOARDING, from 1 inch to 4½ inches thick, seasoned, and ready for use; also, Mahogany, Moulding, Wainscot, and all kinds of Timber required for Building purposes.—Address, R. SLADE (late E. Simms', Flooring Manufactory, Wilton-road, Pimlico.

ALFRED ROSLING begs to inform his Customers and the Building Trade generally, that he is enabled to allow a discount of 15 per cent. upon his list prices for Mouldings.—A large stock of dry floorins at low prices.—Southwark-bridge Wharf, Bankside.

MACHINE CARVING WORKS (Patent). Ecclesiastical and every other description of CARVING. A magnificent Gothic Screen, Carved Glass Frame, and other specimens. Tables, Chairs, Lecterns, &c. Designs and estimates at the Works, Belvedere-road, Lambeth, foot of Hungerford-bridge.

AMERICAN MACHINERY.—L. D. OWEN and CO. Importers, have on hand at 187, Tottenham court-road, London, Wood-Working Machinery, manufactured by Messrs. Buck and Co. consisting in part of Planing, Tenoning, Morticing, Moulding, and Sawing Machines, of the best structure, which they offer at prices which cannot fail to suit.
N.B. Machinery of the kind now established. Messrs. Buck and Co. may be seen in operation at the Royal Arsenal, Woolwich.

ANOTHER GREAT REDUCTION.—Yellow Deals, 3s. 3d.; Pine Plank, 3s. 6d.; Spruce Deals, 3s.; Mahogany, 6d.; 2¾ Yellow Battens, 12 10s.; F. Walnut, 7d. Carriage free in town.—T. FORMAN, 1, Walnut-tree-walk, Lambeth-walk.

EDWARD SIMMS begs to inform Builders and the trade, that he has now on hand at his manufactory (the first of its kind ever established), a large assortment of PREPARED FLOORS and MATCH BOARDING, seasoned and ready for use, from 1-inch to 1¼-inch thick, in White or Yellow Deal, Oak, or Pitch Pine. Also Dry Deals, in all thicknesses, Slating Battens, Pantile Laths, Oak Sills, Plank, and Scantlings. Mouldings in clean Pine, to any design. A pattern list forwarded on application.—Address, E. SIMMS, Flooring Manufactory, and Sawing, Planing, and Moulding Mills, King's-road, Chelsea.

NOTICE of REMOVAL.—EDWARD SIMMS begs to inform his customers and friends that he has REMOVED his business from Wilton-road, Pimlico, to the KING'S-ROAD, CHELSEA, where their orders will be promptly executed as heretofore.—Please address, E. SIMMS, King's-road, Saw mills, Chelsea, opposite Manor-street.

MOULDINGS BY MACHINERY. Capping, Sash-bars, Beads, &c. to any Design, carefully packed and sent to all parts of the Country. A Pattern List sent on application to
E. SIMMS,
SAWING, PLANING, AND MOULDING MILLS,
KING'S-ROAD, CHELSEA.

PATENT SOLID SWISS PARQUETERIE. This beautiful, unique, economical, and elegant description of Flooring, so extensively used in Paris and other continental cities, is now introduced in this country. An extensive assortment of specimens and patterns commencing at 1s. per foot super together with every particular of its cost and adaptation, can be obtained of Messrs. H. P. BURT and CO. 2, Charlotte-row Mansion-House; or of Messrs. ARROWSMITH and CO. 80, New Bond-street.

LETT'S WHARF PATENT SAWING, PLANING, and VENEER KNIFE-CUTTING MILLS, Commercial-road, Lambeth. The Proprietors beg to announce to the Trade that they have completed their extensive arrangements, and will be happy to execute all orders entrusted to their care with despatch and punctuality. Wet and dry docks, and powerful cranes for landing heavy goods, offer facilities not to be obtained elsewhere. A large assortment of seasoned prepared flooring match boarding, &c. &c. always in stock at reduced prices.

ROBINSON and BARTRAM, SAWING and PLANING MILLS, BELVIDERE-ROAD, LAMBETH, and SWAN-STREET, BERMONDSEY, having completed powerful MACHINERY for SAWING TIMBER, for building purposes, will be glad to receive ORDERS in this Department, and beg to assure their friends that all favours shall be executed in the best manner, and with the utmost punctuality and despatch.

ACORN TIMBER WHARF and SAW MILLS,
CANAL, BRIDGE, OLD KENT-ROAD, LONDON.
A Monthly Price Current forwarded on application.
RICHARD MAY, Proprietor

ST. PANCRAS SAWING, PLANING, and MOULDING MILLS, Cambridge-street, Old St. Pancras-road.—GEORGE NOKES and CO invite the attention of Builders and the Trade generally, to their STOCK of DRY FLOORING, at the following prices, for cash:—
½-inch white, 13s. 6d. per square; ¾-inch white, 18s. per square; 1-inch white, 18s. per square; ¼-inch yellow, 15s. per square; ¾-inch yellow, 18s. 6d.; 1-inch yellow, 20s.
Timber, deals, planks, &c. at the lowest remunerative prices. A liberal discount allowed on mouldings for exportation. Book of designs forwarded on application.

STAINING DEAL TO IMITATE ALL KINDS of WOODS. It requires NO SIZING, and will stand the exposure to the weather. Price 6s. per gallon. Varnishes for W. NAYLOR'S Stains may be had at the Factory, 44, James-street, Oxford-street; also Manufacturer of Improved Knotting and Decorative Varnishes.

GRAINING by MACHINERY.—The present system of graining is far surpassed by the use of BELLAMY'S PATENT GRAINING MACHINES, by which an ordinary workman can produce first-class work, and at an immense saving of time. The designs are perfect imitations of the choicest specimens of fancy woods and patterns of the first artists.
The Patent Graining Company are now prepared with a large and well-assorted stock of instruments, which they offer to grainers, painters, builders, and others without royalty.
Grained paper in imitation of all kinds of fancy woods of the choicest descriptions, in the piece, or in sets for panels, &c. wholesale and for exportation. Pattern-boards and cards for the trade in great variety
Painters, Grainers, Decorators, Merchants, and others are respectfully invited to inspect the patterns, and see the process at the Company's Offices, 30, Minories, London.

TO FRENCH POLISHERS, CABINET-MAKERS, BRASS-WORKERS, &c.—A considerable reduction has taken place in the prices of French polish, white and brown hard spirit varnishes, paint lackers, and finishing spirit. The present price is 6s. to 8s. 6d. per gallon; white French polish, 10s. per gallon; white shellac, 1s. 8d. per lb.; gums, shellac, and sold at the lowest prices. A net cash list forwarded on application to JAMES SLIPPER, 87, Leather-lane; and 14 and 15, Dorrington-street, Holborn, London.

TO BUILDERS, HOUSE-PAINTERS, and CONSUMERS of PAINT.—The GRAFTON MINERAL PAINT.—This is the most durable paint hitherto known. It has been used during the last four years in the United States with great success. It is there admired to be unrivalled. After it has been applied to wood, and exposed to the weather a few months, it becomes as durable as stone. Wherever it is applied, neither rain nor tea-water can penetrate. The colour of the Grafton Paint is a reddish brown, but a variety of durable colours may be made by mixing it with other paints. In proportion to the quantity of any other paint mixed with it, will be the loss of its own peculiar properties. It may, however, be mixed advantageously with an equal quantity. The colour produced by this mixture will be far more durable than that of other paint. It is used on buildings of wood or brick, on iron bridges, iron railings, gasometers, and iron-work in general. Also, on fences, gates, waggons, railway-trucks, &c. For priming under any paint it is unequalled, 25 lbs. of this paint will cover 100 square yards of brickwork, or 170 of wood or iron. The Grafton Paint being finely ground does not require to be ground again. It is easily spread out, and does not emit any unhealthy effluvium
TESTIMONIAL.
"I have analyzed the Grafton Mineral Paint, and find it to consist of silica, alumina, and peroxide of iron. These inde-tructible ingredients are in such a state of chemical combination that they are unaffected by heat, cold, rain, or sea-water.
"WM. BASTICK, Analytical Chemist,
"2, Brook street, Grosvenor-square, London."
Sold by LIVETT, FRANK, and SON, Oil-Merchants, 14, Borough, London-bridge; of whom may be had testimonials in its favour, and also directions for use.
Price 20s. per cwt.
Sole Consignee for the United Kingdom,
JOHN EIVLS, 61, King William-street, City.

WOLSTON'S TORBAY IRON-PAINTS, warranted to stand the action of the Atmosphere, Steam, Gases, Noxious Vapours, Damps, and Salt Water; also intense heat without blistering. These Paints have been tested for five years in Her Majesty's Dockyards, and two Official Reports made thereon, which testify that 6lbs. of Wolston's Torbay Iron-Paint will effectually cover as much surface as 112lbs. of either White or Red Lead, and that they resist atmospheric action better than Lead Paints. For all Public Works, Galvanized and other Iron Roofing, Fencing, Shipping purposes (Wood or Iron), Stucco and Cement fronts, economy and durability will be secured. To Builders and Painters, for all painting purposes, the saving will be immense. Manufactured at the TORBAY IRON-PAINT and ORE WORKS, Brixham, Devon; London Depôt, Chamberlain's Wharf. Letters or orders addressed to Mr. WOLSTON, at the Works, or No. 34, John-street, Bedford-row, will have immediate attention.

KENT'S PAINTING-BRUSHES are of the very best quality, and may be obtained at all the first houses in the trade, and of the manufacturers, G. B. KENT and CO 11, Great Marlborough-street, London. Established 1777.
N.B. Kent's Painting Brushes are all stamped G. B. KENT & CO.
Price Lists forwarded by post.

WINDOW BLINDS.—FULLER BROTHERS, Manufacturers of every kind of Inside and Outside WINDOW BLINDS, warranted of the best materials and workmanship, at the lowest possible prices. Builders and the Trade supplied. A List forwarded on application. 29, Charlotte-street, Blackfriars-road; and at Sydney, New South Wales.

WINDOW BLINDS.—TYLOR & PACE, Window Blind Manufacturers, 104, New Bond street, and 3, Queen-street, Cheapside, London, submit the following PRICES of WINDOW BLINDS, which they can recommend as being made in the best manner:—Venetian blinds, per square foot, 9d.; best holland blinds, on rollers, 6d.; best ditto, on spring rollers, 9d.; gauze wire blinds, in mahogany frames, 2s.; perforated zinc blinds, in ditto, 1s. 10d.; outside blinds of striped cloth, 2s. Transparent blinds in great variety. Engravings, with prices and discounts to builders and the trade, forwarded on application post free.

A FIXED ALLOWANCE OF at PER WEEK
in case of Injury by
ACCIDENT of any DESCRIPTION,
or the Sum of

Forms of proposal, prospectuses, &c. may be had of the agents, of the clerks at all the principal railway stations, and at the head office, London, where also
RAILWAY ACCIDENTS ALONE
may be insured against by the journey or by the year as heretofore.
Railway Passengers' Insurance Company, empowered by Special Act of Parliament.
WILLIAM J. VIAN, Secretary
Offices, 3, Old Broad-street, London.

ELMLEY CEMENT WORKS.—ROMAN and PORTLAND CEMENT of the first quality, manufactured on the above works. Also STOCK and KILN-BURNT BRICKS, hand moulded and machine made, for shipment or otherwise.—Apply to G. BOOTH, Agent, as above.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring.—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS Millbank-street, Westminster; and Seel-street, Liverpool.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Accounts of COMPARATIVE EXPERIMENTS on the strength of this and other Cements (read at the Institute of Civil Engineers), to be obtained from the Makers, JOHN BAZLEY WHITE, and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

BATH, PORTLAND, and ROMAN CEMENTS.—The London and West of England Cement Company can offer to the Trade the best natural HYDRAULIC CEMENTS at reduced prices. The Company particularly recommend the best quality of their Bath Cement for all modelling cornices, decorations, &c. as having all the qualities requisite for an interior cement, and being quite unaffected by extremes of weather. The Company also supply BLUE LIAS LIME, lump and ground, which will carry more sand than any in the market.—Communications to be addressed to the General Offices, 80, Old Broad-street, London; to Mr. MONUMENT, 4, Caroline-place, City-road; to Mr. TIMEWELL, the Depôt, 9, North Wharf-road, Paddington; or to the Works, Dunball, Bridgewater.

SOUTHAM BLUE LIAS LIME DEPOT.
Glazed Stoneware Sewage Pipes.
Brick, Lime, and Cement Merchants,
TATHAM and CO.
14, South Wharf, Paddington.

PARIAN CEMENT, reduced in price 25 per cent. This article is valuable for inside stucco, and especially for skirtings, for flooring on brick arches, &c. It takes paint in a few hours after its application on walls or laths, is without efflorescence, and may be papered in a couple of days. A finer quality forms a beautiful Scagliola, with any admixture of colours.—Manufactured by FRANCIS, BROTHERS, Cement Works, Nine-elms, London.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 8, Upper Thames-street, London; and also at the manufactory, Faversham, Kent.—N.B. These Cements supplied for shipment, on advantageous terms.

THE PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. to WHOM THE PRIZE MEDAL WAS AWARDED in 1851, are prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes to which Cement is applicable. Orders received at Great Scotland-yard and at the Works.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland Cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brickwork, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

PORTLAND and ROMAN CEMENTS.—T. H. BOORMAN, WILD, and CO. MEDWAY LIME and CEMENT WORKS, LOWER HALLING, near Rochester. Agent at the Works Mr. THOMAS WEEKES.
Agents in London, Messrs. GEORGE POTTER and CO, Lime-merchants, Purfleet wharf, Earl-street, Blackfriars, and No. 19, North-wharf-road, Paddington.

PORTLAND and BATH CEMENTS.
TATHAM and CO.
14, South Wharf, Paddington.

PORTLAND and BATH CEMENT.—FULLWOOD THOMPSON and CO. request the attention of Merchants and Contractors to the quality of their Portland and Bath Cement, which they manufacture on an improved system, securing regularity of strength and colour, and at a less cost than is attainable by most other makers.
These cements set under water in a few minutes, and are not affected by extreme heat or cold.
FULLWOOD THOMPSON & CO. will be happy to send prices and samples in reply to application by post. They deliver free into the Bristol and Exeter Railway Company's trucks at their works, or free on board in the Port of Bridgewater.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light, Dark, and Portland Cements equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Laths, Stucco, &c. Marble Merchants and Importers of Pozzolano.

JOHNS and CO.'s PATENT PERMANENT STUCCO WASH (perfectly non-absorbent). STUCCO CEMENT, STUCCO PAINT.—CLARK and BENGOUGH, Manufacturers, Grand Surrey Canal Bridge, Old Kent-road. Offices, 4, George-yard, Lombard-street.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Millwall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl-street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

PORTLAND and ROMAN CEMENT.
PLASTER of PARIS
Manufactured by J. B. BLYTH, at Millwall, Isle of Dogs, Warehouse, No. 1, Wharf, Paddington-basin.

BLUE LIAS LIME.—CHAS. NELSON begs to offer to consumers a supply of Blue Lias Lime direct from his Quarries in Warwickshire, the quality of which has been tested by several of the largest building firms in the metropolis and approved by them; and those who have favoured C. N. with their patronage during the last three years have always expressed themselves satisfied with his system of weighing or measuring the lime. When the lime is delivered by boat, the master has instructions to produce (on demand) the canal gauger's pass, by which the purchaser may know the exact weight delivered.—Orders addressed to the London Depôt, 19, South Wharf, Paddington, J. B. BLYTH, Sole Agent, will have immediate attention.—Quarries and Manufactories, Stockton, near Southam, Warwickshire.

HUBBUCK'S PATENT WHITE ZINC PAINT,
The Permanent White of the Ancient Artist.
HUBBUCK and SON, the Original Manufacturers, are enabled, by their process, which is patented, to supply Pure White Zinc Paint at the price of White Lead. Neither heat nor tropical climes act upon it. It is entirely free from any poisonous or pernicious property. Those direful maladies, paralysis and painters' colic, will be altogether avoided. The fearful White Zinc may be had for grinding in Oil, and where it is used with Size, Varnish, &c. To prevent the prejudice against Zinc paint, which the adulterated article must otherwise produce, it is now sold by the Wholesale Paint-dealers in Original Packages, each cask stamped, HUBBUCK—LONDON PATENT. And when so marked, the quality is guaranteed. THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers, Paint and Varnish Works opposite the London Docks, London.
N.B. OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT FOR REFINING.

GREY STONE LIME WHARFS,
12, UPPER GROUND-STREET, Blackfriars (Surrey side),
7, NORTH WHARF ROAD, Paddington.
WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME in any quantities from the above wharfs, or per barge direct from the kilns.
Large Grey Stone, or Grey Chalk, free on board at Works, 1s. 9d. per ton.
Small ditto, ditto, 6d. per ton.
Barges loaded in a few minutes.
Wouldham-hall Grey Stone Lime Works, on the Medway, near Rochester.

CHARLES RICHARDSON,
3 & 6, SOUTH-WHARF, PADDINGTON BASIN.
COWLEY AND KENT BRICKS.
PORTLAND, ROMAN, AND OTHER CEMENTS,
TAMWORTH GLAZED SEWAGE PIPES
BLUE VITRIFIED BRICKS, COPINGS, PIPES, &c.

3 & 6 South Wharf, Paddington.
NOTICE.
CHARLES RICHARDSON takes the earliest opportunity of informing Engineers, Architects, Contractors, and others, that he is now burning GREAVES'S BLUE LIAS LIME per the Great western Railway from Harbury to Bull's bridge and Paddington, from whence it can be delivered alongside any part of the river Thames, canals, or railway stations in London the day after it is burnt and ground, in any quantity, and at a great reduction in price.
All applications for prices and terms will meet with prompt attention.
N.B. Please observe the lime is ground at the works, not in London.

NOTICE.
SOUTHAM HYDRAULIC BLUE LIAS LIME.
WILLIAM OLDHAM begs to inform those parties requiring genuine Hydraulic Blue Lias Lime, that he is prepared to deliver the best quality of ground and lump, into boats, at the Works.—Address, WILLIAM OLDHAM, Blue Lias Lime and Cement Works, Southam.

BLUE LIAS LIME.—Messrs. GREAVES and KIRSHAW having completed their Works on the Birmingham and Oxford Line of the Great Western Railway, at Harbury, are now prepared to supply LUMP and GROUND LIME of the best quality, direct from the kilns, to all the Stations on the Great Western Railway.—Greaves's Blue Lias Lime.—Portland, Bath, and Lias Cement. Works at Harbury, Stockton, and Wilmcote.—Office, at Warwick.

GREAT REDUCTION in BLUE LIAS LIME.—To BUILDERS.—CARR'S FOUNDATION LIME can now be had at 3s. 10d. per quarter, delivered at the Paddington Station.—Address, Mr. ISAAC CARR, Twerton, near Bath.

THE BEST HERTFORDSHIRE MALM SECONDS;
THE BEST WHITE SUFFOLK and RED FACINGS:
WHITE SUFFOLK PERFORATED BRICKS;
DEEP RED RUBBING BRICK.
Also COWLEY and KENT STOCKS, in any quantities.
J. EASTWOOD and SONS, Belvidere-road, Lambeth; and Surrey-canal-bridge, Old Kent-road, Surrey.

BRICK-FIELDS, QUEEN'S-ROAD, PECKHAM, SURREY
(Within a short distance of the five bridges).
THE BEST MALM-CUTTERS, SECONDS, PICKINGS, and PAVIORS, in any quantity.
Also, STOCKS, of FIRST QUALITY.
J. EASTWOOD and SONS, Belvidere-road, Lambeth.

BRICKS of all kinds (clamp-burnt or kiln-burnt), Lime, Chalk, Chalk Rubbish for brick-making, Flints for building and pottery work, Foundry Loam, Writing, Whiting Sand for sahphate, Land Drain Pipes, Patent Drain Pipes, Gas Soil for brick-making, &c. &c. Sent by carts from Messrs. MEESON and CO.'S works at Grays, Essex, to any part of the Thames, the various canals, the river Lea, &c. or by rail to any station on the London and Southend and Eastern Counties lines, or any railway connected with them. Vessels of 500 to 600 tons can load alongside the wharves at Grays. At MEESON and CO.'S wharf and kilns, Bow-bridge, Stratford, Essex, the above-named articles can also be procured, as well as all kinds of fire goods both Welsh and Newcastle, Fire-clay, Fire-bricks, Lime, and Marble and Temper Lime; and here lime is packed in hogsheads, casks, jars, &c. for exportation.
General Office—No. 12, GEORGE-YARD, LOMBARD-STREET.
Letters addressed to Grays Essex, will meet with immediate attention.

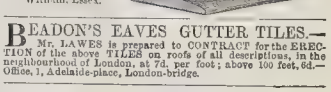
BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at R. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.
Malm Place, half washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.
Apply to HENRY DODD and Co. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.
N.B. Lighterage or Pitching Hand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

BRICKS.—Mr. Rydon having made more bricks than he requires for the builders on his estate, Hinbury New-park, would be willing to enter into engagements with builders and others for supplying first class STOCK and RED BRICKS upon advantageous terms.—For particulars, apply at the Estate Office, Delf's Farm, 58, Kingsland-road, Kingston Green.

ROUPELL-PARK BRICKFIELDS, LOWER NORWOOD, SURREY, near the Crystal Palace.
Entrance, Norwood end, Palace-road.—BRICKS of the first class Red Kiln, Malm, Cutters, Pressings, Facings, and Paviors. Clamped ditto, Yellow and Pale, Seconds, Paviors and Pickings, Washed Stocks, Stocks, and Place.—Apply to TRUMAN and Co. Norwood Lodge, Palace-road, Roupell park, Lower Norwood, Surrey.

GRAVEL.—WANTED, to PURCHASE, about 200 loads of good Lime GRAVEL, for roads.—Apply to Mr. WELCHMAN, No. 23, Rutland-gate, Hyde-park.

IMPROVED AIR-BRICKS.



WILLIAM GILBERT, Manufacturer of all kinds and colours of Tiles, Quarries, Drain-pipes, Moulded Bricks, Brackets, Vases, Chimney-pots, Stoneware Glazed Sewerage Pipes, Ornamental Quoin Blocks, &c.
Tivdale, Staffordshire.

THE PATENT BRICK MACHINE COMPANY invite orders for their IMPROVED MACHINES. One of them is working in a field at Caterham, near Croydon, and arrangements are made with the owner for bearers of a letter from the Secretary, to see it in operation every Thursday and Friday. It is the most simple machine invented. Trains from London-bridge to Warlingham (close to the field), leave at 6 and 9.30 a.m. and 3 p.m.; return at 9.55 a.m. and 2.5 and 7.35 p.m.
HENRY C. MOUNT, Sec.
37, King William-street, City.

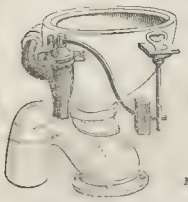
HOGG'S GARDEN EDGE TILES: a cheap, elegant, and durable substitute for Box Edging.
13s. per Hundred, or
4d. per yard.
Exhibited at Court of Inventions, Crystal Palace; and at the Office of "The Builder."
Full particulars from Mr. R. BLACKETT, Witham, Essex.

BEADON'S EAVES GUTTER TILES.—Mr. LAWES is prepared to CONTRACT for the ERECTION of the above TILES on roofs of all descriptions, in the neighbourhood of London, at 7d. per foot; above 100 feet, 6d.—Office, 1, Adelaide-place, London-bridge.

BEADON'S PATENT IMPERISHABLE GUTTER-TILES,
For Spouting Roofs of Houses (either old or new, whether of thatch, slate, or tile), and other structures.
SOLE AGENT,
J. B. LAWES, 1, Adelaide-place, London-bridge.
This is the cheapest kind of spouting known; for, besides its lower cost, it will last without paint or repair as long as the building itself. It will bear the weight of any ladder; and in case of accident a labourer can repair it. It occupies the room of a large amount of roofing, effecting a great saving in slates, tiles, &c. It is especially applicable to the backs of houses in town, cottages, and agricultural buildings.
Price 4d. each tile of about 13 inches long; stop-ends and outlets, 6d. Any mason can put them up, or, if over 100 feet are required, a man will be sent to fix them at 5d. per foot. This charge to include tiles (delivered in Agent's yard), cement, and labour. May be had in London, Gloster, Bridgwater, and Rugby.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21, WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and, thirdly, that the "REPORTS OF THE JURIES," page 881, of the Great Exhibition, rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world

PANTILES, PAVINGS, &c.—J. H. ANDREWS, Wisbench, Cambridgeshire, begs to offer pantiles at 60s. per 1,000; floor bricks and 6-inch pavings, at 37s 6d. per 1,000; 8-inch pavings, at 57s. 6d. per 1,000; plain tiles, at 35s. per 1,000 delivered. Cash prices.—Delivered on trucks in London or Eastern Counties Railway.



IMMEDIATE CASH ADVANCES.—Money Lent on Personal Security, Leases, &c. Sums from 10l. to 300l. advanced two or three days after application, for two years, one year, or six months, repayable by weekly, monthly, or quarterly instalments; and good bills discounted. Charges moderate, and strict confidence observed. London and Provincial Loan Company, private office, 69, Goswell-road, London. Open daily from Nine till Six, thus avoiding inconvenience or publicity.—Form of application and prospectus, gratis, on receipt of stamped envelope.

MONEY WANTED.—The Council of Hastings, acting as the Local Board of Health, for the District of Hastings, in the said borough, are desirous of borrowing, under the powers of the Public Health Act, 1848, the sum of 4,000l. or to that amount, in sums not less than 50l. The said several sums may be repaid by annual instalments of principal and interest, within the period of thirty years; or they may be repaid within such period, subject to special arrangement, by means of sinking fund. Any parties desirous of lending the full sum, or any part thereof, are requested to communicate their terms for interest, &c. address d to the Town Clerk, Hastings.
Hastings, July 9, 1856.

PAPER HANGINGS! PAPER HANGINGS!! PAPER HANGINGS!!!—Builders, the Trade, Country Dealers, and others, will find at immense STOCK and endless variety of all classes of PAPER HANGINGS, at W. CROSSE'S MANUFACTORY, 29, Bowling Arcade, Charing-cross, London. Splendid new designs, both in machine and block printing, not to be surpassed by any house in England. DURABILITY of GUTTA PERCHA TUBING. Many inquiries have been made as to the durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter:—FROM MESSRS. RAYMOND and JARVIS, Bath, VENNER'S HOUSE, ISLE OF WIGHT. Second Post-mark, 7th March, 1854.—In reply to your letter, received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state, with much satisfaction, it answers correctly. Many Builders, and other persons, who merely examined it, and there is not the least apparent difference since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."

N.B. From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

THE GUTTA PERCHA COMPANY, PATENTEES, 18, WHARF-ROAD, CITY-ROAD, LONDON.

M. BLASHFIELD, in Patent imperishable Terra-Cotta, at Mill wall, Isle of Dogs; and sold at No. 1, Wharf, Fitzroy-street, Pentonville-road.

SALT-GLAZED STONEWARE, FIRE-CLAY, AND TERRA-COTTA WORKS,

NEAR BARNSLEY, YORKSHIRE.

The Proprietor, E. B. BEAUMONT, manufactures every description of STONEWARE for drainage, building, sanitary purposes, and fancy ware, from clays which have been subjected to the most searching analyses, and proved to be of the most tenacious and indissoluble qualities. The pipes are wrought by Spencer's Patent Machine, by which tube and socket are cast, without a manipulated joint, and rendered the most compact by hydraulic pressure; and as every improved apparatus has been made available to secure the highest excellence with great economy of labour, the goods are put upon the market at a considerable reduction from the prices charged for others at all assimilating in quality, whilst the stock on hand is always sufficiently large to provide for works of the greatest magnitude. THE TRADE LIBERALLY TREATED WITH.

Price lists and diagrams sent free on account on—
At the WORKS .....To Mr. WM. FORD, Darfield Fire-clay Pottery, near Barnsley.

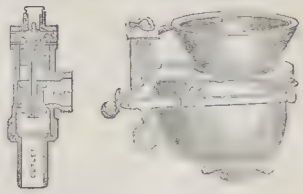
The new lists of prices will be forwarded on application as above. 28, 11 1856

WATER-CLOSET, WITH APPARATUS COMPLETE, for 12s. 6d.

CONSISTING OF

STAFFORDSHIRE BASIN AND TRAP,
Enamelled White Inside,
BRASS VALVE, &c.



MANUFACTURED AND SOLD BY

W. PATTEN, PATENTEE,

OLD FISH-STREET, near SAINT PAUL'S, LONDON.

LAMBERT'S PATENT WATER WASTE PREVENTER, and SELF-REGULATING VALVE-COCK, especially adapted for Water-Closets.

(a) FIG. 1. FIG. 2

This Valve is so arranged, that whether it be held down or propped up, only a given quantity of water can be used at each action.

The pressure of the column of water—viz. its vertical height—being known, a quart gallon, or any other quantity desired will be full to more or less discharged; and before a second quantity can be obtained, a second action must take place.

This Valve is capable of several modifications; one of its applications to the Pan Closet, as shown in Fig. 2, is important, as it renders unnecessary any other appliance to regulate the discharge of water; it can be made to keep open as long or short a time as may be desired, after the handle which operates upon it is set free.

It is yet more valuable when applied to self-acting Closets, as it dispenses entirely with cesspools or supply cisterns; once regulated, say for one gallon, that quantity will always be discharged at each action of the seat by its pressing upon the stem of, or by any other movement.

The Patentees have tested them under every pressure up to 300 feet with complete success.

IMPORTANT WATER-SIDE PROPERTY, ON THE THAMES, IN THE CITY OF LONDON

MESSRS. FULLER and HORSEY are instructed by William Crawshay, Esq. to SELL by AUCTION, on WEDNESDAY, OCTOBER 15, at TWELVE, at the MART (unless an acceptable offer is previously made by private contract), the splendid MERCANTILE PROPERTY, held under the Corporation of London, known as George-yard, Upper Thames-street, in the city of London, having a frontage to the Thames of 138 feet, and occupying a superficial area of about 34,000 square feet, a site unrivalled in the metropolis, either as a depôt for landing and housing goods or for carrying on any wholesale business for which extensive water-side premises are required. George-yard is universally known as the London establishment of Mr. Crawshay, the eminent ironmaster, and has been in the occupation of himself and predecessors for more than a century. The trade carried on ranks among the first in the City, the returns are very large, and, to any firm wishing to occupy the premises for the same business, a large proportion of the connexion may doubtless be secured. In the year 1851, the entire premises many thousands of pounds in the erection of a massive pile of buildings, in fact, the whole, with the exception of a small stove those already erected. The building is one lofty ground-floor, with cellars supported on iron pillars and arches and constructed to carry any weight. There is also a stack of warehouses, abutting on the river, 75 feet in length, of two floors, and a stack of warehouses, 60 feet in length, of three floors, abutting on Thames-street, a commodious dwelling-house in the yard, the lower part occupied as offices for clerks and principals. A commercial should purchase in Thames-street, and seasons paved yards, with two separate entrances, affording every convenience for the landing and loading goods. The whole is held in fee of the Corporation of London, for a term which will expire in the year 1916, subject to the rent of £800 per annum. A stock of warehouses adjoining, of three floors, with frontage of 133 feet in Castle-yard, may be added if desired, at a rent of 150l. per annum. To be viewed till the day of sale. Printed particulars and plan will shortly be ready, and may be obtained at the Mart; of Messrs. CROWDER and MAYNARD, Solicitors, 57, Coleman-street; and of Messrs. FULLER and HORSEY, Billiter street, E.C. tot.

VICTORIA-STREET, WESTMINSTER.—SECOND PORTION —Sale of new Building Materials, Plant, Stock, and Utensils of a Builder.

MESSRS. FULLER and HORSEY are instructed to SELL by AUCTION, on MONDAY, the 29th of OCTOBER, and following days, at ELEVEN o'clock each day, at the PREMISES, Victoria-street, Westminster, (in lots without reserve), the SECOND PORTION of the STOCK of well-seasoned NEW BUILDING MATERIALS, partly prepared, yellow and white deal flooring boards, fir and oak, Portland stone, 5,000 feet 12-inch tooled York paving, 3,000 feet self faced ditto, 2,000 feet York landings, 40 feet of York stone kerb for circle granite, two separate entrances, affording every convenience for landing and loading goods. The whole held in lease from the Corporation of London, for a term which will expire in the year 1916, subject to the rent of £800 per annum. A stock of warehouses adjoining, of three floors, with frontage of 133 feet in Castle-yard, may be added if desired, at a rent of 150l. per annum. To be viewed till the day of sale. Printed particulars and plan will shortly be ready, and may be obtained at the Mart; of Messrs. CROWDER and MAYNARD, Solicitors, 57, Coleman-street; and of Messrs. FULLER and HORSEY, Billiter street, E.C. tot.

SALES BY AUCTION.

Mare, to SELL by AUCTION, in the ensuing months, the whole of the LOOSE STORES and TOOLS of the extensive ship-building yards and iron-works at Blackwall and West Ham, including upwards of 1,000 tons of wrought iron, in bars, rods, plates, scrap, blooms, and puddled bars; 100 tons rivets, 100 tons screwed bolts and nuts; 20 tons cast and shear steel, 500 tons castings, 20 tons engineers' steel stools, an expensive self-acting boring bar, 24 hot benches, stocks, taps and dies, &c.; 100 wrought-iron anvils, 30 tons smiths' tools, in top and bottom swages, hammers, mandrils, monkeys, &c.; 200 tons iron flasks, crane shank and hand ladles; flask weights, several weighing-machines, brassfounders' and finishers' tools, boiler-makers' tools, 100 tons shaping-plates and blocks, patent rivetting-machine, contractor's portable steam-engine and boiler, three Cornish steam-boilers, crab cranes, blocks and falls, many tons of chain slings, mooring-chains, chain-cables, &c.; 50 brass barrel lift-pumps, many water-closets, ships' pumps, five tons brass fittings, a large assortment of general ironmongery, 1,000 dozen files, 100 joiners' benches, joiner's cramp and tools, 1st valves, plumbers' tools, five tons pitch and chemicals, upwards of oak trees, several hundred fathoms of expensive prepared cabin fittings, several thousands of stage planks and deals, shipwrights' tools, 2 boats and sheers, three wrought-iron barges, counting house fittings, and a large assortment of miscellaneous effects. More detailed advertisements will shortly appear. Catalogues are being prepared, and may shortly be obtained at one shilling each, of Messrs. PULLEN and SON, 80, Fore-street; or of Messrs. FULLER and HORSEY, Billiter-street, City.

PRELIMINARY ANNOUNCEMENT.

MESSRS. FULLER and HORSEY, in conjunction with Messrs. PULLEN and SON, are instructed by the Assignees of Mr. C. J. Mare, to SELL by AUCTION, in the ensuing months, the whole of the PLANT of highly matched, non-blating MARINE ENGINES, equal to 450 horses' power; eight new tubular marine boilers; the castings for a second pair of oscillating marine engines; two second-hand marine boilers, with brass tubes; two new wrought-iron boats, and other similar property, more detailed advertisements of which will shortly appear.—Apply to Messrs. PULLEN and SON, 80, Fore-street; or to Messrs. FULLER and HORSEY, Billiter-street, City.

HARROW, MIDDLESEX Valuable Freehold Building Land, and good midway Residence, with the church and the station

MESSRS. FAREBROTHER, CLARK, and LYE are instructed to SELL, at GARRAWAY'S, on WEDNESDAY, OCTOBER 8, a valuable FREEHOLD PROPERTY, close to Harrow on-the-Hill, and about midway between the church and the station, and only a few yards' removed from the high-road, beautifully situate, commanding extensive views over the surrounding picturesque country, divided into three lots, as under, viz.—Lot 1. A desirable plot of ground, as staked out, and abutting on the Roxburgh-road, and having a frontage thereto of 300 feet, and extending in the rear to a depth of about 500 feet, part having a frontage of 207 feet to the Byron-road. Lot 2. A corner plot, situate at the junct on of the Roxburgh and Byron roads, with two frontages, of 118 feet to the former, and 181 feet to the latter. Lot 3. Another valuable plot, having a frontage of 202 feet to the Byron-road. The above property forms a portion of a larger estate, recently disposed of for building purposes. The roads are laid out, handsome villas have been erected on the adjoining plots, and some others are in progress. The proximity of the railway station, combined with the benefits extended by the North-Western Railway Company to occupants of houses in the vicinity, couple with the advantages of Harrow School render this a most desirable property for the erection of villa residences. May be viewed; and particulars, with plans, had of the King's Head Inn, Harrow; the Railway Hotel, at the station; of THOMAS WONTNER, Esq. Solici or, 13, Skinner-street, Snowhill; at Garraway's; and at the Offices of Messrs. FAREBROTHER, CLARK, and LYE, Lancaster-place, Strand.

COLCHESTER.—Freehold Building Land.

MESSRS. BEADEL and SONS have received instructions to SELL by AUCTION, at the CUPS HOTEL, Colchester, on THURSDAY, the 16th day of OCTOBER, 1856, at TWO for THREE o'clock, in sixty lots, several valuable PLOTS of FREEHOLD BUILDING LAND, situate close to the railway station at Colchester, having long lines of frontages to North-street, and the roads leading from Colchester to Sudbury and Ipswich, which will be sold without restrictions as to building; also a few lots close to St. Johnstreet, on the Earl's-hill fronting Castle-road and Garden-terrace. The above property is freehold, land-tax redeemed, chiefly of the free, most eligible situate, and importance for the erection of villa or other residences, and offers votes for the county of Essex.—Particulars, with lithographic plan, may be had and Fillmore, Esq. Solicitor, 59, Coleman-street, London; at the Cups Hotel, Colchester, and of Messrs. BEADEL and SONS, 21, Gresham-street, London.

IN BANKRUPTCY.

MR. ALFRED DAY has received instructions from the assignees of Messrs. Rowland and Evans, bankrupts, to SELL by AUCTION, at the FARMERS, Islington-green, New North-road, Islington, on TUESDAY, the 23rd of SEPTEMBER next, at TWELVE o'clock without reserve, the third portion of the extensive STOCK and UTENSILS of a Builder, comprising 200 scaffold boards, 1,000 putlocks, 30 long ladders, wheeling planks, 1,000 scaffold poles, three powerful crabs, sticks of timber, erection gear, troughs, planks, gates, hollow vices, drilling-machine, benches, masks, weights, smiths' tools, quantity of wrought and bar iron, rod ditto, gratings, iron frames, &c.; also, the Household Furniture, Bedding, Linen, and Kentish rag, in blocks and landings; fire bricks, pantiles, sheds, and other effects. May be viewed on the Saturday and Monday preceding the sale, and catalogues had on the Premises; of HARDEY and FILDER, Solicitors, 16, Gresham-street, City; J. NICHOLSON, Esq. Official Assignee, 24, Basinghall-street, City; and of the Auctioneer, City-road, near the Eagle Tavern.

TO BUILDERS. Superior Chimney-pieces of Statuary Marble, some richly sculptured, one of the Louis Quatorze style, four Italian Chimney pieces, and the Tomb of Dove and Veiled Marbles.

SURVEYOR WANTED. — WEST HAM LOCAL BOARD of HEALTH.—Notice is hereby given, that the Local Board of Health for the District of West Ham, in the county of Essex, require a fit and competent Person to undertake the duties of a SURVEYOR under the Public Health Act, within the said district. He must possess a thorough and practical acquaintance with works of drainage, sewerage, road-making, and paving. He must be competent to take levels, to prepare plans, sections, drawings, working estimates, and to superintend the execution of all works of the description referred to, or which may fall within the duties of the Office of Surveyor under the Public Health Act, or the Bye-Laws of the Local Board. He will be required to superintend the public lighting of the district when under the Management of the Local Board, and see to the execution of their Contracts in reference thereto. The officer will be required to reside in the district, and devote the whole of his time to the service of the Local Board, and will therefore be restricted from taking private business. His salary will be 200l per annum, with the free use of offices. Any further information respecting the duties of the office, may be obtained on application to the Clerk of the Local Board. Candidates must send written applications for the office, with recent testimonials of qualifications and competency, and all particulars of age and previous occupation; and all applications must be sent to me, endorsed "Application for the Office of Surveyor," on or before MONDAY, the 29th instant. Such of the candidates as may be deemed by the Local Board eligible for the Office (but no others) will be required to attend on the day of Election of Officers, and on the hour and place, they will be duly informed. By order of the Local Board,

W. J. BARSHAM, Clerk.

Bloxsby House, Stratford, Essex, Sept. 16, 1856.

COMPETITIONS.

NEW GOVERNMENT OFFICES.—The Commissioners of her Majesty's Works and Public Buildings give Notice, that they are prepared to receive DESIGNS in Architecture of all Countries for COTTAGES for the ACCOMMODATION of the principal GOVERNMENT OFFICES, on a Site facing St. James's Park, the New Palace at Westminster, and the Public Offices in Downing-street and Whitehall. Plans for the Cottages, of Stairs, Entrance Doors, and the Fences and Boundary of each Garden, are to be delivered at the Office of Works, 16, Whitehall-place, on or before the 1st day of DECEMBER next, and the Designs must be accompanied by Plans of the ground, together with a statement of the premiums for which they will be executed, and delivered at the Office of Works, as aforesaid, addressed to me at the same place.

ALFRED AUSTIN, Secretary.

Office of Works, 16, Whitehall, Sept. 25, 1856.

TO SURVEYORS and OTHERS.—PREMIUMS for PLANS.—The Trustees for Sale of a Freehold Estate of 500 acres, including the Bowl and Field, Crystal Palace, require PLANS for LAYING OUT the same for building purposes, showing the several Roads, Sewers, &c., the whole to be clearly defined and apportioned in suitable lots, and laid down to a scale of two chains to one inch, from actual admeasurement. The following premiums are offered:—For the plan adjudged the best by the trustees, 150 guineas; for the second, 100 guineas; for the third 50 guineas. The plans to which the above premiums shall be awarded will be retained by and be the property of, the trustees. Further particulars may be obtained of Mr. PEACOCK, Bailiff, near the Jolly Sailor station, Norwood, close to the property. The Trustees will meet on the 8th day of DECEMBER next, to examine the plans, which are to be previously forwarded, packed and sealed, to the Secretary's Office, Aviation Mart, London, addressed to the Trustees of the White Horse, Norwood Estate.

COMPETITIONS.

WELLINGTON TESTIMONIAL.—The Committee appointed at a Meeting of Subscribers, held at the Mansion House, on the 29th July last, to carry into effect the resolutions then passed, are desirous of receiving DESIGNS for a COLUMN and STATUE to be erected in honour of the late Duke of Wellington, at Liverpool.

The amount at present at the disposal of the Committee is £3,000, and in the event of the designs sent in not being considered worthy of being carried out for that sum, they are desirous that it should be, but any Artist will be at liberty to send in a separate design, either for the Column or for a Column and Statue.

The Committee do not bind themselves to accept any of the designs sent in, but will select that which they consider most worthy of being carried out, and in the event of material which they propose to employ.

A premium of 50l. will be given for the design which, in the opinion of the Committee, shall be the next in merit to that selected.

Each design must have a motto or device, and the name of the author of such design is to be sent in a separate sealed letter, bearing on the outside a corresponding motto or device.

The design for which a premium may be awarded to become the property of the Committee.

All communications to be addressed to the Chairman of the Committee, at the Town-hall, Liverpool; and the designs must be delivered there free of expense, on or before the 1st day of NOVEMBER next.

T. Winkall, Liverpool, September 20, 1856.

TO ARCHITECTS and OTHERS. — The Burial Board for the Parish of Saint Paul, Deptford, in the Counties of Kent and Surrey, are desirous of procuring DESIGNS for LAYING OUT the GROUND, and the ERECTION of TWO CHAPELS, LODGE, and ENTRANCE GATES, accompanied with detailed working drawings, specifications, and estimates. The outlay for the Chapels, Lodge, and Gates, must not exceed 1,600l. The Board will award to the author of the best design, in their judgment, subject to the approval of such design by the bishop of the diocese, the sum of 50l. The design for which the premium is awarded will become the property of the Burial Board, who will not bind themselves to employ the author to superintend the execution of the works. The Board may reject a premium unless a sufficient Tender be made for the erection of the Chapels, Lodge, and Gates, at or within the stipulated sum of 1,600l. If the Board employ the author of the design to superintend the execution of the buildings, the premium will operate in the commission, which is not to exceed 5 per cent. on the lowest Tender accepted, including travelling and other expenses. A plan of the ground, showing the situation of the buildings, may be obtained, at the Office of the Clerk to the Board, in High-street, Deptford, where designs must be deposited, free of all expenses, before FOUR o'clock in the afternoon of FRIDAY, the 31st day of OCTOBER next, marked on each design or drawing, and on a sealed letter addressed to the Board, having the same motto or device on the cover, and inside the name and address of the author. The designs not approved will be returned to the author on application. By order of the Board,

THOS. MARCHANT, Clerk.

High-street, Deptford, 22nd September, 1856.

WELLINGTON MONUMENT.—The Commissioners of her Majesty's Works and Public Buildings give Notice, that it is the intention of her Majesty's Government to ERECT a MONUMENT in St. Paul's Cathedral, London, to the memory of the late Duke of Wellington, and that the Commissioners are prepared to receive DESIGNS for the same from artists of all countries. A drawing, showing the ground plan of the cathedral and the site of the proposed monument, together with a statement of the premiums, and other particulars, will be forwarded to artists on application by letter addressed to me at this Office.

ALFRED AUSTIN, Secretary.

Office of Her Majesty's Works and Public Buildings, Whitehall, London, September 6th, 1856.

CONTRACTS.

TO BUILDERS and CONTRACTORS.—Notice is hereby given, that the receipt of Tenders for Works at Tourville, Alderney, which was advertised to be received by the Inspector-general of Contracts, War Department, Pall-mall, London, on the 29th instant, is POSTPONED until the 20th of OCTOBER, 1856.

War Department, Pall-mall, London, Sept. 20, 1856.

TO BUILDERS.—TENDERS are required for the ERECTION of a WAREHOUSE, in Cutler-street, Houndsditch. The proprietors do not bind themselves to accept the lowest or any other Tender. Apply to Messrs. RICHARD TRESS and CHAMBERS, Architects, 27, Queen-street, City.

TO SURVEYORS. — NOTICE. — NORWOOD, BEULAH SPA ESTATE, near the Crystal Palace. It having been intimated to the Trustees that the time mentioned in the Indenture of the Estate, without power to extend it to EXTEND the same to MONDAY, DECEMBER 8, it therefore is

TO BUILDERS, HOUSE-PAINTERS, and CONSUMERS of PAINT.—The GRAFTON MINERAL PAINT is the most durable paint hitherto known. It has been used during the last 12 years in the United States with great success. It is there admitted to be unrivalled. After it has been applied to wood, and exposed to the weather a few months, it becomes as durable as stone. When put to applied leather can not sea-water can penetrate. The colour of the Grafton Paint is a reddish brown, but a variety of durable colours may be made by mixing it with the other paints. In proportion to the quantity they may be mixed with it, will be the loss of its own peculiar properties. It may, however, be mixed advantageously with an equal quantity of Linseed Oil reduced by the mixture will be far more durable than that of other paint. It is used on buildings of wood or brick, on iron bridges, iron railings, gasometers, and in fact in all general. Also on fences, gates, waggons, railway trucks, &c. For painting under any paint it is unequalled. 25 lbs of this paint will cover 10 square yards of brickwork, or 150 of wood or iron. The Grafton Paint being fire-proof does not require to be frequently renewed. It is easily spread out, and does not run; is unusually effluvium.

TESTIMONIAL.

"I have analyzed the Grafton Mineral Paint, and find it to consist of silica, alumina, and peroxide of iron. These indestructible ingredients are in such a state of chemical combination that they are unaffected by heat, cold, rain, or sea-water.

"WM BASTICK, Analytical Chemist,

"2, Brook street, Grosvenor-square, London."

Sold by LIVETT, FRANK, and SON, Oil-Merchants, 14, Borough, London-bridge; of whom may be had testimonials in its favour, and also directions for use.

Price 20*s.* per cwt.

Sole Consignee for the United Kingdom,
JOHN EIVES, 61, King William-street, City.

WOLSTON'S TORBAY IRON-PAINTS, warranted to stand the action of the Atmosphere, Steam, Gases, Noxious Vapours, Damps, and Salt Water; also intense heat with unrivalled success. These Paints have been tested for five years in Her Majesty's Dockyards, and two Official Reports made thereon which testify that 63lbs. of Wolston's Torbay Iron-Paint will effectually cover as much surface as 112lbs. of either White or Red Lead and that it resists atmospheric action better than Lead Paints. For all Priming purposes, and other Iron Roofing, Fencing, Shipping purposes, (Wood or Iron), Stucco and Cement Fronts, economy and durability will be secured To Builders and Painters, for all priming purposes, the saving will be immense. Manufactured at the TORBAY IRON-PAINT and ORE WORKS, Brixham, Devon; London Depôt, Chamberlain's Wharf. Letters or orders addressed to Mr. WOLSTON, at the Works, or No. 34, John-street, Bedford-row, will have immediate attention

SAVING IN GAS.—D. HULETT, INVENTOR and PATENTEE.—The Mercurial Gas Regulator is the only efficient instrument for ensuring wholesome and uniform lighting, equalizing the pressure, and preventing any irregularity in the height of the flame.—D. HULETT and CO. 85, High Holborn, London, Manufacturers of Gas Chandeliers, Glass Lustres, &c. &c.

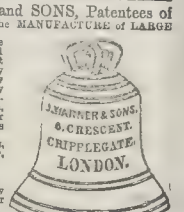
TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.

ANDREW CLARK and COMPANY, PLUMBERS,

THE BEAR GARDEN LEAD WORKS, SOUTHWARK,

Sole Manufacturers of Delbruck's Patent Autogenous Soldering Apparatus, invite the attention of Manufacturing Chemists to their Patent method of

UNITING LEAD TO LEAD WITHOUT SOLDER.



Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.

PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

AUSTIN'S IMPERIAL PATENT SASH and BLIND LINE can be obtained of all ROPEMAKERS, IRONMONGERS, MERCHANTS, FACTORS, and WHOLESALE HOUSES, in TOWN or COUNTRY. Established 1774.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in tune, and more equable in power than heretofore been accomplished.

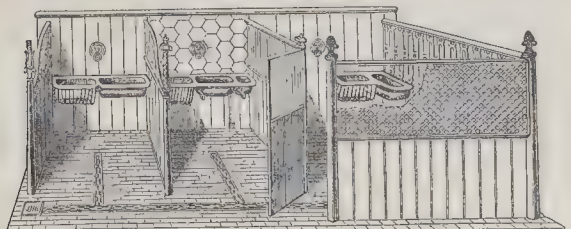
Bells for Churches, Chapels, Collegiate Schools, Turret Clocks, &c. cast for any size, note, weight, singly or in peals.

TUNED BY MACHINERY.

Stocked and wheeled ready for fixing. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system, which give superior tone and facility for ringing.

WROUGHT-IRON GIRDERS
For BRIDGES and BUILDINGS,
MANUFACTURED AND GUARANTEED AS TO STRENGTH.
CAST-IRON GIRDERS for BRIDGES and BUILDINGS.
Castings of every description.



ROLLED WROUGHT-IRON FLITCHES
For TRUSSING BETWEEN TIMBER.
SPIKES, RIVETS, CUT NAILS, WROUGHT DITTO, SCREWS, BOLTS AND NUTS, BOND HOOPS, CHAINS, &c
CONTRACTORS' PLANT, RAILS, EARTH WAGGONS,
And IRON WORK for WOOD WAGGONS, &c.

MATTHEW T. SHAW, 64, CANNON-STREET (late with C. J. Mare & Co.)
Such arrangements are made for Despatch and Punctuality that Orders can be executed in a few days.

ZINC ROOFING, INCLUDING TIMBER OR IRON FRAMEWORK,
IS AS
CHEAP AS SLATES OR GALVANIZED IRON, LIGHTER, AND MORE DURABLE.
Certificates, and Models of various descriptions, may be seen, and estimates obtained on application to
THE SURVEYOR OF THE VIEILLE MONTAGNE ZINC MINING COMPANY, 12, MANCHESTER BUILDINGS, WESTMINSTER.
ROOFS CONSTRUCTED UNDER HIS SUPERINTENDENCE GUARANTEED TO REQUIRE NO REPAIRS FOR AT LEAST TEN YEARS.
THE OLD METAL BEING ALWAYS RETAKEN AT HALF-PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.
Many roofs covered with zinc thirty-five years ago have never required repairs.

NEW PATENT INVENTIONS FOR STABLE REQUISITES.
AWARDED A PRIZE AT THE PARIS EXHIBITION, AND PATRONISED BY THE ENGLISH AND FRENCH GOVERNMENTS.

COTTAM and HALLEN, of Winsley-street,

Are the original inventors of the PATENT ENAMELLED MANGER, WATER TROUGH, and WROUGHT IRON RACK, united to an iron top plate, and forming one complete and useful fixture having Cottam's Patent Noiseless Heater Guide and Coupler attached, the bolt of which is taken to the back of the manger, and works with ease and freedom up or down the corde-bar. Cottam's new Patent seed-box, of galvanized iron, is an important addition to the above fittings, being simple in construction, light and durable, promotes cleanliness, and is economical in its results. Also, the Patent Saddle and Harness Bracket combined, which can be used with great advantage where space is an object, as it can be turned upon or out of the way when not in use.

Improved Harness Holders, for preserving the shape of the harness, and preventing its cracking. Patent Loose-Box Fittings, Cheap and Durable Corn-Bins.

Improved Surface-Drain, with safety covers, Sanitary Traps, and every article for the harness-room and stable, kept in stock, plain, galvanized, and enamelled. Iron Gates, Fencing, Hurdles, &c.

The new Illustrated Catalogue for 1856, and estimates gratis, upon application to

COTTAM AND HALLEN, 2, WINSLEY-STREET, OXFORD-STREET.

TYERMAN'S PATENT HOOP-IRON BOND,
FOR BUILDING PURPOSES.
ADOPTED BY SEVERAL DEPARTMENTS OF THE GOVERNMENT.

TARIFF OF PRICES beyond the current Price of Hoop-iron.

Gauge.	In. wide.	Per 1,000 ft.
No. 16	1¼	7s. 0d.
18	1½	7s. 6d.
15	1¾	8s. 0d.
15	2	8s. 6d.
25	2½	9s. 6d.

THE PATENT BOND (which is prepared from the ORDINARY HOOP IRON, by notching it at intervals of 11½ inches) is now being extensively used in the leading GOVERNMENT WORKS, Dock BUILDINGS, BANKS, ASYLUMS, BRIDGES, VIADUCTS, PRISONS, ENGINE-HOUSES, and MANUFACTORIES, as well as in other PUBLIC and PRIVATE WORKS, in London and in all parts of the kingdom

Sole Manufacturers—THOMAS PERRY and SONS, Highfields Works, Bilston.
London Depôt—ST. ANN'S WHARF, EARL-STREET, BLACKFRIARS.

HOT-WATER APPARATUS of the best construction, adapted for warming and ventilating hot-houses, conservatories, public and private buildings, improved boilers, self-acting regulators pipe, &c; hot-air, drying, and hydraulic apparatus; portable engines; shafting and other machinery supplied or erected by R. S. TAYLER Battersea.

GURNEY'S WARMING APPARATUS, for CHURCHES, PUBLIC BUILDINGS, and PRIVATE HOUSES.—This Apparatus is a modification of that invented by Mr Goldsworthy Gurney, and now used by him for warming the House of Commons and House of Peers. It is constructed so as to be available for private houses, churches, and other buildings. It is simple, inexpensive, and powerful; the fuel may be coal, coke, or gas) combining the laws of conduction and convection of heat, to temper and warm air for respiration, without drying or reducing its natural hygrometric break.—For further particulars apply to Mr. WOODCOCK, 5, Bessborough-gardens, Pimlico, who will supply the Apparatus, and is empowered to grant licenses for agencies under the patent.

BUILDINGS HEATED BY HOT WATER.
G. B. COOPER,
IRONWORKS, 129, DRURY-LANE,
DRYING-CLOSETS for HOSPITALS, UNIONS, ASYLUMS, &c.
BATHS, RANGES, GAS-STOVES,
HOT-PLATES, STEAM and GAS-COOKING APPARATUS,
for HOTELS, MANSIONS, &c.
G. B. C. has recently fitted up the Crystal Palace Kitchens with Gas-cooking arrangements upon an extensive and most complete scale. Ornamental and Constructive Ironwork.

HEATING BY HOT WATER.

JOHN WEEKS and CO. King's-road, Chelsea, HOT WATER APPARATUS MANUFACTURERS. Buildings of every description, and of the most extensive dimensions, can be efficiently warmed by Hot Water. JOHN WEEKS and CO. can give innumerable references of Churches, Dwelling-houses, Warehouses, &c. &c. where they have fixed their Hot Water Apparatus. Also to be seen in extensive operation at their Premises, King's-road, Chelsea.

REGISTER STOVES, with PATENTED IMPROVEMENTS.—DEANE, DRAY, and CO. invite the attention of purchasers to their Stock of STOVES for drawing and dining rooms; also, a large assortment of PATTERNS, suitable for sitting-rooms, offices, bed-rooms, &c. In Fenders and Fire-Irons, DEANE, DRAY, and CO. are constantly introducing every novelty at the lowest prices.—DEANE, DRAY, and CO. Stove, Range, and General Ironmongery Warehouse, London-bridge. Established, A.D. 1700.

BATHS and HOT-WATER APPARATUS. J. TYLOR and SONS' ILLUSTRATED CATALOGUE of BATH WORK, &c. to be had on application. Estimates and Plans for Fixing given. J. TYLOR and SONS, Manufacturers, Warwick-lane, Newgate-street, London

DR. ARNOTT'S SMOKE-CONSUMING GRATE.
Will this Grate become universally used?
Its advantages over every other consist in—
1. A saving of 50 per cent in fuel.
2. Its being a cure for a Smoky Chimney.
3. Its not requiring one half the attention of an ordinary fire.
4. Its being perfectly safe.
A Prospectus, with a Second Series of Testimonials, just issued, from all parts of the country, will be sent on application.
F. EDWARDS, SON, and CO. 43, Poland-street, Oxford-street

WARMING and VENTILATING.—ALFRED MAY begs to call the attention of Architects, Builders, and others to his system of WARMING by HOT WATER, Lunatic Asylums, Workhouses, Churches and other Public and Horticultural Buildings, Mansions, and Offices.

A. M. having had great experience in the above line, is enabled to guarantee the efficiency of such works as may be intrusted to him for execution; he has just completed, to the entire satisfaction of the architects, the warming and ventilation of the Baron's and Sir Anthony Rothschild's new mansions as conservatories.

Manufactory, Eagle court, Bean street, Holborn, and at 30, Devonshire-street, Queen's-square, Bloomsbury.

Artificial heat applies for drying linen on a very economical and effective system.

WILSON, LAW, and COMPANY,
NORTH-WEST FOUNDRY,
GLASGOW
PATENT GAS AND WATER-PIPES.

VENTILATING STOVES! SUSPENSION STOVES!—Approved by thousands of purchasers, and recommended as the two best, the neat, most healthy, and economical for churches, chapels, halls, schools, warehouses, shops, greenhouses, bedrooms, libraries, &c. Prospectuses, with prices, sent post-free.—DEANE, DRAY, and CO. Stove Range, Ironmongery and Furnishing Warehouse, London-bridge.

FOUNDRY AND IRON WORKS,
85, DRURY-LANE, and CHARLES-STREET, DRURY-LANE.
GLOVER, BROS.,
Solicit the attention of the Trade to their extensive Stock of PATTERNS for CASTINGS of EVERY DESCRIPTION either structural or ornamental.

Patterns of Girders, Columns, Balconies, Railing, Ornamental Carriage and Park Gates, Lamp and Street Posts, Tanks, Pipes, Wheels, Pinions, Lathes, and Steam-engines; Range and Hot-plate Metal. An improved Soot Door, adapted for interior work.

A large stock of Rain-water Pipes, Plain and O G Gutters, Air-bricks, Sash Weights, Air-tight Sewer Grates, Stable Fittings, Hurdles, &c.

Plain and Ornamental Vases 20 per cent cheaper than Terra-cotta.

Estimates given for Iron Buildings, Wrought-iron Roofing, Greenhouses, Staircases, Wrought-iron Girders, Fireproof Doors, Book safes and Strong Rooms, Tanks and Boilers, and every description of ironwork to specification, and the work executed with every attention to quality and despatch.

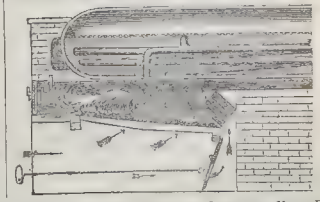
GLOVERS' IRONWORKS,
168, DRURY-LANE, and CHARLES-STREET.

CANNON IRON FOUNDRY, 80, Goswell-street, St. Luke's.—JONES and BLAXTON, having made great additions to their STOCK of PATTERNS, beg to inform the Trade that they can now supply them with Plain and Ornamental Iron Columns, Girders, Balconies, Gates, Iron Coping, Balconies, Window Guards, Vernas tube, Ornamental Staircase Panels, Iron Staircases, Tomb Enclosures, Trellis Panelling, Lamp and other Brackets, Cantilevers, Newel Bars, Water Closet Work, Area Gratings, Fly and other Wheels, Weed Plates, &c

BAKERS' OVEN WORK, Forge Backs and Troughs, Rain Water Pipes and Gutters, Sash Weights, Furnace Bars, Stoves, Ranges, &c. always in stock

IRON FOUNDRY, Harrow-street, Lant-street, Southwark.—W. R. BARTLETT, manufacturer of Girders, Columns, Cantilevers, Railing, and Newel Bars, Iron Coping, Palings, Tomb Enclosures, Area Gratings, Sash Weights, &c. Also Fly and other Wheels, Riggers, Pinions, Engine and Lathe Castings; Forge Backs, Furnace Bars, Kilns, Pans, Pipes, Tank Plates, and other Castings, to patterns or drawings.

FIRE-PROOF CONSTRUCTION.—FOX and BARRETT'S PATENT.
This improved system of fireproof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.



The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wrought or rolled iron, with concrete so constructed that each floor becomes in effect a beam of artificial stone, with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring-boards, or of cement, asphalte, tiles, slate, or other material.

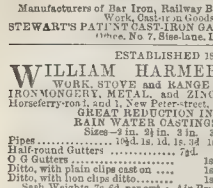
Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one.

Further information may be obtained of the Proprietor of the patent,—Mr. BARRETT, 12, York-buildings, Adelphi.

GARDNER'S PATENT STEAM GENERATOR and SMOKE CONSUMER produces more steam with lessened consumption of fuel, and entire removal of smoke. These patented improvements are highly recommended for their simplicity, durability, and great economy. They are self-acting, have no moving parts, therefore require no external aid.

They are applicable to all Furnaces, Locomotives, Marine Engines, Ovens, Pottery and other Kilns, Common Fire, Kitchen Ranges, Hot and Hot-air Stoves. Application to be made to the PATENTEE, 34, Dorset-street, Fleet-street, or at the Hospital, to Messrs. BURBIDGE and HEALY, 113, Dorset-street, Fleet-street; or to Z. D. BERRY, Albion Works, Wilton-road, Pimlico.

Testimonials, &c. may be seen upon application.



IRON CHURCHES, STORES, &c.—For SALE, Substantial Corrugated Iron Stores, Churches, Dwelling-houses, and every description of Buildings, adapted to all climates. Iron Roofs constructed for all parts of the world. An Iron Church with sittings for 750 people, for hire or sale.—To view and for further particulars apply to SAMUEL HEMMING, Clift House Works, Bow, London.

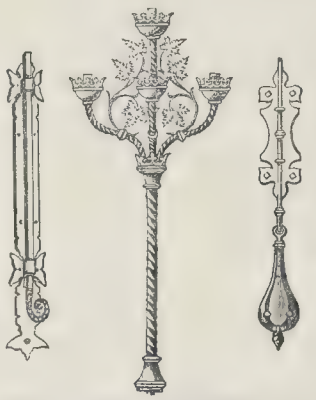
Best Fine Cut Clasp and Rose.
1½ 1¼ 2 2½ 2½ 3-in. & larger.
16s. 6d. 16s. 6d. 15s. 6d. 15s. 14s. per cwt.
And every material required in the building, bell-hanging, upholstery, and brass-foundry trades on the most reasonable terms.
List of Prices had on application at the Warehouse, or by letter prepaid.

COLLINGE'S PATENT HINGES.—Manufacturers, CHARLES COLLINGE and CO. 64 and 65, Bridge-road, Lambeth, where a great variety are always on view for church, park, rail, gate, cacchouse, and other gates and doors of large and small dimensions, a ton weight moving with these hinges as easily as a wicket. Ornamental hinges, adapted for drawing-rooms, &c.; doors fitted with them may be removed and replaced in an instant. Rising and double-acting spring hinges, and every description of fastenings, as per illustrated prices. None genuine unless marked "Charles Collinge, Patent, Lambeth." Plain and ornamental cast and wrought iron-work, for building and other purposes. Engines, machinery, patent axletrees, sugar mills, &c.

WOOD-CUTTING MACHINERY,
JOHN M'DOWALL and SONS,
WALKINSHAW FOUNDRY, JOHNSTONE, near Glasgow.
MANUFACTURERS of VERTICAL SAW-FRAMES
for cutting balks of timber, from 5 feet on the side down to the smallest deal frame.
Patent vertical saw-frames, of the foregoing dimensions, with steam-power attached; circular cross-cut radial sawing machines, patent moveable ditto; patent horizontal cross cut sawing machines, for every timber, planing machines, for working timber ls from one inch thick to 6-inch deck plank; revolving planers, for squaring and shaping heavy timbers, as used by ship-building, &c.; patent carvidrawing machines, for circles, sweeps, and straight cutting, well adapted for ship-builders; power mortising and tenoning machines; moulding machines, single and double; veneer mills of all sizes, with all appliances; scoreboard machines, for hot boxes, &c.; patent sheet for imitators for saw-frames, and every description of machinery for cutting and shaping timber, constructed of iron, of the best materials, and first-class workmanship. Mr. M'Dowall has been in the engineering and millwright business for upwards of 36 years, but during the last 24 years he has given attention particularly to the manufacture of wood-cutting machinery, as evidenced by the numerous patents he has obtained for its improvement, and by the extensive orders his firm has been favoured with from the British and other European Governments and private establishments in almost all parts of the world; and from their large and commodious premises, and first-class plant made for every department of the work without regard to cost, the largest contracts can be executed with a regularity, accuracy, and despatch, which cannot be exceeded by any other firm in Europe.—Applications as above for further particulars, will be promptly attended to.

PATENT MACHINES for WORKING in WOOD.—These celebrated Machines have been awarded a number of prize medals by many scientific institutions, and also by the Great Exhibition in London, and are now extensively used by the Indian, American, and all the principal governments in Europe; also by eminent Contractors, Builders, Shipwrights Machinemakers, and other workers in wood. Their operations are in every respect perfect, either in hard or soft wood, for planing, squaring up, moulding, tenoning, mortising, grooving, rebating, sawing, and boring, which they perform in a very rapid and superior manner, at a greatly reduced cost.—Sold only by WILLIAM FURNESS, Patentee, 26, Lawton-street, Liverpool, from whom full particulars may be obtained, and all the machines can be seen at work.



MACHINERY for SAWING, PLANING, MOULDING, &c.

SAMUEL WORSSAM and CO. beg to call the attention of Contractors, Shipbuilders, proprietors of Saw-Mills, and others, to their improved Inventions and Adaptations in Saw Frames and Benches, Roller and Chain Planing Machines, Endless Saw Frames, and all other kinds of Machines, for Sawing, Planing, Grooving, and Moulding Wood. They have constantly on hand machinery, either wholly or partly made, so that they can at all times on short notice supply them. S. W. and CO. beg to state that they have hitherto confined their attentions to this sort of machinery, and have had the honour of supplying some of the most distinguished companies, ship builders, and contractors in the world with their machines, for home and foreign use. One of their Saw Benches, and also a smaller one, with Boring Apparatus, may be seen at the Machinery Department, Crystal Palace.—A descriptive Catalogue, with Drawings, may be had on application to SAMUEL WORSSAM and CO. Engineers, &c. King's-road, Chelsea, London.

HART and SON, MALLEABLE IRON FOUNDERS, 4, Vine-street, York-road, Lambeth.
Orders for Malleable Iron Castings executed within a week.

FACING FOR BUILDINGS COMPANY—TAYLOR'S PATENT.

BUILDINGS PERFECTLY RESISTANT TO WET WITHOUT ADDITIONAL EXPENSE, OR THE USE OF COMPO,
REQUIRING THE CONSTANT EXPENSE OF PAINTING. EXTERNAL WALLS FACED WITH AN INDESTRUCTIBLE MATERIAL.
STONE-FACED BUILDINGS AT LITTLE MORE COST THAN CEMENT.

No necessity for Iron Cramps and Bond-stones, and the Stone Ashlar never injuriously weighted by the settlement of the Mortar joints of the inside Brickwork. The INSIDE of CHURCHES and OTHER BUILDINGS FACED WITH STONE instead of Plastering. Also Dining halls, Lobbies, Staircases, &c. of Private Residences. It can be had ready for fixing from the quarries at a small cost for carriage, or prepared at home. Can be used with the ordinary Bricks of any locality, and by the ordinary workman. The CHURCH faced inside and outside in this manner, and the other Buildings at SPRING GROVE HOUNSLOW, and elsewhere, can be inspected, and all particulars obtained, of

Mr. JOHN TAYLOR, ARCHITECT, OFFICES OF THE COMPANY, 40, KING-STREET, CORNER OF CHEAPSIDE.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854 was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

CHEAP AND DURABLE ROOFING.

By Her Majesty's  Royal Letters Patent.

F. McNEILL and CO. of LAMB'S-BUILDINGS, BUNHILL-ROW, LONDON, Manufacturers and ONLY Patentees of

THE PATENT ASPHALTED FELT, FOR ROOFING HOUSES, VERANDAHS, SHEDS, &c.

Patronized by

HER MAJESTY'S WOODS AND FORESTS,
HER MAJESTY'S COMMISSION OF CUSTOMS,
HONOURABLE EAST-INDIA COMPANY,
HONOURABLE BOARD OF ORDNANCE,
HER MAJESTY'S ESTATE, ISLE OF WIGHT,
ROYAL BOTANICAL GARDENS, REGENT'S PARK,

And by the most eminent members of the Royal Agricultural Societies of England, Scotland, and Ireland; at whose great national shows it has been exhibited, and OBTAINED THE PRIZE, for being the best and cheapest article for roofing; also used for under slates at the Royal Agricultural Society's House, in Hanover-square. Its advantages are lightness, warmth, durability, and economy. It is impervious to rain, snow, and frost, and a non-conductor of heat and sound. The Felt can be cut to any length, by 32 inches wide. The price is only ONE PENNY PER SQUARE FOOT. Samples, with full directions as to its uses and the manner of applying it, with TESTIMONIALS, some of them of seven years' experience, from Architects, Builders, Noblemen, and Gentlemen who have extensively used it, sent free to any part of the town or country. A Dry hair Felt, for covering Boilers, &c. is also manufactured, by which a saving of about 25 per cent in fuel is effected. The TRADE are respectfully enjoined to send their orders DIRECT to the FACTORY, as the surest means of being supplied with the genuine article, and in lengths best suited to their roofs. They are likewise CAUTIONED AGAINST MISREPRESENTATION, as F. McNEILL and CO. are the only works in Great Britain where the above roofing is made and F. McNEILL and CO.'s Manufactories, LAMB'S-BUILDINGS, BUNHILL-ROW. Roofs covered with the Felt can be seen at the Factory, also the new Vice-Chancellor's Courts, the passages and offices leading to Westminster Hall, and other buildings at the New Houses of Parliament. A Liberal Discount allowed to the Trade.

TO PLUMBERS, PAINTERS, GLAZIERS, and PAPER-HANGERS.—TO LET, PREMISES in the above line eight years. A business done in oils and colours with shipping. Fixtures and stock but trifling. A good opportunity for a plumber. Apply to D. CLARK, Waterside, Erith.

WANTED, to RENT or PURCHASE, within twenty or thirty miles of London the nearer the better, a moderate-sized HOUSE, with not less than five bedrooms, three sitting rooms and good offices, all finished or out of repair not objected to; a large garden and from one to thirty acres of land prefered. Advances will depend upon the locality and amount of purchase, to J. G. W. care of Mr. Eyre, 33, Bouverie street, Fleet-street.

TO WATER and GAS COMPANIES.—TO BE SOLD, by TENDER, the undermentioned PIPES, &c. of the make of Messrs. Cochrane and Co. of Woodside Iron Works, near Dudley, Fourteen 12-inch pipes, weight about seven tons; five 12-inch, about two tons; one hundred and thirty 9-inch, about 29 tons; fifty 4-inch, about five tons. Sundry easy and quarter bends, branches, end and middle plugs, reducing pipes, and bolts and nuts together about nine tons. Also about seventy second-hand 7-inch pipes, about ten tons. Also one 5-inch, two 4-inch, two 3-inch, four 2-inch, and fifteen 3-inch three-way COCKS. Also an excellent twenty-horse-nigh pressure PUMPING ENGINE, with boiler complete, together with 100 yards of wood pump trees, with fixed flanges bolts, and nuts, and stays for a 6-feet 6-inch pit, wheels and counter-balance to pump, bucket and clack, 4-inch pump rods, 12 to 27 feet lengths, with double gaps and boxes complete. The above is surplus stock of the Wolverhampton Waterworks Company, who have no further use for it, in consequence of the new company taking possession at Christmas next.—Separate Tenders, at per ton, for pipes, bends, &c. and old pipes, and for the engine, the lot, also for the casing, to be sent, directed to the Office, on or before THURSDAY, the 2nd of OCTOBER next.
HENRY ROPER, Secretary.
Wolverhampton Waterworks,
Wednesday, Sept. 17, 1856.

FREEHOLD LAND TO BE LET, on Building Lease for ninety-nine years. Money advanced to responsible parties. Freehold Land to be Sold for building purposes in eligible situations.—Apply at the Offices of Messrs. MORGAN and PHIPSON, Architects, 3, Danes-Inn, St. Clement's, Strand.

FINCHLEY.—LAND fronting the Regent's Park-road, and East-end-road, TO BE LET on Building Leases for ninety-nine years, with power of enfranchisement. Plots from one to four acres for large villa residences; smaller plots for semi-detached houses, and plots for shops in the village. Apply to W. A. BOULNOIS, Esq. Architect, 6, Waterloo-place, Pall-mall; or to Messrs. BARKER, BOWKER, and PEAKE, 1, Gray's-inn-square.

PERPETUAL INVESTMENT, LAND, and BUILDING SOCIETY.—Shares issued, 11,000. Invested in real Securities, £61,000. Monies duly received on Deposit or Shares, interest paid half-yearly. Money ready for advances on houses or lands. No legal charges to Borrowers.—Apply for any further particulars to the Secretary, Mr. J. E. TRESIDDER, at the Head Offices, 37, New Bridge-street, London.

TO BUILDERS, CONTRACTORS, and OTHERS.—TO BE LET, on lease, for a long term, several PLOTS of FREEHOLD GROUND, well suited for manufactories, warehouses, or other building purposes. The property is within three miles from London, is land-tax redeemed and tithe-free.—Apply to Mr. W. H. DEAN, Surveyor, Stratford; or to Mr. GEORGE POWNALL, Surveyor, 37, Bloomsbury-square, London.

NEW WINDSOR ESTATE.—Valuable BUILDING LAND to BE LET, in Plots for first and second class Villa Residences, with Stabling, which are much needed in this beautiful locality. The situation is the finest in or near Windsor, abutting on the Park and Long Walk, and commanding a splendid view of the Castle. Within ten minutes of the Great Western and fifteen minutes' walk of the South-Western Railway Stations. Advances can be had by responsible parties. For particulars apply to Mr. WILLIAM SIM, Architect and Surveyor, 3, Danes-Inn, Strand.

CITY.—Building Site, close to Cornhill and Gracechurch-street. TO BE LET, on Building Lease, a valuable PLOT of GROUND, occupying a commanding position in one of the best thoroughfares, and affording a first-rate site for a bank or public company, offices, dining-rooms, or shops. Uninterrupted light back and front.—Mr. DEBENHAM, 80, Cheapside. (2,970.)

ALDERSHOTT CAMP.—TEN ACRES of FREEHOLD BUILDING LAND, close to the camp and adjoining the high road to it. TO BE SOLD cheap, in one lot. A great bargain is, and adapted for public houses or residences of officers, as urgently required for.—Apply to Mr. HEWETT, Surveyor, Winchester.

SHOREDITCH.—BUILDING GROUND. TENDERS will be received until MONDAY, the 6th of OCTOBER, next, for the LEASEHOLD PLOT of BUILDING LAND, upwards of 150 feet in depth, adjoining Shoreditch churchyard, with an east aspect from the High-street, and partly abutting thereon.—Particulars may be obtained of Messrs. R. J. and H. CLUTTON, 9, Whitehall-place, where a plan may be seen.

FREEHOLD LAND to BE SOLD or LET, on Building Leases, a number of SMALL PLOTS, in a very healthy pleasant situation, having a frontage in London-fields.—Apply to Mr. MARTIN, 21, Spital-square.

FREEHOLD BUILDING LAND.—TO BE LET, on reasonable terms, in a good place for letting, space for FOURTEEN HOUSES, 16 feet frontages, roads and drains made, shed and counting house on ground, situate at Belmont, Highfield, Peckham, the very best part.—Apply to W. W. RAWLINS, Queen's-road, Peckham.

BUILDING LAND TO BE SOLD, thirty miles from London, and twenty from Brighton, and within a mile of a first-class station on the Brighton Railway, about TWENTY FIVE ACRES of FREEHOLD LAND, mostly arable, with farm-house, superior farm premises, and two cottages, well drained, well watered, and commands fine prospects with good building stone near the surface.—Apply to Mr. G. PLAYFORD, Grove Farm, Crawley, Sussex.

FREEHOLD ESTATE, with Mansion, replete with every requirement; stall stabling, loose boxes, and paddocks: a few years since the residence of the late master of a celebrated pack of hounds.—FOR SALE, the highly valuable FREEHOLD ESTATE known as WESTHAM, situate one mile west from Basingstoke, forty eight miles from London, comprising handy residence, with its gardens, orchards, and pleasure grounds, capital stabling, loose boxes, coach-houses, and other offices, farm-house, convenient agricultural buildings, rustic cottage, lodge, and cottages, and about 200 acres of productive arable and pasture land, lying up in a ring fence. The whole is in hand, and immediate possession may be had, together with the farming stock if desired. The estate has the advantage of being within a mile of the capital market town of Basingstoke, where there are first-class stations on the South-Western and Great West rn Railways. It is in the centre of the H. H. and the Earl of Portsmouth's country, and forms as a whole a most desirable residential estate as well as a first-class investment, and offers a first-rate opportunity for advantageously selling off part for the erection of villa residences, which are in daily request in this locality. Cards to view, and further particulars, apply to Messrs. YOUNG, YALDING, and JONES, Solicitors, 2, St. Mildred's-court, Poultry, London; or to Mr. HENRY DOWNS, Estate Agent, Basingstoke, Hants.

FREEHOLD LAND TO BE LET, on the River Thames, between the river and the Victoria Docks, being very near the dock entrance on BUILDING LEASES for manufacturing purposes. The land has a frontage of river frontage, but it is bounded on the land side by a branch of the Eastern Counties Railway, into which sidings may be made.—Plans may be seen, and particulars had of Mr. JOHN OAKLEY, Land Agent and Surveyor, 60, Doughty-street; and of Messrs. KINGSFORD and DORMAN, Solicitors, No. 25, Essex-street, Strand.

BUILDING LAND TO BE LET, in Wilson-street (continuation of Bow-street), Long-acre, and Granby-street, Hampstead-road, for dwellings, warehouses, or workshops. Apply to Mr. HARLOW, 11, Portman-street, Portman-square.

BELSIZE-PARK, HAMPSTEAD.—A portion of the Park WILL BE LET, on BUILDING LEASES for Villa Residences. Roads are Macadamized, and gas and sewers are completed. Money, if required, can be advanced on mortgage.—Apply to Mr. WILLIAM THOMPSON, Architect, 9, Conduit-street West, Westbourne-terrace

TO BUILDERS.—Some very eligible Lots of FREEHOLD LAND, suitable for the erection of houses of the value of from 2 or 3,000 each, situate at Tulse-hill; Lower Norwood; Bellevue, near the Railway Station at Harrow; and Forest-hill. TO BE LET on Building Leases at moderate ground rents. Apply to Mr. JAMES HIGHAM, 79, Farringdon-street.

CREOSOTING PLANT, complete, for SALE. Cylinder, 50 feet by 6 feet. Engine, boiler, and pumps, by Burton. Would be divided if needful.—Apply to JOHN CLARKSON, Timber Merchant, Birmingham.

The Builder.

VOL. XIV.—No. 712.

COMPETITIONS are just now abounding. The designs sent in by the sixteen selected competitors for the proposed library and museum in Liverpool will probably be exhibited publicly *before* the committee announce their decision. Several of the designs possess considerable merit. The committee acting on a suggestion made by a committee of the local Architectural Society, invited the competitors to examine and report on the best three designs, in addition to their own, and paid the railway fares of those residing at a distance. These reports were sent in under seal, and by this time have been laid before the committee. We shall look anxiously for the result of this step. But for the weakness of human nature, it would be an admirable course. None should so well be able to detect the weaknesses and appreciate rightly the skill with which difficulties have been overcome in a design (apart perhaps from the question of art), as those who, having worked out the problem for themselves, are fully aware of the requirements. Serving, however, as this course does, to array the judgment and duty of competitors against their immediate personal interest, the result could not always be looked for with perfect confidence. The character of the reports on the present occasion will probably influence the adoption of the step elsewhere.

When a certain number of architects attended Sir Benjamin Hall, at his request, on the subject of the proposed Public Offices Competition, Mr. John Shaw urged the application of the same principle, but his remarks did not elicit any strong expressions in its favour. Turn the question of competition which way you will, there are always difficulties visible. As to the Public Offices Competition itself, the conditions and instructions will be ready for delivery after the 30th inst. These occupy eighteen pages of foolscap paper, and will be accompanied by large and comprehensive plans of the neighbourhood, with especial reference to the design (1) which is sought for the best mode of concentrating the principal Government offices. "The design is also to represent the improvements which may be suggested in the principal approaches to the New Palace at Westminster, as well as in the communications with the Surrey side of the River Thames, especially with reference to the New Westminster-bridge, the ultimate position of which must be considered in connection with this design."

The instructions state that "architects are not necessarily to regard the existing Government buildings, should they interfere with the designs: but it is desirable that as many of such buildings as possible should be preserved and adapted as may be consistent with the integrity of the entire scheme.

Architects desiring to send in models with their designs [for the general arrangement alone] will be permitted to do so, provided the models are made to the same scales; but drawings in frames (other than straining frames) and glasses will not be received."

The time for sending in the designs is extended to the 20th of March, 1857, by which day they are to be delivered at Westminster Hall, where, it is intended, they shall be exhibited.

The following is a list of the principal Government offices, with the approximate area required for each:—

	Approximate Superficial Area in Feet.
The Treasury, including official residences for the First Lord and for the Chancellor of the Exchequer	50,000
The Foreign Office, including an official residence	46,000
The War Department	51,000
The Colonial Office	15,000
The Home Office	15,000
The Paymaster General's Office	15,000
The Exchequer Offices	3,000
The Board of Trade	20,000
The Privy Council Office	15,000
The Departments of the Admiralty (now at Somerset House)	45,000
The Board of Control	12,000
The Poor Law Board	8,000
The General Board of Health	3,000
The State Paper Office	5,000
The Office of Works	8,000
The Office of Woods	8,000
Civil Service Commission, &c.	5,000
The Charity Commission, &c.	6,000
The Ecclesiastical Commission	6,000
The Emigration Office	5,000
Copyhold, Inclosure, and Tithe Commission	10,000

In addition to the offices above enumerated, architects are to provide for farther buildings, to be afterwards appropriated for other departments of the Government, to such an extent as may be consistent with proper open spaces and thoroughfares.

The design (2) for the Department of the Secretary of State for Foreign Affairs is now to include an official residence for the Secretary of State, and this has led to an alteration in the apportionment of the premiums offered. The list, we believe, will now stand as follows:—

"Design No. 1.—(Block Plan.)	
First premium	£500
Second "	200
Third "	100
Design No. 2.—(Foreign Department.)	
First premium	£800
Second "	500
Third "	300
Fourth "	200
Fifth "	100 each.
Sixth "	
Seventh "	
Design No. 3.—(War Department)	
First premium	£800
Second "	500
Third "	300
Fourth "	200
Fifth "	100 each.
Sixth "	
Seventh "	

The designs in respect of which premiums may be awarded are to become the property of the Government.

If, however, the architect to whom the highest premium may be awarded in respect of the design for either the Foreign-office or the War-office, shall be employed to superintend the execution of the work, he will not be entitled to receive such premium, but he will be paid a commission, at the rate of 5 per cent. upon the outlay. Such commission to include all expenses for measuring, superintendence, &c. except the salaries to clerks of works."

Concerning the other competition proposed by her Majesty's Office of Works, that for the intended Wellington monument in St. Paul's, an architect complains to us that, having addressed the Office, pointing out that the old monuments were "architectural," the figure forming, in fact, a part of an architectural design, as might be seen in Westminster Abbey and in other buildings, and inquiring if designs upon paper might be sent, he was informed that they would not be received. We are not disposed to quarrel with this determination. It seems to us right that all the competitors should submit their ideas in the same material, in order to their being fairly compared. Moreover, it is doubtless expected that the competitors will, in this case, show their power over form as well as in design. The premiums offered, it must be remembered, too, are large; much larger in proportion than those offered for the designs for Public Offices. That the monument may very properly be semi-architectural there can be no doubt, and, indeed, we shall be sincerely glad if it be so: the monumental shrines of the mediæval period, and some remarkable examples of the Renaissance period in the church of St. Denis and at Rouen, to go no farther, rise to recollection to strengthen the wish. It is to be hoped at any rate, that the monumen'ts already in St. Paul's will be carefully studied, in order to learn what to avoid. More than 200 applications for the particulars and conditions have been received by the Office of Works; and 150 copies have been sent abroad through the Foreign Office.*

Looking to another Governmental body, we hear with satisfaction from several quarters that the observations we were led to make in July last on the two branches of the Royal Engineer Department (p. 405, *ante*), promise to be of service. The article of course gave offence in some quarters, and was referred, we are told, to the authorities in London as a libel on the corps. The answer it elicited, however, showed that it was viewed there in a very different light, and that an intention to reorganize the department would probably be hastened. The necessity for alteration is obvious. Two such enormous establishments, one civil the other military, cannot be required; nor is it clear why there should be two classes of civilians, clerks of works and foremen of works, farther than it appears that the clerk of works is *de facto* the civil engineer and architect of the department, whilst the foreman of works is the real clerk of works. Then, if this be so, why not give to each his proper title, and get rid of the interference at least of the junior military officers, whose labours appear more to obstruct than to facilitate the public duties of the department.

Attempts have been made repeatedly during the last twenty years to render the artificers of the Royal Sappers and Miners useful in building-work, as carpenters, masons, &c. and also to bring them into the Royal Engineer Department as foremen of works. Have these endeavours succeeded? We believe not. Although the corps officers persist in their assertions that they are a fine body of artificers, they are in fact but indifferent hands. It is scarcely likely that a good mechanic would enlist as a soldier when he could earn three times as much as a civilian, and enjoy his personal liberty. The sappers, when employed on building-work, are placed under the superintendence of the foreman of works of the Royal Engineer Department, who generally allows them, report says, to amuse themselves as they think proper, giving them out a few tools and materials to work on with, and leaving the public to find out what this "cheap" labour costs.

Another point in the arrangements which seems to require alteration, is the employment of *Assistant Royal Engineers*. At many of the stations in the colonies, the heads of the corps call for more engineer officers from time to time, with the view of increasing their own corps; and failing to obtain an augmentation of their corps, they get authority to employ Assistant Royal Engineers, and for these *Engineering* appointments, they select *Regimental Line Officers!* What would be thought of any civil engineer or architect, if, needing assistance, he made a selection from that quarter? Yet, to carry on the engineering works of this great country, this is the course pursued. Can any

* A design is being sought by competition for a column and statue in honour of the Duke of Wellington, to be erected in Liverpool, too, at the cost of [illegible]

other result be expected, but that these infantry engineer officers will obstruct the works carried on by those so absurdly placed under their orders, or can it be imagined that such appointments are made for the good of the public?

What the clerks of the works say is, as we are now compelled to be the civil engineers and architects of the department, give us the title and pay of such; or let us be clerks of works only, and let the military engineer take his hands out of his pockets, and do the work; or, if he is not able to do it, or the clerk of the works to take the position, let efficient civilian engineers and architects be employed and paid for what they do.

Some alteration, at any rate, is needed, and should be made forthwith.

THE PROGRESS OF ARCHITECTURE IN OUR OWN CENTURY.

THE general condition of art in Europe, the bent of thought and action through various channels operating directly or indirectly on taste, and the magnitude of the effects finally supervening in intellectual progress at the cessation of the war, have required us to give attention to the period at or about the year 1815, at some length. We have not even yet referred to all the influences which were conducing to the later and the present state of art in England and Germany. The fact of having worked out the models in one style, the co-existence of many different fields of study or selection, the love of mere *revivalism* in new works, and a desire to perpetuate the old, and the actual apprehension of only a *portion* of the attributes of architectural art, were so many conditions which were prejudicial to success in new works. Yet the desire to achieve something great was not wanting. In Bavaria, it did not even wait for the termination of the war: in England, the requirement for new churches was pressing. How was the *art* in such works to be expressed, under views of art, mistaken, conflicting, or unmatured? The difficulty was one which had never been presented to architects before, in the same variety of details and collective magnitude. The problem is still only being worked out, and is peculiarly complicated in church architecture.

The architect, however, is called upon *to act*. Supposing that the architects of George IV. or Louis of Bavaria, perceived that nice metaphysical points were involved in the work they were called to do, how were they to settle things which are thought out only in the lapse of years and by the contribution of many observant minds? The public oscillates in taste, heedless of consistency, even in error. It is not for a few architects to penetrate the clouded question, and place the art in a permanently progressing course. Like the old general, we are "beaten by time." Never, however, at any juncture in the history of taste, was the discriminating faculty more needed to ensure the erection of buildings, possessing the attributes of *art*, and having features of permanent interest and intellectual elevation for the public.

In the philosophic mind of Germany, we apprehend that perception that there was a fresh requirement was not wanting. This it was that gave birth to the new science of æsthetics, which long occupied the German sages, before the recent development of the same study in England. Time, however, was required in both countries, for the effect to be perceived on new art.

In the last article on this subject,* we essayed to set forth in words, what were all the attributes of the special art of architecture; and certainly we hardly think—though much has been said of some of these attributes—that the same thing had before been done. For, it appears to us, that whilst the *presence* of all the attributes is necessary to constitute the art, the invariable error made in this century, and maintained to this day by the writers in the newspapers, is in exalting colour, or form, or material, or style, or structural propriety or other element—one of them—and in leaving each of the others totally out of view. Half the truth is often as pernicious in its effects as whole error.

It cannot be too widely known, that even assuming correct views to prevail with practical architects, it is not these which make any actual condition in the art of architecture. Such views even are warped and modified by the prevalent opinions of the public: or, in the necessity of *acting* upon conclusions, directions are taken up which are not easily unlearned. We are driven, therefore, to regard as one of the chief active influences for the production of good art, the state of knowledge and taste existing with the public and private patron. It is a deficiency in this particular which yet retards the prevalence of good architecture.

We repudiate the word *patronage*, in the sense in which, alas! it has been often used by artists. We have no confidence in the value of what pertains to alms-giving: and art only is worth recognition, and valuable in its intellectual results, when it proceeds from a demand expressing the love of it, and the appreciation of its moral influences. Architecture, however, as we had hardly need to state, requires a demand, or it is not created: and though *public* patronage may be of chief moment, it is remarkable how much is in the power of individuals.

Now, the modern fame of Germany in the special art of architecture, has been greatly due—independently of the architects—to one or two "patrons;"—it has, indeed, owed much to a single monarch. It requires something more than the possession of funds, or the feeling of a wish, to exercise the calling of a Mecænas. Voltaire,* as quoted by Mr. Elmes, in our last volume, says in one place, "Colbert, le Mécène de tous les arts, forma un académie d'architecture en 1671. C'est peu d'avoir des Vitruves, il faut que les Augustes les employent." And, in another place, "Il n'est pas aussi facile à un génie né avec le grand goût de l'architecture de faire valoir ces talens, qu'à tout autre artiste. Il ne peut élever de grands monumens que quand des princes les ordonnent. Plus qu'un bon architecte a eu des talens inutiles."

But from king to commoner, we have been singularly unfortunate in the Mecænas family in England. Moreover, we are a people worshipping many things besides intellectual attainments, or even high character and virtue. How much, a sounding name and rank, or reputed wealth, or a certain presence, will carry with it, let every day's story tell. If only,—

"* * * * Virro painted, built, and planted,"

though

"Only to show how many tastes he *wanted*;"

or if "some demon" had—

"* * * * whisper'd, 'Visto! have a taste,'"

straightway, reason or no reason, the one has been installed, or the other has installed himself, judge and potentate in such matters as those which affect national credit,—as art does; art, which—what is of even more immediate moment—affects national prosperity, intellectual culture, and material and social happiness. Every bow-window of the clubs, still holds its "Sir Oracle," who, when he *opes* his *mouth*, thinks to "let no dog bark;" and it has been most unfortunate that some of those even, who may have attained considerable learning in particular branches of study, have neglected both æsthetics and the *general* study of styles,—the combined pursuit which we have held to be at this juncture in the history of architecture, more than ever necessary to the just decision upon what steps are to be taken towards the production of anything great. We are *cursed* with "the influence of authority in matters of opinion,"—that is to say, the authority which sycophancy gives to the man with a purse in his pocket, or "a handle to his name,"—leading to the astonishment that pervades the countenance, when *you* "just hesitate dislike,"—you, Mr. perhaps "Blank"—but for your lifetime a student, by lengthened day, and midnight oil, — and the clinching rejoinder, that that very pattern only one hour agone, was chosen by the Duke of Ducats, as well as the Lady Piastre, whom *all the world knows* to be at the head of fashion, and of faultless taste. Such a potentate, only on a wider field, was the great George IV.—of whom as to his capital, it might be said, as of Augustus, "lateritiam accepit;" but of whom, like Augustus, it could not be said that he left it of marble,—either in fact or by figure of speech. That, however, was the comparison drawn in words, by writers who should have known better; for, though by reference to what had existed during some previous years, the change was a remarkable one, and perhaps a fortunate one, the works produced do not form grounds for any very extraordinary congratulation; they are quite unworthy to be set forth as examples of the skill of English architects, and are strikingly inferior in all those elements of architecture which emphatically are the attributes of *art*, to the works which were being undertaken on the continent. Of the English works, however, the terms both of our approval and disapproval have been expressed.

To some, the reputation of a Mecænas appears to convey the idea of the absence of talent, such as it is deemed can be possessed only by those who are—shall we say?—"patronized." To us, it seems, that there is no calling which presents not only scope for so laudable an ambition, but which requires so extensive a combination of qualities. But between an English king and Louis of Bavaria, how great was the difference! The latter erred perhaps in making his capital somewhat of a museum of *imitations*, thereby losing something of the full expression of *art* from what he built; but, in spite of such errors, he "has done more for the permanent benefit of taste during the last quarter of a century, in the small city of Munich alone, than was ever before accomplished, by whole generations of kings, either in ancient or modern times. All the munificence of Pericles, and of Lorenzo the Magnificent combined, would not reach one tithe of the patronage of Ludwig the First, of Bavaria. His works in every department of art are truly surprising, and all accomplished in half the time spent by Louis XIV. over the gorgeous accumulations of his one palace at Versailles."* One great public monument a year was raised by this Mecænas during the twenty-five years; and, independent of architects, about 200 artists were kept constantly employed in decoration,—in sculpture, in painting in fresco and encaustic, in stucco, scagliola, mosaic, and marquetry; besides that during the same time other arts were in full activity, as casting and working in metal, and glass-painting. Indeed, in the last-named, some works of great importance were executed, as the windows which were contributed to Cologne Cathedral. Here, however, again we find ourselves overrunning the years of our present position in the series of this history.

The contrast between the architecture of England and Germany, after the time of the war, is great; and to Englishmen, we fear it must be admitted, is humiliating. Still some advantage may be derived from the comparison. Here are two sovereigns, each commencing about the same time to embellish a capital,—we shall shortly see in what way, and with what results.

In an article in our last volume, wherein we noticed the course of revivalism in Germany, we spoke of German artists, as Overbeck, Cornelius, Schadow, and others, who were resident at Rome, where most of those of the Lutheran Church became Roman Catholics in the year 1814. About this time occurred an event which was probably of great importance in our history. This was the visit to Rome of the Crown Prince, afterwards King Louis of Bavaria. This prince possessed knowledge and taste, and had already manifested a disposition towards the cultivation of the arts. The artists therefore hailed him as a patron, who would secure to them maintenance and fame. They were not disappointed. The prince, having conceived the design of embellishing the capital of his future kingdom, at once attached himself personally to several of the young men, and gave commissions liberally amongst them. The artists, in return, combined to give him a grand festival. A villa was engaged; and the prince was received at the porch by a representation of St. Luke, with an

* See p. 441, *ante*.

* "Essais sur l'Histoire Générale," tom. vi.

* Mr. Wornum's Lecture on "Ornamental Art." *Vide the Builder*, vol. viii. pp. 340, 341.

inscription bidding him enter and contemplate what *the arts* had done in his honour. Allegorical compliments, both to the visitor and to artists, were exhibited, through the medium of transparencies, busts, wreaths, and devices. Veit had set forth the figures of Giotto, Michelangelo, Raffaelle, Albrecht Durer, and others. Overbeck indicated the part the prince was to play by portraits of Pericles, Augustus, Julius II. and Leo X.; while Schadow, Vogel, and others essayed to portray their own high calling by representations of the downfall of the walls of Jericho, the extermination of the Philistines by Samson, and the cleansing of the Augean stables by Hercules.* "There is no doubt," says the writer in the *Quarterly Review*, "that this visit to Rome laid the foundation of all the royal undertakings that have since distinguished Munich." Indeed, amongst the several projects in Germany, to which, in the course of our notice of Cologne Cathedral,† we alluded as put forth at the time the war was thought to be concluded in 1814, was one for the Walhalla, completed several years later, and for which the King of Bavaria issued a programme for architects to send in designs, in that year. In 1814, also, one of the future great architects of Munich, Friedrich Von Gärtner, was in Italy. There he remained four years. Gärtner, it may be remarked, in 1819, visited England; but from 1820, when he was appointed professor of architecture in the Munich Academy, he was employed at Munich. In 1815, Klenze was royal architect, and in 1816 was commissioned to make designs for a Walhalla. A commencement of this building was made in 1821, as far as regards the preparation of materials, but the structure was not in fact commenced till the year 1830. Meanwhile, great attention had been given in Munich to the study of general art. In another article we shall examine further what were the architectural results. A right apprehension of these is of some moment in England.

"IN OLD THINGS THERE ARE NEW."

IT is surprising that the lessons to be gathered from the pages of antiquity, particularly as applied to social and domestic policy, should have been treated with so little consideration as they have been; and it is curious that in our own country many matters are only now beginning to be appreciated by us, although the example had been set hundreds of years ago by the famous old Romans, who, conquering as warriors, did so much as engineers and architects to advance the condition of this country.

For centuries the highways of England were but quagmires, and almost impassable, yet the Roman roads of far older date may be seen at the present time,—faced by boulder stones, or with such materials as could be readily found in the various localities,—in a tolerably perfect state; and some of them are used at small cost of materials at the present day. During the Caffre war, which caused so much distress to our troops a few years back, when a band of men, called by us savages, set at defiance the British forces, the late Duke of Wellington was applied to for advice. This famous soldier gave it in a few syllables,—"Make roads into the bush." This was the Roman method, which we were obliged in our new way to carry into effect in the Crimea.

In connection with the London of bygone times, the Romans buried their dead outside the city: we have but just acknowledged the wisdom of this practice. It seems, from a consultation of the best authorities, that the streets of London, like the capital city of this great people, were set out, as far as practicable, at right angles. We have since then contrived twisted and tortuous roadways,—and such slums and alleys have, in consequence, been originated, that but for the actual damage they cause, they would be curious and ridiculous.

After the Great Fire Sir Christopher Wren proposed to build the new city somewhat after the Roman fashion: where the Bank of England and the Royal Exchange now stand, he inscribed a circle for the Royal Exchange and other important public buildings, and designed that the new streets should branch in long straight lines, and the interval be arranged in a similar manner: one of these main thoroughfares was Cheapside,—a Roman causeway,—raised above the waters and marshes towards the north. If this wise plan had been carried out, it is difficult to estimate the advantages which would have occurred. In a sanitary point of view the ventilation would have been quickened and drainage simplified. As a matter of policy its advantages can be appreciated by those who have to *ferret* into the crooked lanes and streets of Whitechapel and elsewhere. It is scarcely necessary to mention how advantageous Wren's or the Roman plan would have been for the convenience of the increased traffic. The Roman method has been carried out in the American cities; and all the improvements of the old parts of London at the present day are being carried out, at an enormous expense and inconvenience, on the plans which have formerly been propounded.

In the domestic edifices of the Romans—the remains of which have been found in London and elsewhere—the bath was made a necessary part of the dwelling. We have only as it were the other day acknowledged its utility amongst the poorer classes of the community; and, unfortunately, this important accessory to health has been at present but seldom provided in houses for the families of the middle and even the higher classes. It is however certain, that the sooner we imitate the Romans in this respect the better.

Look at the water supply of modern London; its partial impurity in some districts and certain unwholesomeness in others; the people *fighting* for water in courts and alleys, and left, as is unfortunately still too surely the case, without this cheap yet important necessary of life—begging for water, or travelling to a distance to polluted wells.

The old Romans laid a glorious supply of water, bringing it over hills and valleys from a distance, far from the chance of poison from the refuse of towns, by stately viaducts, beautiful in their architectural simplicity, and so substantial in their construction that to the present day they remain to us as samples of human skill, devoted to a wise purpose, well worthy of imitation.

MOSCOW AND THE ST. PETERSBURG AND MOSCOW RAILWAY.*

THE distance between these two cities is only 150 leagues, yet it is only at *Moscow* that we can understand that fusion of the Asiatic and Slavian civilisation, so strongly portrayed in its buildings, ornamentation, &c. The aspect of Moscow from the railway station is without any striking characteristic, no regular tracing (*alignement*) of streets, like in the city of the Neva. Gardens, which reach up to the frontage of the road, and in which stand mostly low houses, give the whole a very Oriental appearance, to which is to be added the *bizarre* architecture of the churches, the *area* of which is equal to *one-half* of the whole city. Every style of architecture, from the massive temples of Ellora to the *bizarreries* of the Moresque style and the Renaissance, is here represented, if not most artistically, still in an original way. These inflated cupolas, chequered with such glaring colours; these *bizarre* porticos, where the Moresque trefoil and the plain Roman cornice are combined; those steeples, which become suddenly expanded for receiving, like a postament, the gigantic crowns of the Czars; those so much flattened vaults, where (like in *Vassily Blajennoy*) one is almost obliged to stoop,—present all a character of originality, unmatched in any other part of Europe.

The *four hundred* churches which we see at Moscow, exhibit all, more or less, that style *sui generis*, which we may, unhesitatingly, call the *Russian* style of architecture. But it is in the *Kremel* where all this is most strikingly combined. At the feet of the beholder, and beyond the circumference of the wall, flanked by massive towers, which form the entering places to the Holy City, flows the Moscowa silver-waved, and overlaid by huge stone bridges. Farther on extends the city; the roofs of the houses, painted pale green, intermix their colour with a gloomy vegetation, relieved, however, by the innumerable steeples of the Greek churches and monasteries, with which are mingled Mahomedan minarets and Chinese pagodas, as here, in the seat of the grossest absolutism, a perfect freedom of religious credence is tolerated. On the other side of the scene you perceive the cathedrals of the Archangel and the Assumption, in front the steeple of *Ivan Veliki*, where the bells of the Kremlin are suspended. Beside that edifice that fabulous bell, so long *half-buried* in the ground, rests now on a granite socle. In following the course of the river you behold the new palace of the Czars, the front of which exhibits all the rich fancies of the Renaissance style. The other palace is that of the ancient Czars of Muscovy, rich in most curious specimens of the Byzantine and Russian art style. Turning towards the gateway of St. Nicholas are the modern structures, which have replaced those consumed in the conflagration of 1812,—the old and new arsenal, which, however, possess no other merit than their huge dimensions. Strange to say, that in the porticos and arches of the Kremel, notwithstanding all renovation, the vestiges of the great fire of 1812 are still visible in a few places.

The St. Petersburg and Moscow Railway has been opened for the last five years, during which and the next following five years the revenue is divided between the Russian Government and an American company; but hereafter the former will be the exclusive owners. Its construction has been most careful, and no possible comfort has been neglected,—so much so, that its title, "*un chemin de fer de luxe*," is no exaggeration. With the exception, however, of some bridges and viaducts, the work has been one of comparative ease, as the line of the railway, passing through the *gouvernements* of St. Petersburg, Novgorod, Tver, and Moscow, almost in a straight line, is built on even ground. The angles of excavations and fillings up are more obtuse here, which renders earth-slips less frequent, and the rails, placed in double pillions on perfectly well-squared beams, are of a good make. Most of the stations, however, are real architectural monuments, leaving far behind the wood and plaster barns of other countries.

The carriages are constructed after the American model, and are a sort of *chars à bancs*, containing seats for from forty to forty-five passengers. They are divided by a passage (*couloir*), which extends from one end to the other, and through which the guards can pass, the passengers go to the commodity, &c. The 500 wersts between St. Petersburg and Moscow are usually traversed in twenty-two hours, giving an average speed of six leagues (*lieues*) the hour. But Russian railway travellers are in the habit of taking breakfast, lunch, dinner, supper, and tea, for each of which half an hour is allowed. The trains start only once in twenty-four hours from and to either of the two cities, except on special occasions. The aspect of the country near St. Petersburg, as far as Tver, is most desolate and barren, the houses of the few peasants seeming to crumble to pieces; and it is only on nearing Moscow that traces of a nascent civilization are to be met with.

COMPOSITION OF MORTAR.

A CORRESPONDENT says,—"In many places sharp river sand for mortar is costly, and the sand from pits, which is often used about London, is objectionable in ways and for causes which I need not point out to you. Clay is prevalent in most districts, and is often carted away at great cost. The mortar of which I send a sample has been used about two months. The clay is mixed with chalk, and burned in heaps: it is then passed through a crushing-mill, worked by steam, and water is added when the compound is required for use. No other lime is used than the chalk burned with the clay. The piece sent is a fair sample cut out of a wall in the course of fixing a stone staircase."

The specimen sent is extremely hard, considering its early age.

MECHANICAL DEVELOPMENT.

INSTITUTION OF MECHANICAL ENGINEERS AT GLASGOW.

At a meeting of this Institution, on the 17th inst. Mr. Whitworth, on taking the chair, delivered an opening address on topics more or less connected with mechanical engineering. After describing a small measuring-machine, by which a difference in length of the 1,000,000th part of an inch may be detected, the chairman said,—"This question of correct measurement is in immediate connection with another, which will repay all the attention that can be given to it; and I think there is no subject that can be more profitably discussed among us;—I mean that of proper gradations of size in all the various branches of the mechanical arts. I think no estimate can be formed of our national loss from the over-multiplication of sizes. Take, for instance, the various sizes of steam-engines—stationary, marine, and locomotive. In the case of marine engines, the number of sizes up to 100-horse power will probably not be short of thirty, where ten perhaps would be ample. If so, look at the sums expended in patterns, designs, and in the number of tools for their manufacture. Nor is this all; for if there were only ten sizes instead of thirty, there would be three times the number made of each pattern, and, as you know, the very soul of manufacture is repetition. By attention to this, the shipowner would be benefited by getting a better engine at a less price. In the case of locomotives and carriages I would urge the subject on the attention of our members, the engineers of the great lines of railway,—the London and North-Western, the Midland, the Great Northern, for instance. I hope they will permit me to suggest that they should consider and determine, not only the fewest possible number of sizes of engines and carriages that will suffice, but also how every single piece may have strictly defined dimensions. This question is also well worthy the attention of our architects and builders. Suppose, for instance, that the principal windows and doors of our houses were made only of three or four different sizes; then we should have a manufactory start up for making doors, without reference to any particular house or builder. They would be kept in stock, and made with the best machinery and contrivances for that particular branch; consequently we should have better doors and windows at the least possible cost. Our friends across the Atlantic manage matters in connection with their buildings much better than at present we do. I hope the members of this institution will join me in doing what we can with reference to those two important subjects—correct measurement and its corollary, proper gradations of size. The want of more correct measurement seems to pervade everything. Take, for instance, the case of the common brick, which ought to be 3 inches thick. Who is there that has made an addition to a building that has not felt inconvenience from the irregularity of size?—the new brick being perhaps too thick, and so not allowing sufficient mortar to be used; or too thin, and requiring too much mortar. Perhaps one of the most effectual means that could be adopted, in the first instance, to remedy this unsatisfactory state of things, would be for the Government to supply corporate bodies with proper standards of length—such as the inch, the foot, and the yard. The corporate bodies themselves might then have their own standards of size founded on these, and made to suit the particular wants of the different trades in the locality. The only standard of length at present supplied by the Government, and kept by the corporate bodies, is the standard yard; but there is so little attention paid to accuracy that to the engineer and machinist it is not of the slightest use, and is only employed to adjust yard sticks for measuring woven goods. There is also another subject which bears upon this question, and which has lately been brought before the legislature,—that of decimalizing weights and measures. There can be no doubt of the beneficial results that would follow the passing of such a measure. There may be a difference of opinion as to what the unit or integer of lineal measure should be; but I am of opinion that it should be the inch; for, from the accuracy with which we can now measure that length, there would be no difficulty in determining and fixing the length of its multiples. The most important divisions of length in mechanism are those of parts of an inch, and if the length of the inch were altered it would cause much confusion. Small accurate standards of length, of the decimal parts of an inch would be of much service to some trades. There is now no standard of appeal; and the different wire and other gauges differ so considerably that the manufacturer, in the case of small wire and sheets of metal, has to send a sample of what he wants, there being no means of correctly expressing its size. Although I have said so much to you with reference to the desirableness of farther improvement and greater perfection in the mechanical arts, I congratulate you on the success which in our time they have attained, and the high consideration in which they are held. Inventors are not now persecuted as formerly by those who fancied that their inventions and discoveries were prejudicial to the general interest, and calculated to deprive labour of its fair reward. Some of us are old enough to remember the hostility manifested to the working of the power-loom, the self-acting mule, the machinery for shearing woollen cloth, the thrashing-machine, and many others. Now, the introduction of the reaping and mowing machine and other improved agricultural machinery is not opposed. Indeed, it must be obvious to reflecting minds that the increased luxuries and comforts which all more or less enjoy are derived from the numerous recent mechanical appliances, and the production of our manufactories. That of our cotton has increased during the last few years in a wonderful degree. Comparatively few persons, perhaps, are aware of the increase of the production during our lifetime. Thirty years ago, the cost of labour for trueing a surface of cast iron, by chipping and filing with the hand, was 12s. per square foot: the same work is now done by the planing-machine at a cost of labour of less than 1d. per square foot; and this, as you know, is one of the most important operations in mechanics. It is therefore well adapted to illustrate what our progress has been. At the same time that this increased production is taking place the fixed capital of the country is, as a necessary consequence, augmented; for in the case I have mentioned of chipping and filing by the hand, when the cost of labour was 12s. per foot, the capital required for tools for one workman was only a few shillings; but now, the labour being lowered to 1d. per foot, a capital in planing machines for the workmen is required which often amounts to 500*l.* and in some cases more. This large outlay of capital, invested in machinery to increase production, makes it impossible to curtail the hours of working machinery as much as could be desired. In some cases two sets of workpeople have been employed in relays, each working eight hours a day; and this system, perhaps, may in time be extended, although it is attended with certain inconveniences. If, however, the relay system could be so improved and organized as to allow more time for the better education of young operatives none would more cordially rejoice than myself. I believe that mechanics, though a mere material power in itself, may, if rightly used, become a moral lever, by which, like Archimedes of old, we may seek to raise the world. There is at the present time a very gratifying circumstance in connection with the extension of machinery—viz. the large remuneration which the operatives receive compared with those who perform hand labour without the help of machinery. I would here mention, with reference to the amount of wages paid to the operative, that it does not solely depend on the master manufacturers of this country, but is governed in some measure by what is paid by the manufacturers of other countries who are in competition with our own. When in America, in 1853, I found that the American operatives received somewhat more wages than are paid in this country; but they worked much longer hours, although the climate during some part of the year is so unfavourable. These longer hours enable the American manufacturer to turn over his capital more frequently. This question of increased production, with which we as mechanical engineers are so identified, is so entirely dependent on the power of the people to consume, that I hope I shall be excused in adverting to it. Our yearly exports now amount to about 100,000,000*l.* sterling, having doubled in a short time, while our home productions have been greatly increased from the same cause—the increased ability of our people to consume. As a general principle, it would seem to be far better to levy a small impost on the entire wealth of individuals rather than to fasten a tax on particular objects, which if produced would constitute wealth, but which are not made because of the threatened impost. The proprietors of land may rest assured that in the future development of mechanical improvements none will be more benefited than themselves. I do not hesitate to say that all harvest operations on land properly laid down will very shortly be performed in one-fourth the time required with the hand labour now expended, by the farther application of machines worked by horse power. This is my conviction, based upon the experience I have had in the successful working of the machine I constructed for sweeping the streets, at the same time filling the cart, by horse power. By the combined aid of mechanical improvements and the science of chymistry, together with the greater skill of our modern agriculturists, the culture of the land throughout Great Britain must more and more approximate to that of a garden. We have seen the effect of the repeal of the duties on glass and bricks in the improved appearance and reduced cost of residences, and a still further benefit may be expected to result from the removal of the remaining duty on timber."

MR. BESSEMER'S PATENT PROCESS FOR MAKING MALLEABLE IRON.

Time, as yet, in place of entirely settling the merits of this new process, only accumulates an increasing mass of contradictory assertions and opinions regarding it. While one class of objectors declare that the process evolves no extra heat at all, and that the metal still remains crude iron, another class allege that the heat is so intense that a new cupel must be erected, at great and impracticable cost, on every occasion, as the fire-bricks are melted and the vessel destroyed at every making of the metal. As to the qualities of the metal actually produced, too, there are the like contradictions; one announcing that it turned out to be mere rotten iron, and another that it produced articles of excellent quality. May it not be that, although purified from carbon and sulphur, phosphorus, or other crudity by the new process, the metal requires to be either cooled very slowly, to enable it to assume the fibrous or tenacious state, *or re-heated*, though not puddled; and that in those cases where it has been said to have turned out well, and produced articles of good quality, the re-heating requisite even to shape the articles so produced constituted an essential element in the favourable product; while in other cases, where a want of tenacity or consistency was met with, there was no such adequate or sufficient re-heating, or re-cooling rather. Of course, if re-heating and slow re cooling be essentially requisite, the value of the process is, to a certain extent, diminished; but still, if actual puddling be not necessary to the production of malleable iron or steel in this way, an immense advantage would be gained, and perhaps even the extra heat attendant on the process itself might be ultimately expended in protracting the cooling process so as to anneal the metal as it were, and obviate the necessity of even re-heating.

We do not mean to add to the speculations and opinions, however, already entertained on this interesting subject, but shall confine ourselves to a mere record of such alleged facts as appear to be of importance in their bearing on the final determination of the points at issue.

The *Engineer* states that—

"A piece of one of the bars made at Woolwich, from iron refined by Bessemer's process, was heated and rolled out to a thin sheet, at one of the Wolverhampton mills. With a view to its being rolled yet thinner, the sheet was then doubled, again heated, and again rolled, when it came out duplicate pieces of No. 23 gauze, 12 inches long by about 4 inches wide. These were then

annealed in the manner customary in the finishing of sheets so thin, and when cold were submitted to the following very severe test. They were taken to a tobacco-box maker in the same town, and, still cold, were punched out to the required shape for such an article. Operated upon first lengthwise and then across, the resistance was the same—perfect. It seemed as ductile as a piece of good block tin. In the words of the workman conducting the operation, 'it was as tough as leather.' The box was completed and the burnishing tool applied, when a polish was produced, that, if the process had been continued a little while longer, would have 'equalled,' the operator said, 'the polish of steel.' 'A better bit of iron,' this man said, 'I never worked.' The only perceptible flaw that the excessive punching which the shaping of the box required, was one of very minute proportions; and this the burnishing tool removed easily. The dimensions of the piece of bar from which these Lilliputian sheets were rolled, were, length about 4 inches, width about $2\frac{1}{2}$ inches, and thickness about, we think, $1\frac{1}{10}$ inch. *Before being broken it had been nicked and had broken very short*—the bar being to all appearance devoid of all the usual appearances of fibrous iron; *and yet, after being submitted to the heating and rolling processes* which we have described, it became malleable to the very great extent required to stand successfully so severe an ordeal."

These results seem to support the ideas we have broached: they would also explain why others have found the metal yielded by the very same experiment to be apparently so bad. Even the purest of glass forms but indifferent, or, at least, brittle, and hence comparatively worthless articles, unless annealed. May it not be so with the purest of iron, even admitting Mr. Bessemer's to be so, till also annealed, or unless protractedly cooled?

The experiments at Woolwich alluded to by the *Engineer*, and reported in the *Society of Arts Journal*, have apparently militated much more against than in favour of the immediate product of Mr. Bessemer's process, so far as regards tenacity, but they may be subject to the considerations already suggested. The metal was found to be crystalline, yet approaching to fibrous iron in tenacity: it is to be remembered also that the product of the experiment witnessed by various iron-masters was said to be semi-steel only, or at least not malleable iron, the metal having been poured out before it attained to the malleable state. At Woolwich, however, the cooled metal *was* re-heated, in whatever way it may have been re-cooled.

Till it be fully proved, if it can be, that Mr. Bessemer's process is really valueless, it is but fair to put the most favourable construction on its merits, since no actually great and important discovery was ever all at once matured, or ever so manifested itself from the outset as to defy criticism and to be without failure.

A strange letter from Mr. David Mushet appears in last week's *Mining Journal*, in which he charges a patent-agent with very questionable conduct in regard to the preparation of the specifications of the American patentee, Mr. Martien, after he had also prepared, unknown to that gentleman, the specifications of Mr. Bessemer's patent. The most remarkable circumstance in respect to this new view of Mr. Mushet's is that while he now expatiates by inference as largely on Mr. Martien's prospects, as he formerly did in relation to those of Mr. Bessemer, which he now affects to depreciate and pity, he asserts that Mr. Martien publicly performed, in November last, "precisely the same operation from which Mr. Bessemer has been deriving such *éclat*." This, he says, was "witnessed by a host of incredulous and astonished spectators;" and yet we find Mr. Mushet, who had been expressly invited to examine Mr. Martien's plans, and witness his astonishing experiments, expressing, in the *Mining Journal*, only a few weeks back, his own unbounded astonishment and admiration at *Mr. Bessemer's process*, which had just been published at the Cheltenham meeting of the British Association!

We pointed out, a week or two ago, what appeared to us to be an essential point in which Mr. Bessemer's patent overrode Mr. Martien's, namely, inasmuch as Mr. Bessemer contemplated the purification of the metal at once into steel and malleable iron, on the great scale, in a special vessel or receptacle; while Mr. Martien only specified the infusion of air into the pig metal, as it flowed from the crude furnace, through the gutters or channels, to the pig moulds. Now, however, we are told by Mr. Mushet that, although Mr. Martien explained his process to the agent, while preparing his specification, in such a way as ought to have secured for him this very "receptacle," or vessel,—

"Mr. Martien was very much surprised to find that, according to the English patent law, his brief and comprehensive *provisional* specification would not cover any claim for refining liquid iron, except while the iron was flowing in a channel or gutter from the blast-furnace, and that he was debarred from refining the iron in a 'receptacle,' and that it was necessary to *strike out* of his draft the word 'receptacle' wherever *he had inserted it*. It is true the provisional did not contain the words channel or gutter: it contains no limitation whatever: it claims the searching and complete penetration with air of the liquid metal 'as it comes, or after it has flowed, from a blast or smelting-furnace, and prior to its congelation in the shape of pigs or otherwise.' It was also true that this claim, which Mr. Martien sought the best reputed advice in order to secure in the amplest manner, had been actually and publicly proved, *not* in a channel or gutter, but in a 'receptacle.' Puzzled and perplexed by such apparent contradictions, Mr. Martien could do nothing but bow with great unwillingness to English patent law, as expounded by a celebrated agent: he never dreamed, nor could have dared to dream, that there was a secret patent, filed under the proper secrecy of six months' protection, being carried forward in the same office, attempting to give another man the title to use Mr. Martien's sole invention in a receptacle or 'colander!'"

One would have thought that in such a case, it is Mr. Martien who ought to be pitied as a Tantalus; but no: it is Mr. Bessemer from whose lips the "full cup" is about to be "dashed!" It may be so; but certainly Mr. Mushet's explanation seems to be anything but clear, unequivocal, or satisfactory.

MODEL LODGING-HOUSES IN FRANCE.

The following observations have been addressed by Mr. Henry Roberts, architect, to the Society for Improving the Condition of the Labouring Classes:—

Having very recently had an opportunity of examining the two earliest establishments formed in France, on the general plan of our model houses, I think that a short account of them may be interesting to you, as well as to other members of our committee, and perhaps be suggestive of some useful practical lessons.

The Model Lodging-house at Marseilles is a large and imposing pile, built for 150 unmarried men. It is outside the town, in a healthy situation, but evidently too far from the daily occupation of the class for whose benefit it was constructed; and the many advantages it offers, being not sufficiently appreciated, do not practically counterbalance this objection. The consequence is, that a considerable number of the chambers are generally unoccupied, although the rent has been reduced to six and seven francs per month, according to the floors.

Whilst, in the main features of arrangement, our George-street house has been taken as a model, nearly double the space is given to the separate compartments provided for each lodger: the expense of construction has in proportion been consequently greatly increased.

A *restaurant* forms part of the establishment, and involves a heavy loss, owing to the small number of persons who use it. The superintendent expressed a strong opinion as to the improbability of such an appendage to a model lodging-house being likely to prove self-supporting, as, in all probability, but comparatively few of the inmates would be customers with sufficient regularity to admit of an adequate supply of provisions being dressed without the risk of constant waste.

Baths are also supplied in the house, but these cannot pay the cost and expenses.

A very respectable merchant, who takes great interest in the establishment, and the lead in its management, told me that, in a pecuniary point of view, it is altogether a failure, as, notwithstanding the subvention of one-third of its cost being paid by the Government, the 150 proprietors receive no dividend. In regard to its moral effects, he doubted whether they are more encouraging. The only obvious benefit appears to be that of the health of the inmates, no death from cholera having occurred in the house.

The Government has been anxious that houses for families should be built at Marseilles, where they are much wanted; but so great is the discouragement caused by the want of success in this first effort, that the large subvention which they have offered in aid remains untouched.

At Mulhouse, a manufacturing town on the line of railway between Basle and Strasbourg, the population of which has doubled within the last ten years, a *cité ouvrière* has been built by an association of manufacturers, on a scale more extensive than that of any other similar establishment in France. Although without the town, being in the vicinity of several large factories, the workmen therein employed are its principal occupants, and all the houses appear to be tenanted.

A spacious road, planted on either side, runs between the main groups of cottages, and parallel roads run behind them. They consist chiefly of groups of four dwellings, forming a detached block of building, placed in the centre of a square plot of garden ground, which is divided equally between the tenants. Two of these dwellings front the main central road, and two the minor or back road—an economical arrangement in regard to cost of construction, and one which admits of good internal ventilation.

The dwellings, though not precisely uniform in their disposition, have mostly a wide entrance, fitted up with a cooking-stove and sink. Beyond is a staircase leading to three bed-rooms and a closet. The remainder of the ground-floor is devoted to the living-room, with a large recess behind the staircase, of sufficient dimensions to contain a full-sized bed. This compartment has a side window, and, in some cases, being partitioned off from the living-room, forms a small separate room.

There are, besides these, several rows of double houses, built back to back, each having a narrow strip of garden ground. They are let at much lower rents than the others; but their arrangement cannot be commended as consistent with good ventilation; and the general appearance of the tenants indicated a decidedly inferior class of occupants, with considerable want of cleanliness and propriety.

The progress made in the construction of these houses has been:—In 1853, there were 100 built; in 1854, there were added 86; and in 1856, 40 more, together with a spacious and well-arranged building for baths and washhouse, with another for a bakehouse and public kitchen, conducted by a *société alimentaire*. In this establishment food is prepared and sold at cost prices: it may be either consumed on the spot, or taken home: in the former case, a payment of 75 centimes is required for three months' right of admittance to the refreshment-rooms. A breakfast, consisting of bread, coffee, and milk with sugar, costs 15 centimes, or $1\frac{1}{2}$d.; a dinner of soup, bread, meat, and vegetables, from 20 to 30 centimes, or 2d. to 3d.; and supper in the same proportion.

The intelligent manager of this establishment, which has been fully organized only about two months, told me, that in order to its being self-supporting, from 500 to 600 persons must be daily supplied with food. The progressive increase of customers warrants the expectation that the object of the founders will in this respect be realized.

To revert again to the dwellings: out of the 186 completed up to the close of the past year, seventy-five have been sold to tenants at cost prices, exclusive of the outlay on the roads, drainage, fencing, and planting, which were paid for out of the government subvention of 300,000f. or 12,000*l.* being one-third the amount of outlay of 900,000f. The cost of the houses has averaged from 72*l.* to 120*l.* each.

The managing director, M. Bernard, to whose zeal and activity may, doubtless, in the main, be attributed the measure of success which has been obtained, spoke much of the difficulties he encountered, resulting from the administration

of the law in France with reference to tenants, and the expulsion of such as proved unworthy. He remarked that it was invariably the best who became purchasers; and that the payments, whilst attended with much trouble, owing to the smallness of the sums received, and frequent irregularity of payment, produced the important and gratifying effect of inducing industrious and frugal habits, as well as in producing that feeling of self-respect and honest independence which appears to be much better understood amongst the working-classes in England than in France.

In a sanitary point of view, the experience here has been the same as in all other like cases. And whilst alluding to this important consideration, I may add, in proof of the enormous expense which a defective sanitary state sometimes involves, that the chief magistrate of Genoa lately told me cholera had put the authorities of that city to an expense of 12,500,000f. chiefly in providing relief for those who, from the defective state and confined atmosphere of their dwellings, were the greatest sufferers.

VENTILATION OF HOSPITALS.

The importance of this subject, commented on in your leader of last week, induces me to offer a few remarks on those parts which bear particularly on ventilation.

In the summary which you educe from Mr. Roberton's excellent paper, you remark, "that modes of ventilation called *scientific*, which may answer for mere dormitories, fail in an hospital."

It is impossible for me to urge, more strongly than you have done, the great importance of ventilation in hospitals. The influence upon the sick, of an atmosphere charged with the emanations of disease, and the fatal effects, arising from a want of change in the poisonous air of the wards, engendering erysipelas, and other endemic diseases, are patent to all of any experience in these buildings; and the works of military surgeons prove that the per centage of recoveries, which is greater in their temporary hospitals than in our permanent buildings, arises principally from their temporary construction allowing the winds of heaven to blow freely through them. These may be said to be *naturally* ventilated. But, however desirable this system may be, it cannot always be carried out in the hospitals of our great cities.

In these the area is necessarily limited, and the height of the wards diminished, and it is under these circumstances that the necessity for ventilation is greater, and the means of obtaining it *naturally* becomes more difficult.

"Windows facing each other on the opposite side walls," which you so properly advocate, cannot always be obtained, and without this arrangement the movement of the atmosphere, instead of passing through, and thoroughly changing the air of the wards, displaces it from one part of the hospital to another. But even when opposite windows can be obtained, they cannot in all weathers be opened, and ventilation should be *constant, day and night*, and in amount such, that no difference can be perceived by the sense of smell between the freshness of the air of the wards and the external air.

These conditions cannot *constantly* be obtained except by artificial ventilation.

In trying experiments on the air of the wards of the Middlesex Hospital, previous to their being ventilated, I could not detect any difference in the smell of the air at the level of the floor, or even up to 4 feet from it; but from this height to the ceiling, the air became gradually more fœtid, until at the latter level, it was quite overpowering; but after the upper parts of these wards were connected with a powerful extracting shaft, little or no difference could be detected in the quality of the air at the different levels. This proves strongly the benefit derived from *artificial ventilation with an upward current*.

While speaking of this hospital, I may mention a circumstance indirectly bearing on this question. In one of its wards erysipelas constantly attacked patients who were placed in certain beds. For some time the cause could not be discovered, but on closing and ventilating a dust-bin placed outside of the building, near this part of the ward, no erysipelas afterwards occurred. The position and ventilation of the water-closets are, as you say, most important, and demand especial attention, more particularly as it is necessary for the convenience of patients, that they should be situated as near the wards as possible, and the emanations from them being sure to contaminate the atmosphere of the wards if allowed to enter.

The most certain method of preventing this, is to *ensure* a current of air always setting in *from* the *wards* to the water-closets, and this has been provided by Mr. Mennie for the Royal Victoria Hospital, by connecting the water-closets, with a powerful extracting shaft, which means have been proved at the London and other hospitals, to have perfectly effected the required ventilation. Wm. Jeakes.

*** With further reference to the Royal Victoria Hospital, we are requested by the architect to say that "cement dressings" are not to be used, but that it is to be built of red bricks and Portland stone, with a granite plinth. We had our information obligingly from the architect himself, and made a note of it at the instant. It was doubtless a slip of the tongue, and we most gladly rectify the statement. As to the position of the "latrines," notwithstanding the provision made for their ventilation according to Mr. Jeakes, we must reiterate the hope that the position of them will be altered. Several correspondents have written to confirm our statements touching the condition of many of our hospitals. Dr. Roberton says,—"I have inspected a considerable number of our provincial hospitals, as well as a majority of those in London, and so unhealthy are many of them, that I confess I see no remedy for such a calamitous state of things without some exposure such as would result from the labours of a Commission of Inquiry issued by Government."

FOREIGN INTELLIGENCE.

Berlin: New Museum.—At the beginning of winter a fresh portion of the Berlin Museum will be opened to the public, comprising the ethnographical collection, placed in three saloons on the first floor of the southerly part of the edifice. The bulk of the collection consists of the stock of the former *Kunst Kammer*, and the collections made by Prince Waldemar in India. The Mexican antiquities, hieroglyphics, &c. are exhibited in cases of old Mexican fashion. Asia alone occupies nearly two saloons. A model of a reed house from Borneo, and Indian and China lackered ware, models of alabaster and ivory, water-colour drawings on glass, &c. are amongst the most interesting specimens of the Berlin ethnographic collection.

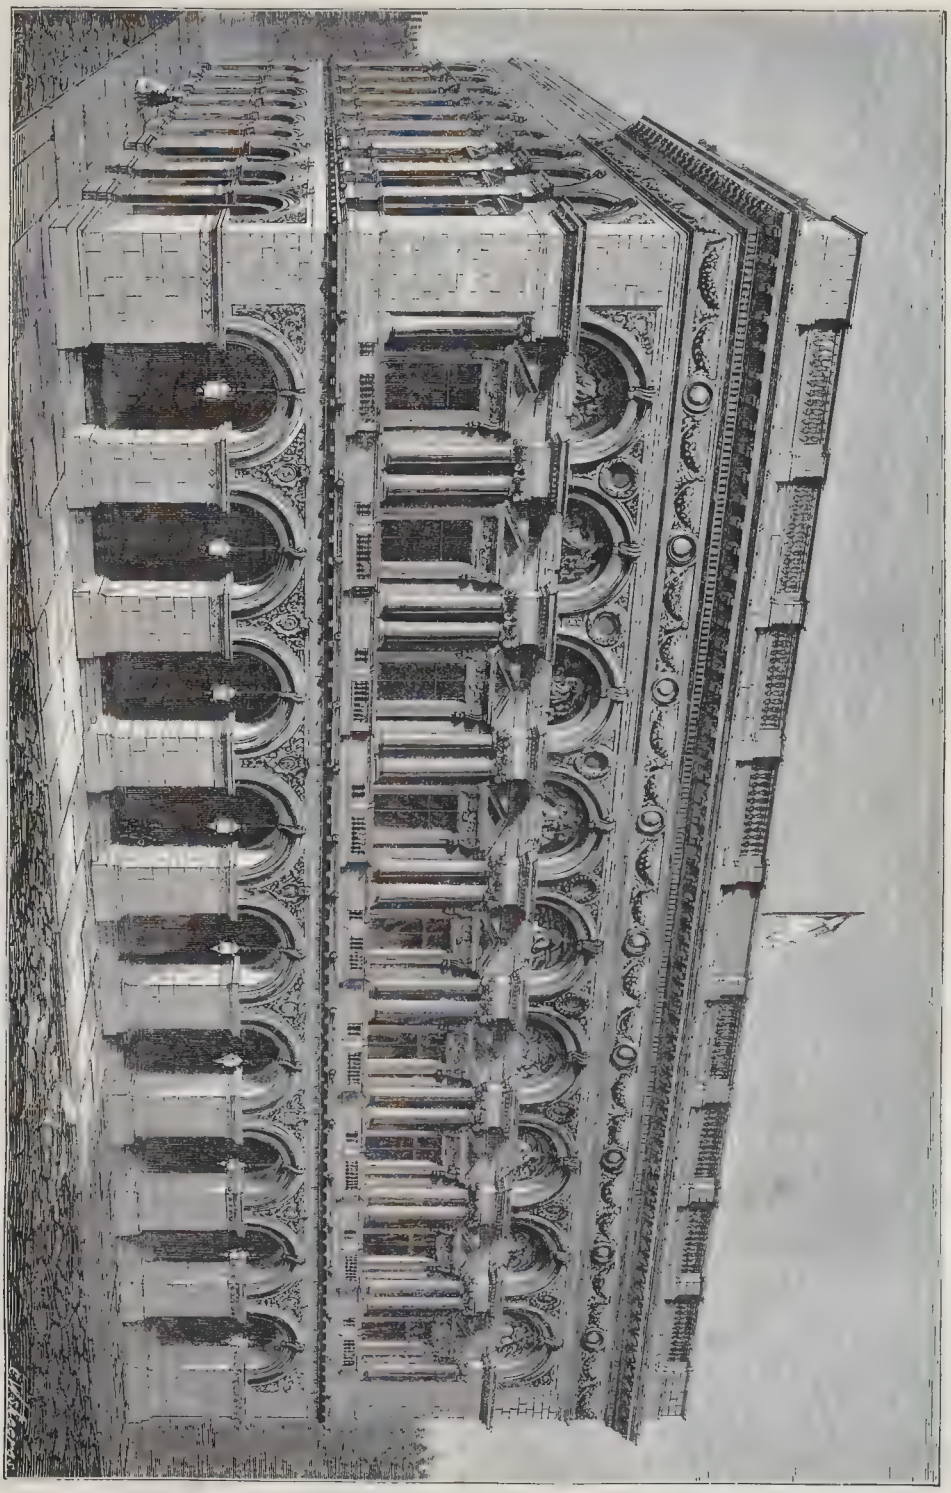
The Cathedral of Cologne.—The northern tower of this building is progressing towards completion, the material used being the *basalt-lava* of the Perlenkopf, one of the volcanic summits which form the mountains between the Laacher Sea and the Aarthal. The *basalt-lava* of the Perlenberg is even harder than that of Niedermending: in fact, it may be considered the hardest building-stone hitherto known. The pillars, which have to serve as buttresses to the walls and vaults of the lateral nave of the north and south portals of the dome, have also been begun.

Vienna.—The models for the *Kaiserhalle* of Speyer exhibited here, have been much approved of. They will be placed in the niches of the chief portal, and represent Maria with the infant, Stephen the Martyr, &c. The basso-relievos for the interior of the hall are to be made by Pilz, of Rome; the statues of the Emperors by Dietrich. Some of the pictures of the Gallery Manfrin have arrived here: a fine St. George, by Andreas Montagna, a superior and well-preserved picture. A plan of Vienna, of the time of the Babenberg dukes of Austria (1300), has been found, which the Vienna Academy of Sciences will shortly publish.

The Antiquarian Associations of the South of Germany.—The associations of Cassel, Darmstadt, Mayence, Wiesbaden, and Frankfort, have combined for the editing and publishing of their joint transactions. The last number of the *Periodische Blätter* of these historical and antiquarian societies contains "A Roman Colony in the Niederlahngau;" "Unedited Antiquities of Mayence and Environs;" "The Merovingian Churchyard at La Chapelle St. Eloi," &c.

Switzerland. — An Art-loving Parish.—The parish of Ragaz, the place where Schelling died, and where King Max has erected him a monument, has, through their communal and federal superiors, expressed to the king their acknowledgment for honouring their township with the memorial of such a man. They say that they are sure that the Supreme Powers of the Swiss Republic will, for all time to come, respect and protect this monument of the piety of a monarch towards his teacher.

Photographical cards.—They are making visiting cards in Germany, whereon, besides the name, the portrait of the party is engraved. Some odd anecdotes have resulted from this novel industry.



THE NEW FREE-TRADE HALL, MANCHESTER.

The new Free-Trade Hall in Manchester, built on the site of the hall bearing that name, in which the Anti-Corn-Law meetings were held, is to be opened in October next.

Our engraving represents the exterior of this very handsome building, for which Manchester is indebted to the skill and taste of Mr. Edward Walters. It has been raised by subscription, by not very many gentlemen of Manchester, and has cost 25,000*l.* without fittings, such as for the gas, or ultimate decorations. Mr. George Hurrap was the builder; Mr. J. Hollins, the mason. The building, externally, is of Yorkshire stone. The principal front, it will be seen, consists of two main stories, the ground-floor forming an arcade of nine arches, with broad piers and plain archivolts, imposts, and block cornice, but having the spandril spaces filled with the arms of different towns in foliage; and the upper story, of greater height, having a range of three-quarter Ionic coupled columns, with pedestals and blocks of entablature, bearing archivolts with consoles, above which is the main entablature of the building, with its frieze enriched with medallions and festoons, the whole building being terminated by a balustrade. The spandril spaces of the range of arches last named are enriched with wreaths and circles of red granite, and the semicircular panels in the arches are filled with alto-relievos by Mr. Thomas. Immediately below these, a narrow panel, ranging with the cornice of the order, contains a fret. The windows have architraves, trusses, pediments, and balconies. The building derives considerable effect from the width of its angle piers, which are without quoins, and are undecorated except by the lines of the several horizontal impost and other mouldings.

In the grand hall the walls above the gallery have coupled attached columns with entablatures, forming piers, with arches cutting into the great sweep of the cove of the ceiling: the room is lighted by five circular openings, and seventeen openings in the cove round the hall. The proportions of the room are somewhat different to those of ordinary large rooms, being 78 feet wide, and only 52 feet in height; and yet it has not the appearance of a *low room*. The object of the architect has been to produce a good room for speaking in. The length of the hall is 135 feet. There are seventeen panels with centre flowers in the ceiling, and in these flowers are sun lights, containing some eighty burners in each. These lights, as yet, are only partially understood. When properly formed, with flues of the necessary size, the heat rushes towards a centre, and the flowers themselves should never be *soiled* by the gas. The hall is not yet painted, the work not being dry, and the money not forthcoming. This would require at least 4,000*l.* more.

In addition to the hall, the building includes an assembly-room, 76 feet by 37 feet 6 inches, and 28 feet high, with a separate staircase; a drawing-room, 40 feet 6 inches by 24 feet, and 24 feet high; a supper-room over the assembly-room, and various other apartments. The extent of the principal front is 153 feet, the total height of it 75 feet. The building covers an area of 2,300 square yards.

THE FREE-TRADE HALL, MANCHESTER.—MR. EDWARD WALTERS, ARCHITECT.

PROVINCIAL NEWS.

Taunton.—A fatal accident occurred at the new Shire-hall here on Wednesday before last. From the evidence before the coroner, reported in the *Bridgwater Times*, it appears that two workmen were on a brick wall about the middle of the building, taking off the braces from the couples. As one of the men was taking down one of the rafters, having one end of a rafter in his hand, and the other end of the rafter being on the back of the couple, he went to pull it off, when the end of the rafter slipped off the couple, struck against the wall, and knocked him off the wall. He fell down 23 feet on a joist below, and from thence to the ground, a farther distance of 14 feet, and was killed. The rafter was 4½ inches by 2¼ inches, and 18 feet in length. His fellow-workman had a rope in his hand, which the deceased ought to have tied to the rafter before he attempted to wrench it from the couple. The former, in his evidence, stated that he told the deceased that he would tie the rafter to the couple, but as he was going to do it the accident happened.

Portsmouth.—The Government, it is said, have resolved to open a communication between Portsmouth and Langston harbour, by a canal, 200 feet wide, and 13 feet 9 inches deep. The plans and specifications are said to be ready, the contracts to be shortly taken, and the work commenced. Farther schemes are also said to be under consideration, which, if carried out, will not only render Portsmouth impregnable, but will make it one of the largest government establishments in the world.

Hastings.—The ceremony of laying the first stone of the general drainage of Hastings was performed on Saturday last by the Mayor, in the presence of most of the members of the corporation. The stone was laid near the Rock-a-Nore Groyne, where Mr. Munday has commenced his contract for the carrying out the drainage of division A. Several coins were deposited in the stone; also a scroll, with an inscription upon it. Mr. John Laing, C.E. is the surveyor.

Sheerness.—Messrs. Kirk and Parry, of Sleaford, are said to have received an Admiralty order to build a new military hospital within the fortifications of Sheerness.

Bedford.—Application is to be made at the next meeting of the local commissioners for permission to lay down main pipes for the supply of the town with pure water. In the event of the application being successful, a company, according to the *Bedford Times*, will be formed for the purpose, the supply to be raised from the river near Clapham, and made available to supply every house at a small cost, even to their attics. The reservoir is intended to contain sufficient for the flushing of the sewers when an improved system of drainage is accomplished. The estimate is said to be 10,000*l.* and the capital intended to be raised in shares of 5*l.* each, securing 6 per cent. at a moderate calculation for the investment.

Wellingborough.—The works for the sewerage of this town are being executed by the contractor, Mr. Richard Anderson, under the superintendence of Mr. Dixon, the engineer and surveyor to the Local Board of Health. The main line of sewer through the town approaches completion; those through Market-street and Oxford-street are commenced; and the one through Church-lane is finished.

Halifax.—In consequence of a report having been circulated to the effect that the newly-constructed reservoir at Ogden, five miles west of Halifax, and from which the town is now supplied with water, was likely to burst, the place was visited on Sunday in last week by at least 10,000 persons from the surrounding districts. The reservoir stretches itself over an area of forty acres of land, and was in depth last week more than twenty yards, at which time water was observed to commence springing from the rocks a little distance below the embankment. It was at first thought to be an old spring which had become diverted in its course by reason of the workings; but new springs burst one after another, until they became six in number, which again united at a short distance, and, on being measured, it was found that the quantity discharged amounted to 3⅔ cubic feet per second, equal to the amount required to supply the mills in the vale below for manufacturing purposes. On Friday in last week the reservoir was visited by members of the town council, who, on inspecting the works, determined to ease the pressure of the water by opening the clow a little, so that the escape was then, taking into account the escape at the rocks below the embankment, about 10 cubic feet per second, which in twenty-four hours' time lowered the water in the reservoir 19½ inches. "As to the probability of the embankment giving way," says a local paper, "it is out of the question altogether, but what means will be adopted to stay the discharge of water alluded to we have not yet heard suggested by any one; nor have we heard on whom the expense will fall." We are afraid there are more than one reservoir in the country needing inspection and care.

Doncaster.—The tender of Mr. Robert Wood, for the enlargement of the infirmary at the union workhouse, and other improvements connected with the washhouses, has, it appears, been accepted by the local Board of Guardians. For the joiners' and bricklayers' works, &c. the amount is 365*l.* This, however, does not include the plumbing, which has been given to Mr. John Walker, at 43*l.*; making a total of 408*l.* From the highest to the lowest tender there was a difference of 137*l.* The contract is to be completed by the end of the present year, under the superintendence of Mr. Godfrey.

Stirling.—For some time past, a spacious goods shed has been in course of erection at the station of the Scottish Central Railway here, the former having been quite inadequate for the increasing traffic. The building is now approaching completion: it is 200 feet in length, by 80 feet in breadth: the walls are 19 feet high, and to the top of the ridge of the trussel roof the height is about 36 feet: the great span of the roof is unprovided with central supports. The architects are Messrs. A. and A. Heiton, of Perth, who have been the architects of many similar works, including that of the goods shed at Edinburgh, and the engine sheds at Perth. They were also the architects of Mr. Russell's residence at Falkirk, and other gentlemen's mansions in this and adjoining counties. The builder was Mr. Stevenson, from Aberuthven The woodwork was done by Messrs. Currie and Taylor, of Stirling; the slate-work of the roof by Mr. Morrison, from Glasgow; and the glazier was Mr. Alexander M'Donald, of Stirling. The wood principals, iron tie-rods, and iron suspension-rods were supplied by Messrs. Tod and Sons, of Edinburgh. Counting-houses, &c. are attached to the building.

CHURCH-BUILDING NEWS.

Barton.—The consecration of the Barrow-on-Humber burial-ground took place on Monday before last, commencing in the church, which is being restored. The new ground is situated on an elevated part of Thornton-road, about half a mile from Barrow. The chapels are in the Early English style, from designs of Mr. D. W. Aston, of Hull, architect. They are of equal dimensions, and adjoin each other. The ground is two acres in extent, and enclosed with a wood fence and quickset-hedge around the sides, and in the front is a brick wall and iron palli-sading.

Stanwick.—The Church of St. Lawrence, Stanwick, has been restored, and was re-opened on Tuesday in last week. The church was formerly blocked up with high pews of various sizes, a large stove mounted on a high brick base in the centre aisle, a west gallery for the organ and singers "done in Doric woodwork," and the arch between the tower and nave blocked up with rough boarding. The roof of the nave was of rough timber, and of so low a pitch as to cut across the arch alluded to, so that a portion of it was visible outside above the lead of the roof. Now the seats are open and uniform, and correspond, says our authority, the *Northampton Herald*, with some ancient ones found in the church. The pulpit, prayer-desk, and lectern are of oak, panelled and carved. A new roof has been placed on the aisle, and an entirely new roof has also been placed on the nave, of the original pitch, and covered with Collyweston slates. This has brought the whole of the tower arch inside, and, all other obstructions having been cleared away, the tower is thrown open to the church. The simple lancet window at the west end, and octo-foil over, have both been filled with stained glass. The glass is the gift of Lord Sidmouth, and is the work of Messrs. Clayton and Ward. All the stonework inside has had the whitewash removed, and has been restored, and the walls re-plastered. The porch has a room over, the entrance to which was formerly blocked up, but is now opened, and a new oak door provided. The other doorways have also oak doors, with ornamental ironwork for the hinges and locks. The old font has been cleaned and preserved. A new window has been put in the chancel, and the seats there are placed stallwise. The stone-work outside has been repaired, and new stone crosses placed on the gables. The works have been executed by Mr. Eaton, of Titchmarsh, under the superintendence of Mr. William Slater, architect.

Hungerford.—A new chapel was opened at Hungerford, on the western border of the New Forest, on Tuesday in last week. The chapel was erected under the superintendence of Mr. Jurd, of Southampton. It is calculated to hold, including a gallery at one end, about 300 persons. There are pointed windows on either side, and a triple-arched window at the gallery end.

Wells.—On Wednesday in last week, the first stone was set of the new portion of the screen in the cathedral of this city. The new part will project 5 feet from the old, and will be 17 feet in length. The new organ, built by Mr. Willis, of London, will be put up as soon as the masonry is sufficiently advanced.

North Petherton.—The consecration of the new cemetery here took place on Friday before last. The architect, under whose superintendence the works were done, was Mr. J. C. Knowles. The ground extends over about two acres; a portion of it being devoted to the Dissenters, the division being effected by suspended iron chains. The style of the chapel is Gothic, of thirteenth century. The entire outlay involved in the completion of the cemetery (including purchase of land, enclosing the same with stone walls, iron railings, gates, erection of chapels, and other incidental expenses), according to the *Bridgwater Times*, will be about 1,800*l.*

Flaxley.—A new church erected close to the old, at Flaxley, in the Forest of Dean district, was consecrated on Thursday week. The new edifice was designed by Mr. Scott, and built by Mr. James Coleman, of Westbury. It is in the Decorated style of architecture, and is built of red-grit stone from the forest, with grey-stone facings. The internal fittings are of oak. There is an east window by Jarente, an alabaster altar screen by Philips, and the font and pulpit are constructed of Painswick stone, with marble columns. An organ of fourteen stops with couplers, built by Grey and Davison, has been put up in the building.

Market Drayton.—The consecration of the new church at Hales took place on 11th inst. This church was lately erected and endowed at the sole expense of the Rev. Alexander H. Buchanan, of Hales Hall. It was built under the direction of Mr. Scott, and is of red sandstone, lined with white ashler, and in the style of the latter part of thirteenth century. The carving was executed by Mr. Philip, of London; and the stained windows, seven in number, were the production of Mr. Ward. The church is calculated to contain 180 persons.

Bingham.—The interior of Bingham Church is undergoing decoration, from designs by the lady of the rector. The eastern windows, of tinted glass, on which are representations of the Evangelists, were the work of this lady.

Aston.—The presbytery connected with St. Michael's Church, Aston, is just completed. It stands on the site formerly occupied by the ancient hall, and the more recently built monastery, which was removed in consequence of its foundations having given way. The Rev. Canon Huddlestone, the new rector, for whom the work is being executed, is about to take possession. Besides the house, a large sum has been expended in building a new aisle and otherwise repairing the church, which had fallen into

a very bad state of decay. The work has been carried out under the direction of Mr. Pugin, and the contract was taken by Mr. Hutton, of Wolverhampton.

Southport.—The foundation-stone of the new church in Birkdale Park, near Southport, was laid on Saturday week. The architect is Mr. Alfred Rimmer, and the builder, Mr. Richard Wright.

Saltaire.—The original plan of Saltaire included the erection of a Congregational church. Designs of the intended edifice have been prepared by Messrs. Lockwood and Mawson, of Bradford, and the ceremony of laying the foundation-stone is to take place on 27th inst. The church will be a large edifice in the Roman Corinthian style of architecture. The principal front will consist of a circular colonnade detached from the building, above which will rise a pedestal, supporting a cupola and dome, 130 feet in height to the top of the vane. The sides and end will be also decorated with Corinthian pilasters, and a frieze and entablature. In the interior the walls will be relieved by three-quarter columns in verd antique marble, with Parian caps and bases, supporting a circular ground ceiling of rich design. The length of the body of the church inside will be 90 feet by 45 feet, exclusive of entrance and apse. The extreme length, from east to west, will be 140 feet.

Penistone.—The chief stone of the new church of Saint Ann, at Carlecotes, in the parish of Penistone, Yorkshire, has been laid. This church is being erected at the expense of Mr. John Chapman, of Mottram (and late high-sheriff of Cheshire), at a cost of about 5,000*l.* exclusive of the ground on which it stands, which is also presented by the founder. The site is in close proximity to the old manor-house of Carlecotes, and the church will hold about 200 persons. A school-house and parsonage will also be included in Mr. Chapman's gifts to the inhabitants. The church will be of stone, from a design supplied by Mr. Shaw, of Saddleworth, who is the architect of the building. It will be in the Gothic style, with a belfry over the roof at the western end.

Barnsley.—The new Congregational church, Barnsley, is now nearly completed, and was to be opened for public worship on Thursday. The chapel, which is situated on the right hand side of Regent-street, includes nave 82 feet 10 inches, by 37 feet, in the clear of seven bays, the four last bays being thrown into a double transept on each side, two bays being devoted to each transept, and divided on each side by a lofty column, from which springs a double arch. At the front is a tower and spire, the base of which forms the principal entrance to the interior of the edifice, a second doorway being placed on the opposite side of the building. At the upper end of the chapel is placed the pulpit, on a raised dais of two steps, with an ornamental screen at the back of it, dividing the organ-gallery from the chapel. Behind the chapel, and with entirely separate and distinct entrances, are a public vestry, 21 feet 10 inches by 16 feet 6 inches; a minister's vestry, 13 feet 6 inches by 9 feet; a girls' school, 30 feet by 16 feet 6 inches; a boys' school, 37 feet 10 inches by 16 feet 6 inches, with three class-rooms on the first floor. The style of architecture is Early Decorated. The front of the chapel consists of a four-light window, with a three-light on each side of it, the whole under one label moulding, and giving the appearance of a window with ten lights. Above these, and divided from them by an enriched string, is a circular window contained in a spherical triangle, with column, &c. the gable finishing with an ornamental finial. The spired tower attached to this main gable of the nave is 19 feet 8 inches square at the base, and is divided into four stages, the lowest having a doorway surmounted by a crocheted pediment, terminating in an enriched finial. The topmost stage is pierced with two windows, of two lights each, in either face, and the tower itself finished with canopied pinnacles rising up from the angle buttresses at each corner. The spire springs from this, and, with the exception of two tiers of spire-lights, is kept quite plain. The height of the tower is 73 feet; the whole height to the top of the vane on the spire being 167 feet. In addition to the large window, the nave is lighted by two-light windows, filled in with tracery in each bay. Each transept has a coupled three-light window under a hoodmould, with a small window in each gable. The chapel will seat about 600 adults on the ground-floor, and there is an end gallery which will accommodate about 150. The works have been designed by Mr. Joseph James, of London, architect, and have been carried on under his superintendence, assisted by Mr. Whitworth, of Barnsley. The contract exceeds 4,000*l.*

Castle Douglas.—The foundation-stone of an Episcopal chapel was laid at Castle Douglas on 10th instant. The site, as described by the *Dumfries Courier*, is a little to the end of the town, at the head of the Carlingwark Lake, and directly in front of the Grove House. Some progress has been already made in the erection of the works. The church has been founded by Colonel Johnston, of Carnsalloch, assisted by Mr. R. J. Congreve, and a few other subscribers. The plan of the building, which is to be erected in the Early English style, is cruciform, consisting of a nave and chancel, to which a northern vestry and a southern organ-chamber form the transepts: over the vestry will rise a tower and spire. The interior will be seated, in the first instance, for 120 persons, but with capabilities of enlargement, should necessity require it. The seats will be open. The stone used for the quoins, mullions, windows, and all external ornamental works, is Dalbeattie granite: the walling, which is the gift of Mr. Gordon, of Greenlaw, is of Silurian, and the interior decorative stone is sandstone from the neighbourhood of Carlisle. The roof will be of oak timber, framed with arched ribs, and covered with slates of the country. The design was furnished by Mr. E. B. Lamb, of London.

STAINED GLASS.

Goole.—Messrs. C. and A. Gibbs have just fixed two stained-glass memorial windows in Luddington Church, Goole, one in memory of Mrs. Lister, provided for by her widower, Mr. James Lister: the other has been given by Mr. John Richardson, of Northland House, Winterton Brigg, Lincolnshire, to the memory of his father and mother. The west window has been also filled in with stained glass by the same artists.

Ely.—Mr. Wilmhurst has just fixed a stained-glass window in Ely Cathedral. It is a Norman window, in the baptistery, called St. Catherine's Chapel, 9 feet 6 inches by 4 feet 5 inches. The subject is the Baptism of our Lord by John the Baptist. It is the gift of the Rev. William Gale Townley, of Beaupre, near Wisbeach.

Kettering.—Stained-glass traceries are being put in the windows of the north aisle of Kettering Church, to correspond with the south, which is already decorated. The traceries represent the twelve apostles, and the work was executed by Messrs. Webb and Nixon.

Bildeston.—A large window on the south side of the chancel of Bildeston Church has just been restored and reglazed, as a memorial to the late Rev. Charles Johnson, fifty-three years rector of this parish, and Catharine his wife, and to Ann Gedge, daughter of the late James Johnson, mother of the Rev. J. Gedge, the present rector. The tracery in the head contains the symbol of the Trinity; the Vine (John xv.); a stem and ears of wheat (John vi. 48, Mark iv. 28); and the Rose and Lily of the Valley (Cantic. ii. 1.) The three principal compartments are filled with diapered glass, bordered, and scrolls bearing the texts,—"I am the Way and the Truth;" "No man cometh to the Father but by me;" "I am the Resurrection and the Life;" beneath which are the three obituary inscriptions. The work was executed by Messrs. Chance, of Birmingham.

Birmingham.—A memorial window has recently been placed in the east end of the chancel of Ward End Church, by the family of the late Mr. Isaac Marshall. It consists of three large lancets, in the style of the latter part of thirteenth century, and the glass is designed in the style of that period, the finest examples of which are in the celebrated "five sisters' window," in the north transept of York Minster. In the centre light, enclosed in the symbolical *vesica piscis*, is a figure of Our Lord ascending. The light on the north side contains the Virgin and Child. The Virgin holds in one hand a lily. In the light on the south side is a figure of St. Margaret, to whom, in conjunction with the Virgin and the Holy Trinity, the church is dedicated. St. Margaret bears in one hand a sword, the instrument of her martyrdom, and in the other a palm branch. These figures are placed under canopies. Above them, in the midst of the grisaille ornament, which constitutes the general groundwork of the window, are the emblem of the Holy Trinity, the Lilly, and the Martyr's Crown, with palm branches. Medallion groups below the figures illustrate David showing and explaining to Solomon the plan, building, and dedication of the Temple. These particular groups were selected in especial reference to the pecuniary and personal assistance afforded by the Marshall family in the erection of the church. Mr. Wailes was the artist. It is intended to fill some of the other windows of this church with stained glass. The Rev. J. F. Green, the incumbent, wishes, it is said, to have memorial windows offered for this purpose.

Coventry.—The subscription in this city for a memorial window to the late Colonel Hood has so far advanced, as to admit of the work being proceeded with. The subject, in accordance with the wishes of the family, will be the Ascension of Our Lord, and also figures of eight prophets from the Old Testament. The window, which is to be completed by the 1st of December next, has been entrusted to Messrs. Heaton and Butler, of London.

Devizes.—A memorial window, by Messrs. Gibbs, has just been placed in Shrewton church, Devizes, Wilts, to the memory of Mrs. Nicholls. The window has been given by the widower, Mr. John Nicholls, of Shrewton House, Devizes. This is the second memorial window executed by the same artists for the family of the Nicholls, and placed in the same church.

THE LATE DR. EMILE BRAUN.

MANY of our antiquarian readers will hear with regret of the premature death of Dr. Emile Braun, of Rome, the well-known antiquary and the secretary of the Archæological Society of that city. He was attacked by *la perniciosa*, and died, during the absence of Madame Braun, who was in England, at his residence on Monte Caprino. Dr. Braun's acquirements were very extensive; and he had directed his attention to many branches of art and industry. His annual course of lectures on the Antiquities of Rome, his Handbook to these Antiquities, published not long ago, and a new material for casts invented by him, and described in this journal at the time, will be best known to our readers. The very fine model of the Coliseum, in the Crystal Palace at Sydenham was made under his direction. His death must be regarded as a general loss.

THE METROPOLITAN BOARD OF WORKS.

I CANNOT in any way admire your patience and forbearance towards the Metropolitan Board of Works.

Two separate sets of Commissioners of Sewers were dismissed for not carrying out an effectual method of sewerage of London, and a representative Board was then tried. About this time Prince Albert told us that representative government was then on its trial.

This representative Board had the advantage of all the information obtained by the former commissions and their surveyors and assistants just as they had got ready for action. Notwithstanding these advantages, they have showed themselves incapable of action,—more so than can be charged against any other body. Who is it that would venture to value a fellow creature's life, and what can the man or the men be who would presume to do this with thousands of such lives? The members of the Metropolitan Board of Works are the most thoughtless, or else the most sinful and wicked body that ever met together. They have been denounced so by all I have heard speak of them, and those are neither few nor unimportant, but such as may be relied on for sound judgment. They are complete obstructives to the proper sewerage of London, as well as all other healthful improvements. Many of your readers have expressed their astonishment that you have not ere this commented on their shameful neglect of their duties. S. P. X.

THE SHIPWRIGHTS' STRIKE.

At the Central Criminal Court, on 18th instant, ten shipwrights pleaded guilty to the charge of conspiracy to prevent workmen from entering the service of the prosecutors, Messrs. Young, Son, and Magnay; but, on the recommendation of the prosecutors, the judges, Baron Bramwell and Mr. Justice Williams, they were merely ordered meantime to enter into their own recognizances to appear and receive the judgment of the court if they should be called upon to do so.

Baron Bramwell, in delivering this interim order, said he would ask them to listen to a bit of advice which might be useful to them and others in a similar position of life. The law had been very rightly laid down that they had a right to refrain and refuse to work for any person except upon terms that were satisfactory to themselves. This was only reasonable, but they must remember at the same time that they had no right whatever to coerce and intimidate others from accepting employment; and it was clear that such a proceeding amounted to the most insufferable tyranny. In these times, when everything was done to remove all impediments to commerce, when ancient corporate rights were abolished for that object, and when working men were allowed facilities by the abolition of apprenticeship and other similar rights, it was intolerable that any set of men, for their own selfish purposes, should set up a tyranny of such a description. For his own part, he would much rather live under one intelligent despot, whose knowledge of the world and whose education would induce him to exercise his tyranny, at all events, in a sensible way, than be subject to the tyranny of a set of men who did not possess any of these qualifications. He should be glad to know what the defendants themselves would say if the agricultural labourers of the country—a class which they, no doubt, considered infinitely beneath them so far as intellect and education were concerned—were to assemble together and pass resolutions that they would only work six hours a day, and endeavour to coerce, and bribe, and intimidate those who would not join them? He was sure they would say these were a set of stupid, ignorant fellows.

The Shipwrights' Union have, it appears, thrown away no less than 4,000*l.* on this lunch question, and have utterly failed, after all, in their purpose, their late employers having taken into their employment more reasonable workmen, who have resolved not to allow their fellows to tyrannize over them and their employers.

AUSTRALIAN NEWS.

At Adelaide, the city corporation, by the last accounts, were about to introduce into the Legislative Council a Bill for a Building Act, which appears, from an abstract given by the *Adelaide Observer*, to follow much in the train of the London Building Act. The Government had just laid upon the council-table a Water Supply Bill for the city of Adelaide, providing for a constant supply of water from the Torrens, to be realized by funds, raised in bonds bearing 6 per cent. interest, to the extent of 280,000*l.* the sum of 28,000*l.* to be annually appropriated as a redemption fund. The ultimate investment of the works in the municipal corporation is provided for, and municipal authorities may in the meantime be appointed as commissioners by the Governor. The paper just alluded to complains of the apparent apathy of the inhabitants as to this measure, and endeavours to excite an interest in the question of drainage as well as of water. The Port Adelaide waterworks had just been provided with an engine imported from Dundee. By its means, a power of twelve horses is employed in drawing and forcing up a column of water to a height of 35 feet into eleven galvanized iron tanks, seven capable of holding 1,000 gallons each, and four 3,000 gallons each. From these reservoirs the inhabitants of the Port are supplied with water.

A public library and reading-room had just been opened at Angaston, according to the *Adelaide Observer*.

The free Presbyterian Church at Gawler has also been opened. This church, which has been built by Messrs. English and Brown, at a cost of about 1,350*l.* is regarded as decidedly an ornament to the town: it is the only building with a spire as yet in the colony. About 300 persons can be accommodated in it. A debt of about 500*l.* still remained on the church.

In Victoria colony, the daily papers are devoting great attention to railway subjects. The proceedings at Adelaide, or in South Australia, and those in New South Wales, had evidently spurred them on. A surveyor from the Government department at Sydney, had lately taken an overland journey from the Murray to Melbourne, to report on the facilities that exist for a "through" line to connect Sydney and Melbourne, and to invite the Victoria government to join with Sir William Denison in promoting the early formation of such a line. The tenders for the Mount Alexander line from Melbourne had been opened, but the result was not known.

The Government of New South Wales and Victoria, relying upon the co-operation of South Australia, had resolved to lay down a line of electric telegraph between Sydney, Melbourne, and Adelaide. The cost of construction was estimated at about 64*l.* per mile. The direction of the line will probably be from Sydney, *viâ* Liverpool, Goulbourn, Yass, Gundagai, Albury, and Beechworth, to Melbourne; thence *viâ* Ballarat, Belfast, Portland, and Penola to Adelaide.

WINCHESTER CATHEDRAL.

Workmen are now engaged, under the direction of Mr. John Colson, architect, in throwing open to the public the south-west side of the cathedral; and in doing so a fine arcade of five Norman arches has been exposed to view. These arches formed the north end of the Chapter-house. The foundations of the Chapter-house have been exposed, as well as those of other Norman buildings which formerly stood near. It is interesting to watch the removal of the accumulated rubbish and earth, as every day's work brings to light something for the study of the archæologist. The work, when completed, will be a great improvement to the Close and cathedral.

COMMERCIAL-STREET CHAPEL, WHITECHAPEL.

In opening main roads and noble streets, or forming railways in the metropolis, it is necessary to reinstate interests disturbed. If it is worth while to form a long perspective of lofty mansions, or to ride royally over the heads of lowly buildings and abodes, it is equally worth while to pay pleasantly for the damage done to the houses, and to reinstate handsomely the institutions that are upset. By so doing, not only is the immediate object in view secured, and justice done to those dispersed, but they are led to seek the advantage of sites in the new thoroughfares, on which to erect buildings of more value than those they have left. And so those whom it is necessary to turn out, to make way through a densely-populated district, become the occupants and improvers of the vacant ground in the streets opened out for the purposes of metropolitan improvements.

An instance in which this principle has been carried out is afforded by a chapel recently erected in Commercial-street, Whitechapel.

In the progress of time steam, by two new lines of railway, invaded the retreat of thought and prayer of a people who had erected it after emerging from another sort of persecution in years gone by. Under the then circumstances, they took advice as to how they should escape from discord and distraction. A claim, not only for damages but for entire reinstatement, was put in, and was simply left in the hands of Mr. Tite, the railway company's architect, by whose award, with between 3,000*l.* and 4,000*l.* in addition to it, they have erected the new chapel in Commercial-street, Whitechapel, from the designs of Mr. Joel F. Earle, architect, to seat about 800 persons, at the following cost, including everything except legal expenses:—

Freehold site, 88 feet by 85 feet.....	£2,900	0	0
The chapel, external dimensions, 78 feet by 52 feet 9 inches, and 60 feet high from the basement floor to the ridge of roof; the lecture-room and school-room, external dimensions, 41 feet 6 inches by 27 feet; and vestries, class-rooms, &c. occupying a space of 85 feet by 12 feet	6,760	0	0
Total	£9,660	0	0

The entrance to the ground-floor of the chapel is by a Roman Corinthian portico of two columns *in antis*, through a central lobby 16 feet by 8 feet, and so by two smaller lobbies into the body of the building. The entrance to the gallery from the portico is by two stone staircases, each enclosed by lobbies. The portico stands on a granite plinth 5 feet high, the gift of Mr. J. Freeman. Two independent columns, with pilasters grouped on each side, form the portico; the staircases to the galleries are in the spaces thus enclosed by pilasters of the portico.

The chapel and school are fitted with deal seats, stained and varnished; the pulpit is placed on a raised platform; the baptistery is under the platform; when used, part of the floor is wheeled forward, and thus the baptistery is opened, and the vestries connected with it become accessible from it.

The basement of the chapel is prepared for use, when required, either for a school or other purposes. A vacant portion of the site is reserved for a minister's house.

MELTON MOWBRAY CHURCH.

At the recent meeting of the Leicestershire Architectural Society, to which we referred last week, the Hon. and Rev. J. Sandiland read a paper, forwarded by a member of the society, on Melton Church, a part of which we print.

Melton Church is the finest church in the county. The ground arrangement, the outline of the superstructure, and the details, possess a superiority, it is presumed, over every other.

It is a cruciform church, and is peculiar in its symmetrical proportions. The transept is of due length, a circumstance to which attention should be called, as in parochial churches this advantage is seldom found. Nor do we often meet with the two side aisles and clerestory carried out in this part upon the same plan as in the nave. But here we have them in perfection. These are matters essential to true grandeur, and have almost been confined to cathedrals.

In details there is variety, and each of the three Gothic styles is admirably exemplified. The clerestory and the upper part of the tower are of Perpendicular work, of the time of Henry VII. and are a specimen of the excellent masonry for which that period was remarkable. The Decorated side aisles, seen in this view, are rather poor; but this is fully atoned for by the beautiful porch, which, with its doorway and eight gorgeous niches, presents a show of elaborate sculpture of the time of Edward II. It is in very good preservation, with the exception of the pinnacles, which have perished, and have been superseded by a modern coping. Their restoration will ere long be accomplished, we trust, to the perfecting of this ecclesiastical gem. The lower part of the tower is Early English, and to this we particularly invite attention: it is, perhaps, the most perfect example to be met with.

The centre of the building is the place from which to see the clerestory, which must not be forgotten. It is peculiarly light and elegant, containing no less than forty-eight windows, each of three lights. The pendants and mouldings are almost innumerable.

It may occur to some to ask,—How came Melton to be honoured with the best architects and the best workmen in the thirteenth, fourteenth, and at the end of the fifteenth century?—for the fact that it was so is proved by these architectural remains. No doubt it was then a place of more importance than now. Medelton, as it was anciently called (or *Middle-Town*), is one of the oldest market towns in England. It had an endowed school at least as long ago as 1347. But we suspect its church is chiefly indebted to the great Priory at Lewes, which in the thirteenth century had the patronage, and to which priory the cell of twelve Cluniac monks at Melton was subject. And we must not forget its connection with the illustrious family of the Mowbrays.

Objects of interest, and some of great interest, are not wanting to the ecclesiologist.

Two important brasses only remain. Of the many that once did honour to the dead, the matrices or vestiges show where the *robbers of churches* have laid their sacrilegious hands. Incised slabs and ancient tombs exist, but they are partly concealed by modern work. There are three high-tombs, dating about 1300, 1400, and 1500, respectively commemorative of a Crusader, a Lady, and a Knight. The first has a recess in the south wall of the nave, as though a founder or benefactor of the church; the second, an alabaster enshrinement; the third, a Purbeck marble structure, formerly inlaid with a splendid brass, the outline of which enables the instructed student to recover the design. How delightful must have been the contrast of the two last, and how striking their appearance, when the "virgin white," and the shining sable, illuminated with glowing brass, did their best to honour these worthies, who were probably chief contributors to the magnificent temple wherein they have their resting-place!

The bells are eight in number: the six largest are old, and some have inscriptions. There are two fonts: one, of a modern character, has the well-known Greek inscription, that may be read either backward or forward: the other is a gift of the family of the late Richard Norman, Esq. and is a striking piece of church furniture from an elaborate design by Scott.

We come lastly to a portion possessing more than ordinary attraction—the Galilee Porch. The sculptured and ornamental parts, judging from the work, seem to have had the same artists as were employed at the south-west of the church at Gaddesby, in this county, and, if possible, surpass both in design and execution. It is much to be regretted that the porch is mutilated by the disappearance of the presumed pinnacles. Its piscina, locker, and other relics will be explored with much pleasure; and a question for interesting discussion will arise upon a singular window, and more especially four openings in the

walls. These latter resemble the mysterious Lychnoscope, a name still retained, though the theory it denotes is exploded by more conclusive evidence that it was "an outward confessional window for all comers." The apertures, to which we solicit attention, like the lychnoscope, had never been glazed, but have had a grating and shutter: they are not high from the ground, and had long been firmly blocked up by masonry. Much to the annoyance of the antiquarian, they have been recently opened and glazed. They furnish good examples to help farther investigation of the question; and if we be satisfied to regard them as outward confessionals, the number will not be staggering, provided we bear in mind that Melton was on the highway to the great leper hospital at Burton Lazars, which at certain times of the year would bring swarms of these "all comers." Besides the hospital, a spring at that place in great repute for the cure of leprosy attracted them. Moreover, the farm-house adjoining the churchyard, afterwards and to this day called the Rectory, was inhabited by fourteen chantry priests. We may conclude, therefore, that there would be no lack of applicants or of priests to confess them.

RECENT PATENTS.

THE following are selected from the *Mechanics' Magazine*, and other sources:—

Rowcliffe, E. Improvements in the manufacture of blocks or slabs for paving or building purposes. Dated Dec. 22, 1855. (No. 2906.)—The inventor takes natural asphalte and reduces it into small particles, and then places it in metallic or other moulds, without reducing it into a fluid state, and by hydraulic or other pressure makes it into the form required.

Grey, R. Improvements in machinery or apparatus for moulding bricks, tiles, and other similar articles. Dated Jan. 4, 1856. (No. 33.)—This invention relates to a peculiar construction of machinery for making bricks, pipes, tiles, chimney-pots, &c. by expelling the plastic material horizontally by continuous pressure through dies, placed at or near the bottom of the sides of a pug-mill. It consists in the employment of a vertical pug-mill fitted with an Archimedian screw, and furnished at the sides, at or near the bottom, with lateral orifices, each fitted with a suitable mould die. In front of each of these orifices is a travelling platform, running on wheels, and fitted with the ordinary rollers to ease the motion of the clay, which is introduced into the top of the pug-mill, and is pressed down by the rotation of the Archimedian screw.

Chaffer, T. and J. Ellis. Improvements in machinery for sawing and cutting slate, stone, coal, salt rock, or other minerals. Dated Dec. 6, 1855. (No. 2751.)—This invention is applicable to sawing or cutting blocks from the quarry, and consists—1. In sawing seams into minerals, by means of a circular saw, which travels along a bed plate fixed to the mineral to be operated upon. 2. In causing a cutting tool to move to and fro along a bed plate, and in so moving it as to cut a seam into the mineral, the said cutting tool being made to increase the cut by means of a setting-up screw or other mechanism.

Glover, F. R. A. Improvements in the construction of breakwaters, sea-walls, and other structures or foundations of structures which lie partially or entirely under water. Dated Dec. 18, 1855. (No. 2868.)—In order to construct the foundations of breakwaters, &c. where the natural bed of the sea or stream is composed of a shifting or moveable sand, the patentee fixes a number of pieces of framework by means of anchors, or by weighting them with ballast, and in order to insure a firm and sound structure, he bolts or connects the separate pieces together. The framework thus set up, serves gradually to collect the sands, &c. moved about by the waves, and to enclose and retain them, the deposit continually increasing until the framework is filled, and a compact mass has been produced on which any required superstructure may be erected. Secondly, he constructs the framework in the manner described, and gradually adds to the sand or materials collected a quantity of lime, cement, or concrete material during the process of collection, so as to expedite the solidification of the mass.

Cook, J. E. An improved composition for preserving exposed surfaces or surfaces liable to deterioration and decay. Dated Dec. 27, 1855. (No. 2931.)—In making up this composition, from two to six pounds of gum shellac are dissolved in every gallon of methylated spirit; or, instead of methylated spirit, wood spirit may be used.

Jennings, J. G. An improvement in the arrangement of the overflow-pipes of baths, wash-hand basins, and other vessels. Dated Dec. 10, 1855. (No. 2787.)—This invention consists in applying a syphon-pipe to the overflow openings or passages of a bath, a wash-hand basin, and any other vessel subject to like consequences of leaving the tap open.

Jennings, J. G. Improvements in connecting earthenware rain-pipes and soil-pipes of water closets, and in valve water-closets. Dated Dec. 10, 1855. (No. 2788.)—For connecting earthenware pipes, cast-iron junctions are used. Each junction is cast with an internal rib or projection of the thickness of the pipes, and on the outside there are lugs to fix the junction to part of a building. The junction is fixed in the following manner:—There is a grooving around or near the end of the pipe, so that when the end is introduced into the junction, and melted asphalte or cement is run into the socket between it and the pipe, there will be a good joint formed. In fixing the end of another pipe into the junction, a washer of vulcanized India-rubber is placed on the projection in the junction, and the whole of the surfaces are coated with red lead or suitable cement, and then the end of the other earthenware pipe is introduced, and a sound joint is made.

Davis, R. W. and D. Davis. An improved vice. Dated Dec. 12, 1855. (No. 2805.)—This invention comprises—1. The application to a vice of a beam having a ratchet which is engaged by a pawl, and having a spiral-faced head or the equivalent thereof, fitted with a loose cap having a corresponding face, &c. 2. An arrangement of crossed levers between the jaws, and their attachment so as to secure to the jaws an uniform leverage.

Gardner, J., J. C. and H. Improvements in glasses as applied for the transmission of light. Dated Dec. 7, 1855. (No. 2762.)—This invention consists in the use in the ordinary way over the light (gas or otherwise, as the case may be), for increasing its illuminating power, of a solid piece of glass having a cylindrical, elliptical, or other bore or opening through or near the centre for the light, such glass being externally more or less globular in form. Also in the use of hollow glasses filled with water or other transparent fluid.

Back, H. Improvements in the application of glass to decorative purposes. Dated Jan. 4, 1856. (No. 30.)—This invention consists—1. In adapting or applying hollow glass pillars or facings, gilded or coloured at the back (as described in a patent granted to the patentee, March 15, 1855); and 2. In adapting and applying fluted, corrugated, diapered, or otherwise suitably decorated sheet glass, gilded or coloured at the back as above, to various uses, either alone or in combination with the hollow glass pillars or facings above referred to.

Miscellanea.

SCHOOL KITCHENS.—Miss Banister, to whom the public are indebted for various suggestions, proposes a plan for a kitchen, to be superintended as a reward for good conduct by respectable women cottagers, in succession. Six children, from eight to ten years of age, are to attend to be taught;—one day how to make broth, soup, and gruel; on other days how to make meat puddings and boil potatoes, broil chops, bake loaves, pies, cakes, &c. The room, &c. to be kept in order by the children. The pay of the cottager to be one-fourth of the food cooked, the other three parts to be sent by the children to sick and aged people. From eight to ten years of age poor children would thus learn the duties of life, while gaining all the knowledge their simple career requires, in the school-room. Miss Banister "calls upon all who have the power to aid in getting undone that unfitting course of education for the labourer's children which has so unthinkingly been done, and is still doing." Although the foregoing plan is principally intended for our agricultural population, it is suggested that it might be easily adapted to towns by dividing them into sections of 150 to 200 children in each. "Miss Burdett Coutts having courageously come forward," says Miss Banister, "I am induced to offer my scheme to stay prevailing errors."

THE PARIS IMPROVEMENTS.—The *Revue Municipale* says:—Twenty dark and narrow streets, containing 249 damp and unhealthy houses, were demolished for the enlargement of the Central Halles. The prolongation of the Rue de Rivoli, which is now 3,146 mètres in length, and the clearing away the approaches to the Hôtel de Ville, caused the removal of thirty-two narrow streets and 587 houses. When the question is to rebuild, it will be readily understood that the difference between the number of old and new houses must be very great. It was found necessary to abandon a large space of ground to the public thoroughfares, 22 mètres of width for the Rue de Rivoli, and 30 mètres for the Boulevard de Strasburg. The houses to be rebuilt cannot be at all like those which were demolished, most of the latter belonging to old Paris, and being most unhealthy. During the last six years nearly 2,000 houses have been demolished in Paris, while the number of new ones is not more than 650. The destruction of these 2,000 houses has led to the removal of more than 80,000 persons.

WATERLOO-WITH-SEAFORTH BOARD OF HEALTH.—Mr. W. A. Richardson, an assistant in the Borough Engineer's Office, Liverpool, was unanimously elected on the 8th instant by the Local Board of Health for the district of Waterloo-with-Seaforth (near Liverpool), as surveyor and inspector to the Board. There were forty applications for the situation.

RECOVERY OF POSSESSION OF HOUSES BY THE COUNTY COURTS.—In the new County Courts Act about to come into force, there are several clauses of considerable importance to landlords, extending the recovery of premises, where the rent does not exceed 50*l*. a year, in a summary manner, and preventing actions of ejectments in the superior courts. Where the term has expired in property where neither the value of the premises nor the rent is more than 50*l*. by the year, a plaint may be entered, and in default of the tenant giving up the same, the bailiff may enter and give the landlord possession. In plaints for the recovery of possession, the plaintiff may recover his rent where the same does not exceed 50*l*. Farther, the Act provides that where there is a half-year's rent due, and the landlord has a right to re-enter, possession may be given by the County Courts.

NEW FIELD FOR FEMALE LABOUR.—A few months since, a series of letters appeared in the *Times* and other London journals, showing that the most available means of rescuing the female toilers of this country from their present abject position, was the introduction of the art of watchmaking among them, and for which pursuit it was shown by the well-known watchmaker of Cheapside, Mr. John Bennett, by whom the idea was first started, the female hand was highly suitable. The subject is now receiving attention on the part of many provincial manufacturers, and ere long the public, we are glad to learn, may look forward to the realization of this excellent suggestion, at least to some extent. It is by female employment that Switzerland has become so celebrated for watchmaking, and it is hard to see why England, the chief improver of this branch of art, should not be able to cope with Switzerland in this respect.

THE COVENTRY SCHOOL OF ART.—The works executed by the students of this school have been on view during the week, in St. Mary's Hall, Coventry, and large numbers have attended, particularly in the evening, and been much gratified by the character of the drawings, paintings, &c. exhibited. The examination was conducted by Mr. H. A. Bowler, the Government Inspector, who was assisted by Mr. Henry Rafter, the Head Master of the school; and proof of the proficiency of the pupils, and the skill of their instructor, appeared in the number of medals awarded,—eighteen; the greatest number given in any former year having been eleven. Besides these, seven works were distinguished by "honourable mention." Sir Joseph Paxton having offered a prize of ten guineas for the best ribbon designs, for which the ladies' class were to compete, ten were sent in, and they attracted considerable attention and comment. This prize has not yet been awarded.

PROPOSED TESTIMONIAL TO MR. MECHI.—Friends of Mr. Mechi, who have long been desirous of presenting that gentleman with a testimonial of their appreciation of his efforts to assist in agricultural progress, as well as a slight acknowledgment of his undeviating hospitality at his annual gatherings, are now taking steps to carry out their object.

ANOTHER ACCIDENT AT THE WELLINGTON BARRACKS.—On Monday an accident occurred at the Wellington Barracks in St. James's-park, by the falling of a mass of earth, the effect of which was that one of the unfortunate men engaged in the excavation, of the name of Henry Redman, lost his life. Several men, who were in the employment of the contractor for the erection of the barracks, were engaged in digging the foundations for the officers' barracks, and a spacious tank to contain a large quantity of water. They had got to the depth of about 12 feet, where a layer of sand was met with. The men were about to leave their work, but just as they were doing so the gravel gave way, when immediately the mass of earth on that side fell, and covered four men who were at the bottom of the shaft. Three of them were promptly extricated, and were found to have received no serious injuries. In about two hours afterwards the fourth man, Henry Redman, was got out, but life was extinct.

INVENTION FOR SAWING PAVEMENT.—We understand the Earl of Caithness, among his other mechanical inventions, has constructed a machine for sawing stone, which is likely soon to be put in practical use in this county. The invention consists of an endless saw or knife affixed to a metallic belt which is run over two drums, and may be driven by any power—steam, water, or hand. We trust the invention may be completely successful, as it is now high time the method of stone-sawing at present adopted in Caithness were superseded by some more easy and less labourious system.—*John O'Groat's Journal.*

BLAST OF 12,000 TONS.—The great limestone quarries at Penderryn, in the Vale of Neath, have been the scene of a blast which has detached the enormous mass of 12,000 tons of solid rock. An old chamber was cleared out to an extent of 10 yards, and half a ton of powder was placed therein. The match having been lighted, in eleven minutes the explosion took place, which drove out a mass of rock 20 yards square, and immediately the whole face of the rock, 120 feet in height, rolled down and filled the quarry below. The calculations range as high as 15,000 tons, stones of 250 tons being detached separately. These quarries are the property of Mr. Wm. Crawshay, and supply great quantities of limestone to the adjacent ironworks.

MASONS' STRIKE. — We are glad to hear that the masons who had struck in Mr. Kelk's employ have returned to their work, and that the strife has been happily brought to a termination. The questions in dispute were, as stated in the letter of the masons to Mr. Kelk, of the 6th August, as follows:—First—That they should have the full privilege of four o'clock time on Saturday. Second—That they should not be asked to work piecework. The special arrangement of Mr. Kelk's establishment, as to the four o'clock time on Saturday, Mr. Kelk had conceded, in the first instance and at once; so that the actual and only cause of difference was that of piecework; and this the workmen, after conference with the members of the Builders' Society, on the 11th instant, have wisely withdrawn unconditionally.

CHANCERY-LANE IMPROVEMENTS.—The first stone of the new building for the Law Union Fire and Life Insurance Company, within one door of Fleet-street, has been laid. The front is to be of stone, and Elizabethan in character. The works are being carried out by Mr. Myers, from the designs of Mr. J. Wornham Penfold.

PROPOSED EXHIBITION OF LOCAL ART AT MANCHESTER.—It is intended to have an exhibition of the works of local and native artists in the new picture gallery which is being erected in Peel Park, adjoining the present museum. Mr. David Chadwick, borough treasurer of Salford, according to the local *Courier*, was the originator of the scheme. A meeting of artists was held in the mayor's parlour, Town-hall, Salford, on Thursday in last week, to consider the suggestion, and to appoint a committee, &c. Resolutions promotive of the object in view were unanimously passed, and Mr. Hammersley, the head-master of the Manchester School of Art (who was among those present), was elected chairman of the new committee. It was deemed desirable that the exhibition should be open before the Art Treasures Exhibition at Old Trafford, and remain open for some time; and it was accordingly resolved to open the exhibition on the first Monday in March; artists to be at the expense of forwarding the pictures they intend to exhibit to the museum building, free of cost, the executive committee undertaking to insure the pictures and return them carriage free: with respect to the works of deceased artists, the committee to bear the whole expense of collecting and returning them.

"ROADSIDE RESTING-PLACES."—The writer of a pamphlet bearing this title, known in the literary world as the authoress of "Home Truths for Home Peace," has carried her philanthropic project into execution near the town of Shepton Mallet, by erecting large iron seats by the roadside, on the turnpike-roads, for the accommodation of travellers. The chairs are large enough to seat five or six persons, and are covered with short texts of Scripture.

IMMORTALITY BY PRIVATE CONTRACT. — Affixed to a post at the corner of one of the numerous streets which intersect each other at the back of the Jardin d'Hiver, at Lyons, is seen the following announcement:—"To be sold by private contract, the right of giving the purchaser's name to this street."

DIRT AND VICE.—The *Glasgow Mail* declares that "Glasgow has been filthier in 1856 than in any year in the last decade;" and "the stenches, so intolerable in the summer and autumn, have at certain periods been worse, if possible, than ever they were before." Glasgow is also said to be the most drunken city in the empire. "So true it is (comments the *Gateshead Observer*), the more dirty the more vicious (or the more vicious the more dirty, whichever way you like to put it)."

INCREASED VALUE OF LAND AND PROPERTY IN SCOTLAND.—By tables of returns which have been obtained by the Board of Trade it appears that the acreage of Scotland is now set down at 20,049,462 acres. In 1674 this acreage and the house property on it were valued for land and houses at 319,281*l.*; but in 1855-56 they were valued at 8,155,972*l.* The valuation for the county of Aberdeen in the former year was 19,418*l.*: last year it was 526,640*l.*: the county of AYR was 15,967*l.* and 640,926*l.*; but the county of Lanark showed the greatest increase, the valuation in 1674 being only 13,511*l.* while in the latter it was 870,562*l.*

CONCERTS FOR THE PEOPLE.—An inaugural entertainment was given on Monday last, at St. Martin's-hall, and was largely attended by an audience not quite so quiet as was deserved. Mr. Leigh Hunt presided. It was the committee's intention to give between the parts of the musical portions a literary interlude, consisting of readings from the old poets, and the introduction was written by the chairman of the evening, and read by Mr. Stocqueler. Whether, as the audience said, they could not hear, or they did not wish to hear such readings, we will not say, but they certainly would not listen even when a more powerful voice was called into requisition. The musical selection was a very good one, and gave great pleasure to those assembled. Miss Birch, Mr. Donald King, and others took part in it.

AN IMPROVING LANDLORD.—Mr. James C. Harter, of Broughton Hall, Lancashire, purchased, in 1852, an estate of some 1,500 acres, lying for about three miles along the verge of the Shannon, and contiguous to the bridge of Banagher. The estate of Esker was, at this time, in a deplorable condition. Mr. Harter paid for it 8,000*l.* and he has since expended in improvements about 4,000*l.* The farms were all remodelled, and substantial aid given to every tenant to improve his residence and offices. As a preliminary improvement, draining was extensively set on foot, and new roads made, opening up the estate, and giving value to the land which it was impossible formerly to reach. Every cottage and farmhouse is neatly whitewashed and kept clear of manure heaps and cesspools. Persons who saw this property a few years ago, would scarcely recognize it now. The swamps and morasses have been converted into excellent land, and the callows are worth treble their former value.

PROPOSED NEW MARKET AT MANCHESTER.—The markets committee of the Manchester corporation have advertised for plans for a new butchers' market, to be erected in the place of the old shambles at Shudehill. Two prizes have been offered by the committee, and eleven different plans have been sent in for competition. The decision of the committee, according to the local *Courier*, will be made known early next month.

THE VULCANIZATION OF INDIA-RUBBER.—This has become a very important and extensive process, better known hitherto in America for the multiplicity of its uses than with us. Vulcanized rubber is worked in the plastic state, especially by the aid of steam and boiling water, just as if it were plastic clay, and is in this state moulded at once into all sorts of forms, such as those of workmen's tool handles, or compounded with other ingredients, so as to assume the aspect of bronze, ivory, buckhorn, cameos, &c. For chisel-handles, and such like, subject to concussion, the vulcanite possesses the rare quality of permitting the hardest blows being dealt with the hammer or mallet indifferently without splitting or other injury. Gum elastic, or India-rubber, as remarked in an interesting article on the subject in the *Mechanics' Magazine*, can be readily mixed or combined with almost every other substance. It may be mixed with other gums, oils, coal-tar, carbon, and with the earths and oxides, or pulverized metals and ores. It can likewise be combined with all fibrous products. It is compounded in the manufacture with many of the above substances, for the purpose of obtaining particular advantages for special uses. Ground cork and other light materials are sometimes mixed with the gum to increase the bulk and make the articles light. The oxides of metals, their filings and pulverized silicas, will give imitations of marble. The fibre of cotton or the dust of different woods will afford simulations of wood of greater or less gravity, as may be required. The combining of plumbago gives the crayon, oxide of zinc produces lithographic stone, and so on, *and on*.

A NEW CITY ON THE UPPER MISSISSIPPI. — A correspondent of the *Morning Herald*, in St. Cloud, Minnesota, writes of that new and flourishing town. One year ago it contained only two shanties in the way of houses. It has now between 300 and 400 inhabitants, and upwards of ten frame buildings, among which are six stores, mechanics' shops of various kinds, and one steam saw-mill that cuts 10,000 feet per day, which cannot half supply the demand. There are many more buildings in progress, and under contract to be finished this year, among which are the county buildings, a steam flouring-mill, two churches, a hotel 50 feet by 60, three stories high. There are several fine quarries of granite within a short distance of the town, also good lime rocks, clay for making brick, &c. for building purposes, which are soon to be put in use. There is a fine spring of water, capable of furnishing a town of 15,000 inhabitants. The "city" stands at the head of the steamer navigation of the Mississippi. There is a great demand for labourers. Mechanics command from two dollars fifty cents to three dollars per day; common day labourers from one dollar fifty cents to two dollars fifty cents per day. Carpenters are in great demand.

DISGRACEFUL STATE OF THE NELSON MONUMENT AT YARMOUTH. — The *Bury Post* gives a lamentable account of one of the very few monuments ever erected to the honour and the memory of an admiral who so immensely contributed to the naval renown of Britain, as did the glorious Nelson. In these days of sickening re-duplications of unnecessary monuments to Wellington, it is really an infamous disgrace to the country that the memory of its other noble sons, and its gratitude to the dead, so quickly fade. The Yarmouth monument to Nelson is fast going to utter ruin. The terrace at the base is greatly dilapidated: the walls are forced several inches outwards, from being choked with sand and rubbish: the terrace platform is much sunk, disjointed and damaged: the caryatides supporting the roof are all injured: the figure of Britannia has ominously lost the trident: the unsightly poles which surround the monument are all rotten: in short, the whole is a sad picture of decay and desolation. More than all ought what follows to bring the blush of shame to the cheek of every one interested in the honour and glory of his country: we quote from the paper already alluded to:—"About thirty years ago the terrace was relaid, at an expense of about 50*l.* by the brave old veteran James Sharman, who 'shows' the monument, and who was one of those who carried the dying Nelson down into the cockpit, after he received his fatal wound, at the battle of Trafalgar. Since that time he (Sharman) has spent about 20*l.* about it. These sums he paid out of the money which he received during the first ten years of his 'keeping' the monument; but since then, unfortunately, the annual amount which he has obtained for doing so has been so small, that it has not sufficed to maintain him and his family. Were not this the case, he would, he says, do all that is required to be done to preserve the monument without asking the country for a single farthing towards the expense!"

ANTIQUARIAN DISCOVERY IN RUSSIA.—A discovery has just been made in the village of Alexandropol, in the government of Ecatherinslow, which has caused a sensation among archæologists. M. Luzancho, the director of the Museum at Kertch, has found in a small mound the catacombs of the Scythian kings. Numerous articles in gold, silver, bronze, iron, earthenware, &c. have been discovered there. The existence of the Gherros, or Necropolis of the Scythian monarchs, spoken of by Herodotus, is thus proved.

PRINCE ALBERT.—A COURSE OF ELEMENTARY CLASS-LECTURES on the CONTENTS of the MUSEUM, will be delivered in the Rooms of the Museum, on the Evenings of MONDAY, OCTOBER 13th and 27th, and NOVEMBER 10th and 24th, by the Rev. CHARLES BOUTELL, M.A. Hour of admission, SEVEN o'clock. Lecture at EIGHT o'clock. Cards may be had at the Museum, by a Member's recommendation, on and after WEDNESDAY, OCTOBER 1st, when the Museum will be re-opened; also at the Office of "The Builder." The competitions for the prizes for Wrought-Iron Work and Stone Carving, will close on the 31st of DECEMBER next.

GEORGE GILBERT SCOTT, Treasurer.
HENRY CLUTTON, Hon. Sec.

September 20, 1856.

ARCHITECTURAL ASSISTANT.—Messrs. ANDREWS and DELAUNAY, Architects, Bradford, Yorkshire, require the services of an ASSISTANT competent to prepare Working Drawings, measure up Works, and take out Quantities.—Address as above, stating the Salary required

TO PARENTS AND GUARDIANS

A VACANCY is open for an ARTICLED PUPIL as an ARCHITECT and LAND SURVEYOR, in an office conducting a most advantageous practice, and having the management of several valuable building and other estates, and where the pupil, from the extensive nature of both branches of the business, would have an opportunity of acquiring a thorough practical knowledge of his profession. A premium will be required.—For particulars apply to Messrs. LOCK and PEDLEY, Architects, 5, High-street, Southampton.

TO BUILDERS, PAINTERS, CONTRACTORS, HOUSE-AGENTS, &c.

CLERK and STOREKEEPER, &c.—WANTED, by an experienced, active Man, aged 34, a SITUATION as above. Can measure and estimate every description of builder's work, and having a good knowledge of materials and general repairs, would be found very useful in a jobbing business, or on an estate.—Direct, J. THOMAS, 24, Philip-street, Walworth-road

N.B. A short engagement not objected to

MASONS for Working Granite, or for Hard Stone. WANTED at Sheerness, Isle of Sheppey, Kent.

WANTED, in a Builder's Office, a respectable YOUNG MAN, who writes a good hand and is capable of measuring and booking materials. He would be required to take charge of the store, and serve out ironmongery and other materials.—Address, stating references and salary required, A. B. Post-office, Wolverhampton.

WANTED, a REGISTRAR and MANAGER for the BRADFORD CEMETERY. He will be required to give up the whole of his time to the duties of his office; to superintend the works and grounds and the workmen employed; the sale of graves; and to keep the books. He must be a good writer and accountant, well versed in all that appertains to the office, and possessed of good taste in monumental designs. Salary, 300*l.* a year, with excellent house, free from taxes and rates.—Application, stating age, previous situation, and number of family, with test monials, to be made to JOHN ATKINSON, Esq. Secretary; or Messrs. RAWSON, GEORGE, and WADE, Solicitors, Bradford, Yorkshire.

WANTED, an intelligent Young Man of respectability, about 18 years of age, capable of TAKING CHARGE of the TIME BOOKS and keeping the Prime-cost Accounts in a manufacturing business in town. He must write a neat hand, and be able to give unexceptionable reference.—Apply by letter only, stating age, where last employed, and salary required, to W. A. 33, Act n-street, Gray's-inn-road.

TO FOREMEN OF HOUSE-PAINTERS.

WANTED, a steady, persevering, practical Tradesman, of good address, married, and not under thirty, as FOREMAN, and capable of wholly conducting a business in the City when required. He must be thoroughly qualified in every respect, and bear an irreproachable character, which will be very strictly investigated, the situation being one of the utmost trust and confidence. Apply, by letter, with proper name and address, to B C D, Office of "The Builder."

JUNIOR CLERK AND ASSISTANT SECRETARY.

WANTED, at a Manufactory, a gentlemanly YOUNG MAN, from 17 to 21 years of age, liberal education and active habits, accurate in account keeping, and who writes fairly well. He must be able to produce good testimonials and satisfactory references; some knowledge of, and a taste for, drawing, would be advantageous, and must render any gentleman who accepts the situation worthy of greater value. A willingness to be generally useful would be appreciated, but the work more particularly needed relates to a department of church-windows, and other decorative glazing.—Apply by letter, prepaid to Messrs. JAMES POWELL and SONS, Whitefriars Glass Works, London.

WANTED, in a Builder's Office, an experienced MEASURING CLERK.—Address, with full particulars, to B. R care of Mr. Farnell, 40, Watling-street.

WANTED, in the Office of a Builder and Surveyor, a competent MANAGING CLERK; he must be a good penman and accountant, and capable of taking out quantities, measuring work, and plotting land. Address, Mr G. HUDSON, Surveyor, Woolwich.

WANTED, a Person accustomed to the routine of a Lead Warehouse, to act as CUTTER and SALESMAN; one who has a knowledge of house agency preferred. References as to capability, honesty, and sobriety indispensable.—Apply to THOS. STANWAY, Plumber, 10, Dorset-street, Portman-square, London.

WANTED, in a Timber Merchant's Office, a thoroughly good ACCOUNTANT, who understands the trade, to take charge of the books.—Apply, by letter, pre-paid, to X. Y. Z. at Garraway's Coffee-house.

TO JOURNEYMEN PLUMBERS AND GAS-FITTERS.

WANTED, experienced, steady Men, who have no objection to the country. Reference as to character and acquirements necessary.—Apply, 26, Warwick-street, Regent-street, London; or 76, Southgate-street, Gloucester.

TO ARCHITECTURAL DRAUGHTSMEN

WANTED, in a Builder's Office, an experienced CORRESPONDING CLERK, BOOKKEEPER, and QUANTITY MAN.—Apply to JOHN WEEKS and Co. Horticultural Builders, Kingsroad, Chelsea

WANTED, a respectable Young Man, as CLERK, in a Decorator's and Upholsterer's establishment, at the West end of the town.—Address, stating age, particulars where last engaged, and salary required, to X. Z. Office of "The Builder."

WANTED, by a well-experienced CLERK of WORKS, a RE-ENGAGEMENT. He is a good draughtsman, and can get up working drawings; is well conversant in all the branches of building, and has first-rate testimonials from previous engagements.—Address, T. B. 3, Bloomsbury-terrace, Vauxhall-bridge road, Pimlico.

TO SHIP AND HOUSE JOINERS.

WANTED, THREE or FOUR Steady MEN who can answer to the above. Apply at Mr. H. P. BOLT'S, Builder, &c. Newport, Monmouthshire.

TO WINDOW-GLASS AND LEAD MERCHANTS, &c.

WANTED, by a Person, aged 30, a SITUATION as FOREMAN, SHOPMAN, or as entire MANAGER of a BUSINESS; is thoroughly acquainted with every branch in the above trades, having had great practice for sixteen years, and is a thorough window-glass cutter.—Apply to F. W. 13, Wellington-terrace, New-road, Hammersmith.

TO DECORATORS, &c.

WANTED, by an OIL GRAINER, ORNAMENTAL and HERALDIC PAINTER, a SITUATION in either or the whole of the above branches. No objection to filling up time with plain painting. Wages 27*s.* per week. Good reference given as to character and ability given if required. No objection to the country.—Address, T. C. No. 3, Upper Bryanston-street, Edgware-road, London

WANTED, to PLACE a Youth for four years as IN-DOOR APPRENTICE to a CARPENTER and BUILDER where he would be part of his time in the office, and gain a thorough knowledge of the business. The country preferred.—Stating terms, address, R. W. No. 31, Clarges-street, Piccadilly.

TO PLUMBERS AND BUILDERS.

WANTED, a SITUATION as FOREMAN, by an experienced hand, capable of taking the charge of three branches, and a good sheet-lead caster. No objection to town or country.—Address, G. M. 34, Stanhope-street, Clare-market, London.

TO BUILDERS, &c.

WANTED, by a Young Man, who has served his time in a carpenter and joiner's shop, a PERMANENT SITUATION, where he would have an opportunity for improvement. Address to ALPHA, at Tanner's, 18, Boston-place, Harewood square

N.B No objection to a country town.

The enamelled Slate is now supplied for [illegible] Chimney-pieces, Tops for Washing-stands, Tiles for Hearths, Tops for Tables, Trays for Tea-tables, and Brackets; wash-stand tops, billiard tables, linings to halls and passages, and for [illegible] purposes. Apply in connection to Mr. MAGNUS, 29 and 31, Upper Belgrave-place, Pimlico.
N.B. Plain slate work executed from a single article to the most extensive contracts, for home and abroad.

SLATE.—The Bangor Royal Slate Company have now on hand a LARGE ASSORTMENT of ROOFING SLATES, being the produce of the Company's newly-opened Quarry, which, for Strength, Durability, Slimness of Bed, and Regularity of Size, are unsurpassed by any Slates. Also, Slates for Lining Rooms, &c. for the same to be had of Messrs. Field, Chancellors, to be addressed to Mr. EDWARDS, Manager, Bangor Quarry.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars, Fleet-street.—Orders left at 2, Queen-street, Cheapside, or addressed to the yard or wharf, will have prompt attention. Loads of mortar sent by the yard or per barge. Stocks, lime, and old bricks, by the load, delivered by barge, in any quantity, along the Thames.

CROGGON and COMPANY, Manufacturers of PATENT ASPHALTE ROOFING, BOILER, RAILWAY, AND BATHING AND HYDOROUS FELT. For Damp Walls and Flat Roofs, &c.
2, D'OYLY-CHILL, LONDON.

ASPHALTE.—GERVASE FOOTTIT TRINIDAD ASPHALTE WORKS, ROTHERHITHE, LONDON. Established 1838.—TRINIDAD, SEYSSEL, and BRITISH ASPHALTE, the purest, cheapest, and most powerful, and the best adapted for [illegible] and every purpose for using it, and to which he particularly solicits attention. Estimates for roofing in London or the country attended to.—Estimates given for every kind of the above work.

ASPHALTE, FOREIGN and BRITISH, for FLAT ROOFING and every description of PAVING, especially in damp situations.
PER YARD. PER SQUARE YARD.
Country Builders supplied with Asphalte for Lining and Barn doors, with instructions for using it.
Apply to JOHN CLIFTON, Patentee and Manufacturer, Asphalte Office, Monument-yard, Fish-street-hill, London, E.C.
N.B. Importer of the PURE ROCK ASPHALTE, from the LIMMER Mines in Hanover.

NOTICE TO ROAD CONTRACTORS, NURSERYMEN, AND OTHERS.

W. and J. STUDDS, Sole Proprietors of the WEST DRAYTON GRAVEL PITS, lately removed from No. 21 Wharf, Harrow-road, to 9, North Wharf-road, Paddington, have now on sale and in order and Screened Gravel for Paths, &c. approved Wharf.
Contractors supplied to any extent.

TO BUILDERS AND OTHERS.

AT the LOWEST PRICES.—TIMBER, DEALS, MAHOGANY, and WAINSCOT. A large assortment of seasoned prepared FLOORING and MATCH-BOARDING of all description, and an extensive stock of Dry White Yellow, and Pine Cut Stuff, Sawn, Battens, Pantile Lath, Oak Plank, Sash Cills, &c. Timber of all kinds, Planks, Deals and Battens, fresh, and from the docks, sawn by patent machinery in the best manner, and delivered on the shortest notice.—THOMAS JACKSON, Sawing and Planing Mills, Commercial-road, Pimlico, London.

FURTHER REDUCTION of PRICES.—SAMUEL PEARCE has much pleasure in informing his numerous friends that he has made a further reduction in the price of Pine Planks, &c. and respectfully solicits an inspection of his large and well-selected stock of Deals, &c.:
Pine Planks, 12 feet by 3 in. by 11 in. from £21 0 per 120.
Yellow Battens, from ..... 11 10 "
Yellow Deals, from ..... 20 0 "
Spruce Deals, from ..... 18 0 "
Prepared Flooring, &c. equally low. A list of prices forwarded on receipt of a postage stamp.—N.B. All sawn goods delivered within two miles free of carriage.—Borough road, Southwark, and Elm street, Gray's inn-lane.

MAHOGANY and WAINSCOT seasoned by Symington's New Patent Process.—JOHN COUMBE solicits an inspection of his stock. The above process enabling him to season his wood in a comparatively short space of time, he sells at prices generally charged for wet wood. Address, PATENT WOOD SEASONING WORKS, Lady Lake's-grove, Mile end-gate.

EDWARD SIMMS begs to inform Builders and the trade, that he has now on hand at his manufactory (the first of its kind ever established), a large assortment of PREPARED FLOORS and MATCH BOARDING, seasoned and ready for use, from ½inch to 1½inch thick, 1, White or Yellow Deal, Oak, or Pitch Pine. Also Dry Deals, in all thicknesses. Slating Battens, Pantile Laths, Oak Sills, Plank, and Scantlings. Mouldings in clean Pine, to any design. A pattern list forwarded on application.—Address, E. SIMMS, Flooring Manufactory, and Sawing, Planing, and Moulding Mills, King's-road, Chelsea.

FLOOR BOARDS, &c.—R. SLADE begs to inform Builders and the Trade, that he has now on hand a large assortment of FLOORING and MATCHED BOARDING, from 1 inch to 1½ inches thick, seasoned, and ready for use; also, Sash-bars, Mouldings, Wainscot, and all kinds of Timber required for Building purposes.—Address, R. SLADE (late L. Solomons), Flooring Manufactory, Wilton-road, Pimlico.

ALFRED ROSLING begs to inform his customers and the Building Trade generally, that he is enabled to allow a discount of 15 per cent. upon his list prices for Mouldings.—A large stock of dry flooring at low prices.—Southwark Bridge Wharf, Bankside.

NOTICE of REMOVAL. — EDWARD SIMMS begs to inform his customers and friends that he has REMOVED his business from Watton-road, Kingsland, to the KING'S-ROAD, CHELSEA, where their orders will be promptly executed. Entrance—Pelham-place, E. SIMMS, Kin's-road, saw-mills 3 doors opposite Manor-street.

MOULDINGS BY MACHINERY.

Cornices, Sash-bars, Beads, &c. to any Design, carefully packed and sent to all parts of the Country. A Pattern List sent on application to

E. SIMMS,
SAWING, PLANING, AND MOULDING MILLS,
KING'S ROAD, CHELSEA.

LETT'S WHARF PATENT SAWING, PLANING, and VENEER KNIFE-CUTTING MILLS, Commercial-road, Lambeth.—The Proprietors beg to call the attention of Builders to their Extensive Premises, which have been fitted up with the most complete machinery for the execution of every description of Joinery, with despatch and punctuality. Wet and dry docks, and powerful cranes for landing heavy goods, offer facilities not to be obtained elsewhere. A large assortment of seasoned prepared flooring, matched, grooved, &c. always in stock, at reduced prices.

ROBINSON and BARTRAM, SAWING and PLANING MILLS, BELVIDERE-ROAD, LAMBETH.—ROBINSON and BARTRAM beg to call the attention of Builders to their MACHINERY for SAWING TIMBER, &c., and the purposes, will be glad to receive ORDERS in the Trade, and to contract for the entire fitting up of Mills, which they can execute in the best manner, and with the utmost punctuality and despatch.

ACORN TIMBER WHARF and SAW MILLS,
CANAL BRIDGE, OLD KENT-ROAD, LONDON.
A Monthly Price Current forwarded on application.
RICHARD MAY, Proprietor.

ST. PANCRAS SAWING, PLANING, and MOULDING MILLS, Cambridge-street, Old St. Pancras-road.—GEORGE NOKES and CO. invite the attention of Builders and Timber Merchants generally, to their STOCK of DRY FLOORING, which they can supply at the following prices:—
¼inch white, 1s. per square; ¼inch white, 16s. per square; ¼inch yellow, 18s. per square; ¼inch yellow, 20s.
Timber, deals, planks, &c. at the lowest remunerative prices. A liberal discount allowed on mouldings for exportation. Book of sections forwarded on application.

GRAINING by MACHINERY.—The present system of graining is far surpassed by the use of BELLAMY'S PATENT GRAINING MACHINES, by which an ordinary workman can produce first-class work, and at an immense saving of time. The designs are perfect imitations of the choicest specimens of fancy woods and patterns of the first artists.
The Patent Graining Company are now prepared with a large and varied assortment of instruments, which they offer to grainers, painters, builders, and others without royalty.
Grained paper in imitation of all kinds of fancy woods of the choicest specimens in the pieces or sets for panels, &c. a whole speciality of imitation. Pattern-boards and cards for the trade on application.
Painters, Grainers, Decorators, Merchants, and others are respectfully invited to inspect the patterns, and see the process at the Company's Offices, 17, Minories, London.

A SUBSTITUTE FOR PAINT, AND AT HALF THE COST.

STEPHENS' DYES or STAINS for WOOD. The following extract from a letter the Proprietor has obtained permission to publish:—Northaw, Southgate, Feb. 1855.—Sir,—I have just finished a new church with your Oak stains, and I assure you I think them the best adapted for the purpose for the present approach to the real wood of any I have ever used.—I am, sir, your obedient servant, "SAMUEL GRIMES, Builder
"To Mr. Henry Stephens, 54, Stamford-street, London."
Samples and prospectuses free to any part of the kingdom.

TO FRENCH POLISHERS, CABINET-MAKERS, BRASS-WORKERS, &c. — A considerable reduction in the prices of French polish, white and brown hard spirit varnishes, spirit lackers, and flatting spirit. The present price is 8s. 6d. to 7s. per gallon; white French polish, 10s. per gallon; white shellac, is. 8d. per lb.; gums, shellacs, and all other articles at lowest prices. A trial list forwarded on application to JAMES SLIPPER, 87, Leather-lane; and 1 and 15, Dorrington-street, Holborn, London.

MONEY WANTED.—The Council of Hastings, acting as the Local Board of Health, for the District of Hastings, in the said borough, are desirous of borrowing, under the powers of the Public Health Act, 1848, the sum of £[illegible] for the purpose of [illegible] and sewerage of the said borough, and are willing to grant mortgages of the rates and assessments of the said borough, and of any other property which may be legally assigned for the purpose, for the repayment of the principal and interest, within the period of thirty years; or they may be willing to grant debentures for the said loan, bearing interest at the rate of [illegible] per cent. per annum, payable half-yearly, and repayable at the end of the said period of thirty years. Any persons desirous of lending the said sum, or any part thereof, are requested to communicate their terms of interest, addressed to the Town Clerk, Hastings.
Hastings, June [illegible], 1856.

LOANS, from 10l. 10s. to 100l. ADVANCED, within twenty miles of London, repayable weekly or otherwise, at 5s. per cent. for twenty-five weeks, and 8 per cent. for fifty weeks. Forms, price 2½d.; by post, three 9-stage stamps to be sent to the METROPOLITAN LOAN COMPANY, 1, Crane-street, Strand. Established 1849. Office hours, from Ten to Four o'clock. ROBERT NORTON, Secretary.

NOTICE.—TO BUILDERS, RAILWAY AND DOCK DIRECTORS, WATERWORKS AND GAS COMPANIES, CONTRACTORS, &c.—JOHN CHADWICK, Manufacturer of the Patent Lithic, Roman, and Portland CEMENTS, made on the same principle and from the same materials as used by the late firm of Swindells, Brother. J. C. is prepared to enter in to contracts with any of the above branches that may favour him with their orders. The advantage to be derived from the above cements, manufactured by J. C. over all others, are their extraordinary hydraulic properties. Samples and references may be had on application either at the Works, Ashton New Road, or the Warehouse, 5, Broom street, Shudehill, Manchester.

BATH, PORTLAND, and ROMAN CEMENTS. The London and West of England Cement Company can offer to the Trade the best natural HYDRAULIC CEMENTS at reduced prices. The Company particularly recommend the best quality of their Bath Cement for all ordinary flue purposes, decorations &c as having all the qualities requisite for an inferior cement, and being quit unaffected by extremes of weather. The Company also supply BLUE LIAS LIME, brown and ground, which will carry more sand than any in the market.—Communications to be addressed to the General Offices, 69, Old Broad-street; London; to Mr MANTEVENT, Clerk, pro tem, City-road; to Mr. TIMEWELL, the Depôt, 9, North Wharf-road, Paddington; or to the Works, Dunstall, Bridgewater.

SOUTHAM BLUE LIAS LIME DEPOT.
Glazed Stoneware Sewage Pipes.
Brick, Lime, and Cement Merchants,
TATHAM and CO.
14, South Wharf, Paddington.

PARIAN CEMENT, reduced in price 25 per cent. This article is valuable for inside stucco, and especially for skirtings, for flooring on brick arches, &c. It takes paint in a few hours after its application on walls or laths, is without efflorescence, and may be papered in a couple of days. A finer quality forms a beautiful Scagliola, with any admixture of colors. Manufactured by FRANCIS, BROTHERS, Cement Works, Nine-elms, London.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent.—N.B. These Cements supplied for shipment, on advantageous terms.

THE PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and Co. to whom THE PRIZE MEDAL WAS AWARDED in 1851, are prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes to which Cement is applicable. Orders received at Great Scotland-yard and at the Works.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland Cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brickwork, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

PORTLAND and ROMAN CEMENTS.—T. H. BOORMAN, WILD, and CO. MEDWAY LIME and CEMENT WORKS, LOWER HALLING, near Rochester.
Agent at the YORK—Mr. THOMAS WEEKES.
Agents in London, Messrs. GEORGE POTTER and CO. Limemerchants, Purfleet-wharf, Earl-street, Blackfriars, and No. 19, North-wharf-road, Paddington.

PORTLAND and BATH CEMENTS.
TATHAM and CO.
14, South Wharf, Paddington.

PORTLAND and BATH CEMENT.—FULLWOOD THOMPSON and CO. request the attention of Merchants and Contractors to the quality of their Portland and Bath Cement, which they manufacture on an improved system, securing regularity of strength and colour, and at a less cost than is attainable by most other makers.
These cements set under water in a few minutes, and are not affected by extreme heat or cold.
FULLWOOD THOMPSON and CO. will be happy to send prices and samples in reply to application by post. They deliver free into the Bristol and Exeter Railway Company's trucks at their works, or free on board in the Port of Bridgewater.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light, Dark, and Portland Cements equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Mine Ochre, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Tiles, Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Portzeloa.

JOHNS and CO.'s PATENT PERMANENT STUCCO WASH (perfectly non-absorbent), STUCCO, CEMENT, STUCCO PAINT.—CLARK and BENGOUGH, Manufacturers, Grand Surrey Canal Bridge, Old Kent-road. Office, 4, George-yard, Lombard-street.

PORTLAND CEMENT.—JAMES WESTON has enlarged that portion of his CEMENT WORKS on the Medway, for the manufacturing the above CEMENT, begs to inform the Trade in general that it can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Rochester, or Middle Wharf, Scotland-yard, Westminster, Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

PORTLAND and ROMAN CEMENT.
PLASTER of PARIS
Manufactured by J. M. BLASHFIELD, at Millwall, Isle of Dogs, Warehouse, No. 1, Wharf, Paddington-basin

11 George-yard, Lombard-street, City.

ELMLEY CEMENT WORKS.—ROMAN and PORTLAND CEMENT of the first quality, manufactured on the above works. Also STOCK and KILN-BURNT BRICKS, hand made and machine made, for shipment or otherwise.—Apply to G. H. OTT, Agent, as above.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known Lime Stucco, dry ready for use, in tin packets, with a few days. Manufactured by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick setting Cement, that requires no coat-sanding. Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel-street, Liverpool.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements tread at the Institute of Civil Engineers, to be obtained from the Makers, JOHN BAZLEY WHITE, and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

HUBBUCK'S PATENT WHITE ZINC PAINT,
The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers, are enabled, by their process, which is patented, to supply Pure White Zinc Paint at the price of White Lead. Neither has it the disagreeable effect upon it. It is entirely free from any poisonous or pernicious property. The generality of the painters' colic, will be altogether averted. The Powdered White Zinc can be had in three grades, Nos. 1, 2, and 3, and where it is used with Soap, Varnish, &c. To prevent the proper genuine Zinc paint, which the adulterated article is most objectionable, being sold in Oriental Packages, each cask stamped, HUBBUCK'S LONDON PATENT. And when so marked, the quality is guaranteed. THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers, Paint and Varnish Works opposite the London Docks, London.
N.B. OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT FOR REFINING.

BLUE LIAS LIME.—CHAS. NELSON begs to offer to consumers a supply of Blue Lias Lime direct from his Quarries in Warwickshire, the quality of which has been tested by several of the largest building firms in the metropolis and approved by them; and those who have favoured C. N. with their patronage during the last three years have always expressed themselves satisfied with his system of weighing or measuring the lime. When the lime is delivered by boat, the master has instructions to produce on demand the canal company's pass, by which the purchaser may know the exact weight delivered.—Orders addressed to the London Depôt, 6, South Wharf, Paddington, J. D. BLYTH, Sole Agent, will have immediate attention.—Quarries and Manufactories, Stockton, near Southam, Warwickshire.

DAVIES and NORMAN, CROWN WHARF, GREAT SCOTLAND YARD.
R. MAN and PORTLAND CEMENTS,
LIME BRICKS, TILES, SLATES, FIRE GOODS, &c.
STONEWARE PIPES, PANS, TRAPS, &c.
A Liberal Allowance to the Trade.

NOTICE.
SOUTHAM HYDRAULIC BLUE LIAS LIME.
WILLIAM OLDHAM begs to inform those parties requiring genuine Hydraulic Blue Lias Lime, that he is prepared to deliver the best quality of ground and lump, into boats, at the Works.—Address, WILLIAM OLDHAM, Blue Lias Lime and Cement Works, Southam.

BLUE LIAS LIME.—Messrs. GREAVES and KIRSHAW having completed their Works on the Birmingham and Oxford line of the Great Western Railway, at Harbury, are now prepared to supply LIME and GROUND LIME, either ex-kiln, direct from the Works, or by Railway on the Great Western Railway.—Greaves's Blue Lias Lime.—Portland, Bath and Lias Cement. Works, at Harbury, Stockton, and Wilmcote.—Office, at Warwick.

GREY STONE LIME WHARFS, 12, UPPER GROUND STREET, Blackfriars (Surrey side), NORTH WHARF-ROAD, Paddington.
WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME, in any quantities from the above wharfs, or per barge direct from the kilns.
Large Grey Stone, or Grey Chalk, free on board at Works, 1s. 9d. per ton
Small ditto, ditto, 4d. per ton.
Barges loaded in a few minutes.
Wouldham-hall Grey Stone Lime Works on the Medway, near Rochester.

CHARLES RICHARDSON, 3 & 6, SOUTH-WHARF, PADDINGTON BASIN.
COWLEY AND KENT BRICKS,
PORTLAND, ROMAN, AND OTHER CEMENTS,
TAMWORTH GLAZED SEWAGE PIPES
BLUE VITRIFIED BRICKS, COPINGS, PIPES, &c.

2 & 6, South Wharf, Paddington.

NOTICE.
CHARLES RICHARDSON takes the earliest opportunity of informing Engineers, Architects, Contractors, and others, that he is now bringing GREAVES'S BLUE LIAS LIME per the Great Western Railway from Harbury to Bull's Bridge and Paddington, from whence it can be delivered alongside any part of the river Thames, canals, or railway stations in London the day after it is burnt and ground, in any quantity, and at a great reduction in price.
All applications for prices and terms will meet with prompt attention.
N.B. Please observe the lime is ground at the works, not in London.

BRICKS of all kinds (clamp-burnt or kiln-burnt), Lime, Chalk, Chalk Rubbish for brick-making, Flints for building and pottery work, Foundry Loam, Whyting, Whitin Sand for asphalte, Land Drain Pipes, Patent Drain Pipes, Gas Soil for brick-making, &c. &c. sent by barge from Messrs. MEESON and CO.'S works at Grays, Essex, to any part of the Thames, the various canals, the river Lea, &c. or by rail to any station on the London and Southend and Eastern Counties lines, or any railway connected with them. Vessels of 200 to 600 tons can load along-side the wharves at Grays. At MEESON and CO.'S wharf and kilns, Bow-bridge, Stratford, Essex, the above-named articles can also be procured, as well as all kinds of fire goods, both Welsh and Newcastle, Fire clay, Flare-burnt Lime, and Marble and Temper Lime; and here lime is packed in hogsheads, casks, jars, &c. for exportation
General Office—No. 13, GEORGE-YARD, LOMBARD-STREET.
Letters addressed to Grays Essex, will meet with immediate attention.

BRICKS.—Mr. Rydon having made more bricks than he requires for the builders on his estate, Highbury New-park, would be willing to contract to arrangements with builders and others for supplying first-class STOCK and RED BRICKS upon advantageous terms.—For particulars, apply at the Estate Office, Delly Farm, Stoke Newington Green.

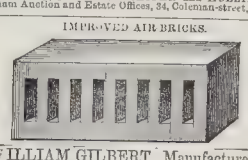
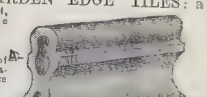
THE PATENT BRICK MACHINE COMPANY invite orders for their IMPROVED MACHINES. One of them is working in a field at Caterham, near Croydon, and arrangements are made with the owner for bearers of a letter from the Secretary, to see it in operation every Thursday and Friday. It is the most simple machine invented. Trains from London-bridge to Warlingham (close to the field), leave at 6 and 9·30 a.m. and 3 p.m.; return at 9·55 a.m. and 5·5 and 7·55 p.m.
HENRY C. SOUNE, Sec.
37, King William-street, City.



BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and judge for themselves.
Malm Place, half unsited Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.
Apply to HENRY DODD and CO. at the Counting-house, Horton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.
N.B. Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

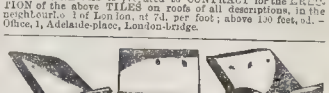
BRICKFIELD TO BE LET at TOTTENHAM, containing 6½ acres of excellent malm earth, situated by the side of the high road, 4 miles from London. The bricks made in the field have always found a ready sale.—For terms and other particulars, apply to Mr. A. RICHARDS, Auctioneer, Tottenham.

BRICKFIELD TO LET, in full work.—In consequence of decease of a principal, situate about twelve miles west of London; the Great Western Line passing at the end of the property, and the Grand Junction Canal at the other, with a commodious Dock and Loading Stage. About Thirty-three acres of LAND, twenty-five thereof containing excellent Brick earth, together with roomy DWELLING-HOUSE, and all stone and three-quarters acres of ground attached thereto. A great portion of the land not yet required for brick-making, is profitably underlet. About one, three years of lease unexpired.—Apply, by letter, to H. Y. Messrs. Hemington, Stationers, 142 Fenchurch-street, London.



TO BRICKMAKERS and OTHERS.—TO BE LET or SOLD, a BRICKFIELD, containing 15 acres of ground, 12 acres of which are brick-earth, commanding both railway and water carriage; low royalty. The field is in full working order, with machinery, &c. complete.—For further particulars, apply to Messrs. SLOPER and HOLLIDAY, 12 Gresham Auction and Estate Offices, 34, Coleman-street, City.

IMPROVED AIR BRICKS.



WILLIAM GILBERT, Manufacturer of all kinds and colours of Tiles, Quarries, Drain pipes, Moulded Bricks, Brackets, Vases, Chimney pots, Stoneware Glazed Sewage Pipes, Ornamental Quoin Blocks, &c.
Tiverdale, Staffordshire.

HOGG'S GARDEN EDGE TILES; a cheap, elegant, and durable substitute for Box Edging.
13s. per Hundred, or 1½ per yard.
Exhibited at Court of Honour, Crystal Palace; and at the Office of "The Builder."
Full particulars from Mr. R. BLACKETT Witham, Essex

BEADON'S EAVES GUTTER TILES.—Mr. LAWES is prepared to CONTRACT for the EXECUTION of the above TILES on roofs of all descriptions, in the neighbourhood of London, at 7d. per foot; above 100 feet, 6d.—No. 1, Adelaide-place, London-bridge.

BEADON'S PATENT IMPERISHABLE GUTTER-TILES,
For Spouting Roofs of Houses (either old or new, whether of thatch, slate, or tile), and other structures.
SOLE AGENT,
J. B. LAWES, 1, Adelaide-place, London-bridge.
This is the cheapest kind of spouting known; for, besides its lower cost, it will last without paint or repair as long as the building itself. It will bear the weight of any ladder; and in case of accident a labourer can repair it. It occupies the room of a large amount of roofing, effecting a great saving in slates, tiles, &c. It is especially applicable to the backs of houses in town, cottages, and agricultural buildings.
Price 4d. each tile of about 13 inches long; stop-ends and outlets, 6d. Any mason can put them up, or, if over 100 feet are required, a man will be sent to fix them at 5d. per foot. This charge to include tiles (delivered in Agent's yard), cement, and labour. May be had in London, Gloster, Bridgwater, and Rugby.

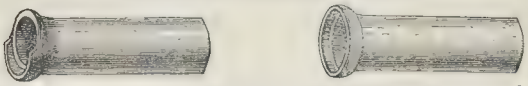
MINTON and CO.'S ENCAUSTIC and other PATENT TILES, for Churches, Entrance Halls, Conservatories, Balconies, &c.; Antique, Geometrical, and Alhambra Mosaics, manufactures of a highly decorative character and extreme durability, Slabs and Tiles for Fireplaces and Hearths, Cistine Grates, Door Furniture, White Glazed and Ornamental Tiles for Baths, Dairies, and Kitchen Ranges, may be had, in great variety at their Warehouse, 9, Albion-place, Blackfriars-bridge, London; and at their Manufactory, Stoke-upon-Trent, Staffordshire.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPÔT for the WARE is at HOWELL'S WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "Terro-Metallic," is the exclusive right of the Proprietor; and, thirdly, that the "Reports of the Jurors," page 681, of the Great Exhibition, rank the Manufactories known so long as "The Tile-ries," Tunstall, Staffordshire, as the best of the kind in the world.

PANTILES, PAVINGS, &c.—J. H. ANDREWS, Wisbeach, Cambridgeshire, begs to offer pantiles at 50s. per 1,000; floor bricks and 6-inch pavings, at 37s. 6d. per 1,000; 9-inch pavings, at 57s. 6d. per 1,000; plain tiles, at 25s. per 1,000, delivered. Cash prices.—Delivered on trucks in London on Eastern Counties Railway.

AYLESFORD POTTERY COMPANY,

BELVEDERE-ROAD, LAMBETH.



MANUFACTORY AT AYLESFORD, NEAR MAIDSTONE, KENT.

The above Company having now been in existence for nearly six years, and having during this period supplied DRAIN PIPES, &c to some of the largest Works in and around London, viz.:—The New Cattle Market, Wellington and Chatham Barracks, Deptford Dockyard, Her Majesty's Commissioners of Works, &c. and in all instances parties using them expressing themselves satisfied therewith,—take this as a fair test of the quality of the articles supplied by them; and as they now feel themselves established as Potters, beg to offer their goods to Contractors, the Trade, &c. of a first-rate quality and manufacture, and at the lowest possible prices, NOT BEING IN ANY WAY CONNECTED WITH THE LONDON POTTERS' ASSOCIATION.

GREAT REDUCTION IN GLAZED STONEWARE PIPES.

STEPHEN GREEN,

IMPERIAL POTTERIES, LAMBETH.

S. G. wishes to call attention to his WHOLE and HALF-SOCKET PIPES, made on the principle of PILBROW'S IMPROVED REBATED SOCKET-END, which fully secures a joint free from obstructions, and meets the demand for removing Pipes at any point.

5s. 6d. each; if fitted with PATENT AIR-TIGHT VALVES, 1s. 6d. each extra.

Also to his IMPROVED REGISTERED CLOSET PAN, with an impervious White Glaze inside, and formed to insure a Flush of Water over the entire Internal Surface. Made with or without STEPHEN GREEN'S PATENT AIR-TIGHT VALVE on the top of the Trap.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter:—FROM SIR RAYMOND JARVIS, Bart., VENTNOR, ISLE of WIGHT.—Second Testimonial.—"March 18th, 185 . In reply to your letter, received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state, with much satisfaction, it answers perfectly. Many Builders and other persons, have lately examined it, and there is not the least apparent inferiority since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."

N.B. From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

THE GUTTA PERCHA COMPANY, PATENTEES, 18, WHARF-ROAD, CITY-ROAD, LONDON.

HANCOCK'S PATENT VULCANIZED INDIA-RUBBER TUBING, HOSE-PIPES, WASHERS, ENGINE PACKING, both round and flat, and SOCKET-RINGS, for Hot-water-pipes. N.B. All communications and orders punctually attended to, addressed to the Manufactory, JAMES LYNE HANCOCK, Goswell-mews, Goswell-road, London.

GREAT REDUCTION in PRICE of STONEWARE DRAIN-PIPES.

WILLIAM NORTHEN,

UNION POTTERY, 14, VAUXHALL-WALK, LAMBETH,

Begs to call the attention of Surveyors, Contractors, Builders, and others, to a very great REDUCTION in the PRICES of his

GLAZED STONEWARE DRAIN-PIPES.

LISTS OF PRICES FORWARDED ON APPLICATION.

THE LATE FIRE AT THE BOURNE VALLEY POTTERY,

NEAR POOLE, DORSET.

The Proprietors of the above Works respectfully inform Surveyors, Contractors, Builders, and Others that the buildings rendered necessary by the late disastrous fire are now nearly complete, and they are enabled to supply SALT-GLAZED STONEWARE DRAIN-PIPES, BENDS, JUNCTIONS, CLOSET-PANS, TRAPS, &c. in any quantities. These Pipes, &c. being made under immense pressure by new and patented machinery, and burnt, by intense heat, to an unusual degree of hardness, are very far superior to any hitherto made in Hants or Dorset, and will bear comparison with any in the kingdom; and being made of clay of the finest quality, the produce of the estate can be rendered at very moderate prices.

The goods, or any information respecting them, may be obtained on application to the Manager, Mr. J. T. BOUNSALL, Bournemouth, near Poole; or the Agent, in London, Mr. G. S. WHITTON, 17 and 18, Princes-street, Lambeth.

N.B. A liberal discount to the Trade. A large Stock always on hand.

THE BRANKSEA POTTERY,

NEAR POOLE, DORSET.

GREAT REDUCTION IN PRICES OF DRAIN-PIPES.

TO THE METROPOLITAN BOARD OF WORKS, DISTRICT BOARDS, BOARDS OF HEALTH, TOWN COUNCILS, IMPROVEMENT BOARDS, SURVEYORS, AND BUILDERS.

THE BRANKSEA POTTERY and CLAY COMPANY are prepared to supply all descriptions of Glazed Drain-pipes, Bends, Double and Single Junctions, Closet-pans, &c. Also, Terra-cotta Chimney-pots and Fire-bricks of a very superior quality at moderate prices.

N.B. A LIBERAL DISCOUNT TO THE TRADE. A LARGE ASSORTMENT OF GOODS CONSTANTLY ON SALE.

The clay obtained from the pits on the island of Branksea is of the finest quality, and the goods are manufactured by men of long experience in the trade, with the aid of powerful machinery. The articles offered for sale will be found to bear comparison with the best goods manufactured in any part of England.

A list of prices forwarded free on application to Mr. T. G. BECK, at NEW WHARF, No. 6, Little Abingdon-street, adjoining the New Houses of Parliament; or to Mr. R. PETTS, at the Works, Branksea Island, Poole, Dorset.

EXTENSIVE REDUCTION IN PRICES.

KINSON POTTERY AND CLAY WORKS, POOLE, DORSET.

LAMBERT'S PATENT WATER WASTE

PREVENTER, and SELF-REGULATING VALVE-COCK, especially adapted for Water-closets.

(a) FIG. 1. FIG. 2.

This Valve is so arranged, that whether it be held down or propped up, only a given quantity of water can be used at each action.

The pressure of the column of water—viz. its vertical height—being known, a quart, gallon, or any other quantity desired will be (and no more can be) discharged; and before a second quantity can be obtained, a second action must take place.

This Valve is capable of several modifications; one of its applications to the FIG. Closet, as shown in FIG. 2, is important, as it renders unnecessary any other appliance to regulate the discharge of water; it can be made to keep open as long or short a time as may be desired, after the handle which operated upon it is set free.

It is yet more valuable when applied to self-acting Closets, as it dispenses entirely with reservoirs or supply cisterns; once regulated, say for one gallon, that quantity will always be discharged at each action of the seat by its pressing upon the stud a, or by any other movement.

The Patentees have tested them under every pressure up to 300 feet with complete success.

THOS. LAMBERT and SON,
Founders and Manufacturers of High pressure Water-Valves, Plumbers' Brass Work, Pumps, &c.
SHORT-STREET, NEW-CUT, LONDON.

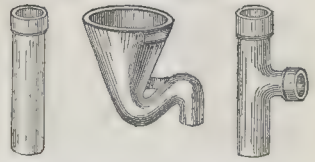
PATENT TERRA-COTTA.

Tracery for Parapets and Terraces, Mullions, Pinnacles, Moulded Bricks, Coats of Arms, Crosses, Label Mouldings, Friezes, Trusses, Vases, Balusters, Capitals and Bases of Columns, Paving, Facing Bricks, Coping, Kitchen and other Sinks, Chimney Shafts and Tops, and numerous other Articles, manufactured by J. M. BLASHFIELD, in Patent imperishable Terra-Cotta, at Mill-wall, Isle of Dogs; and sold at No. 1, Wharf, Praed-street, Paddington-basin.

REDUCTION IN PRICES.

PATENT DRAIN-PIPES, UNGLAZED,

manufactured by ARTHUR C. FRANCIS and CO. Grays, Essex. Sold by them, and by FRANCIS, BROTHERS, Nine-Elms, London, and at all their Warehouses.



PRICES.

3 inch bore, in 2 ft. 6 in. lengths, at			2½d. per foot.
4	"	"	3½d. "
6	"	"	5d. "
9	"	"	9d. "
12	"	"	1s. 6d. "
15	"	"	2s. 6d. "

These pipes are made under steam pressure, and burnt to great hardness, and are capable of bearing nearly double the hydraulic pressure of ordinary glazed pipes. The production against red-ware is overcome by this manufacture, and it is well known that good earthenware, UNGLAZED, is the oldest material discovered in a perfect state in Rome, Babylon, Nineveh, &c. &c.

GREAT REDUCTION in the PRICE of

STONEWARE POTTERY from this date.

VICTORIA POTTERY, LEIGH, near SOUTHEND; London Establishment, 4, Falcon Wharf, 80, Bankside.—DAVID MOUNTAGUE, Manufacturer of every article of Lambeth POTTERY, having now further reduced the prices, begs to offer to consumers and others, STONEWARE PIPES, &c. &c. on the most advantageous terms. The new lists of prices will be forwarded on application as above.—Feb. 11, 1853.

Gentlemen desirous of promoting the interests of the Institution, by becoming stewards, will be pleased to forward their names to the Treasurer, Mr. GEORGE BIRD, 38, Edgware-road; or to the Secretary, at the Offices, 19, Southampton-street, Bloomsbury, where Tickets may be obtained, 21s. each, of the Stewards, and at the London Tavern.

A. G. HARRIS, Secretary.

September 25, 1856.

TO ARCHITECTS, ENGINEERS, SURVEYORS, AND BUILDERS.

PROFESSOR DONALDSON'S COURSES of LECTURES on ARCHITECTURE and CONSTRUCTION, at University College, for the Session 1856-57, will commence on Tuesday, the 21st October. The circular and terms can be had at the College Office.

COMPETITIONS.

NEW GOVERNMENT OFFICES.—The Commissioners of her Majesty's Works and Public Buildings give Notice, that they are prepared to receive DESIGNS from Architects of all Countries for a SCHEME for the CONSTRUCTION of the principal GOVERNMENT OFFICES, on a Site lying between Whitehall and the New Palace at Westminster; and also Designs for Two Buildings which her Majesty's Government have determined to erect forthwith, as parts of such general scheme, one for the Department of the Secretary of State for Foreign Affairs, the other for the Secretary of State for War. Plans of the ground, together with a statement of the premises and other particulars, will be forwarded to architects on application by letter addressed to me at this Office.

ALFRED AUSTIN, Secretary.

Office of Works, Whitehall, Sept. 20, 1856.

TO ARCHITECTS and SURVEYORS.—WHITE-HORSE ESTATE, NORWOOD.—Competitors for the Premium of 150*l.* for setting out this estate for building purposes, can be furnished with a plan from a recent survey on moderate terms.—Apply to Mr. SMITH, Surveyor, Edenbridge, Kent.

COMPETITIONS.

FOLESHILL, WARWICKSHIRE.—NEW WORKHOUSE for the FOLESHILL UNION.—INSTRUCTIONS to ARCHITECTS and CONDITIONS. The proposed New Workhouse and Buildings are to be erected on a site near Foleshill Hall. Accommodation is required for 150 Paupers, with Wards, Yards, and other Conveniences, suitable for their complete classification in proportion as follows, namely:—

Men infirm from age or other cause	36
Able-bodied Men and Youths above 15	14
Women infirm from age or other cause	30
Able-bodied Women and Girls above 15	20
Boys under 15 years old	15
Girls under 15 years old	15
Lying-in Women	6
Sick Males	6
Sick Females	8
	150

Detached Wards for Vagrants of both sexes, 6 of each.
Receiving Wards.
Refractory Cells in three Compartments.
A Dead-house.
A Board-room, suitable for 25 Guardians.
Clerk and Registrar's Office, with Closets for Books and Papers. The Safe in the present Register Office to be removed to a site adjoining the Registrar Office.

Accommodation for a Master, Matron, Schoolmaster, and Schoolmistress, situated with respect to their duties.

A Dining hall, suitable for the whole of the Inmates to dine at one time.

A Workroom for able-bodied Men.
A Schoolroom.
The plans to be so framed that the Children may be kept totally apart from the Adult Inmates.

The Sleeping Accommodation to be equal to 300 cubic feet of space for each inmate in health, and 500 cubic feet for each sick person.

A Well in the able-bodied Men's yard, with a Pump to be fixed thereon, to be worked by manual labour, of sufficient power to supply the establishment with water.

Washhouse and Laundry.
Bath-house, with Hot and Cold Water Taps.
Cisterns for Cold Water, with requisite Fittings.
Requisite Fittings in the Lavatories and Water-closets, with sunk Pool for filth from Water-closets.
Tanks under ground, to store the rain-water from the roofs, with Flushings to the Drains.
Pumps in the Washhouse.
The house to be provided with open Fireplaces, and a complete system of Ventilation.
Stabling for 12 Horses, and an Open Shed, 30 feet by 20 feet.
Good Kiln Bricks to be used in the buildings. The floor-line to be two feet above the surface of the land.

Further extension of the Dormitories must be provided for, with due regard to uniformity; and the day-rooms must be sufficiently extensive to accommodate an additional number of inmates, not exceeding 20.

The Architect must state the cost of completing the works according to his plans. The maximum sum proposed to be expended on the building is 3,500*l.*

Architects are required to furnish the following plans, with general specifications and estimates. The plans, except the block-plan, to be drawn to a scale of eight feet to an inch.

1. A block-plan, showing the situation of the building on the land, and the proposed drainage.
2. A plan of each floor.
3. One transverse and one longitudinal section of the principal buildings.
4. Elevations.
5. A plan of the roof.

Each set of plans and specifications must be sent in with a motto affixed, and a sealed letter, containing the name and address of the Architect, bearing the same motto. The letters will not be opened until the Board of Guardians shall have finally decided upon the plans and specifications accepted. The plans to be sent addressed to the Guardians of the Foleshill Union, Foleshill; and the letters addressed to the Clerk.

The Guardians will not be responsible for any injury which the plans may sustain, and the plans will be returned to the unsuccessful candidates, with the letters, unopened.

All plans are to be delivered on or before the 24th day of NOVEMBER next, and no plans will be received after that day under any pretence.

The Architect producing a plan accepted by the Guardians, and approved by the Poor Law Board, will be employed at a sum not exceeding 5*l.* per cent. on the outlay, and his plans and specifications will become the absolute property of the Guardians.

No Architect shall be entitled to make a charge, or to receive any remuneration for his plans or specifications which shall not be accepted.

The Guardians do not bind themselves to accept any of the plans which may be submitted.

By order of the Board of Guardians,
THOMAS DEWES, Clerk.

Coventry, 19th September, 1856.

TO SURVEYORS and OTHERS.—PREMIUMS for PLANS.—The Trustees for Sale of a Freehold Estate of 500 acres, including the Beulah Spa, and near the Crystal Palace, require PLANS for LAYING OUT the same for building purposes, showing the necessary roads, sewerage, &c. the whole to be clearly defined and apportioned in suitable lots, and laid down to a scale of two chains to one inch, from actual admeasurement. The following premiums are offered:—For the plan adjudged the best by the trustees, 150 guineas; for the second, 100 guineas; for the third 50 guineas. The plans to which the above premiums shall be awarded, will be retained by, and be the property of, the trustees.—Further particulars may be obtained of Mr. PEACOCK, Builder, near the Jolly Sailor Station, Norwood, close to the property. The Trustees will meet on the 8th day of DECEMBER next, to examine the plans, which are to be previously forwarded, enclosed and sealed, to the Secretary's office, Auction Mart, London, addressed to the Trustees of the White Horse, Norwood Estate.

TO SURVEYORS. — NOTICE. — NORWOOD, BEULAH SPA ESTATE, near the Crystal Palace. It having been intimated to the Trustees that the time mentioned for the Delivery of the Plans is insufficient, they have determined to EXTEND the same to MONDAY, DECEMBER 8, at the same place.

COMPETITIONS.

WELLINGTON TESTIMONIAL.—To SCULPTORS and ARCHITECTS.—The Committee are desirous of receiving DESIGNS for a COLUMN and STATUE to be erected in honour of the late Duke of Wellington, at Liverpool.

The amount at present at the disposal of the Committee is about 6,000*l.* and if their intentions can be properly carried out for that sum, they are desirous that it should be, but any Artist will be at liberty to send in a separate design, either for the Column alone, or for a Column and Statue.

The competitors must accompany their designs by estimates of the cost, either for the Column and Statue combined, or separately, and stating the description of material which they propose to employ.

A premium of 50*l.* will be given for the design which, in the opinion of the Committee, is the best for the purpose intended.

Each design to be marked with a motto or device, and the name of the Author is not to appear, but to be put in a separate sealed letter, bearing on the outside a corresponding motto or device.

The design for which the premium may be awarded to become the property of the Committee.

All communications to be addressed to the Chairman of the Committee, at the Town-hall, Liverpool; and the designs must be delivered there, free of expense, on or before the 15th day of NOVEMBER next.

Town-hall, Liverpool, September 20, 1856.

ARCHITECTURAL EXHIBITION.—All drawings, models, photographs, &c. must be delivered at the Galleries, Suffolk-street, Pall-mall East, on the 1st or 2nd of DECEMBER next. Printed rules will be forwarded on application to the Honorary Secretaries.

DEPARTMENT for MATERIALS.—Patents, &c. connected with Building, &c.—Exhibitors should apply immediately to Mr. JAS. EDMESTON, (Honorary Secretary), as most of the space is already engaged.

Exhibitors will be allowed to set up and fix their contributions at any time between the 1st of NOVEMBER and 1st of DECEMBER.

The following gentlemen are added to the number of local honorary secretaries since the list last published:—

BATH	J. ELKINGTON GILL, Esq.
POCTHAMPTON	A. BEDBORO'UGH, Esq.
WORCESTER	J. HOPKINS, Esq.

There are still some important places for which the committee would be glad to appoint local secretaries.

Lectures will be delivered on the Tuesday Evenings, by Thomas Allom, Esq.; Professor Donaldson; the Rev Mr. Boutell; R. W. Billings, Esq.; Owen Jones, Esq.; George Scharf, Jun. Esq. unless circumstances in the meantime should interfere; and other gentlemen.

Subscribers have the privilege of introducing a friend to, or of transferring their tickets for, the lectures.

JAMES FERGUSSON, Esq. F.R.A.S. } Honorary
90, Lowndes-place, Regent-street, } Secretaries.
JAMES EDMESTON, Jun. }
3, Crown-court, Old Broad-street.

CONTRACTS.

NOTICE to BUILDERS and CONTRACTORS.—The War Department having rejected the Tenders which have been received for the erection of an Officers' Barrack at Dover Castle, the Commanding Royal Engineer of the Dover District hereby gives Notice, that sealed TENDERS will be received at the Office of the Director-General of Contracts, Pall-mall, London, on or before THURSDAY, the 9th of OCTOBER, 1856, from competent persons desirous of CONTRACTING for BUILDING a RANGE of OFFICERS' BARRACKS, with Stables and Coach-houses, in the Mediæval style of architecture, at Dover Castle. The plans and specifications of the works may be seen by persons fully competent to undertake the works (none others need apply), and forms of Tender obtained at the Royal Engineer Office, Dover, between the hours of TEN and FOUR o'clock, from WEDNESDAY, the 24th of SEPTEMBER, to WEDNESDAY, the 8th of OCTOBER, 1856 (Sundays excepted). The party whose Tender may be accepted for the works will be required to enter into a bond, with two eligible securities, jointly and separately, to be bound under a penalty of 3,000*l.* for the due performance of the contract. Tenders for the above works to be addressed to the Director-General of Contracts, Pall-mall, London, and endorsed "Tender for Building an Officers' Barrack at Dover Castle."

N.B.—The War Department reserve to themselves the right of rejecting the whole or any of the Tenders.

Royal Engineer Office, Dover, Sept. 20, 1856.

NOTICE to BUILDERS.—ORDNANCE CONTRACT.—The Principal Officers of Her Majesty's War Department hereby give Notice, that they will receive Proposals for the following CONTRACT, viz.:—For the several WORKS proposed in the erection of QUARTERS for Married Soldiers, Laundry, drill-sheds, privy, ash-pit, &c.; also for drains, gas and water piping, &c.; and converting soldiers' rooms into staff sergeants' quarters, at Richmond Barracks, Dublin. Persons desirous of Tendering for the same will receive every information on application at the District Commanding Royal Engineer's Office, Lower Castle-yard, Dublin, and may obtain specifications with the terms of Contract. The drill-sheds to be completed, and the joisting of the upper floor of the quarters for married soldiers laid by the 15th MARCH, 1857, and the remainder of the whole completed on or before the 31st OCTOBER, 1857. The letters of Tender, with specifications, to be sealed, and transmitted under cover to "The Director-General of Contracts, War Department, Pall-mall, London," so as to be received on or before the 18th day of OCTOBER, 1856, and to be marked on the outside, "Tender for Work at Richmond Barracks, Dublin."

Commanding Royal Engineer's Office, Dublin,
24th September, 1856.

TO ROAD-MAKERS and CONTRACTORS. The Committee of the City of London Freehold Land and Building Society are desirous of receiving TENDERS for MAKING a ROAD through their Estates at Tube-hill, Lower Norwood. The specification may be seen at the offices of the Society, 79, Farringdon-street, where Tenders must be delivered before THREE o'clock on TUESDAY, the 14th inst.

JAMES HIGHAM, Secretary.

CONTRACTS.

BUILDERS desirous of TENDERING for the ERECTION of a PAIR of VILLAS and a PAIR of COTTAGES on the Stratford Estate of the Temperance Permanent Land and Building Society may inspect the drawings and specifications on and after the 12th instant, at the Office of the Architect, Mr. WILLIAM ELLISON, 19, Stainsby-road, Lomehouse; also at the Offices of the Society, 34, Moorgate-street, City, where Tenders are to be delivered by SEVEN o'clock in the evening of MONDAY, the 20th instant. The lowest Tender is not necessarily accepted.—MONEY is ready to be ADVANCED by this Society to any amount on houses and lands; for terms apply, between TEN and FOUR, to HENRY J. PHILLIPS, Secretary.

BRADFORD CORPORATION WORKS.—To EXCAVATORS, MASONS, and GENERAL CONTRACTORS.—The Waterworks Committee of the Bradford Corporation will meet at their Office in Bradford on WEDNESDAY, the 22nd day of OCTOBER, at ELEVEN o'clock in the FORENOON, for the purpose of receiving TENDERS or PROPOSALS for the following WORKS:—

CONTRACT C.—The excavating, forming, and completing of a STORE RESERVOIR, of about sixty acres in extent, near to Chelker House, in the township of Draughton and parish of Skipton, with the Culverts, Waste Pit, and other Works connected therewith, including the diversion of the Skipton and Otley turnpike-road for about half-a-mile in length.

CONTRACT D.—The excavating, forming, and completing of a STORE RESERVOIR, of about sixty acres in extent, on the Barden Beck, in Barden Bush Park, in the township of Barden and parish of Skipton, with the Pye Channels, Residuum Lodges, Culverts, Valve Well, Waste Weirs, Waste Water Channel, and other Works connected therewith; also, the building and completing of a Branch Conduit of about 720 yards in length, from such Store Reservoir to the Main Conduit hereinafter mentioned.

CONTRACT E.—The excavating, forming, and completing of a MILLOWNERS' COMPENSATION RESERVOIR, of about 100 acres in extent, on the river Dibb, near to Grimwith, in the township of Appletreewick and Hardingston, in the parish of Burnsall, with three Culverts, Valve Well, Waste Weir, Waste Water Channel, Gauge Basin, Residuum Lodges, and other Works connected therewith.

CONTRACT F.—The forming and completing of about 17½ miles in length of the main Aqueduct or Conduit for bringing an improved supply of water to the town and borough of Bradford, whereof about 4 miles will have to be executed by means of tunnelling, and about 4½ miles will consist of a cast-iron main pipe and which Contract may be subdivided as follows:—

Division No. 1.—Main Conduit, from the end of Barden Beck Branch, in the township of Barden, to Addingham low moor being a length of about 7,320 yards, including the Barden Tunnel of about 1,730 yards in length, the Draughton Tunnel of about 210 yards in length, and the Chelker Tunnel of about 1,320 yards in length, with the lading and laying down of about 920 yards in length of Cast-iron Pipe of 28 inches in diameter for crossing the Ings Beck Valley, near Draughton, and a Branch Conduit of about 20 yards in length for bringing the water from the above-named Chelker Reservoir to such Main Conduit.

Division No. 2.—Main Conduit from the end of Division No. 1, at Addingham low moor, to a public highway passing through Holden Wood in the township of Silsden, and parish of Kildwick, being a length of about 7,278 yards, including the Silsden Tunnel of about 850 yards in length, the Swarma Tunnel of about 230 yards in length, the Flockton and Bowling Tunnel of about 560 yards in length of Cast-iron Pipe of 30 inches in diameter for crossing the Holden Beck Valley, near Holden Wood, and the Holden Park Reservoir Tunnel of about 80 yards in length, of which about 150 yards will be tunnelling.

Division No. 3.—Main Conduit, from the end of Division No. 2, at Holden Wood, to East Morton, in the town ship of Morton East and West, and parish of Bingley, being a length of 5,800 yards.

Division No. 4.—Main Conduit, from the end of Division No. 3, at East Morton, to a public highway at Heaton, near to the Service Reservoir now in progress there, being a total length of about 4,200 yards, including the Greenhill Tunnel of about 920 yards in length, the Goose Eye Tunnel, of about 545 yards in length and the lading and laying down of about 1,260 yards in length of Cast-iron Pipe of 30 inches in diameter, for crossing the valley of the Morton Beck, at East Morton; and a further length, of about 4,980 yards in length of Cast-iron Pipe, of like diameter, for crossing the valley of the river Aire, including the passing of the river Aire and the Leeds and Liverpool Canal, below Hurst Mill, near Shipley.

The Committee do not bind themselves to accept the lowest or any other Tender for any of the above Contracts. Plans may be seen, and further information may be had, from and after MONDAY, the 6th day of OCTOBER, on application to Mr. J. W. LEATHER, Civil Engineer, Leeds.—By order,

W. H. HUDSON, Town Clerk.

Bradford, September 23rd, 1856.

TO CONTRACTORS and BUILDERS.—TENDERS are required for the ERECTION of a DWELLING-HOUSE at Berwick-upon-Tweed. The plans and specifications may be seen at my office, Howard-street, Near Shields, between the hours of TEN and FIVE, from the 14th to the 21st day of OCTOBER, and at the Shop of Mr FLEMING, Berwick-upon-Tweed, until the 28th.

F. R. N. HASWELL, Architect.

North Shields, September 24th, 1856.

LLANDUDNO IMPROVEMENT ACT, 1854.—To SEWER CONTRACTORS, &c.—Parties desirous to CONTRACT for the CONSTRUCTION of the MAIN SEWER in the Town of Llandudno, may see the plans, sections, and specifications, prepared by T. MACDUGALL SMITH, Esq., C.E. at the Office of the Commissioners, between the hours of TEN o'clock a.m. and FOUR o'clock p.m. daily. Tenders, under seal, to be sent into the Office before MONDAY, the 27th of OCTOBER next. The Commissioners do not bind themselves to accept the lowest Tender; but in the event of one being accepted, the party or parties will be required to give security for the due performance of his or their contract. The Commissioners have on hand a quantity of sewerage bricks, pipes, invert and junction blocks, which the contractors will have to take at cost price.

WANTED, a steady experienced Overseer, Person, to act as CLERK of the WORKS, to superintend and to take charge of the above Works being properly carried out.—Applications, stating terms, accompanied by satisfactory testimonials or references, to be made to the Commissioners' Office, before the above date.—By order,

JOHN WILLIAMS, Clerk to the Commissioners.

Improvement Commissioners' Office, Sept. 22 1856

TO CONTRACTORS.—WORMLEY INCLOSURE, HERTS.—The Valuer acting in the matter of the Inclosure of the Westend Commons in the parish of Wormley, in the county of Hertford, is desirous of receiving TENDERS for the FORMATION of a PUBLIC WHARF, the construction of a culvert, the formation of certain new roads, and improvement of existing road &c. &c. The roads to be formed and improved are in length about 1,100 yards. Plans and specifications of the above works may be seen at the offices of Messrs. GRAWTER and BEATH, at Turner's-hill, Cheshunt, where Tenders for the whole are to be delivered on or before TUESDAY, the 13th instant, addressed to me. The lowest or any Tender will not necessarily be accepted, and security for the efficient performance of the works will be required.

Cheshunt, Herts, Oct. 1, 1856. JAMES DEATH, Valuer

TO SANITARY ENGINEERS, SURVEYORS of BOARDS of HEALTH, &c.—SEWAGE DEODORIZATION.—The Hitchin Local Board of Health is desirous of receiving PLANS for PURIFYING and DEODORIZING the SEWAGE flowing from the town, at or near the outlet before it is discharged into the river. Plans, accompanied by an explanatory descriptive statement, and an estimate of the cost, are to be sent to JOHN GOODWIN, Clerk of the Local Board, not later than SATURDAY, the 1st day of NOVEMBER. No plan can be adopted and carried out by the Board, until it has received the sanction of the Central Board of Health. Any information required can be obtained by applying, personally, to Mr GOODWIN. It will save time if a letter be first sent to him, stating the nature of the information to be applied for, as, when he may expect to be called up for it. By order of the Board,

SAMUEL GOODWIN, Clerk to the Board.

Hitchin, Herts, September 29 1856.

CONTRACTS.

THE YORK UNITED GAS-LIGHT COMPANY.—To GASHOLDER MAKERS, IRONFOUNDERS, &c.—Parties desirous of TENDERING for the CONSTRUCTION of a TELESCOPIC GASHOLDER, mean diameter 101 feet 8 inches, and 30 feet deep, in cup lifts, with columns, cast &c., orders, &c. complete, may see the plans and specifications at the Company's Office, Monk-bridge, York, daily from TEN to FOUR o'clock, from MONDAY, the 29th, to WEDNESDAY, the 8th days of OCTOBER inclusive. Security will be required for the due performance of the Contract. Tenders will be received at the Company's office up to TEN o'clock on THURSDAY, the 30th instant, but no pledge is given that the lowest or any Tender will be accepted JOSEPH BRADDOCK, Engineer.

York, October 1st, 1856

GRAMMAR-SCHOOL, SUDBURY, SUFFOLK.—To BUILDERS.—The Trustees of the above School are prepared to receive TENDERS for the execution of the several WORKS required to be done in the erection and entire completion of the new GRAMMAR SCHOOL and MASTER'S HOUSE, on the plot of ground known as the School Playground, Sudbury Suffolk. The plans specifications, and conditions of contract may be inspected at my Office on and after the 9th day of OCTOBER next ensuing, between the hours of TEN and FIVE o'clock, where the Tenders are to be delivered not later than THURSDAY, the 16th instant, addressed to me, and endorsed "Tender for Sudbury new Grammar School." Any further particulars required relating to the work may be obtained of the Architect, Mr. ROBT. P. POPE, 3, Provost-road, Haverstock-hill, Hampstead-road, London, where copies of the plans may also be seen. The Trustees will not pledge themselves to accept the lowest or any Tender.

(Signed) GEO. WM ANDREWS, Clerk to the Trustees.

Sudbury, September, 1856.

TO WELL-SINKERS, &c.—The Board of Works for the Wand-worth District are desirous of receiving TENDERS for SINKING FOURTEEN WELLS, in the parishes of Battersea, Clapham, Putney, and Wandsworth.—Specification and particulars may be seen at the Offices of the Surveyor to the Board, Mr. D. W. YOUNG, Bellingbroke-grove, Wandsworth-common. Sealed Tenders, addressed to "The Board of Works for the Wand-worth District," and endorsed, "Tenders for Sinking Wells," are to be delivered at the Offices of the Board, on or before WEDNESDAY, the 8th day of OCTOBER next, at THREE o'clock in the afternoon. The Board do not bind themselves to accept the lowest or any Tender.—By order of the Board of Works for the Wand-worth District.

ARTHUR ALEXR. CORSELLI, Clerk to the Board.

Bellingbroke-grove, Wandsworth-common, Sept. 23, 1856.

TO CONTRACTORS. — Wavertree Local Board of Health.—The Wavertree Local Board of Health are prepared to receive TENDERS for the CONSTRUCTIONS of SEWERS within the district of the Local Board of Health (Wavertree), according to the plans and specifications prepared for that purpose. The Tenders to be sent in addressed to "The Chairman of the Wavertree Local Board of Health, Public offices, Wavertree near Liverpool," according to the forms, with a schedule of prices attached to each, before FOUR o'clock on MONDAY, the 13th proximo. The plans and specifications may be inspected at the Office of Mr. ISAAC ATHERTON, Prince's buildings, North John street, Liverpool, from MONDAY next to MONDAY the 13th proximo, where forms of Tender may be obtained on application, and at the Board-room where plans may be obtained in the immediate neighbourhood. The Board do not pledge themselves to accept the lowest or any Tender.

Prince's buildings, North John-street.

Liverpool, Sept. 30, 1856

THE CONSERVATIVE LAND SOCIETY.

The drawings and specifications may be seen at the Offices of Mr. GEORGE MORGAN, 3, Pancras Inn, Strand, London, on and after WEDNESDAY, OCTOBER 1st, 1856, between the hours of TEN and FOUR. Tenders are to be delivered on or before TWELVE o'clock on SATURDAY, OCTOBER 18th, to the Surveyor, at his Offices, and endorsed "Tenders for a Pair of Villas, Enfield." The Executive Committee do not bind themselves to accept the lowest or any Tender

CHARLES LEWIS GRUNEISEN,

33, Norfolk street, Strand, London.

STEAM BOILER for SALE, Fourteen-horse power, of the best description for getting steam requiring no brick-work. Also several sets of Stamping Machinery for reducing Ores, Lead, &c. to Powder; Horse-whim gear, pumps, and every kind of machine for mining purposes, at J. WALKER'S, 17, Cowper street, City-road

TO CAPITALISTS, BUILDERS, and BRICKMAKERS.—To BE SOLD by private contract, a FIVE HORSE POWER STEAM-ENGINE, together with other machinery used for the purpose of brickmaking. Also, To BE LET, a valuable BRICK FIELD, and the rent and royalty, situate at Dartford, Kent, near to estates on which buildings are being rapidly erected.—For further particulars apply to Messrs. WIRE and CHILD, Solicitors, 3, St. Swithin's lane City.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.

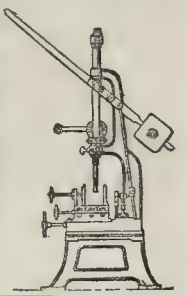
ANDREW CLARK and COMPANY, PLUMBERS,

THE BEAR GARDEN LEAD WORKS, SOUTHWARK,

Sole Manufacturers of Delbruck's Patent Autogenous Soldering Apparatus, invite the attention of Manufacturing Chemists to their Patent method of

UNITING LEAD TO LEAD WITHOUT SOLDER.

Leaden Chambers, or any leaden vessels, made or repaired by his process, making them complete, without the introduction of any foreign metal.

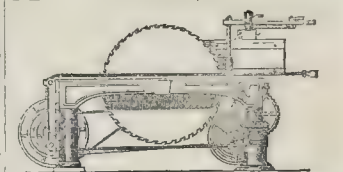


PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD on the LOWEST TERMS.

AUSTIN'S IMPERIAL.

PATENT SASH and BLIND LINE can be obtained of all IRONMAKERS, IRONMONGERS, MERCHANTS, FACTORS, and WHOLESALE HOUSES, in TOWN or COUNTRY. Established 1774.

TO BE SOLD, a MACHINE for WOOD MOULDINGS. Has been worked, and may be seen at No. 3, Clephane-road, Canonbury



NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD and BORING WOOD or IRON.

House and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to call at the Patentees', POWIS, JAMES, and Co. Wholesale Builders and Cabinet Makers, Ironmongery Establishment, 26, Watling-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing these three separate kinds of work by one machine; and as it is self-feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.

P.S. Steam Engines and Machinery contracted for.

MACHINERY for SAWING, PLANING, MOULDING, &c.

SAMUEL WORSSAM and CO. beg to call the attention of Contractors Shipbuilders, proprietors of Saw-Mills, and others, to their improved Inventions and Adaptations in Saw Frames and Bedplate, Moller and Pfaan Planing Machines, Endless Saw Frames, and all other kinds of Machines, for Sawing, Planing, Grooving, and Moulding Wood. They have constantly on hand a large stock, either wholly or partly made so that they can at all times on short notice supply them. S. W. and Co. beg to state that they have hitherto confined their attentions to this sort of machinery, and have had the honour of supplying some of the most distinguished companies, ship builders, and contractors in the world with their machines, for home and foreign use. One of their large and also a smaller one with Bonn's Apparatus, may be seen at the Machinery Department, Crystal Palace.—A descriptive Catalogue, with Drawings, may be had on application to SAMUEL WORSSAM and CO. Engineers, &c. Kings-road, Chelsea, London.

By Her Majesty's Royal Letters Patent.

IRON SAW-BENCHES, PLANING MACHINES, and PATENTED MACHINERY, for Cutting out Sweeps, and Moulding all kinds of Wards in Circular Grounds. May be seen at work, and prices obtained, on application to THOMAS ROBINSON and SON, Railway Saw-mills, Rochdale.

WOOD-CUTTING MACHINERY, JOHN M'DOWALL and SONS, WALKINSHAW FOUNDRY, J. JOHNSTONE, near Glasgow, MANUFACTURERS of VERTICAL SAW-FRAMES (driven by steam),

For cutting balks of timber, from 5 feet on the side down to the smallest deal frame

Patent vertical saw-frames, of the foregoing dimensions, with steam-power attached; circular cross-cut radial sawing machines; patent moveable ditto; patent horizontal cross-cut sawing machines, for heavy timber; planing machines, for working from 4 to 24 inches thick; to 6-inch deck plank; revolving planers, for squaring and shaping heavy timbers, as used by ship-builders, &c; patent curvilinear sawing machines, for circles, sweeps, and irregular cutting, well adapted for ship-builders; power mortising and tenoning machines; moulding machines, single and double; veneer mills of all sizes, with all appendages; scale-board machines, for hat-boxes, &c.; patent silent feed machine for saw-frames; and every description of machinery for cutting and shaping timber, all constructed of iron, of the best materials, and first-class workmanship. Mr. M'Dowall has been in the engineering and millwright business for upwards of 16 years, but during the last 24 years he has directed his attention particularly to the manufacture of wood cutting machinery, as evinced by the numerous patents he has obtained for its improvement, and by the extensive orders his firm has been favoured with from the British and other European Governments and private individuals in almost all parts of the world; and from their large and commodious premises, and first-class plant made for every department of the work, without resort to cost, the largest contracts can be executed with a regularity, accuracy, and despatch, which cannot be exceeded by any other firm in Europe. All parties as above for further particulars, will be promptly attended to.

AMERICAN MACHINERY.—L. D. OWEN and Co. Importers, have on hand at 187, Tottenham court-road, London, Wood Working Machinery, manufactured by Messrs. Buck and Co consisting in part of Planing, Tenoning, Moulding, Morticing, and Sawing Machines, of the best structure, which they offer at prices which cannot fail to suit.

N.B. Machinery from the works of Messrs Buck and Co. may be seen in operation at the Royal Arsenal, Woolwich.

TO GAS and WATER COMPANIES.—TO BE SOLD, by TENDER, the following CAST-IRON PIPES, purchased for the Mains of the Stockton Gas Consumers' Company, Limited and not required, in consequence of the purchase by that Company of the plant of an existing Company:

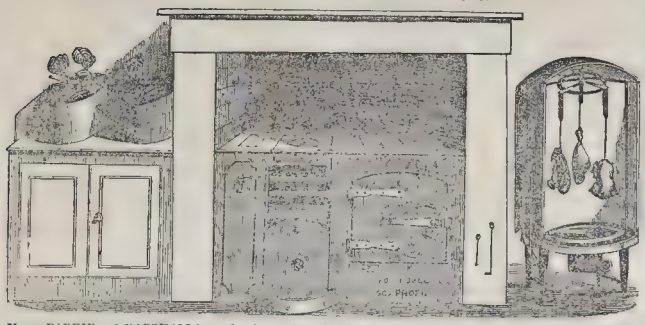
450	yards of	7-inch	pipes,	weighing	140 lbs. per yard.
500	"	6-inch	"	"	96 " "
700	"	5-inch	"	"	68 " "
1,000	"	4-inch	"	"	52 " "
750	"	3-inch	"	"	35 " "
2,000	"	2-inch	"	"	26 " "

Tenders, marked "Tender for Pipes," to be sent on or before TUESDAY, the 14th OCTOBER, to T. W. HORNSBY, Secretary to the Stockton Gas Consumers' Company, Limited, 131, High-street, Stockton-on-Tees.

Stockton-on-Tees, 25th September, 1856.

SAVING IN GAS.—D. BULE, T. INVENTOR and PATENTEE.—The Mercurial Gas Regulator is the only efficient instrument for ensuring wholesome and uniform lighting, equalizing the pressure, and preventing any irregularity in the height of the flame.—H. BULLET and CO. 33, High Holborn, London, Manufacturers of Gas Chandeliers, Glass Lustres, &c. &c.

PARKIN AND MARSHALL,



GENERAL MERCHANTS, AND MANUFACTURERS OF

TABLE CUTLERY, PEN and POCKET KNIVES, SCISSORS, RAZORS, ELECTRO-PLATED WARES, FILES, SAWS, EDGE and JOINERS' TOOLS, AUGURS, STEEL, &c. &c.

TELEGRAPH WORKS, SHEFFIELD.

OFFICES—{NEW YORK—71, JOHN-STREET. BOSTON—25, KILBY-STREET. U.S. MELB URNE 24, COLLINS-STREET EAST.

CORPORATE MARK —XLALL. — Granted by the Cutlers' Company, 1789

Messrs. PARKIN and MARSHALL have also pleasure in stating that they are appointed Sole Wholesale Agents for the Sale of the undernamed Articles, manufactured by

MR. ENOCH OLDFIELD TINDALL, IRON WORKS, SCARBOROUGH, viz.:—

TINDALL'S Patent Portable Mangles, Washing and Wringing Machines, Napkin Presses, Cooking Ranges, Laundry Stoves, Sanatory Trap and Grate, Chaff Cutters, Oat, Barley, Malt and Linseed Mills, Bean Mills, Oilcake Breakers, Portable Saw Mills, Turnip Cutters, Cultivators, Ploughs, Harrows, &c. &c.

THE PATENT COOKING RANGES AND ROASTERS are now amongst the most complete and inexpensive before the Public, and especially adapted for the Families of Gentlemen, Cafes and Taverns.

THE IMPROVED LAUNDRY STOVE will heat Fifteen Irons at once, occupies only 12 inches in space, is removable from one room to another and will be found invaluable in Public Hospitals, Infirmaries, Laundries, and Private Families.

E. O. T.'S SANATORY GRATE AND TRAP is now acknowledged to be the best and most secure from effluvia (as well as not choking Pans) for Sinks, and Pens are using them, and bear testimony to their efficiency and superiority over all others.

Prize awarded for Mangles by the Yorkshire Agricultural Society, at Rotherham, August, 1856

THE OAT BRUISERS AND WRINGING MACHINES have been introduced into the Royal Household most of the Public Institutes, and also into many thousand Private Families, and bear testimony to their efficiency and superiority over all others.

Prize awarded for Mangles by the Yorkshire Agricultural Society, at Rotherham, August, 1856

THE OAT BRUISERS AND CHAFF CUTTERS, like the above, combine cheapness with the greatest simplicity of construction, and only need to be tried to be appreciated. They effect great saving and should be in every stable.

N.B.—E. O. TINDALL is the Sole Licensed Manufacturer for the North of England of BUSHE'S celebrated ROOT PULPER and SLICING TURNIP-CUTTER.

CASTINGS WAREHOUSE, 56, UPPER THAMES-STREET.

BARTON'S PATENT SAFETY STABLE FITTINGS, and ENAMELLED MANGERS.

THESE FITTINGS will be found to possess all the latest and most important improvements and are of the best manufacture. All kinds of Stable furniture in stock. Iron Hurdles, Gates, Fencing, Tanks, &c. New illustrated Catalogues forwarded on receipt of two postage stamps. JAMES BARTON, Ironfounder, &c., Gas Engineer, London

ECONOMIC COOKING-STOVE.—DEANE, DRAY, and CO. recommend with confidence their IMPROVED COOKING-STOVE, to the notice of the public. It is cheap in first cost, simple in construction, easy of management, capable of doing a large amount of work with a comparatively small consumption of fuel, and is manufactured in sizes suitable for large or small families. It can be seen daily in the stove and fender department of Deane, Dray, and Co.'s establishment; where may also be obtained cloth fire-screens with pokers, or forwarded free by post. DEANE, DRAY, and CO. opposite to the Monument, London-bridge. Established A.D. 1700.

HEATING BY HOT WATER.

JOHN WEEKS and CO. King's-road, Chelsea, HOT WATER APPARATUS MANUFACTURERS. Buildings of every description, even the most extensive dimensions, can be effectually warmed by Hot Water. JOHN WEEKS and CO. can give innumerable references of Churches, Dwelling-houses, Warehouses, &c. &c. where they have fixed their Hot Water Apparatus. Also to be seen in extensive operation at their Premises, King's-road, Chelsea.

BATHS and HOT-WATER APPARATUS. J. TYLOR and SONS' ILLUSTRATED CATALOGUE of BATH WORK, &c. to be had on application. Estimates and Plans for Fixing given.—J. TYLOR and SONS, Manufacturers, Warwick-lane, Newgate-street, London

DR. ARNOTT'S SMOKE-CONSUMING GRATE

Will this Grate become universally used?

It combines every other construction

1 A saving of 50 per cent in fuel

2 It is being a cure for a smoky Chimney

3 It is not requiring one half the attention of an ordinary fire.

4 It is being perfectly safe

A Prospectus, with a Second Series of Testimonials, just issued, from all parts of the country, will be sent on application to F. EDWARDS, SON, and CO., 42 High-street, Marylebone, London-street

WARMING and VENTILATING.—ALFRED MAY begs to call the attention of Architects, Builders, and others to his system of WARMING by HOT WATER, Ornamental Asphalte Work in Churches and other Public and Horticultural Buildings, Mansions and Offices.

A. M. having had great experience in the above line, is enabled to guarantee the efficiency of such work as may be intrusted to him for execution; being just completed for the restoration of the arch-roofs the warming and ventilation of the Bishop's and Sir Anthony Rothschild's new mansions and conservatories

Manufactory, Brassmaker's-place, Holborn, and at 80, Devonshire-street, Queen's-square, Bloomsbury

Artificial heat applies for drying linen on a very economical and effective system

VENTILATING STOVES! SUSPENSION STOVES!—Approved by thousands of purchasers, and recommended as the two best, cheapest, most healthy, and economical for churches, chapels, halls, schools, warehouses, shops, greenhouses, hothouses, libraries, &c. Prospectuses, with prices, sent post-free.—DEANE, DRAY, and CO., Stove Range, Ironmongery and Furnishing Warehouse, London-bridge.

FENDERS, STOVES, and FIRE-IRONS.—Buyers of the above articles are invited to personally inspect the Stock of WILLIAM S. BURTON'S SHOW-ROOMS. They are the largest in the world, and contain such an assortment of Fenders, Stoves, Ranges, Fenderings, and General Ironmongery as can not be approached elsewhere, either for variety, novelty, beauty of design, or exquisite workmanship. Bright Stoves, with bronze ornaments and two sets of bars, 5 ft. high, £5 5s.; ditto, with ormolu ornaments and two sets of bars, 5 ft. high, £8 18s.; Bronzed Fenders, complete, with standards, from 2s. to 3 guineas; Steel Fenders, from £2 15s. to £8 8s.; ditto, with rich ormolu mountings, from £5 15s. to £7 7s.; Fire-irons, from 1s. 9d. the set to £1 5s. Solid entire of all other Patent Stoves, with polished hearth-plates. All which he is enabled to sell at these very reduced charges.

First—From the frequency and extent of his purchases; and

Secondly—From those purchases being made exclusively for cash

GASELIERS in GLASS or METAL.—The increased and increasing use of gas in private houses has induced WILLIAM S. BURTON to collect for the various manufacturers in metal and glass all that is new and choice in BRACKETS, Pendants, and Chandeliers, adapted to gas, candles, &c., and dwelling-rooms, as well as Entrance Halls and Passages, are expressly for him; these are ON SHOW over his SIX LARGE Rooms, and present, for novelty, variety, and purity of taste, an unequalled assortment. They are made in Bronze, Glass, and Ormolu, at prices proportionate with those which have tended to make his establishment the largest and most remarkable in the world.—No. 1, Nine Light Gasolier, in Ormolu and Glass, 10 guineas. Also a Show of twelve extensive premises (already by far the largest in Europe) are of such a character that the entire EIGHT Floors are devoted to the display of the most magnificent stock of GENERAL HOUSE IRONMONGERY (including Cutlery, Nickel Silver, Plated Goods, Beds, Bedsteads, Bedding, and Bed Hangings) ever collected in any one Show Rooms, as to afford to parties furnishing facilities in the selection of goods that cannot be hoped for elsewhere.

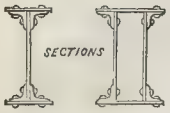
The Illustrated Catalogues sent (free post) free.

39, OXFORD-STREET; 1, 1a, 2, and 3, NEWMAN-STREET; and 4, 5, and 6, PERRY'S PLACE, LONDON.

ZINC ROOFING, INCLUDING TIMBER OR IRON FRAMEWORK,

IS AS

CHEAP AS SLATES OR GALVANIZED IRON, LIGHTER, AND MORE DURABLE.



Certificates, and Models of various descriptions, may be seen, and estimates obtained on application to

THE SURVEYOR OF THE VIEILLE MONTAGNE ZINC MINING COMPANY, 12, MANCHESTER BUILDINGS, WESTMINSTER.

ROOFS CONSTRUCTED UNDER HIS SUPERINTENDENCE GUARANTEED TO REQUIRE NO REPAIRS FOR AT LEAST TEN YEARS.

THE OLD METAL BEING ALWAYS RETAKEN AT HALF-PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.

Many roofs covered with zinc thirty-five years ago have never required repairs.

WROUGHT-IRON GIRDERS

For BRIDGES and BUILDINGS,

MANUFACTURED AND GUARANTEED AS TO STRENGTH.

CAST-IRON GIRDERS for BRIDGES and BUILDINGS.

Castings of every description.

ROLLED WROUGHT-IRON FLITCHES For TRUSSING BETWEEN TIMBER.

SPIKES, RIVETS, CUT NAILS, WROUGHT DITTO, SCREWS, BOLTS AND NUTS, BOND HOOPS, CHAINS, &c.

CONTRACTORS' PLANT, RAILS, EARTH WAGGONS, And IRON WORK for WOOD WAGGONS, &c.

MATTHEW T. SHAW, 64, CANNON-STREET (late with C. J. Mare & Co.)

Such arrangements are made for Despatch and Punctuality that Orders can be executed in a few days.

Plan and Section of Buckled Plate; Convex Side.

MALLET'S PATENT BUCKLED PLATES.

TUPPER AND CARR,

SOLE LICENSEES AND MANUFACTURERS.

THESE Plates are applicable to every purpose where strong, rigid, light, and durable load-sustaining surfaces are demanded; as for the Flooring of Bridges, Viaducts, Jetties, Fireproof Floorings for Buildings, Fireproof Partitions, Bulkheads, Doors, and Shutters; the Plating in between Iron Piling for Wharf or Dock Walls; the Covering of Iron or other Roofing, as for Building Slips in Dockyards, for Railway Stations &c. The construction of Iron, Military, Colonial, or other Huts, Stores, and Iron Buildings of all sorts; the Formation of Water-Tanks; the Covering of Reservoirs of Waterworks; and, generally, to every purpose to which Corrugated Iron has been applied, besides many others to which it at present is inapplicable,—as, for example, the Construction of Balcony or Cantilevered Galleries, Fireproof Footways, &c. the Plates deriving their support solely from themselves and the walls.

BUCKLED PLATES may be united to each other, or to the frame of the structure they cover, by either lap or butt joints, and either by screw bolts, rivets, or wood screws (of timber), and the joints are made absolutely watertight when required, by riveting and bolting up, or by interposed strips of felt saturated in oil cement, or in tar and pitch, or by strips of vulcanised India-rubber, or by a thin layer of oil putty.

The sizes of the Patent Buckled Plates are—4 ft. by 4 ft.; 3 ft. by 3 ft.; 4 ft. by 2 ft.; and 3 ft. by 1 ft. 6in.

Other sizes by agreement.

For further particulars, prices, &c. apply to the Licensees,

TUPPER AND CARR,

3, MANSION-HOUSE-PLACE, LONDON, AND 6, BERKLEY-STREET, BIRMINGHAM.

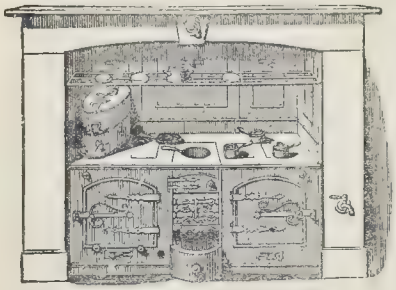
TYERMAN'S PATENT HOOP-IRON BOND,

FOR BUILDING PURPOSES.

ADOPTED BY SEVERAL DEPARTMENTS OF THE GOVERNMENT.

TARIFF OF PRICES beyond the current Price of Hoop-iron.

Gauge.	In. wide.	Per 1,000 ft.
No. 16	.. 1½ ..	7s. 0d.
15	.. 1¾ ..	7s. 6d.
14	.. 1¼ ..	8s. 0d.
13	.. 2 ..	8s. 6d.
12	.. 2½ ..	9s. 6d.



THE PATENT BOND (which is prepared from the ORDINARY HOOP IRON, by notching it at intervals of 11½ inches) is now being extensively used in the leading GOVERNMENT WORKS, DOCK BUILDINGS, BARKS, ASYLUMS, BRIDGES, VIADUCTS, PRISONS, ENGINE-HOUSES, and MANUFACTORIES, as well as in other PUBLIC and PRIVATE WORKS, in London and in all parts of the kingdom.

Sole Manufacturers—THOMAS PERRY and SONS, Highfields Works, Bilston.

London Depôt—ST. ANN'S WHARF, EARL-STREET, BLACKFRIARS.

FLAVEL'S PRIZE KITCHENER.

The only Kitchen Range which obtained a Prize Medal and special approbation at the Great Exhibition, 1851.

These Ranges are strongly recommended for their simplicity of construction and their economy and cleanliness in use.

The top forms a Hot-plate, and the open fire removes many of the objections which are felt to close Ranges.

They are made in all sizes, from 3 feet to 18 feet in width, suitable for large or small establishments.

They are admirably adapted for the Cure of Smoky Chimneys.

SOLE AGENTS:

S. W. SILVER and Co. Works, North Woolwich.

TESTIMONIALS

"Commercial Mills, Cornbrook, Manchester, Oct 6, 1854.

"GENTLEMEN, We have been using almost exclusively, for the last three years, your Packing to our stuffing boxes and steam and water joints, previous to which time we tried all the sorts which came under our notice, but yours we consider decidedly the best and most economical.—We are, yours respectfully,

"JOSHUA SCHOFIELD and SONS."

"King and Queen Iron Works, Rotherithe.

"London Nov. 11, 1854.

"GENTLEMEN,—We have tried your Patent Packing for some time in our steam-engines, and also in steam-pipe joints, and find it efficient and economical, and to be much superior to the ordinary hemp packing. It is especially serviceable in the slide valve.—Yours truly, "HOWARD RAVENHILL and CO."

"Works, Deptford, Jan. 29, 1856.

"I have pleasure in stating that the Packing of Messrs. S. W. Silver and Co. has been used in the various parts of the engines on board the steam-ships of the company, and given every satisfaction. "J. BEARDMORE, Engineer,

"General Steam Navigation Company."

Copies of further testimonials forwarded, on application to S. W. SILVER and CO. Nos. 3 and 4, Bishopsgate-street Within, opposite the London Tavern.

PATENT CRAMP FOR FLOORS, DOORS, AND SASHES.
W. BISSELL, PATENTEE,
WOLVERHAMPTON, Manufacturer of Rein and Mortise Locks, and Builders' Ironmongery.

AA. A set screw and pin moving in slab C, to regulate for any thickness of joist, from 3 to 4 inches.
B. An eccentric notched lever, to be turned and pressed against the joist.
Lay the cramp upon the joist close up to the board, move the set screw in the slab up to the side of the joist, then fix the set screw firm. Turn the notched lever B against the joist, then, by turning the handle D, the lever will gradually fix itself and hold the cramp firm: the greater the strain, the more tightly, by its eccentric action, will the lever bind. The Patentee, in asking the attention of Builders and others, assures them that his cramp possesses great advantages. It is a new kind of cramp of the best kind, and as well suited for doors and sashes as for floors. From its superior mechanical principles, it has greater power, and will be found to be more quickly and easily worked than any yet brought out, and at the same time it is light and portable.

P. O'CONNOR'S PATENT LEVER HINGE.—The most perfect and simple INVENTION for CLOSING SWING DOORS and GATES yet produced. The motive power being a weighted lever, it may be easily adapted to any size door, and it is not liable to get out of repair, as spring hinges generally are. May be had from all Ironmongers and Factors; J. GARTLAND and SON, Manufacturers, Birmingham; or from the Patentee, P. O'CONNOR, Ironmonger, Wavertree, Liverpool.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new principle connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and altogether such as has heretofore been accomplished.
Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, weight, singly or in peals.
TUNED BY MACHINERY
Stocked and wheels ready for fixing. Old Bells recast or taken in exchange.
MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system, which give superior tone and facility for ringing.

IRON CHURCHES, STORES, &c.—For SALE, Sabrimetal Corrugated Iron Stores, Churches, Dwelling-houses, and every description of Building, adapted to all climates. Iron Roofs constructed for all parts of the world. An Iron Church with sittings for 250 people, for hire or sale.—To view and for further particulars apply to SAMUEL HEMMING, Cliff House Works, Bow, London.

LOSH, WILSON, and BELL,
NEWCASTLE-ON-TYNE.
Manufacturers of Bar, Hoop, Sheet, Plate, Pressed, and Engine Work of all kinds, and
STEWART'S PATENT CAST IRON GAS and WATER PIPES.
Office, No. 7, Size-lane, London.

TO ARCHITECTS, &c.—The IMPROVED SELF-ACTING WATER-BAR for FRENCH CASEMENTS, the best and most effectual yet invented, is made by T. SMITH, of 14, Queen-street, Oxford-street, near Argyll-street, where a working model can be seen, or a sketch will be sent on application.
N.B.—Espagnolette Bolts of a superior quality, at reduced prices.

NOTICE of PURCHASE. — ROBERT SLADE begs to inform the public and customers of EDWARD SIMMS late of Wilton-road, Pimlico, that he has purchased the Lease of the Premises, as also the Stock which has since been greatly increased of the said EDWARD SIMMS, situated at Wilton-road, Pimlico, where a choice assortment of FLOORING BOARDS are always kept on hand. All other descriptions of timber at the Lowest possible prices. The system of keeping prepared flooring boards was first introduced in London at this yard.

ANOTHER GREAT REDUCTION.—
Yellow Deals, 3s. 3d.; Spruce, 3s.; Pine Plank, 3s. 6d.; Mahogany, 6d.; 2½ Yellow Battens, from 11l. 10s. Cartage free to any part of town.—P. FORMAN, 1, Walnut tree walk, Lambeth-walk.

FURTHER REDUCTION of PRICES.—
SAMUEL PUTNEY has much pleasure in informing his numerous friends that he has made a further reduction in the price of Pine Planks, &c. and respectfully solicits an inspection of his large and well-selected stock of Deals, &c.

Pine Planks, 12 feet by 3 in. by 11 in. from	£21	0	per 120.
Yellow Battens, from	11	10	"
Yellow Deals, from	20	0	"
Spruce Deals, from	18	0	"

Prepared Flooring, &c. equally low. A list of prices forwarded on receipt of a postage stamp. N.B. All sawn goods delivered within two miles free of carriage.—Borough-road, Southwark, and Elm street, Gray's-inn-lane.

MAHOGANY and WAINSCOT seasoned by Samuel by Steam at his New Patent Process.—JOHN [illegible] solicits an inspection of his stock. The wood is [illegible] him to season as it is in the hull of a ship, [illegible] rolls of paper, each containing a plank, [illegible] PATENT WOOD SEASONING WORKS, Lady Lake-wharf, New Cross-road.

EDWARD SIMMS begs to inform Builders and the trade that he has now on hand at his factory the first of its kind ever established, a large assortment of PREPARED FLOORING BOARDS, tongued and grooved and ready for use, from 4 inch to 9 inch broad, in White or Yellow Deal, Oak, or Pitch Pine. Also Dry Deals, in all thicknesses, Sliding Battens, Panelled Backs, Sunk Silk, Plank, and Scantlings. Mouldings in clean Pine, to any design. A pattern list forwarded on application.—Address, E. SIMMS, Flooring Manufactory, the Pavilion, Pimlico, and Moulding Mills, Kings-road, Chelsea.

FLOOR BOARDS, &c.—R. SLADE begs to inform Builders and the Trade, that he has now on hand a large assortment of Deal, Yellow and WHITE FLOORING, from 4 inch to 9 inches thick, tongued and grooved for use. Also Mahogany, Moulding, Wainscot, and all kinds of Timber required for Building purposes.—Address, R. SLADE (late E. Simms), Flooring Manufactory, Wilton-road, Pimlico.

ALFRED ROSLING begs to inform his Customers and the Public generally that he has removed his Planing Machinery and Stock of Timber to the Grand Canal (which allows him the most extensive range of Wharfage), Mouldings—A large assortment always on hand at low prices.—Scott's-wark-bridge Wharf, Battle-bridge.

NOTICE of REMOVAL. — EDWARD SIMMS begs to inform his customers and friends that he has REMOVED his Joinery and Moulding Machinery from the KING'S ROAD, Chelsea, to the Pavilion, Pimlico, where he has erected as before one Planing Machine, and [illegible] SIMMS, late of Saw Mills, Chelsea, one mile Nearer Town.

MOULDINGS BY MACHINERY.
Capping, Sash-bars, Beads, &c. to any Design, carefully packed and sent to all parts of the Country. A Pattern List sent on application to
E. SIMMS,
SAWING, PLANING, AND MOULDING MILLS,
KING'S ROAD, CHELSEA.

LETT'S WHARF PATENT SAWING, PLANING, and VENEER KNIFE-CUTTING MILLS Commercial-road, Lambeth. The Proprietors beg to announce to the Trade that the [illegible] are now in full operation, and will be happy to execute all orders entrusted to them with despatch and punctuality. Wet and dry docks, and powerful cranes for landing timber goods, offer facilities not to be obtained elsewhere. A large assortment of seasoned prepared flooring, match boarding, &c. &c. always in stock at reduced prices.

ROBINSON and BARTRAM, SAWING and PLANING MILLS, BELVIDERE-ROAD, LAMBETH, and SWAN-STREET, GERMONDSEY (now completed powerful MACHINERY for SAWING TIMBER, for building purposes, will be [illegible] to receive ORDERS [illegible] Department, and [illegible] to execute [illegible] at reduced prices, to be executed in the best manner, and with the utmost punctuality and despatch.

ACORN TIMBER WHARF and SAW MILLS,
CANAL BRIDGE, OLD KENT-ROAD, LONDON.
A Monthly Price Current forwarded on application.
RICHARD MAY, Proprietor.

ST. PANCRAS SAWING, PLANING, and MOULDING MILLS, Cambridge-street, Old St. Pancras-road.—GEORGE ACKLAND begs to call the attention of Builders and the Trade generally to his STOCK of DRY FLOORING, all full two inches thick, tongued, and grooved, viz.
1-inch white, 13s. 6d. per square; 1-inch white, 15s. per square; 1-inch white, 16s. per square; 1-inch yellow, 15s. per square; 2-inch yellow, 16s. 6d.; 1-inch yellow, 20s. per square.
Timber, Deals, Battens, &c. at the lowest remunerative prices.
A liberal discount allowed on mouldings for exportation. Books of designs forwarded on application.

STAINING DEAL TO IMITATE ALL KINDS of WOODS by the process of VARNISHING, and rendering the exposed portions of fir, &c. impervious to dirt. Varnishes by W. NAYLOR'S Steam Factory, 3, Bedford-place, off the Fountain, Oxford-street; also Manufacturer of Improved Knotting and Decorative Varnishes.

GRAINING by MACHINERY.—
The present system of graining is far surpassed by the use of BELLAMY'S PATENT GRAINING MACHINES, which ordinary workmen can produce better work and in a tenth of the time. The designs are perfect imitations of the most expensive kinds of foreign wood patterns of the finest grain. The Patent Graining Combs, which are used with the machines, and which [illegible] of the most delicate and beautiful varieties. Graining papers and [illegible] of all kinds of fancy designs for [illegible] and whole sale [illegible] Patent boards and cards for [illegible] in the country.
Painters, Grainers, Decorators, Merchants, and others, are requested to visit the Factory, and see the Process, at the Company's Offices, 30, Minories, London.

TO FRENCH POLISHERS, CABINET-MAKERS, BRASS-WORKERS, &c.—A considerable reduction has taken place in the price of French polish, and brown and spirit varnishes, and [illegible] and [illegible] spirit. Pure [illegible] 4s. per gallon; best [illegible] polish, 10s. per gallon; white shellac, 1s. 8d. per lb.; gums, shellacs, and acid at the lowest prices. A list can be forwarded on application to JAMES SELL, [illegible] Leather-lane, and 14 and 15, Dorrington-street, Holborn, London.

THE GRAMMAR OF ORNAMENT,

By OWEN JONES.

BEING A SERIES OF THREE THOUSAND EXAMPLES, FROM VARIOUS STYLES, EXHIBITING THE FUNDAMENTAL PRINCIPLES WHICH APPEAR TO REIGN IN THE COMPOSITION OF ORNAMENT OF EVERY PERIOD.

ONE HUNDRED IMPERIAL FOLIO PLATES.

Drawn on Stone by F. BEDFORD. Printed in Colours by DAY and SON.

Now publishing, in Twenty-five Numbers of Four Plates each, price 14s. each. Part XIX. will appear Oct. 15; Parts XX. and XXI. Nov. 1; Part XXII. Nov. 15; Part XXIII. Dec. 1; and Parts XXIV. and XXV. Dec. 15.—The Work when complete will consist of

Chapter	I.	The Ornament of various Savage Tribes	..	..	..	..	..	..	3 Plates.
"	II.	"	Egypt	..	..	..	..	..	5 "
"	III.	"	Nineveh and Persia	..	..	..	..	..	3 "

									100

The Author will endeavour in the several chapters to define the apparent origin, and trace the development of the several styles of Ornament. He will proceed to ascertain the laws which govern their composition; both those which are general to all styles and those which are peculiar to each. He will further attempt in the 20th chapter to show how, bearing in mind those general laws which govern all styles, we may proceed in the work of nature and return again to her for fresh inspiration, and yet go forward, and, whilst availing ourselves of the experience of all time, may be enabled to produce a style that shall be consistent with our wants and habits of thought.

The Author feels that a work containing material has been long wanting for the use of students, and that such material, if brought together in a convenient form, and in the use of which it will be his endeavour to serve them as a guide, would be of great assistance to them.

The Author feels the difficulty of the task he has undertaken; he trusts that with the aid of Lectures, Artists, and All others engaged in any way with the decorative arts, will have before them an amount of material which does not elsewhere exist in any such convenient form, and in the use of which it will be his endeavour to serve them as a guide.

N.B. The Letterpress, with many Wood Engravings, will appear complete with the last Part of the Work on Dec. 15.

Published by DAY and SON, LITHOGRAPHERS to the QUEEN, 6, GATE-STREET, LINCOLN'S-INN-FIELDS.

*** Intending Subscribers are requested to forward their Names immediately.*

PAPIER MACHE, COMPOSITION, CARTON PIERRE, AND CEMENT WORKS.

WHITE AND PARLBY

Beg to refer kindly to Architects, Builders, and Decorators, that they are prepared to execute in the above materials all internal or external decorations, at exceedingly moderate prices. They solicit inspection to their varied ENRICHMENTS of Cornices, Centres, Friezes, Trusses, Consoles, Trophies, Panels, and Pilaster Decorations, enriched Mouldings, Bosses, Ornamental Centres

The Builder.

Vol. XIV.—No. 713.

BRUSSELS is a city of conferences and exhibitions. The International Philanthropic Congress and the Exhibition of Domestic Economy, which have recently been held there, will not be the least useful of its endeavours in this way. The principal place in the Exhibition was occupied by specimens relating to the construction and furnishing of dwellings. It is curious to note the various steps taken in Belgium for the improvement of the dwellings of the labouring classes. The Hygienic Congress of 1852 had given much of its time to the sanitary amelioration of populous districts, and it laid down a series of resolutions on the subject. In these, rules for the building of habitations for the working-classes and poor were published. This subject was taken up by the "Conseil Supérieur d'Hygiène Publique" in two reports, where the means to put into execution the resolutions of the Congress were explained. Ultimately, the "Commission Permanente des Sociétés de Secours Mutuel" examined the question, and issued a report.

In France, a credit of six millions of francs was obtained, in 1852, towards the erection of dwellings for the workmen in the large manufacturing towns. Thus, *cités ouvrières* have been erected in Paris, Marseilles, Lille, and other places. Still, it was the exhibition of the models of the private society of Mulhouse (Département du Bas Rhin) which attracted most notice in Brussels. The whole capital of this company was only 350,000 francs (14,000*l.*), but it had a man like Muller, the architect, who supplied the deficiency by integrity and talent. The houses of the Mulhouse society have each a garden. The French workmen can pay the rent according to a very varied scale, and become even *proprietors*. In the year 1855 the society possessed 186 houses, of which sixty-five had been *sold* to working men: since then, others have been sold. M. Müller had sent to the Exhibition a work on the construction of houses for the labouring classes in town and country, accompanied by an atlas: this work is the best for any one wishing to appreciate what has been done in France. M. Bleck exhibited a model in relief of the "Cité Ouvrière de Mulhouse," made of pasteboard, to the scale of one centimètre to one mètre. Holland, Denmark, Switzerland, even Italy, had also contributed their share to the Exhibition of Domestic Economy, and M. Canevari, a Roman engineer, had sent a plan of houses adapted to the inhabitants of Rome and Central Italy.

Messrs. Ducpatiaux and Dumont have exhibited a series of plans of houses for working men, both in town and country, as well as a specimen of a house furnished in every respect, which has given satisfaction. To economize space without too much restriction, systematize the means of *aëration* (*not ventilation*), to economize fuel without stint, are here the leading principles. In fact, sufficient studies and plans *exist*, but it remains to make them applicable, not to hundreds and thousands, but to millions of working people. The baths, washhouses, and lavatories, after the plans of Messrs. Wynaud, Janssens, and Reinaud, exhibited, are the best existing in Belgium. Amongst the materials for construction were the cements of Medina; the varnished tiles of the manufactory of Messrs. Jonas and Delanzie, of Antwerp; the materials employed by M. Müller in the Cité Ouvrière of Mulhouse; the specimens of Florentine marble from the quarries of Felny (Hainaut); and amongst them a chimney-piece ready for being fixed, at the price of ten francs. The Société de la Vieille Montagne had also contributed towards the Exhibition of Domestic Economy specimens of zinc, worked in all forms and for all wants, showing the great extent to which this metal can be used for building and domestic purposes. Messrs. Staadt and Deldine-Haut exhibited locks and other specimens of this sort, the prices of which are exceedingly low. The painted papers of Messrs. Vandelaer, Lorsont, and Leghers, at 25 cents. (2½d.) the *roll*, were much praised for their good make and pattern. The double-action pumps of Messrs. Mathilm, Brothers, which can raise 1,000 *litres* per hour, cost, with a *balancier*, only thirty francs. The fine spaces of the Botanical Gardens, where the Brussels Exhibition took place, added much to its attraction; and the number of visitors went on increasing, as the public became aware of the wide bearing of the exhibition. The prices being affixed to all specimens, excited at times the surprise of intending purchasers, but made this exhibition as well a sort of fair on a large scale, as every person might purchase, mostly at a short distance, the articles he was in need of. It may be added that M. Müller, of Mulhouse, has been awarded a first prize by the committee, for his plans of the Cité Ouvrière.

At the opening meeting of the Congress on the 15th of September, under the presidency of M. Charles Rogier, after M. Ducpatiaux had read a general report of the objects the Congress had in view, and the transaction of some routine business, Mr. F. O. Ward, as a representative from England, addressed the meeting at considerable length, on the course that had been pursued by sanitary reformers in this country.

There were two ways, he said, of understanding the word philanthropy. We may view it as relieving existing distress, or give it to the endeavour to prevent the production of distress; and it was in this second sense that the English sanitary school dealt with it: they had arrived at the conviction, that it is easier, better, and cheaper to prevent distress, of which a great part results from the want of proper arrangements in towns, and is easily preventible, than to cure it. Starting from this principle, to prevent instead of curing, they had sought for the best means to carry it out, and the results of these inquiries were formulated into another principle, Circulation instead of Stagnation. In following that idea they had gradually been led to elaborate the tubular system, so called, as by a series of pipes it gathers pure water, leads it into the town, carries it away enriched with fertilizing residuums, and applies it to agriculture. He was happy to say that more than 100 towns were already organized, or in train of organization, more or less completely, on this principle, and with a success which the adversaries of the system could not contest. After alluding to various special instances, Mr. Ward deduced, as the results of sanitary improvement:—1. The diminution of illness, mortality, and distress; the moral and intellectual elevation of the people: 2. The increase of the articles of subsistance: and 3. Pecuniary advantages constantly attending improvements in health and in agriculture. And these were the results of philanthropy as understood and practised by the sanitary school of England.

M. Wolowski, for France, referred especially to the increase of the articles of subsistence, and then spoke of the necessity of providing suitable dwellings for the working classes. Paris, he said, was being transformed into a new city: whole quarters were disappearing, the quarters of narrow and crooked streets, where the sun could not penetrate or the free air circulate. A great improvement, in a healthful point of view, had doubtless been effected, and the population of Paris would gain in the end; but in the meanwhile, as a large number of low-priced dwellings were swept away, entire populations (and there was no exaggeration in employing that word, it lent its greatness to the greatness of the evil he was opposing) found themselves driven from the shelter they had enjoyed, and were unable to obtain what suited them elsewhere.

M. Scrive described some admirable arrangements made at Lille for the advantage and recreation of the work people.

Dr. Pinot then related what had been done at Mulhouse, and spoke of the workmen's towns already referred to, which had been built there. The erection of large buildings where were lodged twenty or thirty families had been discontinued. The accumulation of a number of persons, strangers to each other, had given rise to continual discussions, misconduct, and immorality. They had found it more advisable, therefore, to build separate dwellings, wherein only one family was permitted to reside: this had given rise to the *cité ouvrière*. Each city consisted usually of 300 houses, of different size, and different cost. To induce the workman to become the purchaser of his house, the payment was distributed over a certain period of time. On making the purchase, he had to pay down from 12*l.* to 20*l.* according to the size of the house, the price ranging from 75*l.* to 120*l.* If he had not the money, the manufacturer, his employer, sometimes advanced it to him. Afterwards he had to pay from 1*l.* to 1*l.* 5s. a month, till the whole amount was discharged. These little towns are thus much sought for by workmen, some to buy the houses, and others to rent them. In a sanitary point of view, amongst others, the result had been most satisfactory. When the town was affected with cholera, there had been but few cases in the *cité ouvrière;* while, on the other hand, the greater proportion of cases in the town were in the quarters occupied by the workpeople. A public washhouse, baths, bakery, and kitchen, are attached to the *cité ouvrière*.

However, we must pass on. At the closing sitting of the Congress, Sept. 20, M. Müller, of Mulhouse, brought up, in conjunction with Mr. H. Roberts, to whom M. Muller addressed a warm eulogium, a comprehensive report on the conditions necessary for the erection of healthful habitations, and urged further their application in rural districts as well as in towns.

Mr. Roberts, after showing some of the results of sanitary improvement, proposed a resolution, which was adopted, declaring on the part of the Congress the necessity of enlightening the working classes by every means on all matters concerning the amelioration and proper maintenance of their dwellings, the advantages of good ventilation, and the evils produced by dampness.

M. David, of Denmark, mentioned that they had in that country two workmen's cities, containing—one 80, and the other 350 families. An inquiry had been made as to the comparative healthfulness of the *cité*, and although he could not give the exact results, he was able to say that the amount of sickness and mortality there, as compared with the sickness and mortality in the other quarters of the town, was only as 1 to 5! We need not look for a better fact with which to conclude this notice of the meeting in Brussels.

The demolition of the dwellings of the industrious and poorer classes of Paris, for the improvement of that capital, without due provision elsewhere for their occupants, referred

to by one of the speakers, has caused, not only the greatest distress to individuals, but some apprehension to the Government; and it has been determined that little batches of houses suitable to the class who have been driven away shall be erected in the suburbs of Paris without delay. Many remarks have been made on this proceeding by Londoners, apparently unconscious that *in their own capital* the dwellings of the poor have recently been demolished to an enormous extent; and this, too, without thought being given to the ejected tenants. And as it is certain that for some time to come, multitudes of dilapidated houses will annually be condemned to give way to substantial dwellings of a better class, we would again press the matter on attention. Our readers have been from time to time furnished with particulars respecting the dwellings of this great metropolis, and pretty well know their condition. We have often, too, directed attention to the utter unsuitableness of the ordinary dwelling-houses let out to various tenants, without privacy, or the necessary accommodation for families; an evil, the extent of which can only be appreciated by those who have inquired carefully into the subject; but nothing of a better kind seems to have come into the market, at all adequate to the demand. Blame for this, to a great extent, attaches to a large body of the more prosperous mechanics of the metropolis. There is an immense number of the wretched and ignorant poor, who are obliged to take advantage under present circumstances of any kind of shelter (and pay a high price for it, too); but there are numbers who can choose, and yet have a prejudice against anything except the old plan, although they know the inconvenience, and often danger, which beset it both by night and day.

The railways with metropolitan terminuses employ a very considerable number of men, who are lodged with their families in single rooms, in the neighbourhood of the stations, and we are informed that the difficulty of obtaining decent accommodation is very great indeed, particularly for those who have several children. These men pay about 3s. 6d. a week for a room, and some have asked, when viewing the huge hotels which adjoin these stations, if it would not pay companies to plant little colonies on some of their spare land, not too far from town, where something like the necessary room could be found for their workmen at a moderate price, giving the workman a free pass to the place of his employment, and to the wife a pass to town on one day of the week for marketing. Schools and other institutions would soon spring up in such villages. It is, however, to be feared that many of the workmen would rather put up with all the faults of their present lodgings, than avail themselves of a change much for the benefit of both themselves and families. Many builders to whom we have mentioned this subject have said, "What encouragement have we in putting up new-fashioned dwellings, when we look at the profits and state of occupation of the buildings put up by the metropolitan associations—say that in the Old St. Pancras-road?" And it is a circumstance well worthy of notice that for some time past that building, so excellent in its arrangements and which provides the sort of accommodation so much wanted, has not been fully occupied. It is most important to learn the cause of this, in order to show what has produced the present appearance of failure. In doing this, it ought to be borne in mind that this building was the first experiment of the kind made on a large scale,—that the expenses of forming the Association were considerable, including the cost of the charter. The rates are also heavy. However, for five or six years after its completion, this building was so well occupied by a respectable body of tenants that it was difficult to find a vacant set of rooms. The rents had been, during the time above mentioned, raised more than once to new tenants; thus holding out an inducement to those who had possession to remain. About fifteen months ago the rents of the sets of rooms were again raised without the above consideration, and that, too, at a time when the working men were struggling against the advanced price of every kind of provision. Since then more than twenty sets of rooms out of 110 have been unlet at one time, and several are in the same condition at present. Now, as it is a fact that numbers of capitalists well intentioned are watching with anxiety the results of such-like experiments, we cannot help feeling regret that at the time the price of provisions was very high, the rent of this place, provided for the families of persons of limited income, should have been raised, believing that if this building had been put up under ordinary circumstances, without the cost of charters, and management,* or the expense of alterations and repairs (which might have been to a great extent avoided), the rent previously charged would have been ample to have allowed a handsome profit upon the outlay. Even when this model building was first opened at a small rent, it was a difficult matter to let the rooms, so prejudiced against it were the kind of persons for whom it was intended, and eventually a class came into occupation for whom it was not originally intended, and this had the effect of inducing others to follow a good example. At present, we believe, and we say this advisedly, that the families of nine out of a dozen of the mechanics of the metropolis assembled in council respecting the choice of a dwelling, would say of this place, "It looks like a workhouse. I can work, and do not want to seem to live on charity. I like to go in and out as I think fit."† "Merciful goodness!" says the wife, "five stories high—how will I get up and down? the children will break their necks;" forgetting that to some extent the necessity of travelling up and down stairs is much avoided by the dust-shafts, water-supply, sculleries, closets, oven, and boiler, attached to every set of rooms. In Queen Elizabeth's days, sea coal was by many looked upon as abominable: vaccination, the circulation of the blood, railways, and other great discoveries, were for long regarded with doubtful misgivings, which are now laughed at and wondered at. The prejudice against new-fashioned dwellings will, in course of time, in the same manner vanish; but in the meantime, in order to produce present and beneficial results, it is necessary to endeavour to conform as much as possible to the feelings of those for whose benefit the houses are required, trusting that in course of time we may all get wiser.

What is really wanted for the use of several thousands of families, who would be glad, and are able to pay a fair rent in London, are small houses, and houses with the accommodation of two or three suites of apartments of the model buildings, which would present as much as possible the outward appearance of the ordinary dwellings which are now let out to lodgers, and be provided with separate plots of ground; for there is an objection to a large play-ground, in which some hundreds of children of different ages and circumstances are thrown together. We must find some other time to go more fully into this part of the subject, and in the meantime would express a hope that the intelligent working men of the metropolis will turn their serious attention to this matter, not only for the sake of themselves, but also out of consideration for those who, less fortunate than themselves, would much benefit by their sanction and appreciation of those improved arrangements of dwellings which are so much required in the immensely extended and constantly increasing districts which are tied together under the name of London.

* It must be borne in mind that this was a new experiment The walls were stoutly built, and will remain good for centuries ut all the interior fittings, doors, windows, locks, &c. were of th most indifferent description. The rooms were barely whitewashed ver the bricks.

† On the first establishment of these buildings, the gates were ocked at a certain time. Those who have noted the independen pirit of the working classes, know that this will never do; and though this restriction has been nearly abandoned, this is not generally known.

ART-WORKS IN IVORY.

Is it not a singular circumstance, that one of the most delicate and refined species of art-works, those in ivory and its congeners, is one of the most ancient of which we have any record; and that, moreover, it is one which is still practised in the East at the present day, as it was thousands of years since? Even in antique times, statues composed of ivory were known and spoken of as statues "in the ancient style:" and statues were not the only large works done in ivory, for we find in the Bible, that even houses were in some way composed of or at least covered with ivory, so as to merit the name of houses of ivory. That there are several allusions in the Bible to such works in ivory as those we are speaking of, is of course well known to art-writers, but as we do not recollect seeing these allusions specially quoted, it may be interesting to do so with reference to the few notes on ancient art-works in ivory with which we propose to fill a column or two of the present number.

In 1st Kings, x. 18, in the midst of the details of the glory and riches with which Solomon surrounded himself, we are told, that "The king made a great throne of ivory, and overlaid it with the best gold. The throne had six steps, and the top of the throne was round behind. And there were stays on either side on the place of the seat, and two lions stood beside the stays; and twelve lions stood there, on the one side and on the other, upon the six steps: there was not the like made in any kingdom." These lions, though doubtless composite, or made up of pieces of ivory, and other materials, must have been, to some extent at least, carvings in ivory. In the same chapter, verse 22, it is narrated, that "the king had at sea a navy of Tharshish, with the navy of Hiram," and that "once in three years came the navy of Tharshish, bringing gold and silver, ivory, and apes and peacocks," reminding us curiously of certain ancient Egyptian sculptures, in which elephants' tusks, and apes, with other valuables, are being inventoried by the king's officers. The ivory which Solomon thus received from his Mediterranean navy, doubtless, formed the spoils of African elephants, whether got through Egypt or elsewhere. To such an extent, indeed, were the elephants of North Africa robbed of their valuables, and made away with in the process, that they ultimately became extinct as a source of supply. That Solomon also obtained ivory from the East, we presume there can be little doubt.

In the same Book of Kings (xxii. 39), amongst "the acts of Ahab" are enumerated "the ivory house which he made and all the cities that he built." In Psalms xlv. 8, it is said of the anointed, "All thy garments smell of myrrh and aloes, and cassia, out of the ivory palaces, whereby they have made thee glad." These ivory palaces, however, may have been but similitudes of palaces, made for the purpose of holding perfumes. In Solomon's Song, among the bridegroom's poetical beauties, it is said (ii. 14), "His belly is as bright ivory overlaid with sapphires, and his legs as pillars of marble set upon sockets of fine gold." The "ivory overlaid with sapphires" probably denoted some species of art-work which had actually existed. Again (vii. 4), the bride's "neck is as a tower of ivory," such a tower having also probably been an actual formation, especially since we know that such a tower exists in the present day, or lately existed, in China. Ezekiel (xxvii. 6) says of Tyrus, "Of the oaks of Bashan have they made thine oars: the company of the Ashurites have made thy benches of ivory brought out of the isles of Chittim." The merchants of Ashur are spoken of in the same chapter as merchants of Tyre. In Genesis, however, we read of Ashur going forth and building Nineveh and various other cities; and in the passage just quoted, the Ashurites were clearly something more than mere merchants, since they *made* the ivory benches. They were thus, in fact, clearly art-workmen, or at least connected with the building trades of antiquity: from what is said of a company of them, and of Ashur *going forth* and building Nineveh and other cities, may not these "children of Shem" have constituted some of those wandering building tribes who are known to have existed not only in the Middle Ages of the Christian era, but in times of extreme antiquity? In the same chapter of Ezekiel, verse 15, it is said that the men of Dedan brought Tyrus, "for a present, *horns* of ivory, and ebony." These "horns" were doubtless tusks, their resemblance to horns rendering such a mistake probable, or at least possible: nevertheless, the horn of a certain creature, namely, the narwhal, one of

the cetacea, and supposed to have been what is recorded in ancient inventories as "the unicorn's horn," was used, at all events in the Middle Ages, as a species of ivory, which it resembles. This splendid horn, however, which is occasionally 6, and even 7 feet long, is not the only sort of "unicorn's horn;" for it has of late been found that a one-horned animal, the true unicorn, exists in the east, in the Thibetan mountains. The prophet Amos (iii. 15), speaking in the name of the Lord, says, "I will smite the winter house with the summer house; and the houses of ivory shall perish, and the great houses shall have an end, saith the Lord." The same prophet (vi. 4) speaks of those "that lie upon beds of ivory." In Revelations (xviii. 12) are enumerated "Merchandize of gold and silver, and precious stones, and of pearls, and fine linen, and purple and silk, and scarlet, and all thyine wood, and all manner of vessels of ivory, and all manner of vessels of most precious wood, and of brass and iron, and marble."

There are thus not a few allusions, in the most ancient of all books, to the existence of various art-works in ivory in very ancient times; and the recent discoveries of carved ivories at Nineveh by Mr. Layard corroborate the verisimilitude of some of these allusions, as, indeed, do the carved ivories of ancient Egypt, which in some respects resemble the Assyrian. In truth, the facility with which ivory is carved, the polish it easily receives, and the mellow tone of its colour, recommended this material for sculpture from the earliest time of human civilization. Already in Pharaonic Egypt, in ancient Assyria, in the earliest epochs of Etruscan, Greek, and Roman history, it was employed for ornamental purposes. The difficulties besetting, in ancient times, the communication with India and inner Africa, whence ivory was brought, enhanced its value in the west far beyond its present price; though the ancients knew of one more source of supply, now, as said, fully exhausted, viz. that of Northern Africa. Central Africa proved a more plentiful source, which, from times immemorial down to the sixteenth century, supplied Europe, by way of Egypt, with elephant's tusks.

Antique Egyptian carvings in ivory are rare. The dryness of the climate—to which we are indebted for the preservation of such perishable materials as wood, and the colours of the reliefs,—proves destructive to ivory; for as soon as the animal glue which gives it cousistency evaporates, it cracks, and crumbles to pieces. Assyria and Persia were supplied with ivory from India and Bactria. The bearers of elephant tusks are never wanting in the triumphal processions of the Eastern conquerors. The sculptors of Greece derived their ivory both from India and Africa; though it seems that the African, with its yellow tint and more agreeable sheen, was more frequently employed than the white Indian ivory, of chalky appearance. In Greece, not only was ivory used for ornamental purposes, as in Egypt and Assyria, but statues of large dimensions were built up from this precious material, which likewise served for the insignia of royalty and priesthood,* and, together with the purple, remained the symbol of princely power and sacerdotal honour through all the eras of antiquity. By joining smaller bits of ivory, in a manner not yet sufficiently explained, even after the learned researches of Quatremère de Quincy, the Greeks carved colossal statues of this material, adorning them with enamelled gold—the only metal believed to be worthy of being joined to ivory. Some of the Chryselephantine statues became celebrated as wonders of their world, both for their precious material and the eminence of workmanship. The Olympian Jupiter of Phidias, at Elis—his Minerva, at Athens—and the Juno of Polycletus, at Argos—remain unsurpassed for beauty and magnificence. The great French archæologist and patron of art, the Duc de Luynes, had lately made a copy of the Minerva of Phidias, according to the description of the ancient authors, and its representations on medals, vases, and gems. His Chryselephantine statue was one of the most interesting objects of the great French exhibition of fine arts, and gave some idea of the magnificence and costliness of this kind of sculpture.*

The ivory remains of classical antiquity are of extreme rarity. "One only sceptre," says Mr. F. Pulszky† "has been preserved to our days: stiles for writing are more numerous; so are ornamented hair-pins, toys, dice, scent-boxes. Admission-tickets to the theatres and amphitheatres have likewise survived the great catastrophes of history; and with them a few reliefs, among which the most important are the Diptycha. We designate by this name large double ivory tablets, ornamented with reliefs on the outside; whilst the inside was covered with wax, on which the ancients used to write with metallic or ivory stiles. Diptychon means, originally, anything doubly folded; and therefore St. Augustine calls the oysters diptycha; but the term was principally applied to ivory book-covers, or tablets for writing.

The most interesting of these tablets were the Consular Diptycha, because we are able to assign a certain date to them; and as they were manufactured for the highest functionaries of the state, and presented to the senators, we may presume that they are the best specimens of the art of the time, and therefore highly valuable documents for the history of art. They serve likewise to elucidate some dark points of Byzantine history; and afford most valuable information on the manners and customs of a period about which but scanty information can be gathered from contemporaneous authors, whose attention was principally directed to the development of the Christian dogmas, and who neglected political history, so far as it remained unconnected with the Church. Accordingly these ivories, which were always highly prized from the time of their manufacture up to our days, and remained the ornaments of the treasuries of churches and monasteries, attracted the attention of scholars immediately after the revival of letters."

Those interested in this elegant branch of art, ancient and modern, have recently had the opportunity of possessing themselves of a valuable treatise on the subject by Mr. Digby Wyatt, and which has the rare and novel merit of being illustrated by a series of excellent photographs by Mr. J. A. Spencer. The volume has been published by the Arundel Society, under the general title of "Notices of Sculpture in Ivory," and consists of a lecture by Mr. Wyatt, on the history, methods, and chief productions of the art, delivered at the first annual general meeting of the Arundel Society, on 29th June, 1855; and of a catalogue, by Mr. E. Oldfield, of the British Museum, of specimens of ancient ivory-carvings, in various collections (including the Fejérváry, of Mr. Pulszky, just alluded to, and the Maskell collection, recently purchased by the British Museum trustees), casts of some of which are sold by the Arundel Society in classes exemplifying the principal schools and periods.‡

In this interesting volume, Mr. Wyatt enters at some length into the ancient history of the art of ivory-carving, and the various remains which still exist, and of nine of which the beautiful photographs included in the volume are vivid representations. He remarks, that though the ivory used in Classical times, and in great part of Europe during the Middle Ages, was obtained from the tusks and teeth of the Asiatic and African elephants, in the north a different substance generally took its place.

"This was derived from the fine-grained tusk of the *rosmar*, or *rostungr*, found in the Northern seas, and known as the walrus, morse, or sea-horse. That distinguished antiquary, Mr. Albert Way, tells us that such tusks were sculptured in the Scandinavian countries, and highly esteemed, from an early period. This material, which has been ably commented on by Mr. Way, the 'huel-bone' of Chaucer, the 'whale's bone' of ancient English song, well suited to form a substitute for ivory in times when difficulty of communication with the East must have rendered the tusk of the elephant a costly rarity, was largely used by the skilful sculptors of the North for various purposes of ornament or convenience. In Germany, moreover, where in the ninth and tenth centuries ivory was employed, the carvings of the eleventh and twelfth centuries were usually executed in the tusk of the walrus; fine examples of which are to be seen in the Reliquarium at Hanover, in the collection of Prince Soltykoff, and in that of Colonel Meyrick, at Goodrich Court. Amongst objects carved in this material, as we learn from the treatise of the Archbishop of Upsala on the Antiquities of the Northern Nations, as also from Olaus Magnus, chessmen, very elaborately carved, were so esteemed as to be included with royal gifts. Of these, probably the most remarkable collection existing is that discovered in the Isle of Lewis, and now preserved in the British Museum."

In generalizing the details of the ancient art-works in ivory noticed in his lecture, Mr. Wyatt says:—

"When we turn from the details of ivory-carving, and attempt to generalise with respect to national peculiarities, we are met by many difficulties, foremost amongst which is the facility with which the objects might be transported from place to place, rendering the criterion of present locality comparatively worthless. Happily, however, nationality is generally so marked by style, that the judicious connoisseur will distinguish it almost by sympathy. To define precisely why one specimen is believed to be French, another German, and a third English, would be often no easy task, and yet the greatest authorities arrive almost invariably at a unanimity of judgment. It may suffice in this place to point out that France was by far the largest manufacturer, and that the subjects selected by her artists were, even when of a sacred nature, *toujours gais*. A peculiar *nez retroussé*, a dimpled, pouting, and yet smiling mouth, a general *gentillasse* of treatment, and a brilliant yet rapid mode of technical execution, stamp the French work with an almost unmistakeable character. We have already adverted to the two leading varieties of Italian expression, the one spiritual and sublimated, and the other partaking more of Greek immoveability, a little "raide" and uncouth, like the mosaics, but always dignified and grand. German work is invariably admirable in finish and minute elaboration, more especially of drapery, but rarely rising to an elevated type, either of physical or intellectual beauty. The English style, of which Prince Soltykoff's collection contains one of the noblest specimens extant, in the shape of a triptych of the fourteenth century, representing Christ crowned, with the Virgin Mary by his side, the Crucifixion, and four Saints, may be assigned a position midway between the French and the second Italian manner. It certainly does not exhibit the gaiety and tenderness of the former, nor has it quite the grandeur of the latter, but it is marked by a sober earnestness of expression in serious action, which neither of those styles possesses. This vigorous action is now and then carried almost to caricature in English work. With respect to manipulation, it may be noticed in most of the English carvings, that the mark of the cutting tool is very seldom subdued by finishing with abrasive implements—the surface being rarely scraped, but each stroke of the chisel, and a curiously hard expression is given to most of the heads by this practice. Occasionally, however, confusion has arisen between English and French ivories, owing to many objects, the nationality of which is supposed to be attested by the introduction of English heraldic bearings, having been executed by French artists for English knights and nobles during their various partial occupancies of the country of their final loss. Among the multitude of mediæval works which time has spared to us, we are unable to identify the author of any single specimen."

We may appropriately conclude our incidental notices of art-works in ivory with a quotation from Mr. Hendrie's translation of the monk Theophilus's instructive work, "Schedula diversarum Artium." This rare artificer opens to us the *arcana* of his various crafts, and among other instructions he thus relates how ivory and bone are to be carved:—

"In sculpturing ivory, first form a tablet of the magnitude you may wish, and, after smoothing it, portray with a lead the figures according to your pleasure, and with a pointed instrument mark the lines, that they may appear; then carve the grounds as deeply as you wish with different instruments, and sculp the figures, or other things you please, according to your invention and skill. But should you wish to ornament your work with a leaf of gold, lay on the glue of the bladder of the fish which is called 'huso,' or sturgeon, and the leaf being cut into small

* The senators of Rome had likewise ivory sceptres, and the curule seats were of the same material, in order to indicate that the magistrates of Rome were the equals of foreign princes.

* The statue cost the duke 300,000 francs.

† "Catalogue of the Fejérváry Ivories in the Museum of Joseph Mayer, esq. with Essay on Antique Ivories." By Francis Pulszky, F.H.A. Liverpool: printed by D. Marples, 50a, Lord-street.

‡ These casts may be seen in the Crystal Palace, in a court close to the private office of the Fine Art department. There also, we may here remark, are various other interesting art-works, forming a collection belonging to the Arundel Society; and a "Descriptive Notice of the Drawings, Tracings, Models, and Miscellaneous Publications of the Arundel Society," thus exhibited at Sydenham, has been published at the office of the Arundel Society, 24, Old Bond-street.

pieces, overlay it as you please. Fashion also round or ribbed handles from ivory, and make an opening through the middle lengthwise; then, with various files, proper for this work, enlarge the opening that it may be inside as outside, and let it be smooth everywhere, and moderately thin; and portray flowerets around it very finely, or animals, birds, or dragons, twisted together by the necks and tails, and transpierce the grounds with very fine instruments: then scale, as gracefully and artistically as you may be able. Which being done, fill the opening inside with oak wood, which you cover with thin gilt copper, so that through all the grounds the gold can be seen; and so two pieces being joined in from a particle of the same ivory, close the hole before and behind, you will fasten these on with ivory pegs, so cunningly, that no one may be able to see how the gold is laid in. After this, make an opening into the small piece in front, in which the blade is placed, the handle of which, being heated, can be easily inserted, because the wood is within, and it will stand fast; make also a plain handle, and, according to its size, make the opening in which the blade should be placed, and join the wood carefully into it, and according as the wood is fashioned, so cause the handle of the knife to be made. Then grind some clear *thus* (resin) into the finest powder, and fill the opening of the handle with it, and envelop the blade near the handle with a wet cloth, in a threefold manner, and placing it before the furnace, warm this handle until it slightly glows, and immediately fix it carefully in the handle, that it may be well joined in, and it will stand firmly."

Here we have the very practice, with regard to the inserted gilt copper, of the knife-handles of India, and, with respect to the mode of retention of the tongue of the blade in the handle, of Birmingham and Sheffield in the present day.

ARCHITECTURAL EDUCATION.

The approaching commencement of the courses of instruction in architecture and construction at King's College, London, under Professor Hosking, and at University College, under Professor Donaldson, suggests to us to say, that due importance is scarcely attached by our young men to the advantages to be derived, on the commencement of their professional studies, from attention to a systematic course of information and instruction. The student should start with the conviction that, entering upon such a vast subject, which is based, first, upon scientific principles; secondly, upon the profoundest elements of taste; and, thirdly, varied historical knowledge,—it cannot be hoped that he will rise above mediocrity unless he masters these, and becomes acquainted with the numerous buildings already in existence. These cannot be known, or, if known, not sufficiently appreciated, without a careful methodical analysis of their varied peculiarities; the knowledge of all styles of all countries under their various aspects of taste, construction, and historic origin, and also adaptation to special purposes. Dr. Booth at the conclusion of his lecture, elsewhere mentioned in our present number, says:—"Incompetence, imbecility, idleness, and ignorance shall no longer usurp the place of skill, of genius, of vigour, of industry, and knowledge." But how is this to be accomplished, unless our young men render themselves competent by hard previous study and proper instruction?

We cannot better advance our views than by quoting a portion of Professor Donaldson's Sessional Circular:—

"I may be permitted to point out that, as competitive examinations have been adopted by the Government, as the best tests of proficiency for civil and military appointments, and as even such an ordeal before the Royal Institute of British Architects is necessary for the appointment to district surveyorships, the actual circumstances of the day imperatively demand that the professional education of the architect, engineer, surveyor, and builder should be benefited by attendance on such a course.

In addition to the details contained in the papers of questions, I feel myself called upon to instil into the minds of the youth before me an active principle of energy, to exalt his aims, to ennoble his labours, and to excite to new spheres of imagination, reflection and duty; to call to his remembrance that he succeeds to men who have produced the Rhamnesium of Thebes, the Parthenon, the Pantheon, the Coliseum, the Vicentine Basilica, the Louvre, St. Paul's, the Spire of Fribourg, Henry the Seventh's Chapel, magnificent Canterbury and solemn Stonehenge; that he may be possessed of powers of invention and execution identical with theirs, distinct and distant only as are their periods from his in the world's history, and modified alone by the times, the country, the usages and experience of the epoch in which his lot is cast.

In order that a youth may be properly trained to think and act, it is necessary to impress upon his mind that he must be an earnest and devoted labourer; cultivating his intellect by meditation and practice; that he should be urged on as he labours by the consciousness of progress; and mindful that casual, intermittent, feeble efforts can never issue otherwise than in failure, discouragement, and defeat, hoping against hope if necessary, and determining to conquer by a mighty struggle for a noble object."

The standard of the qualifications of the profession is necessarily raised now-a-days, in consequence of the examinations necessary to qualify men to hold public employment. And the spirit of competition (*now opening to the whole world*) must prove that no continued success is possible without previous instructional discipline of the mind. To this end, the courses given at the two Metropolitan Colleges are of material assistance, and those who hope to render themselves eminent, and to succeed to the highest position in the professional career, should not neglect the means presented to them, and which, up to fifteen years since, were not in existence to aid the architect, the surveyor, the engineer, or builder.

We may mention that there is a broad distinction between the Professor's duty at University College, and at King's College. At the former the Professor does not look to the College at all; his class is composed almost wholly, we believe, of young men already in office, and attending specially whom the college might call occasional students. Whereas Mr. Hosking's class is composed of students within the college, his course on the Arts of Construction being part of the *curriculum* of the college for its matriculated students in their third year: occasional students are with him the exception, and do not seem to be sought for, as the teaching is adapted to the college students proper, and they, who are generally under twenty years of age, cannot digest anything but spoon-meat, whilst at University College the Professor finds himself in a position to administer more solid food.

STREET PAVING BY STEAM POWER.

Good street pavement requires a good foundation, good stone, and good ramming; the latter being of the utmost importance. It is painful to see men sweating at a 50 lb. rammer, going three or more times over the surface, and, after all, leaving the work ill done. Again we appeal to the Messrs. Burton, or to any other of our portable steam-engine makers, to turn their attention to a steam-rammer for street pavements. The work would be accomplished more quickly, the stones would be driven to a firmer bed, and much human misery would be saved. Sound paving-stones will bear, without fracture, the force of a blow many times greater than a man can give. If it were not for the multiplicity of gas-pipes and water-pipes, and sewers and sewer-pipes, streets, once formed, paved with the best granite, and steam rammed, would last for years: a second or third ramming, at intervals, as inequalities began to show, would bring the surface even, as at first: ridges would be beaten down, and slack places would be raised. Hand-ramming, as at present practised, cannot possibly accomplish this. Jack Falstaff's "three-man beetle," if used, might do better. But three-man beetles are not used. Why not?

Let us consider how a paved street is formed, and how it wears. Look at the Haymarket, now under repairs. A gravel and concrete foundation is formed and finished, as near as may be, to one uniform surface, having the required cross sectional contour: upon this the paving-stones are laid, in courses, as they are to be set: they are not all exactly of the same depth, neither is the concrete surface, or bed, a true plane: fine gravel or sand is used to set the paving-stones to an even surface, and there is more sand or gravel under one stone than under others. A man, using the heaviest beetle he can lift, cannot ram heavy pavement to an equal bearing: at all events, it is never done, so as to prevent wheels soon knocking it into holes. What takes place then? Wet rests on slack places, sinks to the foundation, and softens it (there is no sub-soil or sub-area drainage): each wheel drops like a rammer on this, the weakest place, jumps at the ridge, produces a second slack, and so on until a pavement, originally smooth, becomes a continuous series of hills and hollows, over which spring-vans, omnibuses, carriages, cabs, &c. bounce along: all the weak places continue to be struck with increased force as the road becomes more uneven, to the discomfort of passengers, tradesmen, and residents, and to the rapid wear and destruction of vehicles. The old and homely proverb of "A stitch in time" is most applicable to road and street repairing. The first show of inequality in pavements should be removed, and this a steam rammer would quickly do. As the process is not to be patented, will any one try it?

The dirt found on granite pavements is not the wear of the stone, but consists of material worked up from below by the incessant ramming of carriage-wheels, and of dirt brought or dropped on. Keep the surface even, and little will work up from below. Surface sweeping or washing must remove surface refuse.

If iron or granite trams are to be laid down, even then a steam rammer will be useful to consolidate the intervening pavement. Macadam stone should be forbidden in streets of much traffic: such streets are merely stone mills, in which some 9 inches or 12 inches vertical in depth of broken stone is annually crushed and ground into mud or dust. Many thousands of tons are so ground yearly in the streets of the metropolis, to great loss of traction, wear of horse-flesh, ruin of vehicles, destruction of clothes and goods, and the misery of all.

When the water companies and the gas companies now trading in the metropolis have been consolidated, and the Metropolitan Board of Works will work, there may be sub-ways for sewers, gas-pipes, water-pipes, electric-telegraph wires, &c. as in the new streets in Paris. One main-pipe will then do the work of ten, the sub-soil will be less tainted, the street surfaces will be less disturbed, such sub-ways will be fully ventilated, and there may be comfort and health above ground as below. Must all this remain a dream, or will some future Peel realize it? Order is the offspring of a clear conception, positive directions, and firmness of purpose.

LIVERPOOL FREE LIBRARY AND MUSEUM COMPETITION.

The Committee, on Friday, the 26th ult. resolved to recommend to the Council to confer the first premium of 150 guineas on the author of the design marked "Con Amore," and the second premium of 100 guineas on the one marked "Alma." These are respectively the first and second in the lists sent in by the competitors, "Con Amore" having eight votes, and "Alma" seven. It is noticeable that all the competitors having voted, as we are informed, there should be no design which commanded an absolute majority of their suffrages; the most successful having only eight votes out of sixteen. The Committee were unanimous in regard to the first, but not so with regard to the second. Some thought that "Alma" was out of court, from its great expense; but it was urged, on the other hand, that, strictly speaking, no single plan had complied with all the conditions, and as the competitors had considered the subject themselves, at the request of the Committee, it was only fair to attach weight to their recommendation. Acting on these views, a considerable majority voted for "Alma" as second. Votes were also given for "Bis dat qui dat Cito" and "Roma."

On opening the letters accompanying the drawings, the author of the design marked "Con Amore" was found to be Mr. Allom, of London; the author of "Alma," Mr. Thomas Holmes, of Bury, in Lancashire.

The Town Council, at its meeting on the 1st inst. adopted the following resolution:—

"That previously to the Council awarding the first or second prize, the Library and Museum Committee,

with the assistance of the Corporation Surveyor, do report to this Council the amount at which the buildings described in the plans forwarded under the mottoes 'Con Amore' and 'Alma' can be erected and completed in a proper manner."

The matter, therefore, will rest here until the cost is ascertained.

Local architects have already objected that out of the sixteen sets sent in, theirs alone complied with the conditions, and that therefore the Committee have done wrong.

THE FAMILY OF SIR CHRISTOPHER WREN.

Among the many distinguished names which gave prominence and lustre to the county of Wilts during the seventeenth century, not the least was that of the first English architect of his day, Sir Christopher Wren, born in 1631 at East Knoyle, at the parsonage-house of his father, Dr. Christopher Wren, the Dean of Windsor. As the following incidents, occurring during the childhood of Sir Christopher, will not be found in the "Parentalia," published by his descendant, Dr. Stephen Wren, their appearance in the *Wiltshire Magazine* may, it is hoped, provoke farther elucidation and illustration from other local contributors.

When the civil wars broke out between Charles I. and his Parliament, Knoyle was the centre of a group of Royalist families, such as Stourton, Bennett, Cottington, Digby, Green of Mere, Willoughby, and Hyde. The doctor's advanced age, moreover, made him averse to any movement of a revolutionary kind. His adherence to the king's party was therefore from the first pronounced in a decided manner. This, in fact, was all that could be alleged against him, to prove what was termed "delinquency," for he had served his cure with credit for nearly thirty years. Still, delinquency, though in the form only of adherence to the king, was a crime to be punished, and even on this point the evidence was very contradictory. There was also another charge, relating to pictures which he erected in the chancel, but it was not shown that they were "superstitious." Without farther comment, we proceed to the facts alleged.

Soon after the commencement of hostilities Dr. Wren retired to Windsor. Sir Edward Hungerford, the Parliamentary general, sweeping through the south of Wilts, compelled Christopher Williams and Henry Marshman to surrender 25*l.* due to the doctor as rent of part of the parsonage of East Knoyle. In a few months after, Ludlow was shut up in Wardour Castle, and Colonel Barnes, who lay before it, had the command of the country adjacent. Down comes the dean from Windsor, armed with a warrant from Sir Ralph Hopton, empowering Colonel Barnes to send a troop of horse to his aid, by which means he speedily collects all rents due to him, and compels Williams and Marshman to pay their 25*l.* over again. This was in the autumn of 1644, and from this time he seems to have considered Knoyle a safer place than Windsor.

The spring of the next year was signalised by Cromwell's capture of Sir James Long's troop near Devizes; and about Lady-day, Cromwell and Waller were lying near Shaftesbury, laying their plans for the relief of Taunton. Keeping these two facts in mind, we seem to trace, in the following fragment of the evidence in Dr. Wren's case, the movements of the scattered remnants of Long's troop, who, being chased (as is known) through Steeple Ashton, and seeking safety by flying southward and distributing themselves among their associates in South Wilts, must have heard with great consternation that the enemy was so close upon their traces.

"On the morrow after Lady-day, 1645," deposed George Styles, of Knoyle, "at about ten o'clock at night, there came to his house a large company of Royalist soldiers, accompanied by Dr. Wren, who saluted this informant with the name of 'landlord.' Mistress Styles provided for the doctor and one of the commanders a bed, in which they lodged together; and in the morning, as they lay in bed, the doctor spake these words to his friend,—'Sir, all is well, there is no danger, for I left word with my wife that if there were, she should send word over the grounds." [Across the fields.]

The next thing we hear of Dr. Wren is his advocacy of the Club-rising in the autumn of the same year, 1645. [This was a union of the gentry and agriculturists of South Wilts and Dorset, to protect their property from both the conflicting parties.] Andrew Marshman swore that Dr. Wren not only encouraged his parishioners to assist, but when Mr. Thomas Bennett, of Pythouse, came to Knoyle to invite their co-operation, Dr. Wren seconded Mr. Bennett's remarks, and even went forth himself with Mr. Bennett, carrying a caliver upon his shoulder. [The doctor was probably shooting pheasants.]

Against this and other testimony to the same import, Randall Dominick declared that Dr. Wren had expressed so decided an opposition to the "Club-business," that the parish of Knoyle did not list themselves.

We next come to the story of the pictures in the church. These were loosely reported at first as "superstitious;" but the only evidence worth reciting in this place will be that of the workman who executed them under the doctor's supervision; and the whole affair shows that the love of pictorial embellishment as an accessory to architecture, which his distinguished son afterwards gratified in the dome of St. Paul's, was a taste derived from the father. Little Christopher was perhaps too young to have watched the progress of the frescoes at Knoyle, being then only eight years of age, but he was fifteen or sixteen before he left Wiltshire.

Robert Brockway, of Quinten, in Dorset, plasterer, being sworn, saith,—"That about July, eight years ago, or thereabouts, Dr. Wren sent for him, and agreed with him to make and set up in the chancel at Knoyle, in fret-work, the picture of the four Evangelists and such other things as the doctor should invent. And, accordingly, he did invent and make a model or draught thereof in paper, which he gave to this examinant and caused him to make it, viz. the picture of the 'Ascension,' with the twelve Apostles, and Christ ascending in the clouds, his feet and lower part of his garment being seen below the clouds. This stood at the lower end of the chancel next towards the church. He also gave this examinant a draught of 'The Trinity,' formed by three rounds linked in each other, an emblem in the midst, with glory around it; and above that, clouds on the roof. This was over the communion-table. Farther, on each side of the east window there was set up the picture of 'Jacob's Dream and his Sacrifice;' clouds above; Jacob sleeping below, and a ladder let down to the earth. On the one side of the window, angels holding crowns of laurel in their hands, ascended; and on the other side of the window they descended; and underneath were these words written, 'Let prayers ascend that grace may descend.'" He farther saith that, "Dr. Wren did himself pay for the work, and used to come every day to overlook it, and give directions thereto." Testified before the committee sitting at Longford Castle, 8th May, 1647. [Abbreviated.]

Fret-work, Mr. Wilton tells me, is the same as pargetting, a sort of Arabesque ornament found in the ceilings of mansions of that date, and also in some country churches. In the latter case, when the church and roof happen to be contemporaneous, this pargetting is found worked into Gothic forms. This pargetting at Knoyle is commended by Sir Richard Colt Hoare.

That Dr. Wren had not designed to raise any scandal by his fret-work is proved by the fact that, while resident at Windsor, he wrote to Randall Dominick (probably his churchwarden), giving him full authority to remove the whole series of paintings, if any offence seemed likely to be taken against them. The Parliament also seems to have taken a view of his case creditable to him in every respect, as shown in the following "Letter from the Committee of Lords and Commons for Sequestrations, to the Wilts Committee, touching Dr. Wren;" without date, but apparently written about February, 1647:—

"Gentlemen,—There are come to our sight several orders of Parliament, and other public certificates, some of them attested by our committee, whereby it appears that Dr. Christopher Wren hath been much employed by the Parliament, and hath suffered many violences and plunderings in the performance of these employments; and likewise that he hath contributed very large sums to the service of the state, and been a painful labourer in the work of the ministry almost these thirty years; all which do fully induce us to believe that he is a parson far from meriting the doom of sequestration (the punishment of most malignant ministers). Wherefore we desire you to take his cause into your serious consideration, and narrowly to weigh the number and quality of the witnesses and informers, looking upon him with such favourable inclinations as the due consideration of these premises do warrant. And what tenderness you please to afford him shall be esteemed as an obligation upon your very assured friends, John Danvers, William Stevens, James Herbert, John Evelyn, William Lister."

Such are the main facts connected with Dr. Wren's share in the Civil War, which might have been much extended by reciting in full all the evidence tendered. At the time when the last-quoted document is supposed to have been written, his son Christopher was executing his treatise of "Spherical Trigonometry," having left Wiltshire for Wadham College, Oxford, in the previous year, 1646.—(*Wiltshire during the Civil Wars.**)

PERSEVERANCE AND PROGRESS.

On the 24th of September Dr. Booth, F.R.S. delivered the opening lecture of the session at the Lewes Mechanics' Institution, on the subject of "Education." Seeking to show that ample means and plenty of leisure time are not indispensable for the acquirement of knowledge, the lecturer said,—The minds of men, brought up with many aids and appliances, are too often without spring: they are deficient in elasticity of intellect, and they often want that one moral quality of mind which breathes life and vigour into all the intellectual faculties, the absence of which no others can compensate, even by their presence in excess—I mean that unflinching determination not to be borne down by difficulties—that enduring perseverance not to be over-mastered by defeat. He among you who can put forth into action such energy of will does not much require external aid. He need not care whether the schoolmaster be abroad or not, for he has got him at home. This is no mere theoretical reasoning. The views I place before you are amply confirmed by experience. Read the biographies of those men whose names shed lustre on humanity, whose lives are our best instructors, teaching us by their example, and encouraging us by their success. I have little doubt that in the minds of other men, perhaps of great sagacity and far reach of thought, before Columbus's day, the existence of a great western continent may have been a dim conception, a mere geographical possibility. That the earth may be circumnavigated, or at all events travelled round, is a truth which follows at once from the admission of its globular form, but the germ of this truth fell on ungenial soil; it never fructified in their minds. Columbus was not the last by many who showed how the impossible may be reduced to the practical. It was the indomitable resolution of Columbus, his unyielding energy, that enabled him to verify his conceptions and to realise his theory. Look at the perseverance of Kepler, who for years and years groped his way through dry, perplexed, and endless arithmetical calculations till he saw that first faint ray of light, which burst out as the sun in the mind of Newton, and revealed those laws concealed since the creation, by which the Almighty constituted the mechanism of the universe. Turn where you will you find indomitable perseverance the indispensable condition of success. Who is there so cold as to read without emotion the heroic struggles of that brave old Huguenot, Bernard Palissy, the potter, who, despite of failure after failure, the ridicule of enemies, the sneers of friends, the remonstrances of his family, still held on till a success unhoped for at last crowned

* Contributed by Mr. J. Waylen to the "Wiltshire Archæological Magazine," published under the direction of the Society for collecting county and other antiquities at Devizes. his efforts. Or, if we wish to take a more fortunate example in our own country, we may name Sir Richard Arkwright, the great inventor of the cotton-spinning machine, who, till he was thirty years of age, continued to practise as a barber in his native town. The characteristic quality of his mind was not deep thinking, but unyielding tenacity of purpose. If any one who hears me is disheartened by his daily toil, or discouraged by the want of books, let him read the autobiography of the late William Gifford, for many years the learned and talented editor of the *Quarterly Review*. Of his early life he thus writes:—"I possessed at this time but one book in the world: it was a treatise on algebra, given to me by a young woman who found it in a lodging-house. I considered it as a treasure. I sat up for the greatest part of several nights successively: this carried me some way into the science. I had not a farthing on earth, nor a friend to give me one. Pen, ink, and paper were, therefore, for the most part, as completely out of my reach as a crown and sceptre. There was, indeed, a resource. I beat out pieces of leather as smooth as possible, and wrought my problems on them with an old blunted awl." Now, here was a man, almost without books, and entirely without instruction or apparatus of any kind, who contrived to master the elements of a sound education, which eventually led him to power, eminence, and wealth. Not less true than trite is the proverb, that necessity is the mother of invention. Difficulties overcome habituate the mind to overcome difficulties. Do not for a moment imagine that if you pore in solitude for hours, say over a mathematical problem, or any other difficulty, and fail even at last to obtain the result you are in quest of, that, therefore, your labour is but lost, and your time thrown away. Do not suppose anything of the sort. Your mind has been at work the whole time. Other things which were before clouded have become clear: principles have been sinking deeper into the mind, and cutting a groove in which your ideas will run with greater ease another time.

It is a very remarkable and curious fact that there is no acquirement of real value, whether it be a science you want to know, or an art you require to practise, or a language you wish to learn, that does not demand a large expenditure of labour for its acquisition. So true is this, that the amount of labour and pains bestowed is the measure of the intrinsic value of the acquirement. One never opens a diamond mine while turning up the soil for knowledge. Chance has very little to do with the extension of knowledge. Thousands had seen apples fall to the ground before the time of Newton. But it was to his mind only that the simple fact was suggestive. It fell upon a mind prepared for its reception. Everybody knew that oxygen was a supporter of combustion—that it is largely present in the atmosphere; but it is only the other day that the simple obvious facts have been applied to compel the air we breathe to supply fuel to our iron furnaces—a process which bids fair to revolutionize the whole iron manufacture. Great discoveries are everywhere cropping out beneath our feet, if we would only look before us. See what vast discoveries in chemistry and natural science were due to Sir Humphrey Davy, and I mention him the more willingly as he is another and a signal example of a man who, born in a humble station, by the brilliancy of his talents, his unrelaxing perseverance and intensity of will, raised himself to high social position, and took his place as the very first of European philosophers. When a surgeon's errand-boy in Penzance, he attempted to make experiments on the properties of air; and what, you will be curious to know, was his laboratory? Why the phials and bottles of his master's shop. His biographer, with great justice observes, had Sir Humphrey Davy been furnished, in the commencement of his career, with all those appliances he enjoyed at a more recent period, it is very probable that he might never have acquired that wonderful tact of manipulation, that ability of suggesting experiments, and of contriving apparatus so as to meet and surmount the difficulties which must constantly arise during the progress of the philosopher through the unbeaten tracks and unexplored regions of science.

Referring to the examinations instituted by the Society of Arts, and the certificates granted by them, the lecturer informed his audience, that at the first examination the best mathematician was a young man from Leeds, a bookseller's shopboy. He passed so good an examination, that the managers of the Kew Observatory, much to their credit, have appointed him assistant observer, a situation which, to one of his predecessors, opened the way to rank and fortune. Within the last few weeks the council of the Society of Arts have come to the determination to establish a public registry of their certificated candidates, which propose to throw open, free of charge, to all those persons who may desire to make merit and intelligence the qualifications of those whom they may employ. The Society of Arts, through its Board of Examiners, pledges its credit and character, that the certificates which it issues, whatever the grade, shall state with the most precise accuracy attainable, and without the least tincture of exaggeration, the clear, uncoloured truth; and he asked the friends of education and progress to co-operate with them, by taking into their counting-houses, warehouses, shops, manufactories, mills, and factories of every kind, those young men who, by obtaining certificates, shall have proved themselves to be intelligent, laborious, studious, and diligent. In benefiting yourselves, he continued, you promote the welfare of your country. England has, indeed, attained to a high standing among the nations: if only true to herself, a brilliant destiny awaits her. But a dark spot mars the brightness of her aspect, and that the Society of Arts, so far as its power and influence prevail, will strive to remove. We will endeavour, in our humble way, that incompetence, stupidity, imbecility, idleness, and ignorance shall no longer usurp the places of skill, of genius, of vigour, of industry, and knowledge.

WELLS.

Being called for a time to reside in this antiquated city, so recently visited by the British Archæological Association, and in which

> "The finer arts (save where the Muse has sung,
> In daring flight above all modern wing)
> Neglected droop their head,"

I thought a few words on what is doing here would not be uninteresting to some of the readers of your valuable journal. The various beautiful studies that here present themselves with thrilling interest to the lovers of architectural and antiquarian history are too well known to need any comment from me. This quaint old city, whose population has neither increased nor decreased for the last three centuries, seems at last to have made a move in the onward direction.

One would suppose that the music of the sweet play of its fairy fountain sparkling in the sun, or the poetry beaming with such intense brilliancy from its glorious cathedral, would almost inspire its people with its own richly-pervading spirit, whose

> "—— grandeur overwhelms us not.
> And why? It is not lessened: but the mind,
> Expanded by the genius of the spot,
> Has grown colossal; and can only find
> A fit abode wherein appear enshrined
> Our hopes of immortality."

The beautiful parish church of St. Cuthbert is undergoing partial restoration under the direction of the architect, Mr. H. Crisp, of Bristol: the old galleries that have so long disturbed the devotional eye have been removed, and their removal has brought to light the ancient colouring and flowing foliage on the clustered pillars. Indeed, it is certain that the whole of the interior of this church was decorated with colour and historical paintings of sacred subjects. After I had examined the portions brought to view by the removal of the galleries, I was informed that a beautiful life-size painting of our Saviour was discovered a few years since in the Trinity Chapel; also another large painting, representing the miraculous draught of fishes, and, by order of the then praiseworthy churchwardens, an artist was employed to restore these paintings; but alas! for the idiosyncracies of human affairs and the jejuneness of feeling for anything appertaining to the beautiful, the succeeding churchwardens had one painting chopped away, and the other plastered up again, because, forsooth, it annoyed their pseudo-religious eyesight. I feel grieved, as indeed must every lover of the fine arts, to see the artistic workings of our forefathers thus lost to us through the ignorance of petty authority.

The old unsightly-looking pews are being replaced by open benches with carved and foliated seat ends.

In East Wells, the piety and munificence of the widow of the late Dean Jenkyns is rearing a church in the Decorated style of the continent. The architect, Mr. Teulon, has elicited considerable polychromatic effect by the use of alternate layers of a red conglomerate, and the blue limestone of the neighbourhood, with the oolitic stone of Doulting for dressings. This church will certainly have a very novel and artistic appearance.

Workmen are also engaged in restoring a portion of the west front of the cathedral, some parts of which, through the inadvertency of the Dean and chapter in cutting away the angle columns of the buttresses, has become very dangerous, and a few weeks since some two or three tons of stonework fell down in the cloisters, through this want of proper advice.

At Wookey Hole, one of the largest papermills in the kingdom is being erected for Mr. W. H. Hodgkinson, under the direction of Mr. Edwin Hippisley, architect. The chimney will be a bold feature in the building, being 100 feet high, with a battlement top. The spirited proprietor also contemplates building a number of cottages for the workpeople, so that this celebrated and beautiful little valley will soon merge its wonted quiet into the noise and din of commercial life.

In East Wells there is also in course of erection a mansion for the bishop's secretary, on one of the most commanding and beautiful sites of the neighbourhood. The style is Decorated Tudor. The architect is Mr. Edwin Hippisley. The walls are of blue limestone and freestone dressings.

I should have mentioned that the workmen in blasting the rocks at Wookey Hole, exposed a portion of the skeleton of a fossil mammoth of the carnivorous tribe, together with a good deal of osseous Breccia, relics of mighty forms which have disappeared, but which, in the dim primeval time, wandered through groves of palms and ferns, and forests of coniferous trees, where now the oak, the elm, and the ash spring up, and the architect seeks in the petrefactions of the older world for the materials wherewith to construct his edifices. Thus may all things—

> "—— So inform
> The mind that is within us—so impress
> With quietness and beauty—and so feed
> With lofty thoughts."

THE SEINE AND THE THAMES.

I read with much pleasure some time since in the *Builder*, the article in which you ventured to stem the current of popular and indiscriminate laudation of the French capital, at the expense of our own, and with equal pleasure that of last week, entitled, "English and French Cities," in which the sanitary conditions of the two metropolitan towns were contrasted most truthfully.

Correct as the writer is when describing the cesspool system of Paris, and the universal stench resulting from it, he falls into an error (as many have done) in supposing that the river Seine is not contaminated by sewage. I have before me, as I write, a plan of the main sewers of Paris, and find that between the Pont de Jena and the Pont de Bercy upwards of seventy large outlets discharge into that river, and many, if not all of them, discharge a fluid almost as filthy as that which enters the Thames from the Fleet sewer, as any one may ascertain for himself by strolling along the quays in the summer months, and looking at the portion of the bed of the river exposed at that season of the year.

The fact is, that although a municipal regulation may exist interdicting generally fæcal matters entering the sewers, yet many exceptions have been made in favour of hospitals, barracks, markets, &c. and the liquid dejections

and refuse of the inhabitants have to a considerable extent for many years been carried off by the sewers into the Seine, and the pollution and injury of that river, I believe to be yearly increasing, and that it will continue to do so; for as the use of water-closets extends and the consumption of water increases, so the landlords will by all means in their power seek to prevent their cesspools (which are already, owing to the increased consumption of water, a heavy expense to them) from filling; and any filthy liquids they can get into the common sewers they will, and have for many years done. The whole of the surface washings also, in times of rain, which are nowhere more filthy than they are from some portions of Paris, discharge into the river, and the Seine therefore, like the Thames, is in a large degree the common sewer of the capital.

W. H.

ART IN MODERN NEEDLEWORK.

I have just now before me a needle-wrought sampler, in a quaint old-fashioned frame, at the bottom of which is "Jane * * * *, her work, 1805." This elaborate specimen of skill probably occupied the fair artist two hours of each afternoon, during five days in the week, for three months. It is painful to reflect upon the large amount of time and pains bestowed upon a thing composed of shreds and patches jumbled together without any principle of arrangement or view towards general effect. There are trees and flowers such as are only to be met with in this department of art. The following verse, neatly lettered in variously-coloured characters:—

> "What is friendship but a name,
> A charm that lulls to sleep;
> A shade that follows wealth and fame,
> But leaves the wretch to weep;"—

is surrounded by a border of some beauty. In fact, here and there, amongst the patterns thrown together at random, there may be traced a lingering indication of mediæval design: the greater part, however, is *modern and original*.

A representation of a milkmaid climbing over a style, of curious construction, is a characteristic example of this style of art. The hat of the maid is green, the dress blue and yellow, the apples on the tree are bright carmine, and the cloud above her head blue, pink, and yellow. On the right hand of the figure is a neat brick cottage; the windows, knocker on the door, &c. cunningly wrought. On the top of the chimney-pots are long iron funnels, which show that our grandmothers were not without the trouble of smoky chimneys. On the other side of the cottage is a balloon rising into a cloud similar to that already described.

There are, in the distant parts, arranged in defiance of all the rules of perspective, various delineations of natural history. These are singular enough, but are natural in comparison with a sort of cherub in top boots, with coal-black whiskers and hair, who on each side of the sampler hovers above the apple-trees amongst the birds.

I have also looked at another sampler, marked 1834, which, although much more effective, and bolder in execution, is equally without any true principle of art; and it is a sad fact, that in many instances, the patterns of needlework produced at the present day, although showy and taking, will not, in most cases, bear the inspection of the eye of true taste. This is the more to be lamented in consequence of our fair countrywomen having for so many centuries been famous both for the beauty and excellence of their working, both with their needle and at the frame.

Without entering into particulars, it may be worth while to mention that in the Saxon times of England, the patterns of the tapestry so much used in the decoration of the dwellings of that period were remarkable (considering the artistic means of the age), for a combination of both historical interest and ornamental design.

During the Middle Ages the fair ladies of England, in both palace and hall, directed the hands of numerous assistants in the production of hangings, embroidered and otherwise, for ecclesiastical and domestic edifices.

Ladies, in needlework pictures of large size, represented the heroic deeds of their husbands, sons, and brothers. They also devised scenes from Scripture history, and designed subjects connected with hunting, hawking, and other sports.

It is true that as the demand for this style of decoration increased, manufactories were established in various parts for their production. Without, however, taking account of these works, and confining ourselves to a comparison of the home-made productions of our ancestors, the historical designs which have already been mentioned, the diapers of many forms and colours, the embroidery of gloves, dresses, &c. &c. we cannot but feel humiliated by the contrast of the past with the present.

In looking over an immense number of designs for slippers, waistcoats, and various other things, the want of principle of design in the application of nature to ornamental purposes, was strikingly evident; so much so, indeed, that I wish you would call attention to this subject, and would direct our fair friends in London to no greater distance off than the tombs of the kings and queens in Westminster Abbey, and the numerous beautiful examples of diapers, &c. collected in the Architectural Museum, Canon-row, Westminster.

Back-Stitch.

CHURCH-BUILDING NEWS.

Stamford.—St. John's Church has been reopened. The work of restoration, under the direction of Mr. Edward Browning, of Stamford, architect, was commenced in May last, by the removal of the old and unsightly pews: all the old wood and stone floors were taken up, the nave arches scraped and restored, the clerestory windows divested of whitewash, the old belfry floor removed, the tower arches thrown open, and flues for heating the church introduced on a new principle. The work next commenced was the laying down of concrete, 6 inches thick, and upon this floors of deal were laid. Stalls, of solid English oak, were then erected, having bench-ends with carved finials, elbows, and sunk carved panels. The free sittings have moulded bench-ends with elbows. The whole of the seats have tracery backs of various patterns, with moulded capping. In addition to the stalls alluded to, there are eight loose framed seats, with tracery backs and carved bench-ends. The floors of the chancel and nave are laid with Minton's encaustic tiles. In the chancel, eight seats, set apart for the rector and the mayor and corporation, have four bench-ends with carved figures, representing the four Evangelists, executed by two self-taught workmen, named Rippin and Hull, in the employ of Messrs. Richardson. The organ, which stood in the south chapel, has been removed to the north chapel, and is enclosed on the south side by the screen which formerly separated the chancel from the nave. New stone altar-steps have been laid down. The reading-desk, on the right of the chancel, is new and of English oak, with open tracery front. The pulpit is of Roach Abbey stone, having four niches with canopy heads, under which stand four carved figures of the Evangelists, the whole surmounted with a carved and moulded capping. The whole of the works have been executed by Messrs. Richardson, and Mr. Tinkler, of Stamford. Two stained-glass windows, by Mr. Oliphant, of London, have been put up. The principal subject in the east window is "The Adoration of the Wise Men." The Virgin, with the Infant Saviour, occupies the centre, while the Magi kneel on either side with their offerings; and the side openings show a group of shepherds on the one hand, and of attendants on the other. Above are the angels, proclaiming "Glory to God in the highest;" and the star which has guided the travellers. In the lower part of the window, set in ornamental panels, and forming a base for the large picture, are five small groups representing our Lord blessing little children, questioning the doctors in the temple, His transfiguration, His triumphal entry into Jerusalem, and His appearance at Emmaus. The west window represents the conclusion, as the east window does the commencement, of our Lord's course on earth. The principal subject here, occupying the three centre openings, is "The Resurrection,"—the figure of the Redeemer rising from the tomb, a group of Roman soldiers dispersed, and an angel, seated on the removed stone. Parallel with this, and underneath it, is the entombment. One of the side openings contains a group of "The Crucifixion," the other has "The Baptism by St. John." The tracery of the window is filled with a choir of worshipping angels, and with figures of the four Evangelists. The east window, remarks the *Lincolnshire Chronicle* in describing it, thus commemorates the dawn and sunrise of Redemption, the west its victorious and complete accomplishment. This window is the gift of Mr. R. N. Newcomb, and is erected to the memory of his late uncle, Mr. Richard Newcomb. The east window was undertaken on the responsibility of the Rev. D. E. Jones, who, through the kindness of several friends, has succeeded in raising rather more than one-half of the required amount.

Shearsby-in-Knaptoft (*Leicester*).—The church of this place has been restored and re-opened. The architect, Mr. Ordish, of Queniborough, has, it seems, as far as possible, endeavoured to preserve the original architectural details, though, from the mutilated state of the fabric, and the alterations which have, without either taste or judgment, from time to time, been made, this must have been a difficult task. With the limited means at the disposal of the executive, however, economy was a point of essential consideration. The old oak chancel screen, of fourteenth century, has been restored. New chancel stalls have been fitted up in substitution of the old decayed pews; and in the body of the church have been erected mediæval benches, with square ends, of very plain construction. The old leaden-covered roof, which was before nearly flat, graduating only a few inches from the eaves to the apex, is now highly pitched, with open framework. There are several portions which have not been restored from want of funds, and amongst them the piscina and sedilia. The exterior of the building presents a curious aspect with the irregular stonework and the apex of the roof rising nearly to the top of the tower, which was built during the last century, but has no distinct form of architecture. The originator and prime mover in the work of restoration was the late wife of Mr. Thomas Wilson, of Knaptoft Hall. As a tribute of respect to her memory, a small lancet stained glass window has been placed in the north wall of the church by the architect, and another of more ample dimensions is about to be placed near it by the relatives and admirers of the deceased. It is now being prepared by Mr. Hardman, of Birmingham. The contractor for the restoration was Mr. Horton, of Mousley, and the expense incurred is about 700*l*.

Cottenham.—The opening of the new Baptist Chapel, at Cottenham, took place on Tuesday before last. The chapel, which has recently been erected after plans by Mr. Thomas Haird, at a cost of upwards of 1,427*l*. stands upon the site of the old building. It is built of white brick, and the interior is calculated to hold sittings for 750 persons. Towards the cost of its erection 1,147*l*. 10s. 6d. have been subscribed in the village.

Oxford.—At Christ Church Cathedral, a few days ago, says last week's local *Journal*, a subterranean chamber, supposed to have been used for the secretion of plate or other treasures, was discovered on the site of the organ gallery. Its size is 7 feet by 5, the walls 6 feet high, with an arched roof. There were cavities on the north and south side, measuring 14 inches by 16, and 1 foot 8 inches deep. On the top a beam appeared to have run across, and on one side was a kind of niche from the top to the bottom. This chamber, the purpose of which has puzzled the architect, the builder, and many antiquaries, has been again covered over, and will doubtless excite similar curiosity in some coming period.

Aylesbury.—On Monday before last a vestry meeting was held, for the purpose of sanctioning the purchase of ground, by the Burial Board, for the new cemetery. Ultimately sanction was given for the purchase of four acres of the ground selected, at a cost of 820*l*. The land selected for the new cemetery is near to the New Road Turnpike, and is the property of Mr. T. Bell.

Little Braxted. — The parish church here

having been restored and re-seated, under the superintendence of Mr. Ewan Christian, was re-opened on 11th ult. for divine service.

Wombridge.—On Tuesday before last, the parish church of Wombridge was reopened, after having been repaired. Mr. St. J. C. Charlton, of Apley Castle, has paid the cost of painting the church, which has been executed by Mr. C. Tudor, of Oakengates.

Tunbridge.—The cemetery buildings will comprise an entrance lodge and two chapels, each 30 feet by 40 feet, connected together by a centre archway, over which is a spire containing the bell. The buildings are designed in the Gothic style of the Decorative period, and will be faced externally with Kentish ragstone in random courses, and lined internally with hollow bricks, to prevent damp penetrating. The whole of the works have been designed by Mr. J. Messenger, of Folkestone, architect, who has already executed two or three cemetery buildings in the county, and will be carried out, under his immediate superintendence, by Mr. George Punnett, for the sum of 2,296*l.*

Croydon.—An appeal to the inhabitants, for the restoration of the parish church, has been circulated by Mr. Hodgson, the vicar.

Newport (Isle of Wight).—The reopening of St. Thomas's Church, according to the *Hampshire Advertiser*, will take place on the 25th inst. The building-fund has now reached the sum of 9,368*l.* odds, or to within 400*l.* of the amount required for the completion of the whole fabric. The inner arch of the principal entrance is all that remains of the ancient fabric. The alabaster effigy of Sir Edward Horsey is re-erected on the south side of the altar, and a large space is left on the eastern side for the monument to be erected, by special order of her Majesty, to the memory of the Princess Elizabeth, and which is now in course of completion by Marochetti. The designs in ornamental carving are being developed daily about the church by Mr. Baker. Most of the pews in the body of the church are completed, and an order is just being given for laying the gas-fittings, glazing, painting, &c.

The Berrow (near Ledbury).—The church of St. Faith, in this parish, was reopened on Thursday before last, after undergoing considerable restoration. The edifice was in a miserable state of dilapidation and decay,—the walls saturated with wet, owing to want of proper drainage, and the roofs rotten,—the old oak benches much defaced, or removed to make way for high pews, and neither wind or wet could be kept out by the decayed and broken doors and windows. The incumbent, the Rev. Mr Law, induced his parishioners to make a parochial grant, and to subscribe liberally to a fund for effecting the works which have now been completed under the direction of Mr. J. W. Hugall, of Cheltenham. The nave and aisle have been entirely reseated with open oak benches: the prayer-desk, lectern, and pulpit, are also of oak: the floors are paved with Minton's tiles, and open roofs have been put upon the building: the walls have been newly plastered, and the windows glazed with cathedral glass. The chancel is still in an unseemly condition, with broken brick floor, rotten plaster, and dirt: the *owner*, it is said, will neither restore it nor allow any one else to do so for him.

Llanerchymedd.—The church here was re-opened for divine service on the 16th ult. The edifice has been almost entirely rebuilt on the old foundation, except the tower, which has had new windows, and a roof put upon it. The style in which it has been designed is a rather Early Pointed. The plan consists of a chancel, 37 feet by 18 feet 6 inches, a nave, 48 feet by 19 feet 5 inches, and a north porch, with tower at the west end, the lower story of which is occupied by a vestry, and above is a ringing-chamber, the third, or uppermost story being intended for bells. There is a small bell-cot on the east side of the tower. The church, as re-arranged, is calculated to contain 260 persons. In the interior is an open timber roof, stained and varnished, as are also the seats, which are all open. The reading-desk and pulpit are placed on the north and south pier of the chancel arch. Within the altar-rails are two carved oak chairs, the gift and design of Lady Sarah Hay Williams. The total cost has been upwards of 1,000*l.* The architect was Mr. H. Kennedy, of Bangor. The additional burying-ground was given by the incumbent, the Rev. Hugh Owen, and has been fenced round by a wall.

Shrewsbury.—Belle Vue having been fixed upon for a cemetery, it was laid out and walled in. The ground has a southernly aspect, and is about two acres in extent. A considerable number of burials have already taken place in it. On Wednesday week the chief stone of the chapel which it is intended to erect upon the ground was laid. The chapel will be in the Early English style, of Redhill stone, with Grinshill stone dressings. On each side will be four buttresses, with neatly moulded water-tables, and three lancet-headed windows. The north end will be the principal face, in the centre of which will be a moulded entrance doorway. On each side of the doorway will be a lancet-headed window: over the gable part will be a moulded wheel window. The gable itself will be surmounted by a bell-turret, of Grinshill stone. The roof will be covered with part ornamented, and part plain, blue tiles, with ornamented blue cross. The roof of the interior will be open, showing the timbers, which will be all dressed: the principals will be ornamented. The reading-desk and seats will be open work, stained. The floor will be laid with blue and red quarries, diamond-wise. Mr. Pickard, of Shrewsbury, is the architect. The building is intrusted to Mr. John Cross, of this city.

King's Norton. — The church here has been re-opened. The east window, a plain five-light lancet, has in stained glass in the centre the Crucifixion, and in the two side lights the four Evangelists, with figures of angels holding scrolls and texts of Scripture. A round-headed window on the south side of the chancel and a priest's door have been removed, and a Decorated window and a new door inserted. This window and the two on the opposite side of the chancel are filled with ornamental stained glass, and the emblems of the Passion in the centres. The pews have been removed and converted into open seats, the old materials being worked up. The chancel has been laid with encaustic tiles, presented by Mrs. Prosser; and the altar rails are in brass, presented by Mr. Stock. The nave and lower entrance, with the cross-aisle, have red and blue quarries chequered. The skylights in the roof of the nave and a window over the chancel arch are now blocked up, and the pillars and arches of the nave have been scraped. The iron bars in the windows of the south aisle will be replaced by stone mullions, and a stone pulpit is to be erected. The Perpendicular windows of the porch, which have been blocked up for many years, are now restored. The organ (built by Harmshaw, of Birmingham) is placed at the west end of the south aisle.

Birmingham. — A new Synagogue, with schools and houses for the ministers, have been erected on a piece of land at Singer's-hill, near the old Synagogue in Severn-street. The building was commenced in June, 1855. Henceforth the whole of the Hebrew institutions of the town will be consolidated in the new building, and the two old Synagogues and the Hebrew school in Hurst-street will be sold. The new Synagogue was to be consecrated on Wednesday. The building was designed by Mr. Henry R. Yeoville, architect, and has been erected, under that gentleman's superintendence, by Mr. Samuel Briggs (both of Birmingham). The main features of the design are Early Italian, but in the details the Byzantine style has been freely used. The materials employed externally are red and white bricks, with dressings of Kingswood stone. The principal front consists of three sides of a quadrangle, of which the ministers' houses form the wings, the centre being occupied by a stone portico of three arches, surmounted by a cornice with an enriched parapet. The front of the quadrangle is enclosed by an iron railing, with gates. Above the portico rises the gable of the main building, in which is inserted a rose window, of twelve lights, filled with stained glass. The side elevations of the building are much plainer than the front. They are pierced by two tiers of windows, the lower modelled on Byzantine examples, and the upper semicircular-headed, with moulded architraves of white brick. The whole is surmounted by a cornice of white brick and stone. Entering by the principal front, and ascending a low flight of steps, access is afforded from a portico to the galleries. A lavatory is attached to the left-hand side wall of the portico. Entrance to the Synagogue is obtained through a vestibule, lighted from the roof. On each side are rooms for the ministers and choristers. The Synagogue consists of a nave, north and south aisles, and an apsidal chancel, or sanctuary, raised four steps above the floor of the nave. The total length is about 90 feet, the breadth 60 feet, and the height 42 feet. A gallery runs round the sides and west end of the interior, and this necessity of the construction has compelled the architect to adopt two tiers of columns, forming seven bays. These arcades divide the aisles from the nave. The columns, which are of Bath stone, support the semi-circular ceiling of the nave, which is divided into panels by enriched bands. It is intended, according to *Aris's Gazette*, eventually to decorate the ceiling with colour. The sanctuary opens to the nave by a lofty arch, with carved soffit and archivolt. The arch is supported by eight scagliola columns, arranged in double tiers, the lower ones being square. Two similar columns, placed at the back of the sanctuary, support the hemispherical, domed roof, which is groined and panelled. The sanctuary is lighted by three deeply-recessed semi-circular headed windows, decorated with pilasters with foliated capitals, and with enriched archivolts. The windows are filled with stained glass, of geometrical designs, chiefly a diaper. In the centre window are placed the tables of the Decalogue, inscribed in Hebrew characters. The centre compartment of the sanctuary, used as the ark, or depositary for the sacred writings, is decorated with a canopy of crimson velvet, and curtains of colours varying with the seasons of the Jewish Church. The seats throughout the building are arranged stall-wise, without doors. The gas-fittings and candelabra were manufactured by Messrs. J. and E. Ratcliff, the stained windows by Messrs. Chance, and the painting and staining of the woodwork by Mr. Whitworth, all of Birmingham..

Edgbaston (Birmingham).—An addition to the church of St. George, Edgbaston, has just been completed by Messrs. Branson and Gwyther, from the designs of Mr. Charles Edge, of Birmingham, in the erection of a chancel, with a vestry and a turret on its north side. By this extension, many additional seats have been gained in the body of the church, and about 200 children can now be accommodated in the galleries. The stained glass which formerly filled the east window has been removed into the chancel. The interior is fitted up with stalls on either side, and the roof is open timbered. The details are in the style of the building—Early English.

Ilam (Dovedale.)—The church of Ilam has been recently restored and reconsecrated. The most material addition has been a new aisle on the north side, capable of accommodating fifty persons. The rest of the church has, however, been so much altered, that no part of it, says the *Derbyshire Advertiser*, would probably be recognised, save the old porch. All the roofs have been raised: they are open inside, and outside are covered with variegated tiles. The tower has been very much raised, and now terminates in a saddleback roof, the gable ends of which are pierced with windows. A peal of five bells, cast by Messrs. Taylor, of Loughborough, has been hung in the tower. The whole area of the church has been seated with open benches of solid oak. A chancel screen crosses the chancel arch: it is of metal, and is the work of Messrs. Skidmore, of Coventry. The chancel seats are placed stallwise, and are carved. The pulpit is of Hopton-wood stone, polished, with carved medallions and shafts of Derbyshire marble. The east window is a triple lancet, with columns of dente marble on the sides, and filled with glass by Ward, designed by Mr. Clayton. Below this window is a reredos, the gift of the vicar, of alabaster, carved, the compartments filled in with tiles from Messrs. Minton's manufactory. An archway, adorned with much carving, leads through a lobby, which has been enriched with a groined ceiling, to the cemetery chapel, containing Chantrey's monument: from

this lobby a door opens into the sacristry. The nave is enriched with three stained glass windows: a large one, the gift of Miss Young, which is not quite finished, represents the Visit of the Wise Men to the Infant Saviour. A small lancet, of early date, has been filled with stained glass by the contributions of the parishioners: it represents the Baptism of our Lord. Another small round window has been inserted by Mr. Watts Russell, to whom the entire restoration is due, with the exception of some gifts from friends and neighbours. The restoration has occupied more than a year, and has been performed by Mr. Evans's workmen. Mr. Harrison was the clerk of the works. The stone carving of the capitals of pillars, &c. was done by a carver named Herley. The church is warmed by a hot-air apparatus, supplied by Mr. Handyside, of Derby. In the excavations for this, and in the demolition of old walls, several curiously-carved monumental crosses of great antiquity were discovered. The church has been restored from designs furnished by Mr. Scott.

Lancashire.—A monument has been recently erected in the churchyard of Great Eccleston Fylde, Lancashire, in memory of Mr. Robert Parkinson, designed by Mr. J. G. Hall, architect, London, and executed by Messrs. Yates and Robinson, of Preston, contractors. It consists of a Gothic cross—the inscription on the stem.

Preston.—The proposed new Baptist chapel in Fishergate will be erected on a site at the corner of Charnley-street. In addition to local competition, says the local *Guardian*, plans were sent in from architects in Leeds, Manchester, and Sunderland. The successful competitors were Messrs. Hibbert and Rainford, of this town, a brief epitome of whose designs we subjoin:—The structure will be erected at the south corner of Charnley-street, and will be entered from Fishergate by a flight of stone steps, with palisading in front. The ground-floor of the chapel will seat 450 persons, and the galleries 170 persons; but are capable of extension, so as to accommodate twice that number. In the rear of the chapel will be the vestry, dressing-rooms, and staircase to the organ-gallery. The seats will be open, and the roof will have open framing, consisting of rafters, with curved ribs, and spandrils filled in with ornamental iron castings. Beneath the chapel are to be boys' and girls' schools, divided by a movable screen, with separate entrances from Charnley-street. These schools will be 12 feet high, and have all requisite conveniences attached. The exterior will be altogether of stone. The style of architecture is Byzantine, of the Venetian manner, selected as giving the edifice a character distinct from the other ecclesiastical buildings in the town. At the corner of Charnley-street will be a square tower, upwards of 60 feet in height.

Manchester.—The fall of the tower and spire of an Independent Chapel, in course of erection at Higher Broughton, is thus noticed in the *Manchester Guardian* last week. "One part of the building was a square tower, rising as high as the roof of the main building, and surmounted by an hexagonal lantern, terminating in a conical spire. For a day or two some cracks and other indications of failure had been remarked, and on the morning of the accident, about five o'clock, the tower and spire, which had reached the height of 170 feet, fell with a tremendous crash, demolishing the west end, or street front, of the chapel, including a large Gothic window, the arched entrance at the base of the tower, a considerable portion of the roof, and the whole of a gallery intended for Sunday-scholars. From the manner in which the materials appear to have fallen, it would seem that the building did not topple over to one side, but the whole fell almost perpendicularly, as if the lower part of the tower had been crushed under the superincumbent weight of the lantern and spire. We understand that the damage sustained by this unfortunate event is estimated at about 1,000*l.* The damage would have been heavier if the tracery of the window had been filled in, and the turrets, pinnacles, and other ornaments of the front raised. The tower is 16 feet square, and the foundation walls, which are carried to a depth of a dozen feet or more, are 5 feet thick. The foundation had to be built deeper than was at first designed, in consequence of it being found that the ground was intersected by drains and watercourses, which may have had some effect in causing the fall of the building. From the hour at which this untoward accident occurred, nobody was at work on the building, and, so far as is known, no personal injury was sustained. It is frightful to think what might have been the consequences if the fall had taken place when the chapel was completed and occupied by a crowded congregation."

Scropton.—The church here, which was consecrated on the 25th ult. is designed in the Decorated style, and consists of a lofty tower, nave, chancel, and porch and vestry. It is built of the local stone, interspersed with courses of deep red sandstone, and radiated arches of alternate light and dark stone around the windows and arches. The tower is lofty, and its belfry lights are not louvered, but kept completely open, provision being made for carrying off the water. The tower is terminated by a pyramidal stone covering. The interior of the church is lined with stone, and the chancel arch ornamented by inlaid red stone and alabaster devices. The pulpit is also of alabaster, with red stone shafts and enrichments. The roofs are of deal, stained, as well as the seats. The church holds 270 people, and has been well executed by Messrs. Elliott and Lilley, the builders, from the designs of Mr. Ferrey, the architect.

York.—The new Wesleyan chapel, erected on the left side of the recently formed thoroughfare between Micklegate and Bishophill, called Priory-street, has been opened for divine service. It is of red brick, with ornamental stone facings, possessing five upper windows in front, three doors, and a staircase window on either side. On each side of the chapel are two rows of seven windows, and in the rear are two vestries. Galleries extend round the chapel in an oval form, the pews in them being five deep at the sides. The pews, which have mahogany tops, are painted white. The lighting of the building is accomplished primarily by a large central "sun-light," consisting of 164 jets of gas, arranged in four circles, in the form of an inverted cone, and suspended about 4 feet from the ceiling. This mass of light is sufficient for the galleries and the body of the chapel, and it is even expected that pulpit lights will be dispensed with. The pews under the galleries are lighted with lamps placed round the walls. The chapel is provided with hot-water apparatus for heating, and ventilated by the open funnel in the ceiling over the "sun-light." The architect of the chapel was Mr. James Simpson, of Leeds, from whose designs the Centenary chapel was also built. The masonry and brickwork have been executed by Mr. Shaftoe, builder, of this city, the joiner's work by Messrs. Atkinson and Thorpe, of Leeds; the plumber's work, by Mr. T. Shouksmith; the plasterer's, by Mr. Geo. Jennings; the slater's, by Mr. W. Ellis; and the painter's, by Mr. G. Wood, all of this city. Mr. G. J. Calvert has supplied the warming apparatus and the communion rails, and the gas company the lighting appointments.

Cadeby (near Doncaster).—The consecration of the Church of St. John the Evangelist, at Cadeby, took place on Thursday in last week. The church has been very recently completed, from the designs of Mr. Scott, and at the cost of Sir Joseph Copley, Bart. on whose estate it is erected, and who has also endowed it. It lies to the right of the road leading from Cadeby to Melton, and overlooks the vale of the Don. The style employed is the Early Decorated, and the stone used is the white limestone on the estate of the founder. The roof is overlaid with Westmoreland slate, and surmounted by a bell turret—and the porch has a deeply-recessed arch. The capitals of the doorway of the porch and the sides are carved. The chancel is lighted by a window of three lights, with circular head cusped with trefoils, filled with tracery—a copy of the old Norbury window—by Mr. Powell, of London. The west end is lighted by two windows, of two lights each, surmounted by a circular window, filled with Powell's patent glass. The pulpit and reading-desk are of oak, from designs of the architect, carried out by Mr. Webster, of Boston. The chancel fittings and the altar rails are also of oak, and the work of Mr. Rattee, of Cambridge. The floor of the chancel is laid with Minton's encaustic tiles; and the nave is covered with the patent tiles, from the works of the same firm. The interior roof is composed entirely of oak rafters, with stencilling between the timbers. The dimensions of the interior of the church, which stands on an acre and a half of ground, are—the length of the nave, 34 feet 7 inches; width, 16 feet: length of the chancel, 23 feet; width of the aisles, 8 feet; height of caps of piers, 12 feet; pitch of the roof, 31 feet. The approach is by a gentle ascent from the highway of a terrace of five steps. The cost of the church has considerably exceeded 5,900*l.*

COMPOSITION OF MORTAR.

With reference to the paragraph last week on this subject, inquiries have been made as to the proper proportions of clay and lime to be used. In reply to these, our communicant, Mr. Stephen Garrard, obligingly writes as follows:—The mixture of the heaps has usually been five of clay to one of chalk. Of course, if the result gives too much or too little strength for use, it is easily remedied by the addition of ground ballast (the burnt clay), or lime, as may be required. The ballast may be treated as sand, and mixed with lime in the ordinary way. Care must be taken that the clay is well burned and well ground.

THE DISTRICT OF NEWINGTON, &c.

It has been suggested that the vacant district should be divided into two. We are glad to find the committee of the Board of Works, to whom the question was referred, appreciating the importance of obtaining men of integrity and good standing as district surveyors, have agreed to recommend that it is not desirable to make the division. Mr. Hesketh, who assisted materially in improving the present Building Act in its passage through Parliament, is a candidate for the appointment. The Board could not have a more efficient officer.

RAILWAY MATTERS.

Traffic Returns.—The traffic returns of railways in the United Kingdom for the week ending Sept. 20 amounted to 492,091*l.*, and for the corresponding period of last year to 450,248*l.* showing an increase of 41,843*l.* The gross receipts of the eight railways having their termini in the metropolis amounted to 213,490*l.* and in last year to 199,837*l.* showing an increase of 13,653*l.*—The increase on the Eastern Counties amounted to 1,503*l.*; on the Great Northern to 867*l.*; on the Great Western to 2,270*l.*; on the London and North-Western to 6,913*l.*; on the London and Blackwall to 62*l.*; on the London, Brighton, and South Coast to 1,107*l.*; on the London and South-Western to 1,762*l.*; on the South-Eastern to 164*l.*: Total, 13,653*l.*—The receipts on the other lines in the United Kingdom amounted to 278,601*l.* and for the corresponding period of 1855 to 250,411*l.* showing an increase of 28,190*l.* in the receipts of these lines.

Railways in Russia.—The principal network of railways to be constructed in Russia has been conceded to a company composed of capitalists of various countries, among whom the chief are the heads of the Paris Credit Mobilier, and MM. Hottinguer, Baring, Hope, and Stieglitz. The concession is granted for 85 years, and a minimum interest of 5 per cent. is guaranteed to the shareholders by the Russian Government. The lines must be completed in ten years. In consequence of this decision, MM. Isaac Pereira and Thurneissen, on the part of the Credit Mobilier, have left for Russia.

Railways in America.—From a statement made up to the end of 1855, of the extent and cost of the railways in the United States, compared with those of Great Britain, we learn that the number of miles of railway opened in America is 23,242, and the cost of construction has averaged 7,100*l.* per mile. For this country the total is put at 8,334 miles (reckoning 3,076 miles of double track as 6,152), and the cost 36,000*l.* per mile. The people of the United States, therefore, are congratulated on having obtained nearly three times the extent of railway possessed by Great Britain, at little more than one-half of our aggregate outlay. The difference in the durability and general character of the roads, and also of the rolling-stock, must, however, be taken into account.

PROPOSED COMPETITION FOR THE PALACE OF INDUSTRY,

TO BE ERECTED IN AMSTERDAM.

It is proposed to erect a building in Amsterdam for industrial exhibitions, with bazaars for collections of objects of art and science, and rooms for meetings and other purposes; and an appeal is made to the architects of all countries for designs. For the convenience of some of our readers, we give insertion to the instructions and conditions which have been issued.

"The ground, of a rectangular form, has an area of 40,000 square mètres, ten acres of which the buildings, without the yards, may cover: 10,000 square mètres = 2½ acres.

The following subdivisions are required, viz.:—

A. A monumental front, containing a colossal vestibule, in which apartments for the royal family, rooms for meetings of the members of the society with their ladies, for the directors and administrators, and for audience chambers; finally, with rooms for the principal home officials and accessory apartments.

B. A series of saloons of different dimensions, varying from 150 to 250 square mètres, which are designed for cabinets, libraries, and collections of objects of art. The number of these saloons must be about twenty, and they may be arranged in two stories, of which the upper is merely destined for placing the collections of objects of art, and which will be provided with light from above.

C. A central exhibition-room, having an area of about 7,000 square mètres, in which should be a gallery, not exceeding 8 mètres in breadth, and containing two refreshment-rooms, with their kitchens, cellars, and the needful dwellings for servants.

The parts B and C must be arranged so that they may be enlarged *ad libitum*, without diminishing the perfection of the original plan; a particular which must be shown clearly in the plans.

The galleries, staircases, communications, and a sufficient number of retiring places, must be easy, spacious, well lighted, and have good ventilation.

The buildings, A, B, and C, must be so arranged that each part can be made respectively accessible to the public. The construction must be solid, and at the same time elegant; also, as far as possible, fire-proof. The principal arrangements and the kind of materials to be used must be clearly described and pointed out, also the manner of lighting, warming, and ventilating.

The space around the buildings must be laid out as gardens and walking-places for the visitors, with large plains before the front, and with covered ways for equipages, whilst the mode of inclosing and adorning the gardens with fountains, benches, groups of statues, is left to the taste of the architects.

To the plan must be added the needful drawings and illustrations, and also an approximate valuation of expense, the cost of piling not included. The ground plan to be made on a scale of 0·003 to 1,000 = 3 : 1,000.

The elevation of the front, the sections of length and breadth, on which the principal construction must be clearly shown, to be on a scale of 0·005 to 1,000 = 5 : 1,000. It is left, however, to the architect to make the drawings of the details on a larger scale.

To the best-judged plan will be awarded a premium of 1,000 f. Dutch currency; and to the two plans approaching the nearest to the best approved, 300 f. Dutch currency.

The three above-mentioned plans remain the property of the society: those which are not crowned can be reclaimed by the authors.

As competitors, the architects of every civilised nation are invited.

The plans must be sent in, free of postage and expenses, before the 31st of December next, to the Secretary of the International Society of Industry, 118, Bloemmarkt, at Amsterdam: they must be distinguished by a motto or mark, and provided with a sealed letter, containing the name, quality, and the domicilium of the authors. The same motto of the plan must be placed on the outside of the letter, with a clear sign for subsequent claim.

The decision on the plans is left to a jury of qualified persons, to be elected by the Council of Superintendence of the Palace, and the report of their judgment will be made known by the journals and periodical publications.

The Direction to the International Society of Industry.

(Signed) D. S. Sarphati, Chairman.

Amsterdam, Sept. 1, 1856."

With the result of the Lille Competition before their eyes, it is to be hoped that English architects, before they compete, will obtain some assurances as to the intentions of the committee, with respect to carrying out the selected design.

ENTRANCE TO ST. JAMES'S HALL, 28, PICCADILLY.

PROPOSED ST. JAMES'S HALL, LO[illegible]

ST. JAMES'S HALL, LONDON.

Advertisements have made known to our readers the formation of a company to provide the west end of London with a suitable music hall. Arrangements are in a forward state, we are told, for commencing the works.

The proposed building, designed by Mr. Owen Jones, architect, will be erected on a plot of ground in Vine-street, extending from the Quadrant to Piccadilly, and will have a frontage in Vine-street and in George-court, with entrances in Piccadilly and the Quadrant. We engrave a view of the intended entrance in Piccadilly.

The building will consist, on the ground-floor, of two minor halls, the one 60 feet by 60 feet, and 24 feet high, entered from the Quadrant; and [illegible] entered from Piccadilly. On the first-floor will be the great hall, 60 feet by 136 feet, and 60 feet high; entered both from the Quadrant and from Piccadilly. There will be besides exits from all the halls, in Vine-street and George-court. The staircases are at the angles

and external to the main building. A private entrance for the Queen is obtained in Vine-street, and the staircases and accommodation for a large orchestra are obtained in George-court. Next the Regent-street entrance will be a spacious *restaurant*, with two rooms, 60 feet by 40 feet, and every other accommodation. The large hall, of which we have engraved a view, is on plan a parallelogram, five squares wide and eight squares long, with recesses at one end for the orchestra and at the other for the galleries. The vault is a semicircle, 30 feet diameter, springing at 30 feet from the floor of the hall. Between each square are small columns, from which spring ribs, stretching right across the hall, and dividing the surface of the vault into eighty spaces, equal on plan, but varying in elevation. At each of the intersections of the ribs will be suspended a gas chandelier in the form of a star, to diffuse one equal light over the whole surface of the hall. To show the decoration more clearly, we shall give one compartment more at large on another occasion.

PROVINCIAL NEWS.

Chelmsford.—A meeting of the inhabitants of Chelmsford was held in vestry last week to consider a proposal to apply part of the Attwood Fund in aid of a project for clearing the entrance to the New London-road of a house recently sold, so as to effect a considerable improvement in the general appearance of the town. The proposal in shape of a resolution was voted for by a majority of twenty-five to twelve, but a poll was called for and agreed to.

Maidenhead.—The Town-hall of Maidenhead has been repaired. The flooring and other parts were in a bad condition. The ventilation was also much complained of. Conveniences, which did not exist before, have been added. The expenses will be defrayed by subscription, collected by the Mayor.

Kingskerswell (South Devon). — The new schools in this parish, built by the Rev. C. A. Fowler, the vicar, were lately opened. They are from a design by Mr. Hugall, the architect of the re-building of St. Mary's Church of this place.

Cardiff.—The new bridge over the Taff River, near Eirw village, in the Rhondda Valley, which has been in course of building for some time, was, on Monday before last, carried away by a flood caused by heavy rain. This will cause great delay and a heavy loss to the contractor, Mr. Richard Mathias. Had the fine weather, it is said, continued a week longer, the bridge would have been placed beyond danger.

Wednesfield.—The new schools here were to be opened on Monday. They are situated near the parish church. Mr. Edward Banks was the architect, and Mr. G. Spilsbury, the builder, both of this town. There is a play-ground in front of the building, and a master's-house (now erecting) adjoining. The site of the school building and a large portion of the play-ground, valued at about 200*l.* have been given by the Rev. W. Stephens, the vicar of Wednesfield, out of private property, by which the school fund will be benefitted another 200*l.* from the committee of council.

Cheadle.—New schools have been erected at the village of Tean, and were opened on Tuesday in last week. They have been erected at the sole expense of Messrs. John and Nathaniel Philips and Co. tape manufacturers, of Tean, Cheadle, Eagley, Manchester, and other places. The new buildings stand on an eminence at the upper end of the village, overlooking the church and fronting to the west. They consist of three rooms for boys', girls', and infants' schools. The boys' school is in the centre, the others transversely at either end, forming the wings of the building. The centre room is 60 feet by 35: the others are 60 feet by 25 each. They are built in the Tudor style, of native bricks, with Hollington stone dressings; open timber roofs, planed and stained. There are also class-rooms, play-grounds, a terrace, and other conveniences. The site upon which the schools are erected was presented to the firm by Mr. John Capel Philips, of the Heath House. They have been erected from the designs of Mr. M. Thompson, of Kendal, architect, by Messrs. Keats, Bostock, and Gosling—the former contracting for the brick and stone work, the second for the joiners' and carpenters' work, and the latter for the plumbing, glazing, and painting. The cost of the buildings has exceeded 3,000*l.*

Burslem.—The Burslem new Town-hall is rapidly approaching completion. Mr. Hales, the surveyor, in his report to the local Board of Health, states that the contractor had completed his original contract, and that there only remained the colouring and decorations to be done preparatory to the opening.

Leeds.—The foundation-stone of the St. Peter's new National Schools was laid on Sunday before last, by the bishop of the diocese, immediately after the morning service. It is estimated, according to the *Leeds Intelligencer*, that about 5,000*l.* will be required for the work. The new schools will be situated on a plot of ground on the north-east side of the parish church, which has been purchased for the purpose, and it will be necessary to pull down several houses. The buildings will cover a considerable area, and will comprise three teachers' residences, with boys', girls,' and infants' schools, having separate entrances to each. The schools will be capable of accommodating 937 children; and there will be a library, class, and lecture rooms, and open and covered play-grounds. The design is in the Perpendicular style of architecture, in harmony with the church, being brick with stone dressings, with tower at the north-east corner, containing a staircase and ventilating shaft. Messrs. Dobson and Chorley, of Leeds, are the architects.

Montrose.—The local *Review* speaks of designs for new Assembly Rooms and Corn Exchange. The styles are Classic and Gothic. The first-floor of the large hall will accommodate 650 persons. There will also be large galleries at each end, capable of seating 200 each; thus giving accommodation for an audience of 1,050. Under the galleries is a large hall to hold about 300, for smaller meetings and *soirées;* together with several ante-rooms for committees, and dressing apartments; whilst a semi-sunk floor will contain kitchen, scullery, and other useful appendages, for *soirées*, dinners, &c. Under the west gallery will be the stalls for the corn-factors. The entrance to the hall will be by a wide covered entrance through Mr. Mitchell's proposed new building in High-street, and passage leading to the intended new markets. The erection of the Assembly Rooms was to be proceeded with without delay, whenever the company was formed, which was to be in a few days.

Jersey.—The new infant school-room, built at the bottom of Clear View-street, at the back of Upper Val-Plaisant, was opened on Wednesday before last. The school-house, says the *Jersey Times*, is built for the instruction of infants belonging to St. Mark's district, by which means the St. Mark's schools will be relieved of a large number of young children, to be prepared for the more advanced schools. The new building is 46 feet long by 20 feet broad. The roof is open to the ridge, with a skylight in the centre, and moulded oak-stained rafters. Messrs. Balsam were the builders.

VENTILATION AND THE VICTORIA HOSPITAL.

The arrangement, construction, and the ventilation of hospitals are of the utmost importance. It is a fact as old as the human race, that fresh air is necessary to health and life. It is also a fact, that this fact is seldom fully realised and acted upon. Look at modern society, at our theatres, at our ball-rooms, at our private houses, during an evening party, and hear what such observers as Mr. Roberton say of our hospitals. I have seen something of the way of modern life, civil and military, low and high, and feel compelled to report that ventilation is not attended to. The poor will crowd living-rooms and sleeping-rooms, until there is not more than 30 or 40 cubic feet of air space to each inmate. Our nobility and the rich will crowd a levee, a state-ball, or an evening drawing-room party, until there is not more than 20 or 30 cubic feet of air space for wax-lights and human lungs, combined. The doors on such occasions must be opened, or the lights would grow dim, and the ladies might faint. At the dinner-table we have our plates changed. We do not pig from a common dish, or eat with our fingers; but at an evening party we breathe lung-tainted air, which is much worse. The necessity for ventilation may be acknowledged: the principle is not practised.

The country is much indebted to you for noticing the Victoria Military Hospital, as also for giving Mr. Roberton's and your own remarks. The arrangement of the wards in the Victoria Hospital is bad, beyond the power of artificial ventilation to mend. Hospital wards ought to be independent of each other, and independent of artificial means of ventilation. There should not be the least chance of the air of one ward tainting the air of any other ward: the foul air of latrines should pass away without "an artificial current of air from the wards." Look at the plan (p. 458, *ante*), and see if rooms, or wards—T T—X X—V—U—&c. story over story, with latrines, S S, betwixt on each floor, and under the same roof, can be prevented even by artificial means from tainting each other. But why adopt this connected form of construction? Did the architect wish to produce a grand elevation, or has it been to economise space? It cannot be this latter, as there is abundance of space inclosed that is useless to the wards and to the sick to be confined in them. C. E.

We have received numerous adhesions to our belief, that the French plan we published is the correct plan,—detached wards,—each room for the sick inclosed by four separate walls,—windows on two sides opening from the ceilings, and double sashes glazed; further, the latrines should be divided from the wards by a passage, or corridor, and be under a separate roof.

The corridors to be continuous and close, to the height of a man, but open above with piers or columns: the spaces not glazed. There should be galleries and seats on the garden sides for convalescents. This is sadly too much neglected. There is no escape from a sick ward, when sunlight, trees, plants, grass, and the external air, would do more for the patients than all the medicine and doctors in the world. Thousands of lives might be saved annually if sick men could be turned out so as to look upon Nature, feel the sunshine, and breathe pure air. We are satisfied that sheds, open on one side, if the patient had food and clothes, proper and sufficient, would be healthier than any close room. This plan was adopted in the Crimea, and Mr. Rawlinson had the huts cut and carved as much as possible, so as to admit abundance of fresh air. At the hospitals on the Bosphorus, windows were broken wholesale. We all know the results.

BEDFORD AND EDUCATION.

Of the 11,693 residents of Bedford in 1851, only 4,681 were born in Bedford, leaving 7,012 born elsewhere, and the disproportion must now be much greater. Bedford as a town must thus be greatly on the increase. The main cause of this state of things is rather a curious one. In the reign of Elizabeth a native of Bedford, sprung from a very humble root, and who became a tailor in London, and eventually one of its lord mayors and a knight of the kingdom, —Sir William Harpur, to wit,—built a free school in his native town, and endowed it with a piece of ground forming a meadow of 13 acres 1 rood, in the rural parish of Holborn, near London, and worth 12*l.* per annum. The *crops* that latterly grew up on the Holborn meadow (in the shape of brick and mortar) have gradually increased the value of the little Harpur property, and now every pound sterling of the primitive twelve has multiplied to 1,000*l.*, with an odd 1,000*l.* over and above, so that no less than 13,000*l.* per annum are now devoted to the purposes of the Harpur Charity at Bedford. This may very well account for the remarkable increase of that town from the influx of strangers. The proceeds of the "meadow" were at one time shamefully squandered by the Bedford Corporation, but now the whole is being restored to its original purposes, and the Free Schools of Bedford at present contain 1,400 children of both sexes receiving free education on a comprehensive scale. The property has just escaped from Chancery, and is probably now destined to a still greater expansion than ever of the benefits which it has heretofore conferred upon the residents of Bedford. It is not education alone either that is pro-

vided from its funds, although its schools are free to everybody,—that is to say, if you (*pater-familias*) were to go to Bedford to-morrow morning, and take a 10*l.* house in that highly-favoured town, you could not only get all your children educated for nothing, and let them compete for 200*l.* prize premiums to teach them professions, but draw lots for ordinary apprentice premiums, marriage portions of 20*l.* each for your daughters, and, when you grow old, be provided probably with an endowed almshouse for yourself, with a weekly allowance, clothes, and medical attendance! These facts are not well known to the public, or Bedford would be resorted to still more than it has been by people of limited incomes. A complete history of this interesting charity has just been compiled by Mr. James Wyatt, of Bedford, in a small volume, published by Timæus, of Bedford, and Longman and Co. of London, to which we may refer those who desire to know more of the matter.

LINCOLN DIOCESAN ARCHITECTURAL SOCIETY.

MEETING AT MANSFIELD.

The autumnal meeting of this association was held this season at Mansfield on Tuesday and Wednesday, the 23rd and 24th ult., under the auspices of the Dukes of Newcastle and Portland, the former of whom occupied the chair. A numerous party of ladies attended amongst the audience. The Town Hall was hung around with the rubbings of brasses belonging to the association from their collection at Louth, and with drawings, plans, sketches, and illustrations of the various objects of interest in the neighbourhood or likely to be referred to in the papers read; and the table set out with objects of curiosity and vertu.

The Duke of Newcastle, in his opening address, explained the objects of the society. His Grace then proceeded to remark that it was not architecture in general which they wished to promote as their main and principal object, so much as ecclesiastical architecture. He would admit that England was in this respect an example to the world, and one which proved that the science of architecture itself had its origin in feelings of piety and devotion. In some earlier stages of the world, it had no doubt been misdirected to the worship of false gods, but nevertheless in a spirit of piety and devotion. In the gigantic temples of Egypt, the sculptured caverns of India, the dateless shrines of Peru, the more sculptured edifices of Greece and Rome, architecture had found its greatest object in works of piety and devotion. He might add to these the enormous pyramids and mausoleums to be found in many of the countries to which he had alluded. He might have gone back in these few observations, not only to the pyramids of Egypt, but the earlier Indian pyramids, as associated with what might to-day be called the cultivation of our own natural style of architecture, though called the "Gothic" architecture,—or by some, the "Pointed style"—but in common parlance the Gothic; although that term was given it as a term of opprobrium, and as such was it recognised for a long time, and with it, as such, he would not quarrel, but would claim for it the title of "native," for it had grown with the growth of our religion, and become engrafted on the soil by the taste of the inhabitants. At the same time, he could not underrate the architecture of St. Paul's, and of many structures of minor degree in this country; although the buildings which attracted the attention, and of themselves aroused the feelings, were all of this other native style of architecture. Greatly as he admired, when he visited it, the great church of St. Peter's, at Rome, never were his feelings raised to such a pitch in any church as when he had visited the magnificent and spacious Gothic cathedral church of Seville, in Spain. Some considered the Gothic or Pointed architecture to have been destroyed at the Reformation; and, perhaps, to a great extent, that feeling had prevailed against its resuscitation in this country. But it was entirely an error. In the conclusion of his address, the chairman remarked, that it was not a less important object of such societies to promote the science of and taste for architecture generally; not merely the architecture of public buildings, but extending their attention to the domestic architecture of the cottage as distinctly as to that of churches. This was not merely of great importance to the cottager by affording superior accommodation, contributing to decency and a proper mode of life; but tasteful designs—not too expensive, for their example would not be followed—promoted habits of cleanliness and comfort amongst the labouring population. They ought not to believe that because they had received a higher education, and lived in greater luxury and comfort, the poor were behind them in appreciation of the beautiful.

The report was then read by the honorary secretary, the Rev. G. H. Smyttan, of Hawksworth. It entered minutely and at some length into the state of various ecclesiastical and other works projected, in progress, and completed throughout the diocese. The report was adopted and office-bearers elected.

The first paper read was one on Old Churches and Old Records, by the Rev. Mr. Dimock, of Southwell, and related to the village churches in the neighbourhood.

A paper was then read by Mr. G. G. Place, architect, on the Ecclesiology of the Neighbourhood of Mansfield, a pretty full report of which, as well as of the other proceedings, appears in the *Nottinghamshire Guardian* of last week.

In the evening of the day of meeting, a large party of members and friends dined at the White Swan Hotel, the Duke of Newcastle in the chair; and afterwards an evening meeting was held, when many strangers were present, including a large body of the working-classes, whom the Duke of Newcastle addressed from the chair.

A paper, on the Suggestiveness of Gothic Architecture, was then read by the Rev. Mr. Smyttan; and Sir Charles Anderson afterwards delivered an extemporaneous address, in explanation of the objects exhibited. Sir Charles also made some remarks on the desirableness of obtaining practical opinions on the durableness of stone.

On the Wednesday an excursion party went to Skegby, and other places, including Bolsover, and returned to Mansfield in the evening, in time for the Nottingham train.

WHAT TWOPENCES CAN DO.

Two lectures delivered to the inhabitants of the village of Lancing, Sussex, by Mr. William White, jun., on the Limited Liability Act, and on Friendly Societies, and other cognate subjects, have been printed on folio sheets for circulation. In these addresses Mr. White points out various useful purposes to which even the poorest class of people might turn the Limited Liability Act, as in the formation of a trading company for the purchase and sale of coals and various other articles. And in respect to Friendly Societies the lecturer gives the details of a scheme showing how much mutual benefit might be derived from very small means, and which there appears to be some design of carrying out at Lancing. He takes the population at 1,514 and calculates on getting 1,000 of these either to join as members or to be put on the list by employers or friends, and thus proceeds:—

	Per Annum.
"Twopence per head per week from 1,000 persons would be	£433
Out of 1,000 persons 25 will die in the course of the year: reckoning the cost of interment, children and adults together, at £4 each, the cost of funerals for the year will be	100
That will leave	£333
Now I propose a young medical man to attend all the births and sicknesses of these 1,000 persons, and to give his whole time and attention to them: he will have on an average from 20 to 30 visits to make every day, and for that service he might perhaps be obtained for	100
That will leave	£233
Medicine and surgical instruments, say	33
That will leave	£200"

This balance it is proposed to dispense in weekly allowances to sick members, except £70 for expenses of management. Rules and regulations are then laid down for the management of such a scheme, and *with trustworthy management* there are certainly many ways, in these days of Joint-stock Limited Liability, and Friendly Societies, in which twopences might be turned to important uses.

METROPOLITAN BOARD OF WORKS.

Public Buildings under Building Act.—At a meeting held on the 26th September, the first business upon the agenda paper was "To hear and consider statements of Mr. J. G. Wigley, architect, and Mr. W. C. Stow, district surveyor, as to whether a building to be erected for the purposes of a private female community is to be considered a public building or not." If a public building, fireproof stairs and accesses would be necessary. The district surveyor said the Act of Parliament upon the question stated that "every building used as a college," or "for public instruction," was a public building. It appeared to him that this was a building used as a college. The only difference between the present and the old Act which related to the subject in question was, that the words "in large numbers" were introduced in the old Act. The clause had been copied, he believed verbatim, all but the words "in large numbers." There was also in the building in question an apartment for worship, and he apprehended that if any person applied to attend the chapel, he would not be denied; but he could not say whether that would or would not be the case. There was also another apartment for the instruction of children, and he apprehended that there would not be any very great objection to the number of scholars being increased, and he thought, therefore, it was for "public instruction; but he believed that Mr. Wigley would state, if it was necessary, that that apartment would not be used for that purpose. For the reasons he had given, he thought the building in question was 'a public building.'"

Mr. Wigley contended that there was a great difference between "public" and "private" instruction. The establishment in question was to be a "private" institution for ladies. There would be sixty persons living in the house, of whom thirty would be scholars. The apartment which had been made for the chapel had been made so as to hold just the number of persons whom they had in the building, and would not be large enough for anybody else.

The Clerk to the Board was then called upon to give his opinion upon the matter. He said he thought the building in question could not be considered a public building. The definition of a "public building" was given in the second section of the Metropolitan Building Act, which was as follows:—"Public Building shall mean every building used as a church, chapel, or other place of public worship; also every building used for purposes of public instruction; also every building used as a college, public hall, hospital, theatre, public concert-room, public ball-room, public lecture-room, public exhibition-room, or for any other public purposes." In looking to the old Act he found the Act referred to a number of places which were to be public buildings, and went on "for the assemblage of persons in large numbers, for business, instruction, or resort." The question was whether the building in question was specified within that rule, and he thought it was not. It could not be said that large assemblages of persons were to meet to resort to that institution for public instruction.

The question was then put, "To agree that it is a private building," which was carried, there being but one or two hands held up against it.

The Engineer to the Commission, Mr. Bazalgette, afterwards read a report on the Drainage of the Metropolis, of which the following is the more important portion:—

"I am still of opinion that, in the absence of deodorizing works, the sewage may be discharged into the Thames, without nuisance, at Halfway Reach, beyond the limits of the metropolis, in the manner already proposed for the south side of the Thames.

Various propositions have, however, been made with regard to the position of the outfall and mode of discharge into the river, and with respect to the application of the sewage to agriculture. I shall now, therefore, endeavour to lay before the Board some facts and estimates, to enable it the more fully to

consider and compare the merits of the different propositions, and to draw its own conclusions respecting them.

There appear to be four different modes by which the metropolitan sewage may be disposed of.

1st. By retaining the points of outfall originally proposed at Barking Creek and Woolwich Marshes (marked A on the plan), but dispensing with the reservoirs at those places, and substituting for them deodorizing works, and discharging the purified waters into the Thames at all times of the tide, after having abstracted from them the deodorised manure, which would be available for agricultural purposes.

2nd. By discharging the sewage into the river at Halfway Reach (marked B on plan), beyond the limits of the metropolis, at and near high water, so that it should not reflow up the river, within the limits of the metropolis, excepting on occasions of heavy storms, which occur on from twenty to thirty days per annum, and last for short periods only on those exceptional days, on which occasions the sewage would be highly diluted.

3rd. By discharging the sewage into the river at Long Reach (marked C on plan) during the first half of the ebb tide, reducing the capacity of the reservoirs, and preventing the reflow of the sewage into the river, within the limits of the metropolis.

4th. By conveying the sewage on the south side of the Thames underneath that river to the north side, and discharging it at Sea Reach (marked D on the plan) at all times of tide, so that it would not return within the limits of the metropolis, and dispensing with reservoirs, or by occasionally distributing such sewage, or any portion thereof, as liquid manure over the lands or marshes through which it would be conveyed on its route to this outfall.

In comparing the foregoing propositions, the expenditure forms an important feature; and I submit estimates of the first cost and probable annual working expenses of each system, having capitalised the latter, at 5 per cent. in order to obtain a more correct view.

I am indebted to Mr. Thomas Wicksteed for the estimates for the deodorising works, which are founded upon his experience at the sewage works at Leicester.

COMPARATIVE ESTIMATES.

	Estimate of Cost of Construction.	Probable Working Expenses.	Working Expenses capitalised at 5 per cent.	Total Expenditure supposed as Capital.
	£.	£.	£.	£.
Main drainage as originally designed to Barking Creek and Plumstead Marshes. (A on Plan.)	2,407,276	27,390	547,800	2,955,076
Ditto, without Sewage Works, extended to Halfway Reach. (B on Plan.)	2,733,606	28,330	566,600	3,300,206
Ditto, extended to Long Reach. (C on Plan.).....	3,082,136	39,550	791,000	3,873,136
Ditto, extended to Sea Reach. (D on Plan.)	3,844,300	43,705	874,100	4,718,400
Deodorising Works added at the Barking and Woolwich Outfalls, at A. on Plan	2,528,556	45,000	1,700,000	4,228,556

Thus it appears that the extension to Halfway Reach involves an increased expenditure of 345,130*l.*; to Long Reach, 918,060*l.*; to Sea Reach, 1,763,324*l.*; and the addition of deodorising works to the original scheme, 1,273,480*l.* The substitution of deodorising works for reservoirs at Barking Creek and Plumstead Marshes involves the smallest expenditure of capital, but the largest annual outlay. The capital would not, therefore, be irrevocably sunk. And this plan presents the following advantages, viz. that if the sewage manure should be found to be of commercial value, it would be available for sale; or should any mode hereafter be discovered by which it could be rendered more profitable, or deodorised more economically, advantage could hereafter be taken of any such improvements. On the other hand, should it appear that the solid manure was altogether valueless, a considerable saving might be effected in the manufacture by merely precipitating, deodorising, and barging it away, and thus dispensing with the drying process and preparation for sale.

This process would, I conceive, entirely remove the sewage from the river in a practical point of view; and by presenting the sewage in a dry, inoffensive, and portable condition, it would test the very prevalent opinion that the metropolitan sewage can be thus profitably applied to agriculture. A further saving of probably nearly half a million might, however, be effected by terminating the sewers and establishing deodorising works nearer to London, say in the Greenwich Marshes, on the south side of the river, and the West Ham Marshes, on the north side, which would, in my judgment, accomplish the object desired without creating a nuisance. I am still, after mature consideration, of opinion that the second proposition, or the extension of the outfalls to Halfway Reach would fully satisfy the requirements of the Legislature, and be effective in a sanatory point of view, as already explained in my former reports upon this subject. This plan would not greatly increase the engineering difficulties in executing the works; and, as regards expenditure, it presents considerable advantages over any of the other plans.

The extension to Long Reach appears also to meet the required object in a sanatory point of view, although the outfall would not be so remote from habitations as that at Halfway Reach; and, if the former is objected to, it becomes questionable whether this will be considered sufficiently advantageous to justify an increased expenditure of upwards of three-quarters of a million.

The discharge of the sewage into the river at Sea Reach, at all times of tide, may also be regarded as the entire purification of the river, and this point and mode of discharge would probably be considered satisfactory. There are also extensive tracts of marsh and agricultural land along the route of the sewer, over which the liquid manure, or a portion thereof, might hereafter occasionally be made to flow, should it be found, as has been suggested, to be of sufficient value to warrant the formation of the necessary distributory works.

In order to effect this extension, it would become necessary to construct the low-level sewer from Putney to the Greenwich Marshes, at an average depth of 10 feet lower than formerly recommended, and to have a branch sewer from Woolwich, to fall into the above main sewer in those marshes, so as to enable the whole of the southern drainage to be carried under the river at Bugsby's Reach, without a syphon."

Buildings in advance of the regular Line of Fronts.—The following letter was approved of, and it was ordered that a copy be sent to each of the metropolitan district surveyors:—

"Sir,—I am directed by the Metropolitan Board of Works to acquaint you, with reference to the verification of plans to accompany applications to this Board for consent, under the 143rd section of the Metropolis Local Management Act, to erect buildings in advance of the regular line of fronts in streets, and applications to this Board under the 26th section of the Metropolitan Building Act, that the Board have passed an order, directing that the duty of verifying such plans should be attended to by a surveyor attached to the department of the Superintending Architect, and that you will not, for the future, be required to perform such services.

The Board consider it of importance that the District Surveyors of the metropolis should be apprised of the interpretation which they put upon the expressions, 'The general line of fronts in any street,' under the Building Act, and the 'regular line of buildings,' under the Local Management Act: the Board regard these terms as implying the line of houses in the street as originally designed and built, without reference to subsequent additions, or so far as built when these Acts came into operation. The consent of this Board is necessary whenever any builder or owner proposes to bring forward any building from the main wall or front of a house, although many such buildings may have been carried out in the length of the street, or any division of it; and the Board are extremely desirous of maintaining and improving all streets and thoroughfares, and preventing encroachments on present widths.

To give effect to their endeavours to preserve the main lines of buildings, they rely upon the active co-operation of the various district surveyors of the metropolis, and they deem it essential, that in all cases which come under their observation, they should inform the builders and others wishing to build on forecourts and vacant spaces, that they must obtain the consent of this Board before they can be permitted to proceed with the works, and by calling the attention of the Board to any cases in which their warning in this respect may have been disregarded.

It may be convenient to add, that in certain districts of the metropolis there are local Acts still in force, which will be found serviceable in preserving lines of frontage, and preventing unauthorised projections."

At a meeting of the Board held on the 1st inst. Mr. Leslie moved, in an elaborate speech, that the report of the engineer, given above, be rejected; but the motion, not being seconded, fell to the ground. Mr. Leslie re-urged the adoption of a single line of main intercepting sewers on the *southern* side of the river, and the necessity for a service and storm-water drainage separate from the sewage drainage. The further consideration of the report was postponed.

THE PROCEEDINGS OF THE METROPOLITAN BOARD OF WORKS.

Your last publication contains a letter signed S. P. X., which, I think, calls for a line or two of remark. The words "wicked and sinful body" are not such as can be justified, however we may desire to see the work of improvement moving with greater speed; neither is it much to be wondered at that the vast scheme of metropolitan drainage, which, as your correspondent observes, has failed under the attempts of two or three Commissions, should be found not quite so easy a matter as a man, quietly writing by his own fireside, is apt to imagine. It is no light affair,—the responsibility of expending two, three, or four millions of money from the pockets of the metropolitan ratepayers, on what some persons think a doubtful speculation, after all. However, an Act of Parliament has now made the attempt imperative, and it behoves those intrusted with the carrying of it out to well weigh every step as the work proceeds. We are probably destined to witness yet further delay, for I observe a notice of motion has been given by a member of the Board, at its next meeting, to negative the entire design, and begin *de novo*. I may, perhaps, be pardoned if I express an opinion that a part of the labours of the Board might reasonably fall elsewhere; for when it is publicly stated that a recent meeting of seven hours' duration was chiefly occupied in the petty details arising out of questions of shop-fronts, porticoes, bow-windows, &c. &c., one is apt to wonder what all the vestries and district-boards, with their architects and surveyors, are for, from Hackney to Turnham Green. One thing is clear,—the members of the Metropolitan Board of Works have no sinecure office, if such things as these fall legitimately within their province instead of the authorities in the several localities.

A Ratepayer.

SANITARY STATE OF SHOREDITCH.

The population of Shoreditch is one twentieth of that of all London, or 125,000 out of 2,500,000. The mortality from all causes in Shoreditch during the quarter ending 28th June last was 629,—from epidemics 158,—a proportion considerably exceeding that of all London. Such is the return given in the first quarterly report on the health and sanitary condition of Shoreditch by the medical officer of health for that district, Dr. Barnes (recently printed by the Vestry). In this report, which treats of various points, urged again and again in our columns, the state of the water supply and the air supply of the district is particularly dwelt on. The water supplied both by the New River and by the East London Companies is regarded as essentially and equally impure: both are impregnated with organic matter, and both are hard. As respects the air supply it is rightly observed, that it is not only necessary to dilute the aerial poisons as they arise by free ventilation, but imperative also by all possible means to get rid of the materials from which they are generated. This is to be effected mainly by improvements in sewerage and drainage. It is even more important, as the reporter remarks, to have a constant supply of air, than a constant supply of water, low fevers being a sure result of stagnant air. Many dwellings in the district are perversely constructed in defiance of both common sense and decency, as in Parsons-square and Bowl-court. They are built back to back in confined situations, with untrapped closets under the staircases, small close rooms, and a sad want of water. Bowl-court is accordingly one of the most prolific nurseries of fever in the whole parish, but the district abounds in courts, rows, and nests of houses little better in a sanitary point of view.

RAGGED SCHOOL, ISLINGTON.

I have noticed with much regret the struggles and difficulties with which the Ragged School in Bryan-street, Islington, has had to contend, in consequence of the want of funds necessary to carry it forward. You have before noticed this school for about 150 little boys and girls, and a number of helpless youths, who have there found shelter, and are acquiring the means of earning an honest livelihood, and who, but for this, would have been houseless vagabonds in the street, or else the inmates of a prison. I am told that a large amount of debt, amounting to about 300*l.* was once a heavy drag to this useful institution, and that this has, by great exertion and good management, been reduced to 25*l.*; and, once out of debt, the establishment promises to extend in usefulness. A little while since the children's-school was closed for a time, and it was a painful sight to see the little things come morning after morning and to watch their disappointed looks at finding the doors shut. They reminded me of a nest of bees whose hive had been destroyed, hovering about the spot. You, sir, who know the sort of places and scenes which these little children were so anxious to leave for a time and try to learn good, will join with me in the hope that this, the only institution of the kind in the generally wealthy parish of Islington, should not be closed for want of funds. When a schoolmistress could not readily be had, it was most praiseworthy on the part of Mr. Healey, the manager of the institution, to take the infant scholars in hand himself to teach; and, although in no way connected with the place myself, I have looked in from time to time, and hope

that, by your publishing this in the *Builder*, it may induce others to do the same, and, after assuring themselves of the merits of this useful and unassuming institution, give it in their various ways a helping hand.

A Dweller in "Merrie Islington."

DEPARTMENT OF SCIENCE AND ART.

PRIZE MANIA.

A paragraph in your journal of the 27th ult. alluding to the Coventry school of art, reports that the "proof of the proficiency of the pupils and the skill of their instructors, *appeared in the number of medals awarded*." The same remark will doubtless apply with equal force and justice to all other schools under the tutelage of the same department; and, such being the case, the following, as showing their prospects, will not, I trust, be read with indifference.

In the Metropolitan spring exhibition of 1855 there were exhibited 186 *drawings*, works forwarded from twenty-seven schools, to which were awarded 195 *medals*.

In the "Report of the Examination of Drawings sent up from Training Colleges at Christmas, 1855," I find that to the pupils of *twenty-six schools* there were awarded 659 *prizes*,—that in one institution 57 per cent. of the students obtained awards, in another 60, in another 66, in another 70, and—prolific talent—at Chester, 88 *per cent. of the competitors rejoiced in the unparalleled triumphs of their genius!*

In the autumn Metropolitan exhibition of the same year, there were exhibited 1,501 works, the product of fifty-eight schools, to which (incredible to relate) 358 *medals only* were distributed. Only 358! But lest this unusual paucity should create surprise, and be accounted by factious minds a presage of departing glory, we are forewarned that "in considering the number of medals given this session, it must be recollected that each year the tendency is rather to raise the standard of merit requisite to obtain them; and that, unless there is a proportionate progress towards excellence in each year, a decreased number of awards must be the result." Again, "In making these awards, it was felt to be desirable to raise slightly the standard of excellence which should be required for obtaining medals, thus occasioning a reduction in the number awarded, which by no means indicates any depreciation of the quality of the works sent up as compared with previous years." In the autumn exhibition of 1854, there were awarded 423 *medals*.

I shall not apologise for the irreverent levity with which I have cited these Blue-book facts: I am but mortal, and I can hardly write with gravity upon a subject which has long been the standing jest of every school-boy in every drawing-school throughout the kingdom.

C. H. W.

FOREIGN INTELLIGENCE.

Aggregate Meeting of German Archæologists, &c. at Hildesheim.—A report was read on the *queries* put forth last year by the association—*Limes imperii Romani*, and the history of the hundreds of Germany. The work of the restoration of the Godehard Church—a fine specimen of the Byzantine style—was inspected. Dr. Haberl exhibited a model of the Roman post-dyke (*Pfahlgraben*) in the Rhine and Taunus country, as well as one of the Porta Decumana or *Saalburg*, near Homburg, according to documentary evidence and the excavations lately made there. Subjects of great antiquarian interest have been lately found in Mecklenburg, belonging to the ante-Christian epoch, but it is doubtful whether they be of German or Celtic origin.

The Medal struck by the Municipality of Vienna,—in honour of the general meeting of German naturalists and medical men, is of a very original design and conception, made by the Medallist Professor Rednitzky. On the obverse side is Vindobona, festively attired, in honour of the guests. Around are allegorical representations of the different eras of this old city; that of Marcus Aurelius, Duke Jasomirgot, the first builder of St. Stephen's, &c. On the reverse is the inscription,—"To the thirty-second meeting of German naturalists and medical men." Underneath is the figure of Nature, with her all-nourishing breasts, and on the raised rim are represented the four reigns of nature by a prism, a palm and oak, bee, &c. Above all appears a star-crowned human head, superintending, as it were, all creation.

A Statue of Baron Larrey, the chief surgeon of the *Grande Armée*, has been placed in the salle of the Ecole de Médecine of Paris. It is a work of the general run of such statuary.

Lipinski, the Polish Archaeologist.—This gentleman, who died lately at Warsaw, has been a contributor to the large archæological work on Poland, as well as author of several essays on Polish antiquities. He had travelled over the whole of the former commonwealth, for studying its ancient churches, castles, &c. He had also co-operated with Count Raczynski in the work on Polish numismatics.

Notices of Books.

Supplement to an Encyclopædia of Civil Engineering. By Edward Cresy, Architect and Civil Engineer. London: Longman, Brown, and Co. 1856.

In this supplement Mr. Cresy has added to his comprehensive and voluminous Encyclopædia some chapters on Water Supply, Drainage, Railways, Cubical Proportion, Brick and Iron Construction, Bridge Building, including an account of the new Rochester Bridge, the Conway Tubular Bridge, and the Niagara Suspension Bridge. The latter is a surprising combination of the uses of the Telford and Stephenson bridges in one. The American engineer seems to have derived his idea from a study made when both objects were before him, and the question naturally arose, why one bridge or transit could not be made for both services. Its span is 821 feet 4 inches from centre to centre of the towers: it forms a slightly curved hollow beam or box of the depth of 18 feet, 24 feet wide at the bottom, and 25 feet at the top, the lower floor of which is used for common traffic, whilst the upper is kept for the railway.

In the portion devoted to brick and iron construction Mr. Cresy suggests the erection of labourers' cottages without any wood, but for the doors: the side walls vaulting the whole in a catenarian curve; five iron railway bars from front to back to be introduced as girders to carry arches which, when level on the top, might receive an asphalte flooring. The aspect of a village so formed would be curious, though not pleasing.

The author has dwelt at some length on the result of his investigations of the proportions adopted by the ancient architects in their buildings. The system he adopts is founded on the fifth book of Vitruvius, and he maintains that the multiplying of the cube constitutes the design alike of the Greek temple and the Gothic cathedral. He accounts for the difference of dimensions between the English and French cathedrals from the tenth to the fifteenth century, as arising out of two standards of measurement:—

"Guided by the fact that those erected in the above period of time were the works of the fraternities of Freemasons, it seemed conclusive that they should have some standard of measurement, either of their own or peculiar to each country; and on testing the measurements with that view, it resulted that those of England were set out with the English perch of 16 feet 6 inches, and no doubt by an English lodge; while in those of France the French perch royal, of 22 *pieds du roi*, equal to 23·452 English feet, was employed: the few exceptions at Bayeux, Caen, St. George Bocherville, and some others with round arches, and the elegant church of St. Ouen at Rouen, in the Flamboyant style, are set out with the English perch of 16 feet 6 inches, and are universally attributed to English constructors: they certainly most curiously agree in proportion and dimension with the English cathedrals, which have two cubes given to the nave, producing on the plan a Latin cross, instead of the Greek, so usually found in France."

Mr. Cresy's Supplement is a very interesting and valuable addition to his Encyclopædia. He has long been a valuable labourer.

Miscellanea.

Drainage of the Metropolis.—A correspondent, Mr. George Clack, C.E., states that about four years since he submitted to several public boards a plan for the drainage of London, comprising the formation of two sewers under the Thames, one close to each bank, to commence at Richmond and continue as far as might be considered necessary down the river, and to discharge the sewage into a tank at each side, to be emptied into the river should it be found to be valueless. The sewers to be so low as to secure a good fall, and ventilated by shafts. Coffer dams of iron in form of caissons to be used in constructing them, and tunnelling to be resorted to where obstacles occurred to the use of coffer dams.

Metropolitan Tolls.—A movement is in progress for getting rid of some of these nuisances. Memorials were lately got up to Lord Lonsdale, the Chairman of the Metropolis Roads Commissioners, and to the Commissioners of the Roads north of the Thames, on the subject, and a deputation went to the Board last week for the purpose of opposing an application from the parochial authorities of St. Pancras for the extension of toll-gates in that district, but the gentlemen forming the deputation were refused access to the commissioners, and the memorials were not presented. The commissioners had met specially for the purpose of considering whether all, or any, and which of the several toll-gates now placed on the ninth amongst other districts on the north of the Thames should be removed and placed elsewhere, or discontinued. The intimation conveyed in the public notice convening the meeting (on 26th ult.) and which was prominently displayed at all the metropolitan toll-bars, induced the ratepayers to believe that the court would be open, or at all events that the commissioners would be ready to receive representations in reference to the heavy grievances which these toll-bars inflict; and this opinion appears to be confirmed by the fact, that at the meeting on 1st August, of which this latter meeting was an adjournment, the parochial authorities of St. Pancras were admitted as a deputation to the commissioners, praying that they would sanction the erection of additional toll-bars in that parish.

Machine for Dressing Stones.—Among a list of inventions lately published, says last week's *John O'Groat's Journal*, we observe mention made of one by the Earl of Caithness, for rough dressing the surface of stone by machinery, as an improvement upon the present laborious plan of hammer-dressing. This is an entirely distinct invention from that for the sawing of stone, which we noticed last week as having been tested at Castlehill by the noble Earl. It consists simply of a series of chisels or hoppers, under which the stone intended for preparation is made to pass; and so rapid is its execution that a stone of considerable superficies may be dressed in the course of a few minutes.

Opening of the Oldham Lyceum.—The new building for the Oldham Lyceum was opened on Monday in last week, and the various proceedings connected with the event caused a good deal of stir in the town. The building (which is constructed in the Renaissance style, of a Palladian character) stands at the junction of Union-street and Clegg-street, immediately opposite the public baths. The corner-stone was laid on 25th June, 1855, by Mr. James Platt, the president. The building has been erected by Mr. G. Whittaker, of Oldham, from designs by Mr. N. G. Pennington, of Manchester. The total cost of the work will be between 5,000*l.* and 6,000*l.*

The Late Strike of Masons.—Seeing a short paragraph in your impression of the 27th respecting the late strike of the masons in Mr. Kelk's firm, permit me to point out what I consider to be an error in the last sentence of the paragraph in question. You say, in our letter to Mr. Kelk, on the 6th of August, our demands were—The full privilege of the 4 o'clock on Saturdays; and that the masons should not be asked to work piece-work: quite correct. But at the conference held at the Freemasons' Tavern with the Builders' Association, we did not withdraw the question of piece-work *unconditionally*, but altered the original words, "They shall not be asked to work piece-work," and substituted the following, "If they are asked to work piece-work and refuse, they would not be discharged in consequence." With this alteration the Association accepted it at once, and pledged their words, as gentlemen, that they would adhere to the terms here indicated. And in conclusion, allow me to state that the masters showed every disposition to treat the subject in all fairness and impartiality; and doubtless much good would accrue to all parties if they were to meet together oftener and discuss in a friendly manner those various questions that occasionally arise between employers and employed.—On behalf of the masons of London,

George Garrett, Sec.

Manchester Free-Trade Hall.—We are asked to say, and do so willingly, that the whole of the carving at this building, with the exception of the semi-circular bas-reliefs over the windows, which are in artificial stone (by Mr. Thomas, as we stated last week), was executed by Mr. Thomas Richard Williams of Manchester.

The York School of Art.—Mr. J. C. Swallow, head-master of this school, delivered on Wednesday evening in last week an interesting lecture to upwards of 200 persons, on the arts of drawing and painting. The working classes were especially the subjects of invitation. Mr. Swallow introduced himself as one of themselves, considering the calling of a working man to be noble, as he had great faith in the dignity of labour. He gave a concise sketch of the arts of drawing and painting, and demonstrated as plainly as possible the utility and advantages which must inevitably accrue to students of every description. At the close of his lecture, Mr. Swallow announced to the working men present, in particular, and to those absent in general, that he had established a class gratuitously, for their benefit, and invited them to enter their names; and in conclusion he said,—If by the means I have placed at your disposal, I shall be successful in disseminating a love for art, I am sure you will keep alive what has been so creditably obtained, and will continue your improvements, by further and still greater exertions, which must ultimately lead to a general and discriminating knowledge, without which, though no one values them more than I do, such institutions as this, exhibitions, galleries, or patrons, will be of little or no avail.

Bronze Castings Abroad.—The *Athenæum* says, seven castings in bronze are in progress at the royal foundry at Munich:—1. An equestrian statue of Washington, destined to form the centre of an immense monument to be erected in the State of Virginia, and which is to be surrounded by forty colossal statues of men who distinguished themselves in the war of independence; 2. An equestrian statue of the King Maximilian the First of Bavaria, for Munich; 3. A statue of Wieland, for Weimar; 4. A group of Schiller and Goethe, for the same place; 5. An equestrian statue of Ferdinand the First, of the Two Sicilies, for Messina, destined to replace one which was destroyed by the revolutionists, and which also was cast at Munich; 6. An allegorical monument to the memory of the Fugger family, the chief of which are considered as the creators of manufacturing enterprise in Germany, for Augsburg; 7. A statue of King Louis the First of Bavaria, for Munich.

Razing Ruinous Buildings.—Mr. Joseph Quick, of the Vauxhall Waterworks Company, Sumner-street, Southwark-bridge-road, the owner of several houses in Middlesex-passage, Bartholomew-close, was summoned by the commissioners of sewers for the city to show cause, on the 24th ult., why Nos. 1, 2, and 3, should not be pulled down, they being in so dilapidated a state as to be dangerous to the public. After some preliminary remarks, Alderman Lawrence said this was the first case that had come before him, and he was not sure that he should be acting right in establishing the precedent of granting orders without the personal attendance of the district surveyor. This case was not disputed, and there was no doubt about it, but a case might arise in which the surveyor's judgment might be questioned, and therefore he ought to be present that he might be examined by the defendant. —Mr. Tyrrell said the act provided that the surveyor's certificate should be sufficient evidence to lay before the magistrate, and he adopted that course because it saved expense, and there was scarcely any defendant he had to summon but grumbled at the expenses.—Mr. Martin, the chief clerk, said, in case of a dispute, the summons might be adjourned for the attendance of the surveyor. After some further discussion, Alderman Lawrence granted the order for taking down the houses within seven days from this date. Similar orders were obtained for houses Nos. 1, 6, and 7, Willis's-court, which were in the occupation of Julia Collins, Joseph Tarbrick, and Mary Jennings, none of whom had paid any rent for the last two years, the property being in chancery.

The late Sir Richard Westmacott, R.A.—I read with much satisfaction and pleasure, and it must have proved so to his family, your notice of the late Sir Richard Westmacott. Considering the many and talented works which emanated from his studio, and considering the many years he was professionally engaged, and the time he devoted to the sculptures of the British Museum, it appears that it would be but a just compliment by the Government to erect a statue of him in the hall of the British Museum, his last great work having been the adorning of the tympanum of the pediment there. This compliment has been paid to Wilkie in the National Gallery.

* * *

*** The statue to Wilkie was erected by subscription.

Sussex Archæological Society.—A reunion of this Association took place at Newhaven on Thursday in last week. The members visited first the Church of Denton, and afterwards that of Newhaven. This latter edifice, as the *Brighton Herald* remarks, has the peculiarity of a tower at the *east* end, which once led an Irish sailor to remark that "it sailed *starn foremost*." After an inspection of both churches, the archæologists adjourned to the Bridge Hotel for the despatch of business, when Mr. R. W. Blencowe was called to the chair. The chairman read a letter from the Duke of Norfolk, accepting the presidency of the Society, vacant by the death of his father. Some members were then elected, and, afterwards, the Rev. G. M. Cooper, of Wilmington, read a paper on Bayham Abbey. Mr. M. A. Lower read an historical and descriptive notice of the Churches of Newhaven and Denton. In the course of his paper Mr. Lower mentioned that, during a late tour in France, he had met with a church at Yainville, on the Seine, which so strikingly resembled that of Newhaven, that it must have been of contemporary date, if not the production of the self-same architect. The scientific business of the meeting being closed, those present sat down to a cold collation, after which some discussion took place as to the locality of the annual meeting for next year, and Arundel and Bignor were provisionally determined on. Among other projects for the forthcoming year, one seemed to meet with general acceptance, namely, an excursion to Normandy by a body of the members, for the purpose of investigating the antiquities of that province, and comparing them with those of this side of the channel.

St. Thomas's Church, Westminster-road.—A site has been obtained by the razing of Gilbert's-buildings, nearly facing the Female Orphan Asylum; and about 4,000*l.* out of the required 5,000*l.*, according to the *Morning Herald*, has been collected. The design selected was that of Mr. S. S. Teulon, architect. It is in the Gothic style, of plain construction, and will consist of a broad nave without aisles, north and south transepts, a sanctuary, with a small vestry on the north side. The nave will be surmounted with a fliche for one bell. The whole of the walls will be of grey stocks, diapered with red and black bricks. The seats to accommodate nearly 1,100, upwards of 800 free, will be open, with plain bench ends. The contractor is Mr. Joshua Higgs, builder. On the 24th ult. the foundation-stone was laid.

The Yorkshire Reservoirs.—Ever since the memorable flood of 6th February, 1852, from the Bilbery reservoir, the inhabitants of Holmfirth have, upon any unexpected rise of the river Holme, entertained fears lest a similar catastrophe should occur through the disruption of the large reservoir at Holme Styes. In consequence of a heavy fall of rain on Saturday week the river was considerably swollen, and so terrified were the inhabitants, that scores of families in a half-frantic state left their habitations for the night, and sought security in the houses of friends or relatives. About one o'clock on the following morning the rain abated, and the reservoir remained safe.——Mr. Bateman, of Manchester, the engineer employed in the construction of the Ogden Clough reservoir, near Halifax, has inspected the works of that reservoir, and states, as his opinion, that the beds of shale on that side of the valley where leakage existed have been disturbed by the formation of a culvert, and that the water escapes through the fissures of the earth; he therefore recommended that the corporation adopt measures for stopping the leakage. No damage, he asserts, is being done beyond the waste of water. He calculates the outlay for the repair at between 200*l.* and 300*l.* In accordance with this recommendation, the water is now gradually drained to such an extent as to allow the necessary repairs to be made. Many thousands of people from Halifax and other neighbouring places have visited the works.

Separation of Married Soldiers.—We are glad to learn that extensive alterations are in progress at Chatham for carrying out an order by the War Secretary, that the whole of the married non-commissioned officers and private soldiers belonging to regiments and depôts at the provisional battalion shall be supplied with separate rooms, apart from the unmarried soldiers.

"Spit in the Road."—As you go for improvements both great and small, do, good Mr. Editor, suggest to those who persist in indulging in the nasty and injurious habit of spitting, that others ought not to be annoyed by their ill-doings, and that they may lessen the annoyance very greatly by using the road instead of the pathway. We are very fond of abusing Brother Jonathan for this practice, but if any one will take the trouble to examine the pavement the next fine day he walks up Regent-street, for example, he will see that reform is needed at home as well as abroad. The practice to me is most disgusting, being, as I sign myself, your constant reader and—

A very nice Man.

Monumental Sculpture.—A tomb, with recumbent statue, has just been completed by Mr. Richardson, by order of the Marchioness of Ormonde, to the late Lord Ormonde. It will be placed in the middle of the south transept of the cathedral church at Kilkenny. At the head and feet of the figure are portrait-statues of the children, and in the panellings of the tomb are shields of arms, and the collar and order of St. Patrick, divided by foliated spandrels from natural leaves and flowers: at the four angles are angels holding scrolls. It will be conveyed to Ireland in the course of a few days.

The Kingdom of Art.—It is right that the kingdom of Art should remain under the joint government of the "Spiritual," the "Classical," and the "Naturalistic." These three distinct powers and authorities constitute "the three estates" in the administration of her empire. The Spiritual element, were it allowed undivided sway, would constitute an absolute theocracy, the tyranny of which, as advocated by M. Rio, we have been anxious to throw off. The Classical, the second of the three estates, is an aristocracy which, by ancestry and merit, we believe to be still entitled to weighty authority. Lastly, the Naturalistic element constitutes the democracy of art, the *vox populi*, which, as we have seen, is not necessarily, in art more than politics, the *vox Dei*. It is, then, in these three elements, in their mutual co-operation and counter-action, that the well-government of art is to be sought: in the Spiritual element we obtain a Divine sanction and authority; in the Classic the wisdom of the ancients; and in Naturalism actual truth, or what political theorists call honesty. The future Bentham in art-literature may doubtless show to the satisfaction of his disciples that such a constitution contains all the elements of the worst administration. We believe, however, that a government so constituted, although not a Utopia, might deliver the existing republic of art from threatened anarchy.—*Blackwood for September.*

Antiquities in Italy.—"About six miles from Rapello, and seven from Venosa and Melfi," writes a correspondent of the *Athenæum* from Naples, "excavations have been lately going on to construct the road of Rendina. In that part of the excavations which was conducted in the Via Appia, a sarcophagus has recently been discovered—which has thus been described to me:—It is of pure white marble, and measures ten palms in length, five in depth, and four in width. On the lid, which represents a kind of dormouse, is a young female sleeping, with her hair of that character so well known in statuary as undulating. Her head rests on a cushion, and her feet on a lion. On the front part of this sarcophagus are four niches,—in one of which is Proserpine—in another a statuette of Mars—in another of Venus with her glass—and in the last Meleager. On the other corresponding part are Ulysses, Vulcan, Mars, and a figure unknown. On one side is a fictitious door, and on the other various festoons. No inscription has been found upon it. This sarcophagus was discovered inclosed in a rectangular edifice, adorned with beautiful marbles, and the walls of which are constructed of brick. 'I have never seen anything like it,' said an antiquary to me; 'and, though many sarcophagi have been found in Magna Græcia, I think these are now more magnificent, for the abundance and the perfection of the sculpture. The style,' he continued, 'is of the finest Roman—the drapery is beautiful—the countenance delicate—and the drawing most correct. The niches, in which are the divinities, are separated from one another by many-spiral columns of the Corinthian order, and the figures are all in *mezzo-rilievo*.'"

Excavating Machines.—Mr. W. J. Curtis, Sebbon-street, Islington, has invented an improvement in combining machinery for excavating land for constructing tunnels. For this purpose, a rectangular or suitable form of frame, of a size depending on the intended tunnel, is constructed, and is arranged, when placed in an upright position, to be moved forward by hydraulic pumps or mechanical means pressing against the work which has been completed. There are three uprights: the two outer ones have reverse screw threads formed thereon, in such manner that a screw nut on each of them, when caused to rotate, shall ascend its upright, and then, when it arrives at the end, again descend. These nuts turn between two plates, which carry an endless chain, and chain wheels by which the chain is carried. The central upright is a shaft which gives motion to the chain wheels and chain. In order to cut or remove the land in front, the chain carries ploughs or cutters, which cut away the land in front as the chain is caused to move. The central upright or shaft is put in motion by a steam-engine, which moves on suitable rails up to the work. Rails are also laid as the work progresses, so that trucks may bring up bricks and materials to build up and form the tunnel, and the earth is raised into the empty trucks by suitable buckets or lifters, put into motion by the steam-engine.

JARROW DOCKS.—The foundation-stone of the north sixty-feet lock of these docks was laid on Tuesday in last week by the resident engineer, Mr. R. Hodgson. The stone was seven feet square, and came from Messrs. Stevenson & Co.'s Quarry, at Usworth. The depth of the foundation of the lock will be 29 feet 6 inches; and the depth of water on the lock sill will be 24 feet 6 inches, or 10 feet below low water at spring tides. The south sixty-feet lock is about ready for commencing with the mason work. The eighty-feet lock is commenced with. The works, as a whole, are making great progress. At present between 800 and 900 men are being employed on the works. The workmen were entertained in celebration of the occasion of laying the stone of the north sixty-feet lock.

LIGHTHOUSES IN THE UNITED STATES.—The illumination of the ocean, as it is called by Brother Jonathan, is now carried on there by means of 471 lighthouses, light fire-stations, and light-barges, of which many, however, are also placed on the banks of lakes and rivers. Of these, nine are placed alone in and near the Bay of New York; in the Bay of Newark there are four; along the Hudson there are twenty-three; along the Erie Lake thirty-four; on the Ontario sixteen. At each of these lights there are one or two guards, whose salaries vary from 180 to 1,000 dollars. The whole cost of maintaining these establishments amounted, in the financial year 1854-55, to 1,002,000 dollars, and 800,000 dollers were spent besides for the building of other similar works for lighting the shores of the United States.

THE ARCHITECTURAL ASSOCIATION.—The architectural association will hold an opening conversazione this (Friday) evening, the 3rd, at Lyon's Inn Hall. The list of papers advertised for the session promises well.

SEIZURE OF WOLVERHAMPTON CORPORATION PROPERTY.—The crisis long anticipated (says the *Staffordshire Advertiser*) has at length arrived, and the personal property of the corporate body of the borough of Wolverhampton is at the present moment in the possession of the sheriffs' officers, who have seized the police accoutrements and furniture, the fire-engines, and the furniture at the new Town Hall, in North-street. This unfortunate state of things has arisen from the claims of persons employed in connection with the late application to Parliament for a bill to construct waterworks, which the corporation failed to obtain, and which it was found they had no power to pay out of any funds in their possession. The chief of these claims was that of Mr. Hughes, civil engineer, for 1,224*l.*, which was considered exorbitant. On the corporation preparing to pay these expenses, they were threatened with legal proceedings, and ultimately a cheque for 3,000*l.*, granted for the purpose, was cancelled. Mr. Hughes sued the corporation, and judgment went by default. The amount for which the execution was put in was 1,485*l.* 16s. 7d., the increase being for legal expenses.

CHURCH STRUCK BY LIGHTNING.—The lofty spire of Castle Donington Church seems, from its elevated position on the brow of a hill, to be peculiarly liable to be struck by lightning. During the last three years it has been struck, it appears, as many times, and twice during the present summer—in each case, however, happily without doing any very material injury. In the previous discharge in the early part of this year (April 4th) the eccentricities of the electric forces were very great, and the peculiarity of that which took place on Friday before last consisted in the repetition, as far as it extended, of precisely the same eccentricities. The conductor ought to be examined by some one skilled in such apparatus: it may not be of sufficient calibre or properly insulated.

THE YOUNG WORKMEN OF LONDON.—I have read with great pleasure the remarks in your paper of last week respecting the young workmen of London. I, as a young man living in lodgings and bound to a trade in this city, have thought that young men of business situated like myself have no cause to be proud of the opportunities and inducements held out to them for improvement intellectually, morally, and physically. Why have we not a young man's club, where he could find comfort, intellectual information, good society, mutual instruction, and rational amusement; where he could read, mark, and learn, and form those habits the acquisition of which causes him to grow up a man, to all intents and purposes, and a useful member of society. I think the young men in London should be far more united for each other's benefit, that they might look to their club and institution with a manly pride. Young men in London are not sufficiently cared for, considering their importance. The enterprise of our enlightened men is much required to carry out and frame such an institution as shall attract us by its good, sound, and substantial foundation.

A BUILDER'S APPRENTICE.

THE IRON TRADE.—At the preliminary quarterly meeting of the South Staffordshire and East Worcester iron masters, held last week, it was resolved not to acknowledge any reduction below 9*l.* for bar-iron, although it is admitted by a Worcester ironmaster that "there are only a few—certainly not ten—houses that maintain that price." Expectations, indeed, had prevailed "that the trade would recognize the reduction in the price of iron, which, in reference to a large portion of the works, has taken place during the quarter."——The recent discoveries of iron ores in the uncultivated wilds of Exmoor Forest, Devonshire, are expected to produce a complete revolution in the iron trade. The district has been taken by three of the largest iron companies in England, and their machinery will, it is estimated, raise 200,000 to 300,000 tons of iron ore annually.——M. Conrad Meyer, of Paris, has invented some improved machinery for rolling metal, by so arranging and constructing rollers that round articles having shoulders, or other inequalities, may be rolled.——Mr. R. A. Brooman, patent-agent, Fleet-street (for a correspondent), has patented some alleged improvements in manufacturing cast-steel. The invention is said to be "for effecting the immediate conversion of bar or malleable iron into cast steel by the single operation of melting, which may be performed in a few hours." Almost any description of iron, it is said, however poor, may by this invention be converted into genuine steel, having great tenacity and malleability, as well as capability to be welded, and capability to stand high degrees of heat (without much, if any, deterioration), and repeated heatings. The basis of the invention consists in the use of certain chemicals in which the principle cyanogen shall be contained, and also some form of sal-ammoniac.

COMPETITION FOR THE GOVERNMENT OFFICES.—The *increased* time to March 20th, 1857, for submitting designs, will even now give but *two* months to architects in *South* America for making them, as it takes THREE months to send the particulars and to return designs from thence. I have written the First Commissioner twice on this point, as an applicant for the plans and particulars on behalf of an English architect of some eminence residing there, and if this is to be the utmost time allowed to those at such a distance, the competition cannot be regarded as *intended* for "all countries." Whether this is done to meet the views in part of those architects who advised the competition to be limited to Great Britain, or in order to hasten the erection of the *War* and other offices, the advertisement proposing it to "Architects of All Countries" is, to say the least, a *misnomer;* and to prevent such a misapprehension your insertion of this in the *Builder* will very much oblige—FAIR PLAY.

OLD ROCHESTER BRIDGE.—The old bridge is in course of demolition, the workmen in the employ of Messrs. Foord and Sons having commenced removing the superstructure preparatory to the whole being cleared away. The balustrading and some other portions of the bridge are to be used in the construction of the esplanade on the banks of the river, which is intended to be erected jointly by the bridge-wardens and the corporation of Rochester.

WINCHESTER CATHEDRAL.—Our correspondent of last week, who mentioned the works now going on at the cathedral, and who from his position ought to have known better, says, he inadvertently put the *south-west* side of the cathedral as being thrown open instead of the south-east, and assigned the five Norman arches discovered to the *north* end of the chapter-house instead of the west.

DENBIGH CASTLE.—The Chester Archæological Society has given instructions for farther exploring the curious shafted passages supposed to be peculiar to Denbigh Castle. The work has been commenced, and a doorway and passage, before concealed, have been partly opened, on the west side of the castle.

[ADVERTISEMENT.]

27 and 28, Bishopsgate-street, Aug. 1st, 1856.

GENTLEMEN,—After twelve years' experience of your Patent Iron Revolving Shutters, I have much pleasure in testifying to their great superiority over all others; and if I were to put in a new front to-morrow, I should most decidedly give them the preference.

I am, Gentlemen, yours, &c.

ROBERT ALEX. ROONEY.

Messrs. Clark and Co. 15, Gate-street, Lincoln's-inn-fields, Engineers.

TENDERS

For the erection of Christ Church Infant and Girls' School, with class-rooms, &c. at Newark-upon-Trent. Mr. Charles Baily, architect. Quantities not supplied:—

Duke and Son	£1,170 0 0
Slater and Thrall	1,091 2 6
Marshall and Henderson	1,091 0 0
Mackenzie and Fretwell	980 0 0

For the completion of seven houses for Mr. J. Sutton, Peckham. Mr. Richard Roberts, architect. Quantities furnished:—

Lawrence	£2,068 0 0
Browne and Co.	2 043 0 0
Gamin	1,955 0 0

TO CORRESPONDENTS.

THE INITIAL LETTERS OF "THE BUILDER."—In reply to several inquirers, the initial letters we are now using were designed by Mr. Henry Godwin, architect.

"T. O."—"E. and Son."—"Mr. S." "L. D. O."—"Y. S. T." A company for bringing sea-water to London was started some time ago)—"L. L. O."—"C. B. M."—"W. H."—Messrs. H."—"R. R."—"T. G."—"G." (there is such a process)—"P. L. N. F."—"T. M."—"H. A. H."—"F. Y. R."—"J. J."—"T. O."—"W. S."—"A Practical Man."—"W. T."—"T. F. T."—"Mr. H."—"J. R."—"Hoathly" (thanks; all right)—"F. S. W."—"A. N. C. B."—"Mr. H. Mell" (take professional advice). "St. Columb" out of our province).

"Books and Addresses."—We are forced to decline pointing out books or finding addresses.

NOTICE.—All communications respecting *advertisements* should be addressed to the "Publisher," and not to the "Editor:" all other communications should be addressed to the EDITOR, and not to the Publisher.

ADVERTISEMENTS.

NO CHIMNEY WANTED for RICKETS'S PATENT CALORIFERE GAS STOVES in CHURCHES, HALLS, or SHOPS;

And for Conservatories, or any close Apartment. A Pipe can be attached to carry away the burnt air.

RICKETS'S CHEAP GAS STOVE, Price £1. 15s.

Made of Sheet Iron, suitable for Heating small Countinghouses, Bedrooms, Cellars, &c. &c.

MANUFACTORY, AGAR-STREET, STRAND, LONDON.

Liberal Discount to Builders.

WOLSTON'S TORBAY IRON-PAINTS, warranted to stand the action of the Atmosphere, Steam, Gas, Noxious Vapours, Damps, and Salt Water; also intense heat without blistering. These Paints have been tested for five years on Her Majesty's Dockyards, and two Official Reports made thereon, which testify that 63lbs. of Wolston's Torbay Iron-Paint will effectually cover as much surface as 112lbs. of either White or Red Lead and that they resist atmospheric action better than Lead Paints. For all Public Works Galvanized and other Iron Roofing, Fencing, Shipping purposes (Wood or Iron), Stucco and Cement Fronts, economy and durability will be secured. To Builders and Painters, for all printing purposes, the saving will be immense. Manufactured at the TORBAY IRON-PAINT and ORE WORKS, Brixham, Devon; London Depôt, Chamberlain's Wharf. Letters or orders addressed to Mr. WOLSTON, at the Works, or No. 34, John-street, Bedford-row, will have immediate attention.

PATENT SOLID SWISS PARQUETERIE. This beautiful, unique, economical, and elegant description of Flooring, so extensively used in Paris and other continental cities, is now introduced into this country; an extensive assortment of specimens and patterns commencing at is per foot super, together with every particular of its cost and application, can be obtained of Messrs. THE NORMAN MACLEOD, Registrar.

KELLY'S PRACTICAL BUILDERS' PRICE-BOOK; or, Safe Guide to the Valuation of all kinds of Artificers' Work; with the Modern Practice of Measuring, and an Abstract of the New Building Act for regulating the Construction of Buildings. Revised and Corrected by New Calculations upon the present Values of Materials and Labour, and Arranged by an Architect of eminence, assisted by several other Practical Measuring Surveyors. Illustrated and exemplified by Steel Engravings and numerous Woodcuts. Royal 8vo price 8s. neatly bound.

London: published by T. KELLY, Paternoster-row; SIMPKIN and MARSHALL; and may be had of all Booksellers.

Of whom may be had, New Editions, in Quarto, of the following Practical Architectural Works:—

1. PETER NICHOLSON'S PRACTICAL CARPENTRY, JOINERY, and CABINET MAKING. Revised by TREDGOLD; being a new and complete System of Lines, for the Use of Workmen; for Iced on Geometrical and Mechanical Principles. Ten Parts at 2s. or in boards, 20s.; containing upwards of Three-hundred Plates, numerous Woodcut Figures,

2. PETER NICHOLSON'S PRACTICAL MASONRY, BRICKLAYING, and PLASTERING. Revised by TREDGOLD, both plain and ornamental; containing a new and complete System of Lines for Stone Cutting, for the use of workmen; the Formation of Mortars, Cements, Concrete, to which is added a variety of new designs for Mural Tablets, Tombs, Gravestones for Cemeteries, &c.; and an Historical Description of the various materials employed. Ten Parts at 3s. or in boards, 30s.; containing upwards of Ninety Steel Plates, and numerous Woodcuts.

3. TREDGOLD and NICHOLSON'S Theoretical and Practical Treatise on the FIVE ORDERS of ARCHITECTURE; containing plain and simple Rules for Drawing and Executing them in the purest style; including an historical Description of Gothic Architecture. Illustrated by upwards of One Hundred Steel Engravings and Fifty Wood Cuts, of Plan, Elevation, Section, and Detail, including numerous Diagrams, &c. Twelve parts at 3s., or in boards, 36s.

4. DESIGNS for COTTAGE and VILLA ARCHITECTURE; containing Plans, Elevations, Sections, Perspective Views, and Details, for the Execution of Cottages and Villas. By S. H. Brooks, Architect. Engraved on Steel, with Directions for Building. Also the Situation of each Edifice. Twelve parts at 2s.; or in boards, 24s.

5. DESIGNS for PUBLIC BUILDINGS, consisting of Plans, Elevations, Perspective Views, and Details of Churches, Chapels, Schools, Almshouses, Gas Works, Markets, and other buildings for public purposes. By S. H. Brooks, Architect. Executed or not executed. Ten Parts at 3s. 6d. each.

6. THE HOUSE DECORATOR and PAINTER'S GUIDE; containing a series of Designs for Decorating Apartments with taste, and suited to the circumstances of Artizans; by H. W. Arlott, Assistant to Her Majesty's Decorator to her Majesty. Ten Parts at 2s. each.

7. THE HOUSE PAINTER, or DECORATOR'S COMPANION; containing a complete Treatise on the Art of House Painting, Graining, and Marbling; including the Origin of Colour, the Laws of Harmonious Colouring, the Manufacture of Pigments, Oils, Varnishes, &c. By W. M. Higgins, Esq. Accompanied by actual Specimens of Hand-brush Graining and Marbling. Ten Parts at 2s. each.

THE ENGINEERS' and MECHANICS' ENCYCLOPÆDIA; a work, intended for the use of Engineers, Mechanics, Manufacturers, Practical Men, and Students in Mechanical Science, in every Branch, from the Simplest Machine to the most complicated Engine. Illustrated by upwards of 2,000 Wood Engravings. By Dr. LARDNER, Civil Engineer, &c. The Engravings of Machines and Engines develop a great deal of the most ingenious and valuable Practice in the Execution of the Engineering Works of the present day. Many of these are recent, and have not been published before. The Work, for a variety of reasons, is peculiarly adapted for Students, and care in the revision of all the Treatises has been taken to render it systematically enriched; so that it may be perused as fully and faithfully exhibiting the existing state of Engineering and Mechanism, up to the present period. Complete in Two large 8vo volumes, cloth, lettered, price 24s.

TO ARCHITECTS, BUILDERS, and OTHERS.—Messrs. LIALE and ALLELCHT, 4, Larch-field-street, Soho, London, for many years engaged at Messrs. Jupp's, Bankside, Southwark, are prepared to execute Copper Roofing, Covering Flats, Gutterings, &c.; also, Ornamental Vanes made to any design, on the lowest terms. Orders punctually executed.

SHOREDITCH.—BUILDING GROUND. TENDERS will be received until MONDAY, the 6th of OCTOBER, 1856, for the LEASE of a PLOT of BUILDING LAND, upwards of 180 feet in depth, adjoining Shoreditch churchyard, with an entrance from the High street and partly abutting thereon.—Particulars may be obtained of Messrs. R. J. and H. CLUTTON, 9, Whitehall-place, where a plan may be seen.

BUILDING LAND TO BE SOLD, thirty miles from London, and twenty from Brighton, and within a mile of a first-class station on the Brighton Railway, about TWENTY-FIVE ACRES of FREEHOLD LAND, most arable, with farm house, superior farm premises, and two cottages. Is well drained, lies high, and commands fine prospects with good building stone near the surface.—Apply to Mr. G. PLAYFORD, Grove Farm, Crawley, Sussex.

TO BUILDERS.—Some very eligible Lots of FREEHOLD LAND, suitable for the erection of houses of the value of from 9 0l. to 800l. each, situate at Tulse-hill; Lower Norwood; Walthamstow; near the Railway Station at Harrow; and Forest-hill, TO BE LET on Building Leases, at moderate ground-rents.—Apply to Mr. JAMES HIGHAM, 79, Farringdon-street.

FINCHLEY.—LAND fronting the Regent's Park-road, and East-end-road, TO BE LET on Building Leases for ninety-nine years, with power of enfranchisement. Plots from one to four acres for large villa residences; small plots for semi-detached houses, and plots for shops in the village. Apply to W. A. BOULNOIS, Esq. Architect, 6, Waterloo-place, Pall-mall; or to Messrs. BARKER, BOWKER, and PEAKE, 1, Gray's-inn-square.

BEULAH SPA HOTEL, TO BE LET, on lease, or the FREEHOLD TO BE SOLD.—The hotel comprises the old and new buildings and about four acres of land. The house is beautifully situated on Bagg's-hill, Norwood, with an extensive frontage to the high road, and is within a short distance of the Crystal Palace. The house is at present unoccupied, except the Tap.—For particulars, apply to E. N. CLIFTON, Gresham House, Broad-street, City.

TO BUILDERS and CAPITALISTS.—FOR SALE, by PRIVATE CONTRACT, about TWELVE ACRES of eligible BUILDING GROUND, situate in the township of Whitley, and adjoining the borough of Tynemouth. The ground commands one of the most beautiful and extensive views on the coast, overlooks the Whitley, or North Rocks, is about one mile distant from the Tynemouth Railway Station, and is approached by a good and level road.—Particulars may be obtained on application to Mr. WM. DUNN, Solicitor, Pilgrim-street, Newcastle-upon-Tyne; or to Messrs. RICHARDSON and ROSS, Architects, Darlington, with whom plans of the estate are deposited.

TO BUILDERS, CONTRACTORS, and OTHERS.—TO BE LET on Lease, for a long term, several Plots of FREEHOLD GROUND, well suited for manufactories, warehouses, or other building purposes. The property is within three miles from London, land-tax redeemed, and tithe-free.—Apply to Mr. W. H. DEAN, Surveyor, Stratford; or to Mr. GEORGE POWNALL, Surveyor, No. 87, Bloomsbury-square, London.

VALUABLE FREEHOLD BUILDING GROUND, comprising about two acres, situated in the parish of St. Mary, Islington.—TO BE SOLD, a valuable PLOT of FREEHOLD LAND, with frontages admirably adapted for the erection of about sixty houses, a chapel, public institution, or any other large edifice.—For particulars, apply to Mr. MILLS, 59, Spencer-street, Northampton square, between the hours of eleven and one o'clock.

BUILDING LAND TO BE LET for 900 years, near the new Railway Station, Norwood, and elsewhere. Money and bricks, if required.—Apply to Messrs BLAKE and SNOW, Solicitors, 23, College-hill, Cannon-street, City.

THE METROPOLITAN BOARD of WORKS are desirous of obtaining a suitable BUILDING for OFFICES of the BOARD, or premises capable of ready adaptation for that purpose, or a site conveniently situate upon which such a building might be erected. The site should not be less than 10,000 feet in area, and in such a locality as to be central, and easily accessible from all parts of the metropolis. Letters, containing full particulars (endorsed "Metropolitan Board of Works—Site for Offices") with plan and other requisite information, to be addressed to the Metropolitan Board of Works, 1, Greek street, Soho-square, before MONDAY, the 6th OCTOBER, at FOUR o'clock p.m. E. H. WOOLRYCH, Clerk of the Board.
Sept. 29th, 1856.

GUILDHALL, 29th September, 1856.—The Committee for Letting the City's Lands will meet at Guildhall, on WEDNESDAY, the 8th day of OCTOBER next, at ONE o'clock precisely, to receive PROPOSALS for a LEASE of a HOUSE, No. 27, Banner-street; and several Houses, Nos. 1 to 9, in York place, Banner street, Finsbury. Also to receive proposals for a yearly Tenancy of a House, No. 3, Giltspur-street.—Plans of the property may be seen, and forms of Tender obtained, upon application at the Architect's Office, Guildhall.
FERDINAND BRAND, Comptroller.

GUILDHALL, London, 2nd October, 1856. The Committee for Letting the Bridge-House Estates will meet at Guildhall, on FRIDAY, the 10th day of OCTOBER inst. at ONE o'clock precisely, to receive TENDERS, for a building lease for eighty years, of a PLOT of GROUND, on the west side of Old Change, in the City of London.—A plan of the ground and conditions for letting may be seen at the Architect's Office, Guildhall. FERDINAND BRAND, Comptroller.

NEW WINDSOR ESTATE.—Valuable BUILDING LAND TO BE LET, in Plots for first and second class Villa Residences, with Stabling, which are much needed in this beautiful locality. The situation is the finest in or near Windsor, abutting on the Park and Long Walk, and commanding a splendid view of the Castle. Within ten minutes of the Great Western and fifteen minutes' walk of the South-Western Railway Stations. Advances can be had by responsible parties.—For particulars apply to Mr. WILLIAM SIM, Architect and Surveyor, 2, Danes-Inn, Strand.

LAMBETH BATHS and WASH-HOUSES COMPANY LIMITED, WESTMINSTER-ROAD, LAMBETH.—TO BE LET, for the next five months, either together or separate, the two handsome and light BATH-ROOMS, being about 150 feet long by 50 feet wide, and of the height of about feet, well adapted for parties requiring extensive premises during the winter season, both rooms being well fitted up and lit with gas. Also a ROOM, 47 feet long by 19 feet wide, with a room adjoining, 16 feet square, and a small note-room. These rooms are fitted up with fireplaces and stoves, and would be found suitable for a school or lecture-room. Possession may be had immediately. For terms and particulars, apply to Mr. J. B. DOWNING, the Secretary; or Mr. FULLER, Superintendent, at the Baths, Westminster-road, Lambeth.
N.B. The Private Warm Baths are now open, daily, from SEVEN a.m. till NINE p.m.; on SATURDAYS, till TEN p.m.; and on SUNDAY MORNING, from SEVEN till NINE o'clock. First Class Private Bath, 6d. Second Class, 3d.

BELSIZE PARK, Hampstead.—A PORTION of this PARK WILL BE LET on building leases to respectable builders. There are bricks on the ground, and the roads and sewers are completed. Money, if required, would be advanced on mortgage.—Apply to Mr. WILLIAM THOMPSON, Architect, 2, Conduit-street West, Westbourne-terrace.

WANTED, a Genteel COTTAGE RESIDENCE, within four or five miles of the Bank, with three best and two secondary Bed-rooms, good Garden, Stabling, &c. and if with Paddock preferred.—Address full particulars to Mr. MURRELL, 1, Walbrook, City.

TO SOLICITORS, ARCHITECTS, AND OTHERS.

OFFICE WANTED.—A Surveyor and Branchman requires an OFFICE, and would not object to share same with either of the above. Preference given where mutual assistance could occasionally be given.—Address to D. M. C. Miles's Library, Upper-street, Islington.

TO BUILDERS, CARMEN, &c.—TO BE LET, with immediate possession, LARGE PREMISES; comprising yard, stabling, and two residences, situate in a convenient locality.—For further particulars apply to Mr. MURRELL, Auctioneer, 1, Walbrook, City.

GREEN-STREET, LEICESTER-SQUARE. TO BE LET, the commodious BUSINESS PREMISES, No. 17, in the above street.—The premises may be viewed on application within, and particulars obtained of W. C. REED, Architect, 64, Old Broad-street, City.

WATERSIDE PREMISES.—TO BE LET, between Blackfriars and Southwark-bridge, Bank-side, ELIGIBLE PREMISES, with Warehouses and good entrance. For particulars apply to Mr. W. HOPWOOD, Aldine-chambers, Paternoster-row.

TO ENGINEERS, MANUFACTURERS, WHARFINGERS, and OTHERS.—TO BE LET, on Building Leases for 99 years, a large WATERSIDE FRONTAGE for building factories, wharfs, &c. with every accommodation by water and land carriage, within two miles from London-bridge.—For further particulars apply to WILLIAM RUSSELL, Ploughroad, Rotherhithe.

WHARF and PREMISES.—TO BE LET or the Lease to be Sold, a WHARF, on the Regent's-canal, near the Victoria-park, having a frontage of about 140 feet, with large shed (the upper part adapted for a granary), dwelling-house, and range of stabling.—Apply to Mr. ST. QUINTIN, Auctioneer, at Royal Exchange.

LIME WHARF, &c.—TO BE DISPOSED OF, the LEASE of an excellent WHARF, with Goodwill of a Lime, Cement, Slate, and Timber trade, situate in a suburban locality and rapidly-extending neighbourhood.—For particulars, apply to Mr. JONES, Estate Agent and Auctioneer, 27, Bucklersbury, City.

PELICAN LIFE INSURANCE COMPANY, established in 1797.
70, Lombard-street, City, and 57, Charing-cross, Westminster.

DIRECTORS.

Robert Gurney Barclay, esq.	Kirkman D. Hodgson, esq.
William Cotton, D.C.L. F.R.S.	Thomas Hodgson, esq.
John Davis, esq.	Henry Lancelot Holland, esq.
William Walter Fuller, esq.	Benjamin Shaw, esq.
Jas A. Gordon, M.D. F.R.S.	Matthew Whiting, esq.
Henry Grote, esq.	M. Wyvill, jun. esq. M.P.

NOTICE.—In order to remove any apprehension that might be entertained as to the perfect security of the Policies granted by the PELICAN LIFE OFFICE, the Directors have omitted every Clause that would render them void by reason of any error in the Statements made by the Assured before or at the time of effecting an Insurance. Moderate rates of Premium with participation in profits. Low rates without profits.
LOANS.—In connexion with Life Assurance on approved security.
For prospectuses and forms of proposal apply at the offices as above, or to any of the company's agents.
ROBERT TUCKER, Secretary.

THE LONDON and WESTMINSTER BANK issues CIRCULAR NOTES of 10l. each, payable at every important place in Europe. These notes are issued without charge, and they are cashed abroad free of commission. The Bank also issues, free of charge, Letters of Credit on all the principal cities and towns in Europe. The Letters of Credit are issued only at the Head Office in Lothbury. The Circular Notes may be obtained at the Head Office in Lothbury, or at any of the Branches, viz.—
Westminster Branch, 1, St. James's-square.
Bloomsbury ditto, 214, High Holborn.

LIFE DEPARTMENT.—Under the Provisions of an Act of Parliament, this Company now offers to future insurers Four-fifths of the Profits, with Quinquennial Division, or a low rate of premium with a participation of profits.

The next division of profits will be declared in June, 1860, when all Participating Policies which shall have subsisted at least one year at that time, 1856, will be all wed to share in the profits.

At the two divisions of profits made by this Company the annual revenue has been added to the policies have exceeded 9,000*l.*

At Christmas 1854, the assurances in force amounted to upwards of 4,240,000*l.* the income from the Life Branch in 1855 was more than 300,000*l.* and the Life Assurance Fund (independent of the Guarantee Capital) exceeded 1,760,000*l.*

FOREIGN RISKS.—The extra premiums required for the East and West Indies, the British Colonies, and the northern parts of the United States of America, have been materially reduced.

INVALID LIVES.—Persons who are not in such sound health as would enable them to insure their lives at the tabular premiums, may have the risks insured at extra premiums.

LOANS granted on Life Policies to a certain fixed amount, provided such Policies shall have been effected a sufficient time to have attained in each case a value not under 50*l.*

ASSIGNMENTS OF POLICIES.—Written Notices of, received and registered.

MEDICAL FEES paid by the Company, and no charge will be made for Forms or Stamps.

Notice is hereby given, That Fire Policies which expire at Michaelmas must be renewed within fifteen days at this Office, or with Mr SAMUEL BROWN, No. 1, St James's-street, corner of Pall-mall, or with the Company's agents throughout the kingdom, otherwise they become void.

Losses caused by Explosion of Gas are admitted by this Company.

TWELVE MARBLE (statuary, carved, truss, &c.) CHIMNEY PIECES TO BE SOLD, all new in the best taste, with shelves 4 feet wide by 2 inch thick. Also, eight slabs each 7 feet long, with a richly ornamented cast-iron table, to be in a revolving top; would suit a sculptor, or as a pedestal for a group or statue. Also an Aneroid, for Dissolving Views Apply to J. FARREL, 54, Norfolk-street, Middlesex Hospital

MARBLE CHIMNEY-PIECES, and every other description of marble work supplied to builders and the trade at about HALF THE USUAL PRICE, in many instances less. Manufactured by the LONDON and CONTINENTAL MARBLE COMPANY, at their own Quarries in France and Belgium.—Office and Depôt, 3, Crooked-lane, London-bridge.—Estimates given for works to any amount.

MARBLE CHIMNEY-PIECES.—The nobility and gentry of the United Kingdom who are building or refitting their mansions are respectfully invited to inspect the most Extensive Collection of MARBLE CHIMNEY-PIECES lately imported from the Continent. They comprise Statuary, Giallo di Siena, Vert Rouge, Dove, Black and Gold, Rouge de Roy, Burdilla, and other choice foreign marbles; and are designed with great taste, and executed by first-class artists.—On sale, in the show rooms of Messrs. EVANS, SON, and CO. King William-street, London-bridge.

MARBLE GALLERIES, 17, Newman-street, Oxford-street.—Mr. ALFRED G EDWARDES, (upwards of 20 years with the London Marble Company,) has opened the above premises, lately in the occupation of Bailey, the celebrated sculptor, under the firm of EDWARDES, EDWARDS, and COMPANY, with the largest stock of BRITISH and FOREIGN MARBLE CHIMNEYPIECES, &c &c in London. EDWARDES, EDWARDS, and CO. solicit the favour of an inspection of their stock by architects, builders, and others connected with the trade; and beg to assure them that for design, style of execution, and price, it will be found unrivalled. Estimates for every description of marble work.

BUILDERS, ARCHITECTS, AND MASONS.

MARBLE. — The ITALIAN MARBLE COMPANY beg to call the attention of Architects, Builders, and Others connected with the trades, to their large and well-assorted STOCK of VEIN SICILIAN, and other MARBLES. The liberal system of business adopted by this company, the superior quality of their marble, and their very moderate scale of prices are combined, to form an inducement to buyers. An inspection is solicited at the Depôt Bridge Wharf, Millbank, adjoining Vauxhall-bridge, where no other persons are authorised to sell except Mr. Baxter, Wharf Foreman, or the undersigned.

WILLIAM W. BONNIN, Secretary.

MARBLE WORKS by PATENT MACHINERY, Commercial-road, Pimlico, London.

THOMAS JACKSON begs to draw the attention of the public to the most extensive stock of Marble Chimney-Pieces in the Metropolis, consisting of a selection of upwards of two hundred, and manufactured by steam power from the finest Italian and other marble, and with that care and attention to the details and finish as necessary in good marble work. The Stock consists of elegant Drawing-Room Chimney-Pieces in statuary Marble; bold, massive Chimney-Pieces, in Black, Black and Gold, Burdilla, Sienna, Verd Antique, Brocatella, Dove, St. Ann's, and Serpentine Marble, suitable for Dining-Rooms, Libraries, Vestibules, and Entrance-Halls; and a great variety of others in Veined, San Juan, Emperor's Red and Amber Marble, for Boudoirs, Breakfast-Rooms, best and secondary Bed-Rooms, &c.; also, Monuments, Tombs, Tablets, and Pedestals for Busts and Statues, and Slabs for Cabinet Work, &c.; the whole executed from the most classical designs, and in all the varieties of the finest Italian and British Marble, at the lowest remunerative prices.

BUILDERS and CONTRACTORS OBSERVE!—The chea est Depot in London for the Sale of Marble Chimney pieces is at the WESTMINSTER MARBLE COMPANY'S WORKS, Earl-street, Horse-ferry-road. A large stock on view to be sold from. Vein Marble Box Chimney pieces from 40*s.* upwards. The trade supplied on liberal terms.

N.B. The Westminster omnibuses pass the Works from the City.

LLOYD'S MARBLE WHARF, Thames-bank, Pimlico, adjoining Vauxhall-bridge.—Italian Statuary, Veined, Sicilian, Dove, Sienna, and other Marbles, for Sale, at import prices. A resident manager on the wharf at all hours.

PURBECK MARBLE can be had of Mr. JAS. WEBB, Corfe Castle, Dorset.

BRAMLEY FALL! BRAMLEY FALL! On account of great facilities than possessed by any one else, TRICKETT and PERKINS are prepared to supply in any quantity BRAMLEY FALL STONE, at greatly reduced prices, having opened the extensive quarries in the Hawksworth Cutting, on the North-Eastern Railway, near Horsforth. The stone is of be same quality as the well-known Old Bramley Fall and Horsforth Quarries, but has the advantage of being of a higher and more uniform colour. The North-Eastern Railway Company have put additional sidings on both sides of the railway. Powerful cranes are fixed so that the stone can be got to any site, and the stone being loaded in the quarries on the railway-trucks can be forwarded the same day to any part of the kingdom, or supplied in London rivers via Selby or Hull, in any quantity.—For particulars apply to JOHN TRICKETT, Stone Merchant, Headingley, near Leeds, or to SAMUEL TRICKETT, Victoria Stone Wharf, Isle of Dogs, London.

BANGOR WHARF, King's-road-bridge, Camden-town.—STRINGFIELD and COOPER late W. W. Rawlins beg to call the attention of Builders and others to their stock of Bangor slates, baths, plaster, Roman, Portland, and Keene's cement, blue lias, Dorking and chalk lime, plasterers' hair, Yorkshire plain, tan, and ridge tiles, garden sewer pipes, closet-pans, and traps, Welsh fire-bricks, gravel and shells for garden paths, ballast, sand, &c. Materials landed, wharfed, and carted

QUARRY WORKED STONE.—Architects, Masons, and Builders would effect a great SAVING in cost by ordering bases, plinths, templates, sills, corbels, imposts cornices, coping steps, staircases of all kinds moulded or plain, square or circular, from the quarries ready worked for fixing. Experienced foremen are kept, and the stone is clean worked, and carefully packed or stowed, and delivered direct to one bottom by vessel or railway truck. Prices and every information given on application, accompanied by plans or sketches, to SAMUEL TRICKETT, Stone-wharf, Isle of Dogs, or to JOHN TRICKETT, Headingley, Leeds, Yorkshire.

RANSOME'S SILICIOUS STONE.—All kinds of ARCHITECTURAL EMBELLISHMENTS executed in this beautiful and indestructible material, at prices not exceeding the ordinary cements. Full particulars furnished on application to Mr. FRED. RANSOME, Whitehall-wharf, Cannon-row, Westminster; or Patent Stone Works, Ipswich.

YORKSHIRE STONE. — THOMAS TILNEY, Stone Merchant, Tanfield-place, Leeds begs to inform Builders, Surveyors, and Local Boards, that he can supply direct from his Quarries, by water or railway Paving, Landings, Steps, Kerb, or coal to sizes, on the most advantageous terms—Prices sent on application

TO CONTRACTORS AND OTHERS.

TO STONE-MERCHANTS, MASONS, and BUILDERS.—The CHEAPEST WHARF in Yorkshire for ROBIN HOOD BLUE STONE is the Queen's Head Wharf, Saw-mills, New Dock, Leeds.—For Prices, &c. apply by letter to JOSEPH SLATOR, Stone-Merchant, Leeds.

GATES and GEORGE, CAEN, AUBIGNY, and GENERAL STONE MERCHANTS.
CAEN WHARF, ROTHERHITHE, LONDON.

CAEN and AUBIGNY STONE.—P. FOUCARD, Stone Merchant and Quarryman, Caroge shipped to order from Caen to any port. Contracts taken for any quantities. Depôts: Granite Wharf, East Greenwich; Leeft Wharf, Waterloo-bridge. Office: 305, High-street, Southwark, near the Townhall.

TO CONTRACTORS, ROAD SURVEYORS, &c.—FOR SALE, about 800 YARDS BROKEN LOMBAY GRANITE, superior to Guernsey; 500 Broken Hobart Town; and 600 other Yorkshire Ditto. Also a large quantity of Peat Gravelles, Broken or otherwise, at very reasonable rates, by the ton or yard.—Apply to Mr. CHARLES ROSS, 3, Putney-causeway, Ratcliff; or at Polly-wharf, Isle of Dogs, Poplar.

WELSH GRANITE.—The Welsh Granite Company, Carnarvon, supplies Pitching or Paving Sets of this Material to order The Sets which have for several years been extensively used in Manchester, Bristol, Leeds, and other large towns, combine in a higher degree than any others, the qualities of non-abrasion in wear and durability. The stone is also well adapted for Roadside curbs, plinths, &c. for public buildings and for mill-stones.

GRANITE.—King William and Nelson Monuments, Plinth and steps of the Royal Exchange, and Terraces at the Crystal Palace.—Supplied by the Haytor Company under Royal Charter.—For terms, apply to Mr. C. HOAR, Haytor Granite Office, 4, Millbank-row, Westminster.

GRANITE.—The Cheesewring Granite Company, Liskeard, Cornwall.
London Agents—REGELLES and TAYLOR, 84, Old Broad-street. Manager—JAS. J. TRATHAN, Liskeard
This Granite is selected for the New Westminster-bridge.

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. SOULES and WOOD invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c cut on the shortest notice. Country orders promptly attended to.

JOHN BAZLEY WHITE and BROTHERS, MARBLE MERCHANTS,
MILLBANK-STREET, WESTMINSTER.
Marble of all kinds and of best quality, in block and slab, Marble mortars, &c.

STONE! STONE! STONE! — To the TRADE.—The cheapest place in London for Portland and Bath Stone, Yorkshire Landings, Steps, Curb, Paving, Rag-face Slab, Granite Pitching and Curb, Guernsey Broken Road Materials, and every other description of stone, at JOHN KNIGHT and SONS', Devon Wharf, Mile-end. York boaled paving 38*s.* 6*d.* per 100 feet; slab for hire, 4*d.* per foot sup.; slab for chimney-pieces, 3*d.* per foot sup.; 8 by 3 window-sills, 6*d.* per foot run; 13 by 3 coping, 8*d.* per foot run; box chimneys (any opening), 8*s.* 6*d.* each. Terms cash on delivery.

BATH STONE OF BEST QUALITY.
RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.

List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

SLATE.—An assortment of the best BANGOR ROOFING SLATE ON SALE, at Bridge-wharf, Millbank.—Apply to Mr. GEORGE BAXTER, Foreman.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Berkhen Hospital, various Lunatic Asylums, the Portsmouth Works, Model Prisons, Parliament-street, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street, and at Messrs Drake's, Belvidere-road, where terms may be obtained.

PARIS EXHIBITION.—ENAMELLED SLATE TWO FIRST CLASS MEDALS!—Mr NAGNUS is the only exhibitor whose productions received the double honour; also the Prize Medal at the Great Exhibition of 1851, and the Medal of the Society of Arts in 1845. This beautiful material, handsomer and more durable than marble, is now finding its way into palaces, into the mansions of the nobility at home and abroad, into the highest class of public buildings, as well as into humbler dwellings. The cost is unnecessarily below that of any other production that can at all compete with it. It is applicable to a variety of useful and ornamental articles, too numerous to be separately specified. Among the chief are chimney-pieces and ornamental stoves for all apartments; plain and exquisitely decorated slabs for the tops of loo-tables, chiffoniers consoles &c.; baths baptistries, altar-tablets, pilasters, columns, vases pedestals, and brackets; wash-stand tops, billiard tables, linings to halls, vestibules, and dadoes.—Price lists can be had on application to Mr. MAGNUS, 39 and 40, Upper Belgrave-place, Pimlico.

N.B. Plain slate work executed from a single article to the most extensive contracts, for home and abroad.

CHIMNEY-PIECES, Baths, Tombstones, Pedestals, Washing-tables, Urinals, and every other Article of Slatework, PLAIN or PANELLED

Self-faced Flags for Barns, Outhouses, or Street Paving.

In Stock at Paddington, SEVERAL FINE SLABS of 70 SUPERFICIAL FEET each.

LLANGOLLEN FLAG AND SLATE COMPANY, PLANTAGENET WHARF, LLANGOLLEN, AND 4 WHARF, SOUTH WHARF-ROAD, PADDINGTON.

ROOFING SLATES or SLATING, SLATE CISTERNS, SINKS, &c.—T. I. HANN-FORD begs to inform Builders and the Trade generally, that they are not only manufacturing materials and workmanship of the best quality, but being the owner of a slate quarry, his prices will be found considerably lower than the usual quotations. 1*l* inch Slate Paving, 4*d.* per foot. Treviglo Wharf, Ratcliff-cross.

SLATE.—The Bangor Royal Slate Company have now on hand a LARGE ASSORTMENT of ROOFING SLATES, blue and green, of the usual sizes, which they are prepared to supply on the most liberal terms for cash, free of delivery, or to be transmit by railway. Also Slabs of all sizes. Orders to be addressed to R. EDWARDS, Manager, Royal Slate Quarries, Bangor.

AMERICAN OILSTONES, superior to all other Oilstones for sharpening Edge Tools. Can be cut to any shape or size. AMERICAN OILSTONE DUST, 2*s.* 6*d.* per lb. Patentee of the Engineers' Rather Drills, Brass, Iron Mi. nesh.—JOSEPH FENN, Tool Manufacturer, 105, Newgate-street, London.

TO CONTRACTORS and PROPRIETORS of SOLID ROCK.—Since the invention of HUNTER'S PATENT STONE PLANING MACHINE, nineteen of which are presently at work in Portsmouth, several on monumental slate-slabs have been made to order at a Machine for Ashlar Dressing, &c. Every one has failed. J and S HUNTER feel bound to direct attention to their PATENT now in practical operation both in England and Scotland. The machinery is constructed that it will receive a block how-ever rough, & cut it to two, facing both sides, it will also face one side without cutting on both sides. The machine is well adapted for large contracts, such as the construction of docks

O. M'CARTHY, CARTAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars, Fleet-street, City. Sand, free above or below bridge, delivered by the yard or per barge. Ballast screened or unscreened, by the yard or per barge. Block, Lime and old bricks, Dry rubble delivered per barge, in any quantity, alongside the Thames.

ASPHALTE.—GERVASE FOOTTIT TRINIDAD ASPHALTE WORKS, ROTHERHITHE, LONDON. Established 1834.—TRINIDAD, SEYSSEL, and BRITISH ASPHALTES, manufactured by Steam power, laid down in the best manner, or supplied in any quantity. Information for using forwarded with material Post-office orders or reference in London promptly attended to.—Estimates given for every kind of the above work.

ASPHALTE, FOREIGN and BRITISH, for FLAT ROOFING and very description of PAVING, especially in damp situations.

1*s.* 6*d.* per SQUARE YARD.

Country Builders supplied with Asphalte for footings and barn floors, with instructions for using it.

Apply to JOHN PILKINGTON, Poloncean and Limmer Asphalte Office, Monument-chambers, 14, Fish-street-hill, London.

N B Importer of the PURE ROCK ASPHALTE, from the LIMMER Mines in Hanover.

NOTICE TO ROAD CONTRACTORS, NURSERYMEN, AND OTHERS.

W. and J. STUDDS, Sole Proprietors of the WEST DRAYTON GRAVEL PITS, late removed from No 21 Wharf, Harrow-road to 9, North Wharf-road, Paddington, have now on sale good Garden and Screened Gravel. For terms, &c. apply at the Wharf.

Contractors supplied to any extent.

CREOSOTING PLANT, complete, for SALE Cylinder, 30 feet by 4 feet. Engine, boiler, and pumps, by Burton. Would be divided if needful.—Apply to JOHN CLARKSON, Timber Merchant, Birmingham.

COLES, SHADBOLT, and CO. CEMENT and PLASTER MANUFACTURERS, LIME BURNERS, BRICK, TILE, DRAIN-PIPE, HAIR, LATH, and FIRE GOODS Merchants, St. James's and Thornhill Wharfs, Caledonian-road, London.
ROMAN CEMENT, made at the above works, may be had fresh from the kilns daily—a great advantage to dealers and sewer contractors, especially in winter time.
PORTLAND CEMENT, of the best quality strength, and Colour, manufactured in Kent. This cement will carry more sand than any of the Lias Cements, so much of which is now brought into the market and sold as Portland.
PLASTER of PARIS, direct from the quarries, both coarse and fine, whole-sale and retail.
LIME, Grey Stone, Chalk, and Blue Lias Lime, fresh and well-burnt, a constant and regular supply of which may be had by the barge or yard.
A large assortment of Glazed Stoneware Drain-pipes, of the best Lambeth make; Yorkshire Plain, Pan, and Paving Tiles; Welch Fire-bricks, Lumps, and Tiles; Hair and Laths, always kept in stock.
These goods are of the best quality, and sold at the lowest possible prices.
N.B. Shipping orders promptly executed.

NOTICE.—TO BUILDERS, RAILWAY AND DOCK DIRECTORS, WATER-WORKS AND GAS COMPANIES, CONTRACTORS, &c.—JOHN CHADWICK, Manufacturer of the Patent Lithic Roman, and Portland CEMENTS, made on the Maidstone and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel street, Liverpool.

BATH, PORTLAND, and ROMAN CEMENTS.—The London and West of England Cement Company is to offer to the Trade the best natural HYDRAULIC CEMENTS at reduced prices. The Company particularly recommend the best quality of their Bath Cement for all modelling purposes, decorations &c, as having all the qualities requisite for an interior cement and being quite unaffected by extremes of weather. The Company also supply BLUE LIAS LIME lump and ground, which will carry more sand than any in the market.—Communications to be addressed to the General Offices, 30, Old Broad-street, London; to Mr. MONUMENT, 4, Caroline-place, City-road; to Mr. TIMEWELL, the Depôt, 9, North Wharf-road, Paddington; or to the Works, Dunball, Bridgewater.

SOUTHAM BLUE LIAS LIME DEPOT.
Glazed Stoneware Sewage Pipes.
Brick, Lime, and Cement Merchants,
TATHAM and CO.
14, South Wharf, Paddington.

PORTLAND and BATH CEMENTS.
TATHAM and CO.
14, South Wharf, Paddington.

PARIAN CEMENT, reduced in price 25 per cent. This article is valuable for inside stucco, and especially for skirtings, for flooring on brick arches, &c. It takes paint in a few hours after its application on walls or laths, is without efflorescence, and may be papered in a couple of days. A finer quality forms a beautiful Scagliola, with any admixture of colours.—Manufactured by FRANCIS, BROTHERS, Cement Works, Nine-elms, London.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON can be had in any quantity, wholesale and retail, at his wharf, 6 Upper Thames-street, London; and also at the manufactory, Faversham, Kent.—N.B. These Cements supplied for shipment, on advantageous terms.

THE PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs ROBINS and Co. to WHOM THE PRIZE MEDAL WAS AWARDED in 1851, are prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes to which Cement is applicable. Orders received at Grey Portland-yard and at the Works.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland Cement is manufactured at these works with especial reference to its destination, whether for stucco, brickwork, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

PORTLAND and ROMAN CEMENTS.—T. H. BOORMAN, WILD, and CO. MEDWAY LIME and CEMENT WORKS, LOWER HALLING, near Rochester. Agents at the Works—Mr. THOMAS WEEKES.
Agents in London, Messrs. GEORGE POTTER and CO. Lime-merchants, Portfleet-wharf, Earl street, Blackfriars, and No. 19, North-wharf-road Paddington.

PORTLAND and BATH CEMENT.—FULLWOOD THOMPSON and CO. request the attention of Merchants and Contractors to the quality of their Portland and Bath Cement, which they manufacture by improved system, securing regularity of strength and colour, and at a less cost than is attainable by most other makers.
These cements set under water in a few minutes, and are not affected by extreme heat or cold.
FULLWOOD THOMPSON & CO. will be happy to send prices and samples in reply to application by post. They deliver free into the Bristol and Exeter Railway Company's trucks at their works, or free on board in the Port of Bridgewater.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light, Dark, and Portland Cements equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-tops, Ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

JOHNS and CO.'S PATENT PERMANENT STUCCO WASH (perfectly non-absorbent), STUCCO, CEMENT, STUCCO PAINT.—CLARK and BENOUGH, Manufacturers, Grand Surrey Canal Bridge, Old Kent-road. Office, 4, Gerrard-yard, Lombard-street.

PORTLAND and ROMAN CEMENT.
PLASTER of PARIS
Manufactured by J. M. BLASHFIELD, at Millwall, Isle of Dogs, Warehouse, No. 1, Wharf, Paddington-basin
11 George-yard, Lombard-street, City

ELMLEY CEMENT WORKS.—ROMAN and PORTLAND CEMENT of the first quality, manufactured on the above works. Also STOCK and KILN-BURNT BRICKS, hand moulded and machine made, for shipment or otherwise.—Apply to G. BOOTH, Agent, as above.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements tried at the Institute of Civil Engineers, to be obtained from the Makers, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

DAMP WALLS.
STENT'S COMPOSITION FOR PREPARING NEWLY-PLASTERED OR DAMP WALLS FOR PAPERING,
Is the result of practical experiments and long experience; it is unfailing in its application. Entire houses have been papered a few days after plastering. In repairs of old plastering it is invaluable. A moderate room can be papered for 2s. 6d.
Prepared only by W. J. STENT, Warminster.
London Agents: Messrs. GEO. and THOS. WALLIS, 64, Long-acre. Agent for Ireland: Mr. S. BOYD, 46, Mary-street, Dublin.

HUBBUCK'S PATENT WHITE ZINC PAINT,
The Permanent White of the Ancient Artist.
HUBBUCK and SON, the Original Manufacturers, are enabled, by their process, which is patented, to supply Pure White Zinc Paint at the price of White Lead. Neither heat nor tropical climes act upon it. It is entirely free from any poisonous or pernicious property. The unctuous and mawkish paralysis and painters' colic, will be altogether avoided. The Powdered White Zinc may be had for grinding in Oil, and where it is used with Size, Varnish, &c. To prevent the prejudice against Zinc paint, which the adulterated article must otherwise produce, it is now sold by the Wholesale Paint dealers in Original Packages, each cask stamped, HUBBUCK—LONDON—PATENT. And when so marked, the quality is guaranteed. THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers, Paint and Varnish Works, opposite the London Docks, London.
N.B. OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT FOR REFINING.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street Westminster

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring. Sold exclusively by JOHN BAZLEY WHITE and BROTHERS Millbank-street, Westminster; and Seel street, Liverpool.

BLUE LIAS LIME.—CHAS. NELSON begs to offer to consumers a supply of Blue Lias Lime direct from his Quarries in Warwickshire, the quality of which has been tested by several of the largest building firms in the metropolis and approved by them; and those who have favoured C. N. with their patronage during the last three years have always expressed themselves satisfied with his system of weighing or measuring the lime. When the lime is delivered by boat, the master has instructions to produce (on demand) the canal ranger's pass, by which the purchaser may know the quantity actually delivered.—Orders addressed to the London Depôt, 19, South Wharf, Paddington.
J. D. BLYTH, Sole Agent, will have immediate attention.—Quarries and Manufactories, Stockton, near Southam, Warwickshire

PLASTER of PARIS manufactured by T. P. BLYTH, Baldwin's-place, Gray's-inn-lane, Holborn. The trade and shippers supplied on advantageous terms. Roman and Keene's Cement, Tiles, Plasterers' Hair, Pan and Plain Tiles, Fire Goods &c

DAVIES and NORMAN, CROWN WHARF, GREAT SOUTH-END YARD.
ROMAN and PORTLAND CEMENTS,
LIME BRICKS, TILE SLATTS, FIRE GOODS, &c.
STONEWARE PIPES, PANS TRAPS, &c
A Liberal Allowance to the Trade.

NOTICE.
SOUTHAM HYDRAULIC BLUE LIAS LIME.
WILLIAM OLDHAM begs to inform those parties requiring genuine Hydraulic Blue Lias Lime, that he is prepared to deliver the best quality of ground and lump, into boats, at the Works.—Address, WILLIAM OLDHAM, Blue Lias Lime and Cement Works, Southam.

BLUE LIAS LIME.—Messrs. GREAVES and KIRKSHAW having completed their Works on the Birmingham and Oxford line of the Great Western Railway, at Harbury, are now prepared to supply LUMP and GROUND LIME of the best quality, direct from the kilns, to all the Stations on the Great Western Railway.—Greaves's Blue Lias Lime.—Portland, Bath, and Lias Cement.—Works, at Harbury, Stockton, and Wilmcote.—Office, at Warwick

GREY STONE LIME WHARFS, 12, UPPER GROUND-STREET, Blackfriars Surrey side, 7, NORTH WHARF-ROAD, Paddington.
WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME in any quantities from the above wharfs, or per barge direct from the kilns.
Large Grey Stone, or Grey Chalk, free on board at Works, 1s. 6d. per ton.
Small ditto, ditto, 4d. per ton.
Barges loaded in a few minutes.
Wouldham-hall Grey Stone Lime Works, on the Medway, near Rochester.

CHARLES RICHARDSON, 2 & 6, SOUTH-WHARF, PADDINGTON BASIN.
COWLEY AND KENT BRICKS,
PORTLAND, ROMAN, AND OTHER CEMENTS,
TAMWORTH GLAZED SEWAGE PIPES,
BLUE VITRIFIED BRICKS, COPINGS, PIPES, &c.
3 & 6 South Wharf, Paddington.

NOTICE.
CHARLES RICHARDSON takes the earliest opportunity of informing Engineers, Architects, Contractors, and others, that he is now bringing GREAVES'S BLUE LIAS LIME per the Great Western Railway from Harbury to Bull's-bridge and Paddington, from whence it can be delivered alongside any part of the river Thames, canals, or rail way stations in London the day after it is burnt and ground, in any quantity, and at a great reduction in price.
All applications for prices and terms will meet with prompt attention
N.B. Please observe the lime is ground at the works, not in London.

BRICKS of all kinds (clamp-burnt or kiln-burnt), Lime, Chalk, Chalk Rubbish for brick-making, Flints for building and pottery work, Foundry Loam, Whiting Whiting Sand for asphalte, Land Drain Pipes, Patent Drain Pipes, Gas Soil for brick-making, &c. &c. sent by barge from Messrs MEESON and CO.'S works at Grays, Essex, to any part of the Thames, the various canals, the river Lea, &c. or by rail to any station in the London and Southend and Eastern Counties lines, or any railway connected with them. Vessels of 200 to 600 tons can load along side the wharves at Grays. At MEESON and CO.'S wharf and kilns, Bow-bridge, Stratford, Essex, the above named articles can also be procured, as well as all kinds of fire goods, both Welsh and Scotch, Fire-clay, Flare-burnt Lime and Marble and Temper Lime; and here lime is packed in bags heads, casks, jars, &c. for exportation
General Office—No. 12, GEORGE-YARD, LOMBARD-STREET
Letters addressed to Grays Essex, will meet with immediate attention.

THE BEST HERTFORDSHIRE MALM SECONDS;

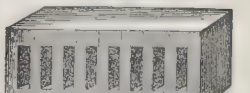
Also COWLEY and KENT STOCKS, in any quantities.
J. EASTWOOD and SONS, Belvidere-road, Lambeth; and Surrey-canal-bridge, Old Kent-road, Surrey.

BRICK-FIELDS, QUEEN'S-ROAD, PECKHAM, SURREY.
(Within a short distance of the fire bridges).
THE BEST MALM-CUTTERS, SECONDS, PICKINGS, and PAVIORS, in any quantity.
Also, STOCKS, of FIRST QUALITY.
J. EASTWOOD and SONS, Belvidere-road, Lambeth.

ROUPELL-PARK BRICKFIELDS, LOWER NORWOOD, SURREY, near the Crystal Palace. Entrance, Norwood end, Palace-road.—BRICKS of the first class, Kiln Bricks, Cutters, Dressings, Facings, and Paviors, Clamped ditto, Yellow and Pale, Seconds, Place and Pickings, Washed Stocks, Stocks, and Place.—Apply to TRUMAN and CO. Norwood Lodge, Palace road, Roupell park, Lower Norwood, Surrey.



THE PATENT BRICK MACHINE COMPANY invite orders for their IMPROVED MACHINES. One of them is working in a field at Caterham, near Croydon, and arrangements are made with the owner for bearers of a letter from the Secretary, to see it in operation every Thursday and Friday. It is the most simple machine invented. Trains from London-bridge to Warlingham or set to the field; leave at 6 and 9.30 a.m. and 3 p.m.; return at 9.25 a.m. and 5.5 and 7.55 p.m.
HENRY C. MOUNT, Sec.
37, King William-street, City.

BRICKS.—Mr. Rydon having made more Bricks than he requires for the Buildings on his estate, Highbury Crescent, would be willing to enter into arrangements with builders and others for supplying first-class STOCK and RED BRICKS upon advantageous terms. For particulars, apply at the Estate office, Bell's Farm, St. Ke Newington Green.

BRICK, TILE, and POTTERY KILNS.—WANTED to RENT, CONVENIENT WORKS for carrying on the above Business. Address, THOMAS FOX Post office, Botwell, Middlesex.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings of good and sound quality, constantly on sale at D. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for them elves
Malm Place, half-washed Stocks, and Place Bricks, also on sale. The Bricks are good, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing
Apply at HENRY DODD and CO. at the Counting-house, Heston Brickfield, Grange-walk, near the Rosemary Branch, Hoxton
N.B Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its freedom from all existing saline matter, is also considered to be preferable to river sand.

IMPROVED AIR-BRICKS

WILLIAM GILBERT, Manufacturer of all kinds and sizes of Tiles, Quarries, Drain pipes, Moulded Bricks, Brackets, Vases, Chimney pots, Stoneware Glazed Sewerage Pipes, Ornamental Quoin Blocks, &c.
Tividale, Staffordshire.

HOGG'S GARDEN EDGE TILES: a cheap, elegant, and durable substitute for Box Edging.
13s. per Hundred, or
4d. per yard.
Exhibited in Court of Inventions, Crystal Palace; and at the Office of "The Builder."
Full pattern as from Mr. R. BLACKET Witham, Essex

BEADON'S EAVES GUTTER TILES.—Mr. LAWES is prepared to CONTRACT for the EXECUTION of the above TILES on roofs of all descriptions in the neighbourhood of London, at 7½ per foot; above 100 feet, 6½.—Office, 1, Adelaide place, London-bridge.

BEADON'S PATENT IMPERISHABLE GUTTER-TILES,
For Spouting Roofs of Houses (either old or new, whether of thatch, slate, or tile), and other structures.
SOLE AGENCY.
J. B. LAWES, 1, Adelaide-place, London-bridge.
This is the cheapest kind of spouting known; for, besides its lower cost, it will last without paint or repair as long as the building itself. It will bear the weight of any ladder; and in case of accident a labourer can repair it. It occupies the room of a large amount of roofing, effecting a great saving in slates, tiles, &c. It is especially applicable to the backs of houses in town, cottages, and agricultural buildings.
Price 4d. each tile of about 13 inches long; stop-ends and outlets, 6d. Any mason can put them up, or, if over 100 feet are required, a man will be sent to fix them at 3d. per foot. This charge to include tiles delivered in Agent's yard, cement, and labour. May be had in London, Gloster, Bridgwater, and Rugby.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21, WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and, thirdly, that the "HARDNESS OF THE FORMS," page 281, of the Great Exhibition, rank the Manufactures known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world

CONIAM'S PATENT IMPROVED ROOFING TILE.—These tiles are light from overlapping each other by a raised edge, which also prevents the drift of rain or snow, and, at the same time, effects considerable saving in timber. To be obtained of C. PHILLIPS, Potter, Weldon-super-Mare.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854 was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes whose named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

N.B. Kent's Painting Brushes are all stamped G. B. KENT & CO.

Price Lists forwarded by post.

LAMBERT'S PATENT WATER WASTE PREVENTER, and SELF-REGULATING VALVE-COCK, especially adapted for Water-closets.

(a) FIG. 1. FIG. 2.

This Valve is so arranged, that whether it be held down or propped up, only a given quantity of water can be used at each action.

The pressure of the column of water—viz. its vertical height—being known, a quart gallon, or any other quantity desired will be (and no more can be) discharged; and before a second quantity can be obtained, a second action must take place.

This Valve is capable of several modifications; one of its applications to the Pan Closet, as shown in Fig. 2, is important, as it renders unnecessary any other appliance to regulate the discharge of water; it can be made to keep open as long or short a time as may be desired, after the handle which operated upon it is set free.

It is yet more valuable when applied to self-acting Closets, as it dispenses entirely with reservoirs or supply cisterns; once regulated, say for one gallon, that quantity will always be discharged at each action of the seat by its pressing upon the stud, or by any other movement.

The Patentees have tested them under every pressure up to 300 feet with complete success.

THOS. LAMBERT and SON,
Founders and Manufacturers of High-pressure Water-Valves,
Plumbers' Brass Work, Pumps, &c.
SHORT-STREET, NEW-CUT, LONDON.

TO WATER COMPANIES AND PLUMBERS.

HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street London.

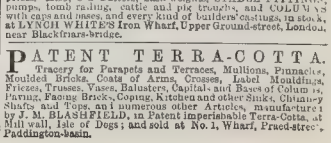
DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter:—FROM SIR RAYMOND JARVIS, Bart., VENTNOR, ISLE of WIGHT.—Second Testimonial.—"March 10th, 1852—In reply to your letter, received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state, with much satisfaction, it answers perfectly. Many Builders, and other persons, have lately examined it, and there is not the least apparent difference since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."

N.B. From this Testimonial it will be seen that the COMPOSITION WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

THE GUTTA PERCHA COMPANY, PATENTEES,
18, WHARF-ROAD, CITY-ROAD, LONDON



HANCOCK'S PATENT VULCANIZED INDIA-RUBBER TUBING, HOSE-PIPES, WASHERS, ENGINE-PACKING, both round and flat, and SOCKET-RINGS for Hot-water-pipes. WHITE ENAMELLED STONEWARE,

UNION POTTERY, 14, VAUXHALL-WALK, LAMBETH, LONDON.

W. N. solicits an inspection of his IMPROVED WHITE ENAMELLED STONEWARE CLOSET-PANS, being an entire new description of stoneware, perfectly vitrified and highly glazed, far surpassing anything of the kind yet offered to the public.

SAME PRICE AS BROWN STONEWARE—Closet and Trap, 5s. 6d.; Closet, 3s. 6d.; Trap, 2s.

SALT-GLAZED STONEWARE, FIRE-CLAY, AND TERRA-COTTA WORKS,

NEAR BARNSLEY, YORKSHIRE.

The Proprietor, E. B. BEAUMONT, manufactures every description of STONEWARE for drainage, building, sanitary purposes, and fancy ware, from clays which have been subjected to the most searching analyses, and proved to be of the most tenacious and indissoluble qualities. The pipes are wrought by Spencer's Patent Machine, by which tube and socket are made, without a manipulated joint, and rendered the more compact by hydraulic surge; and as every improved apparatus has been made available to secure the highest excellence with great economy of labour, the goods are put upon the market at a considerable reduction from the prices charged for others at all approximating in quality, whilst the stock on hand is always sufficient largely to provide for works of the greatest magnitude.

THE TRADE LIBERALLY TREATED WITH.

Price lists and Diagrams sent free on application, to

At the WORKS .....To Mr. WM. FORD Darfield Fire-clay Pottery, near Barnsley.
In LIVERPOOL .....To Mr. JOHN LIDDALL, 36, Shaw's-row.

In GLOUCESTER....To D. S. WILKINS, Westgate Wharf, Gloucester.
In LONDON.....To Mr. J. D. JONES, 37, Bucklersbury; and Goods Depot, No. 4 Warehouse, King's-cross (Great Northern Railway).

AYLESFORD POTTERY COMPANY,

BELVEDERE-ROAD, LAMBETH.

MANUFACTORY AT AYLESFORD, NEAR MAIDSTONE, KENT.

The above Company having now been in existence for nearly six years, and having during that period supplied DRAIN PIPES, &c. to some of the largest Works in and around London viz.: The New Cattle Market, Wellington and Chelsea Barracks, Deptford Dockyard, Her Majesty's Commissioners of Works, &c. and in all instances parties using them expressing themselves satisfied therewith,—take this as a fair test of the quality of the articles supplied by them; and as they now feel themselves established as Potters, beg to offer their services to Contractors the Trade, & others requiring goods, and manufactured, and at the lowest possible prices, NOT BEING IN ANY WAY CONNECTED WITH THE LONDON POTTERS' ASSOCIATION.

GREAT REDUCTION IN GLAZED STONEWARE PIPES.

STEPHEN GREEN,

IMPERIAL POTTERIES, LAMBETH.

S. G. wishes to call attention to his WHOLE and HALF-SOCKET PIPES, made on the principle of PILBROW'S IMPROVED REBATED SOCKET-END, which fully secures a joint free from obstructions, and meets the demand for removing Pipes at any point.

5s. 6d. each; if fitted with PATENT AIR-TIGHT VALVES, 1s. 6d. each extra.

Also to his IMPROVED REGISTERED CLOSET PAN, with an impervious White Glaze inside, and formed to insure a Flush of Water over the entire Internal Surface. Made with or without STEPHEN GREEN'S PATENT AIR-TIGHT VALVE on the top of the Trap.

N.B. Prospectuses, with Prices and Terms, forwarded post-free, as also Prospectuses of STEPHEN GREEN'S PATENT SELF-ACTING FLUSHING CLOSET, complete, with Seat and Riser, &c.

GREAT REDUCTION IN PRICE OF DOULTON'S DRAIN-PIPES.

HENRY DOULTON AND CO.

Beg to inform Builders, Contractors, and others, that they have made a considerable REDUCTION in the PRICES of their

GLAZED STONEWARE DRAIN-PIPES,

Drawings and Prices will be forwarded on application.

SOCKET.

HALF-SOCKET.

MANUFACTORIES: HIGH-STREET, LAMBETH, LONDON; ROWLEY REGIS, STAFFORDSHIRE and SMETHWICK, near BIRMINGHAM.

OFFICES: HIGH-STREET, LAMBETH, LONDON.

REDUCTION IN PRICES.

PATENT DRAIN-PIPES, UNGLAZED, manufactured by ARTHUR C. FRANCIS and CO. Grays, Essex. Sold by them, and by FRANCIS, BROTHERS, Mincing-lane, London, and at all their Warehouses.

PRICES.

3 inch bore, in 2 ft. 6 in. lengths, at					2½d. per foot.
4	"	"	"		3½d. "
6	"	"	"		5½. "
9	"	"	"		9d. "
12	"	"	"	1s. 5d.	"
15	"	"	"	2s. 6d.	"

These pipes are made under steam pressure, and burnt to great hardness, and are capable of bearing nearly double the hydraulic pressure of ordinary glazed pipes. The prejudice against red-ware is overcome by the manufacture, and it is well known that good earthenware, UNGLAZED, is the oldest material discovered in a perfect state in Rome, Babylon, Nineveh &c. &c.

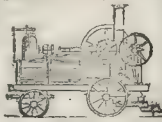
2½	short, with 15 feet of lead pipe attached, ready for fixing		2 14 0
2½	long ditto ditto		3 18 0



The short barrel Pumps is very convenient for fixing in situations of limited height and space, for the supply of coppers and sinks in washhouses with soft water from underground tanks, or in hot forcing, and plant houses; they may be fixed, when desired, under the stage.—May be obtained of any Ironmonger or Plumber in town or country, at the above prices, or of the Patentees and Manufacturers, JOHN WARNER and SONS, No. 8, Crescent, Jewin-street, London.—Every description of Machinery for Raising Water, by means of wheels, rams, deep well pumps, &c. Also, Fire and Garden Engines, &c. &c.—Engravings sent on application.

PORTABLE STEAM-ENGINES and PUMPS kept in Stock for Hire at reduced Prices. R. RICHARDS and CO. Pump Manufacturers and Engineers, Upper Ground-street, Blackfriars-bridge (Surrey Side).

STEAM PUMPING ENGINES.—PATENT PORTABLE STEAM-ENGINES, from four to ten-horse power, always ready to let on hire, by the week or month, for pumping, sawing, pile-driving, raising materials, &c. &c.

Contracts taken for pumping any quantity of water.

JAMES BURTON & SONS, Engineers and Contractors, John's-place, Holland-street, Southwark, London.

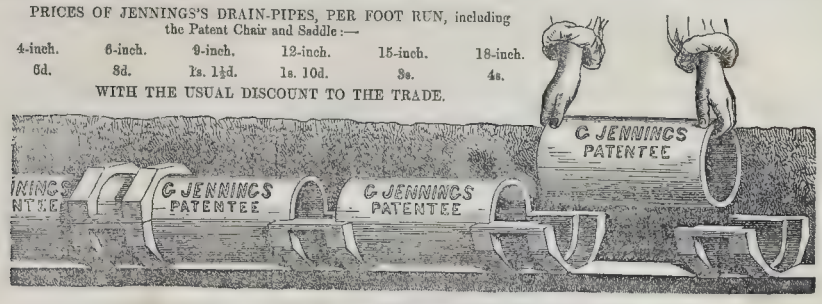
CONTRACTORS' STEAM-ENGINES.—TO BE LET, on HIRE, or for SALE, several NEW and SECOND HAND STEAM-ENGINES, of various powers, suitable for contractors' work generally.—Apply to Messrs. MEDWIN and HALL, Engineers, Surrey Iron Works, Blackfriars-road, where they may be seen.

TO CONTRACTORS.—FOR immediate SALE, a bargain, in consequence of the undertaking being abandoned, a strong and well-made powerful PORTABLE STEAM-ENGINE, adapted for contractors' work generally.—May be seen at work on application to Messrs. MEDWIN and HALL, Engineers, 92, Blackfriars-road.

JENNINGS'S PATENT DRAIN-PIPES.

The Drain-Pipes which weekly ornament the pages of the *Builder*, were originally introduced into Britain BY THE ROMANS. Common sense, however, objected to their use on a LARGE SCALE, as they neither admitted of examination nor repair.

The alterations made by GEORGE JENNINGS remove EVERY OBJECTION TO PIPE-DRAINAGE.



Examinations can now be made, junctions introduced, and repairs effected, without in any way disturbing the Invert or General Drain.

That these alterations were necessary is proved by the attempt of some manufacturers to effect the same object without infringing the Patent rights of GEORGE JENNINGS, who particularly invites Architects, Engineers, and Others interested in Sanitary Improvements, to COMPARE HIS THE ORIGINAL IMPROVEMENTS with the attempted copy.

PRICES OF JENNINGS'S DRAIN-PIPES, PER FOOT RUN, including the Patent Chair and Saddle:—

4-inch.	6-inch.	9-inch.	12-inch.	15-inch.	18-inch.
6d.	8d.	1s. 1½d.	1s. 10d.	3s.	4s.

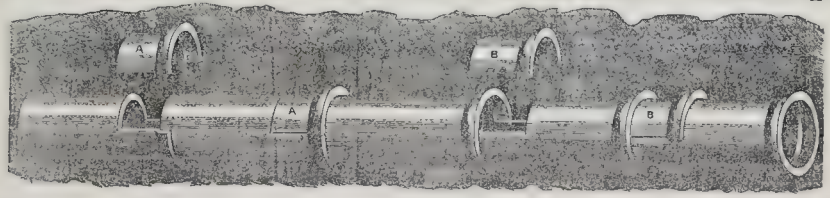
WITH THE USUAL DISCOUNT TO THE TRADE.

JENNINGS'S PATENT DOUBLE-SEATED VALVE-CLOSET.

Architects describing this Closet in their specifications will have a PERMANENTLY GOOD VALVE CLOSET, NOISELESS, and FREE FROM COMPLICATION. The Patentee has such confidence in its DURABILITY and EFFICIENCY, that he will guarantee every Closet for SEVEN YEARS.

JENNINGS'S IMPERISHABLE EARTHENWARE CLOSET AND TRAP.

This Closet has a large water surface, has no back to soil, is imperishable in its material, and the Trap and Closet are combined in one piece, suited alike for the PALACE or the COTTAGE.



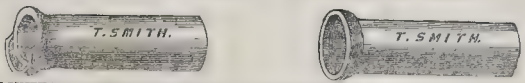
JENNINGS'S IMPROVEMENTS IN LIFT AND OTHER PUMPS.

These Pumps would well repay a visit to Jennings's Factory, where may be seen Jennings's Lavatories, Urinals, Sluice Valves, Fire and Steam Cocks, of every size; Shop-Shutter Shoes; Gully, Area, and Sink Traps, and other sanitary goods.

Or Illustrations and Prices can be had free by post, if two stamps are enclosed to

GEORGE JENNINGS, SANITARY ENGINEER, HOLLAND-STREET, BLACKFRIARS-ROAD, LONDON.

AYLESFORD POTTERY COMPANY'S PATENT DRAIN-PIPES.



THE above Company respectfully invites the attention of Engineers, Architects, Surveyors, Builders, &c. to an improved DRAIN-PIPE, whereby all stoppages may be cleared without disturbing the invert of the drain, by simply removing the cover (marked A or B) whichever may be preferred.

The cover (marked B) may be used in conjunction with whole or half-socket Pipes.
Pipes thus constructed may be laid at intervals in a drain of ordinary Socket-Pipes.
With the great advantage these Pipes offer, they are cheaper than any yet submitted to the public.

London Depôt—AYLESFORD WHARF, Belvedere-road, Lambeth.

MANUFACTORY AT AYLESFORD, NEAR MAIDSTONE, KENT.

GREAT REDUCTION IN PRICE OF SMITH'S DRAIN-PIPES.

THOMAS SMITH begs respectfully to call the attention of Contractors, Builders, &c. to the GREAT REDUCTION in his PRICES of GLAZED STONEWARE DRAIN-PIPES, &c.

T. S. is the ORIGINAL Manufacturer of the CONED or REBATED SOCKET PIPES, and the Medium-backed Closet-pans (with superior White Enamel Glaze inside), as made under the direction of JAMES PILBROW, Esq. Engineer to the Tottenham Local Board of Health, with which he is now supplying several large towns.

N.B. Half-socket Pipes same prices, which obviate all difficulty arising AT ANY TIME from the Inspection of Pipes in the event of the unusual circumstance of a Stoppage occurring, or a Junction being required to be inserted.

SALES BY AUCTION.

TO IRON PLATE-WORKERS, IRONMONGERS, AND OTHERS.

MESSRS. FULLER and HORSEY will SELL by AUCTION, on THURSDAY, OCTOBER 16, at TWELVE, on the PREMISES, White Lion yard, White Lion street, Seven Dials, by order of the Trustees, the TOOLS and STOCK-IN-TRADE of an IRON PLATE WORKER, 100 dozen scoops and scuttles, ten kettles preserving-pans, saucepans, fire baskets, copper hole shovels, sifters, card boxes, and other articles, all of the best manufacture, set of bending-rolls, plate-workers' tools, bright stake heads, bench shears, vices and benches, smith's forge, bellows, anvil and 1 cwt. of round bar iron, tinning pit, lead cistern, fly-press, two iron safes, weighing-machine, and other effects.—To be viewed the morning of sale, when catalogues may be had on the Premises; and of Messrs. FULLER and HORSEY, Billiter-street, City.

COLCHESTER.—Freehold Building Land.

MESSRS. BEADEL and SONS have received instructions to SELL by AUCTION, at the CUPS HOTEL, Colchester, on THURSDAY, the 16th day of OCTOBER, 1856 at TWO for THREE o'clock, in 6 or 7 lots, several valuable PLOTS of FREEHOLD BUILDING LAND, situate close to the railway station at Colchester, possessing considerable frontages to North-street and the roads leading from Colchester to Sudbury and Ipswich, which will be found most desirable investments for building; also a few lots close to St. James's Church, on the East-hill fronting Castle-road and Garden-terrace. The above property is freehold, land-tax redeemed, chiefly tithe free, most eligibly situate, and singularly adapted for the erection of villa or other residences, and offers rotes for the county of Essex.—Particulars, with Lithograph plan (by permission of Colonel Russell, Esq.), of Messrs. Sole, Solicitor, 59 Coleman-street, London; at the Cups Hotel, Colchester; and of Messrs. BEADEL and SONS, 24, Gresham-street, London.

TO CABINETMAKERS, TIMBER MERCHANTS, CHAIRMAKERS, BUILDERS, and Others.

FOR SALE by AUCTION, on the PREMISES, New Inn, Broadway, Curtain-road, Shoreditch, by order of the proprietor who is relinquishing the premises, and removing entirely to 121 Curtain-road), the third portion of the STOCK IN-TRADE of Mr J. F. Mitchell, Mahogany and Timber Merchant, which will be sold without reserve, on TUESDAY, 7th OCTOBER, 1856, at TEN for ELEVEN o'clock precisely. The stock consists of large quantities of excellent and well seasoned Spanish, Cuba, and Honduras mahogany and cedar, in fine logs, flitches, planks, and boards, birch, rosewood, and walnut in planks and boards, dry pine deals and planks, whole and cut, &c. To be viewed two days prior to and on the morning of sale. Catalogues may be had on the Premises and of THOMAS EDWARDS and SON, Mahogany Brokers and Auctioneers 16, Pinner's Hall, old Broad-street, City.

N B The Premises TO BE LET for any other trade.

HARROW, MIDDLESEX.—Valuable Freehold Building Land, about midway between the church and the station

MESSRS. FAREBROTHER, CLARK, and LYE are instructed to SELL, at GARRAWAY'S, on WEDNESDAY, OCTOBER 8, a valuable FREEHOLD PROPERTY, close to Harrow on the-Hill, and about midway between the church and the station, and only a few yards removed from the high-road, beautifully situate, commanding extensive views over the surrounding picturesque country, divided into three lots, as under, viz.:—Lot 1. A desirable plot of ground, as staked out, and abutting on the Roxburgh-road, and having a frontage thereto of 300 feet, and extending in the rear to a depth of about 500 feet, part having a frontage of 187 feet to the Byron-road. Lot 2. A corner plot, situate at the junction of the Roxburgh and Byron roads, with two frontages, of 118 feet to the former, and 183 feet to the latter. Lot 3. Another valuable plot, having a frontage of 202 feet to the Byron-road. The above property forms a portion of a larger estate, recently disposed of for building purposes. The roads are laid out, tasteful villas have been erected on the adjoining plots, and some others are in progress. The proximity of the railway station, combined with the benefits extended by the North-Western Railway Company to occupants of houses in the vicinity, coupled with the advantages of Harrow School, render this a most desirable property for the erection of villa residences. May be viewed; and particulars, with plans, may be had at the King's Head Inn, Harrow; the Railway Hotel, at the station; of THOMAS WONNACOTT, Esq. Solicitor, 18, Skinner-street, Snow-hill; at Garraway's, and at the Offices of Messrs. FAREBROTHERS, CLARK, and LYE, Lancaster-place, Strand.

TO BUILDERS, STONE-MASONS, AND OTHERS.

MR. A. BOOTH will SELL by AUCTION, on WEDNESDAY, the 15th of OCTOBER, 1856, at TWELVE precisely, on the PREMISES, No. 40, Pitt-place, Harrow-road, the STOCK-IN-TRADE of a PATENT STONE-PRESERVING WORKS; 200 chimney-pieces, in imitation, blue Devonia, and statuary marble tops, flower-boxes, clock and shade stands, 500 feet ornamental pavement, one hundred and fifty plaster balustrades, trusses, &c.; Bath and Caen stone in blocks and slabs; Welsh and Yorkshire landings and curbs, steel tools, twenty saws and frames, sheet iron, brick erection of large preserving tanks, moulds, work-benches, gas and office fittings, &c.—May be viewed on day prior and morning of Sale. Catalogues forwarded by post, or may be obtained on the Premises, and of Mr. ABRAHAM BOOTH, Auctioneer and Estate Agent, No. 1, Carlton-Hill-villas, Camden-road (opposite the Brecknock-arms).

CHELMSFORD.—To FARMERS, BUILDERS, and OTHERS.

TO BE SOLD BY AUCTION, by

VALPY and STOKES, on THURSDAY, the 23rd of OCTOBER, 1856, on the PREMISES, Prittle-road, adjoining the Railway Viaduct, Moulsham, without reserve, by order of the Trustees of which is leaving the premises about 500,000 BRICKS and TILES, consisting of white and red kiln brick, yellow and grit stock bricks, pitty and paving bricks and drain-pipes; also, the kiln, as it stands; pipe-moulds, barrows, boards, brick-tables, moulds, &c. &c.; about ten tons of prime new hay, two horses, two fat heifers, thatched shed in brick-field, with standing stage, &c. Sale to commence at TEN for ELEVEN o'clock precisely.—Catalogues may be had at the Place of Sale; Office of the Auctioneers; and at the neighbouring Inns.

TO CABINET-MAKERS, BUILDERS, AND OTHERS.

MESSRS. KENNEDY and BONNY will SELL by AUCTION, at BAYHAM WHARF, near the Railway Station, Camden-town, on TUESDAY, OCTOBER 14th, 1856, at ELEVEN o'clock precisely, in lots, a large quantity of WAINSCOT PLANKS, containing about 15,000 feet, well-seasoned, and varying from 2 inches to 4½ inches in thickness. Also a quantity of WAINSCOT VENEERS.—May be viewed at any time and catalogues had of Messrs. SUTTON and OSMAN, Solicitors, No. 6, Basinghall-street, City; at the Wharf; and at the Auctioneers' Offices, Camden-town.

SALE of MAHOGANY, &c. at LIVERPOOL.

The next Periodical Auction sales, comprising Cargoes of Honduras, Mexican, City St. Domingo, St. Domingo, and Cuba Mahogany, and Havannah Cedar, Rosewood, Walnut, Sapele, and other Furniture Woods, &c. will take place on WEDNESDAY MORNING, the 15th instant, at ELEVEN o'clock precisely, in the WOOD-FLOOR, Upper Brunswick and Dutch Docks, Liverpool.—Catalogues, containing full descriptive particulars, may be had on application to EDWARD CRAWSHAY, Wood Broker and Measurer, No. 6, East-side, Queen's Dock, Liverpool.

TO TIMBER MERCHANTS, BUILDERS, CARPENTERS, AND OTHERS.

MR. LEREW will SELL by AUCTION, on the PREMISES, 42, Union-street, Somers-Town, on MONDAY, OCTOBER 13, at ELEVEN for TWELVE, 2,000 Yellow, White, Pine, and Spruce PLANKS, DEALS, and BATTENS, 5 squares of prepared flooring, 1,000 feet sentling, dry cut stuff, 30 doors, ranges, stoves, ironmongery, scaffold poles, ladders, steps, wheelbarrows, &c. May be viewed on Saturday prior to the sale, and catalogues had on the Premises; and of the Auctioneer, Carlington-street, Hampstead-road.

SALES BY AUCTION.

Surplus Lands and other valuable Freehold Property, on the Caterham Railway, the Rose and Crown Public-house, Cottages, &c. on the road from Croydon to Godstone, in the county of Surrey.

MESSRS. NORTON, HOGGART, and TRIST have received instructions to offer for SALE, at the Mart, on FRIDAY, OCTOBER 17 (instead of the 24th, as previously advertised), at TWELVE, in Twenty-two lots, the SURPLUS LANDS and other FREEHOLD PROPERTY on the Caterham Railway, commencing at the Warlingham Station, and ending at the present terminus, comprising altogether about 170 acres. Lots 1 to 16 inclusive will consist of a brick-built dwelling-house, near to the entrance of Marden Park, with gardens and paddock; a smaller cottage and garden, numerous plots of building land, varying in quantity from one to 10 or 12 acres, possessing very extensive frontages to the high road leading from Croydon to Godstone, and immediately contiguous to the Caterham Station. Lot 17. A valuable Freehold Estate, on the opposite side of the railway, close to the station, bounded on one side by a road leading to the village, and on another by a road called Burnwood lane, containing nearly 80 acres, and capable, by the construction of a new road, of being made available for very extensive double frontages. Lot 18. A valuable Plot of Freehold Building Land, immediately adjoining the Warlingham Station, having a considerable frontage to the road, and containing about two acres. Lot 19. A valuable Freehold Estate, on the other side of the railway, and close also to the Warlingham Station, bounded by a new road and Salmon's-lane, principally adapted for building, and containing about 30 acres. Lot 20. A valuable Plot of Freehold Building Land, adjoining Lot 19, with considerable frontage to the new road, containing nearly seven acres. Lot 21. The Rose and Crown Public-house, close to the Warlingham Station, with offices, garden, and orchard. Lot 22. Three Cottages, garden, and orchard, near the Rose and Crown Public house. The Caterham Railway has opened to the metropolis a district full of beauty for building operations. The soil is excessingly dry, on a chalk subsoil, and, consequently, very healthy. Stone, bricks, lime, sand, and gravel can be obtained on the spot at a remarkably cheap rate, and it has the advantage of being in the neighbourhood of several packs of hounds and good shooting. At the terminus is a very comfortable hotel, with first-class stabling for hunters, erected for the accomodation of sportsmen, and the access to London will be frequent and easy, with the prospect in a short time of a terminus at the west end, and great facilities will be afforded to the public and to building operations by the issue of season tickets at extremely low prices, which tickets, under certain arrangements, will be in force for seven years. Particulars, with plans, may be obtained at the Caterham Railway Station; of Messrs. Farebrothers, London-bridge; at the Greyhound, Croydon; of Mr. ALEXANDER PAINE (who will show the lots), at the Caterham hotel, Caterham; at the stations on the Caterham railway; the White Hart, Godstone; the White Hart, Reigate; the Ward Arms, Westerham; the Dorset Arms, East Grinstead; of Messrs. DREW and GRAY, Solicitors; of Messrs. Dauncey and Son, Solicitors, Croydon; of Messrs. DAVIDSON and BRADBURN, Solicitors, 22 Basinghall-street, of JOHN DINGWALL, Esq., Solicitor, 7 Lenhouse-yard; of Messrs. BANKS and BURY, Architects, 37, Sackville-street; at the Mart; and of Messrs NORTON, HOGGART, and TRIST, 62, Broad-street, Royal Exchange.

Very important and valuable Freehold Building Ground at Paddington, lying between the Grand Junction Canal and the Harrow-road.

MESSRS. NORTON, HOGGART, and TRIST have received instructions to OFFER FOR SALE, at the MART, on FRIDAY, OCTOBER 24, at TWELVE (unless previously disposed of by private contract), a very important and exceedingly valuable PLOT of FREEHOLD BUILDING GROUND, land-tax redeemed, having a very considerable frontage to the Harrow-road, communicating with the Queen's-road, Porchester-road, and Westbourne-terrace bridges, extending in depth about 410 feet, and lying immediately between the Grand Junction Canal and the Harrow-road. This valuable spot offers sites for about fifty houses. The buildings in the immediate neighbourhood consist chiefly of most respectable private houses, and it is almost the only uncovered space adapted for building.—May be viewed, and particulars, with plans, had of Messrs. CLAYTON, COOKSON, and WAINWRIGHT, Lincoln's-inn; at the Mart; and of Messrs. NORTON, HOGGART, and TRIST, 62, Old Broad-street, Royal Exchange.

SYDENHAM.—For absolute and unreserved Sale.

MR. MARSH has received instructions from the Executors of the late Thomas Hunt, Esq. to SELL by AUCTION, without the slightest reserve, on the PREMISES, Wells Road, Sydenham, on TUESDAY, OCTOBER 14th, at TWELVE for FOUR o'clock, in Sixteen Lots of 10,000 each, 600,000 of capital STOCK, SECOND DITTO, PLACE, and other BRICKS. The Premises are close to three Railway Stations, and in the vicinity of excellent roads.—May be viewed the day prior and morning of sale, and catalogues obtained on the Premises, and at Mr. MARSH's Offices, 2, Charlotte-row, Mansion-house.

TO CONTRACTORS, TIMBER MERCHANTS, BUILDERS, CARPENTERS, PACKING-CASE MAKERS, and OTHERS.

MR. MARSH has received instructions to SELL by AUCTION, on the PREMISES, (Messrs. Robinson and Bartrum's Saw Mills, Swan-street, Grange-road, Bermondsey, on WEDNESDAY, OCTOBER 15, at TWELVE o'clock, the entire and first-class STOCK, consisting of about 2,000 squares of dry prepared flooring, from two to four years old; consisting of 1¼ x 7, 1 x 8, 1 x 9, and ¼ x 7 (2 cut 3) inch) dry yellow, 1 x 9, and ¼ x 7 (3 cut 4) inch), 1 x 7, and 1 x 9 dry white deals and battens, and about 3,000 3 x 7 and 3 x 9 yellow, and 2½ x 7 and 3 x 7 dry yellow and white deals and battens, and 3 x 11 best bright yellow pine planks, and other useful timber. May be viewed the day prior and morning of sale, and catalogues obtained on the Premises; at the Swan Tavern, adjoining the property; and at Mr. MARSH's Offices, 2, Charlotte-row, Mansion House.

TO CARPENTERS, BUILDERS, AND OTHERS.

MR. L. ENGLAND will SELL by AUCTION, on the PREMISES, Stoney-street, Caledonian-road, Islington, on TUESDAY, OCTOBER 7th, at TWELVE for ONE o'clock precisely, valuable BUILDING MATERIALS, comprising a large quantity of floor-boards, joists, rafters, quartering, about 200 loads of old bricks, 30,000 pan and plain tiles, 20 tons of granite, pebble and other paving, a large quantity of scaffold boards and poles, Portland cord, a large cistern, a quantity of Christiana and other deals and pine planks, several ranges, registers and other stoves, a quantity of timber, doors, sashes, and frames four-wheel chaise, coach-house gates, twenty stacks of firewood will be found useful articles. May be viewed. Catalogues had on the Premises, and of the Auctioneer, 3, Shepperton-street, New North-road, Islington.

IMPORTANT AND UNRESERVED SALE.—Effects of the late George Gwilt, Esq. F.S.A. F.R.S.A. &c.

MESSRS. PUTTICK and SIMPSON beg to announce that they will SELL by AUCTION, on TUESDAY, the 14th of OCTOBER next, and following day, at the PREMISES, No. 8, Union street, Southwark, at ELEVEN for TWELVE punctually, the FURNITURE and a large quantity of the EFFECTS of the late George Gwilt, Esq. collected with great judgment and at a vast expense. The well-known taste of its late proprietor needs no comment. Besides the usual furniture will be found scientific instruments, philosophical apparatus, rare and choice music, musical instruments, between 300 and 400 valuable books, small quantity of wines, &c. &c.—On view days prior to sale, by catalogue, 6d. each, to be had of the Auctioneers, 191, Piccadilly; FRANCIS HOBLER, Esq. Solicitor, Bucklersbury; and on the Premises, 8, Union-street, Borough.

LONDON: Printed by CHARLES WYMAN, of 13, Hunter-street, Brunswick-square, in the Parish of St. George, Bloomsbury, Printer, at the Printing-office of COX, Brothers, & WYMAN, 74 & 75, Great Queen-street, Lincoln's-inn-fields, in the Parish of St. Giles-in-the-Fields; and published by the said CHARLES WYMAN, at the Office of "THE BUILDER," 1, York-street, in the Parish of St. Paul, Covent Garden, all in the County of Middlesex.—Saturday, October 4, 1856.

THE METROPOLITAN BUILDING

ACT, 1855 (sec. 39).—The Institute of British Architects hereby give Notice, that an EXAMINATION of PERSONS desirous of obtaining a CERTIFICATE of COMPETENCY to perform the duties of DISTRICT SURVEYOR will take place at the ROOMS of the INSTITUTE, No. 16, Grosvenor-street, Grosvenor-square, on TUESDAY, the 21st day of OCTOBER, at TWELVE o'clock, Noon. Persons desirous to be examined must, on or before FRIDAY, the 17th of OCTOBER, 1856, send an application, which must be accompanied by a statement according to a form, to be previously obtained at the Rooms of the Institute.

C. C. NELSON, } Hon. Secs.
M. D. WYATT, }

Oct. ber 7, 1856.

TO ARCHITECTS, ENGINEERS, SURVEYORS, AND BUILDERS.

PROFESSOR DONALDSON'S COURSES

of LECTURES on ARCHITECTURE and CONSTRUCTION, at University College, for the Session 1856-57, will commence on Tuesday, the 21st October. The circular and terms can be had at the College Office.

COMPETITIONS.

NEW GOVERNMENT OFFICES.—The Commissioners of her Majesty's Works and Public Buildings give Notice, that they are prepared to receive DESIGNS from Architects of all Countries for a SCHEME for the CONCENTRATION of the principal GOVERNMENT OFFICES, on a Site lying between Whitehall and the Queen's Palace at Westminster; and also De-igns for Two Buildings which her Majesty's Government have determined to erect forthwith, as parts of such general scheme, one for the Department of the Secretary of state for Foreign Affairs, the other for the Secretary of State for War. Plans of the ground, together with a statement of the premiums and other particulars, will be forwarded to architects on application by letter addressed to me at this Office.

ALFRED AUSTIN, Secretary.

Office of Works, Whitehall, Sept. 26, 1856.

COMPETITIONS.

FOLESHILL, WARWICKSHIRE.—NEW WORKHOUSE for the FOLESHILL UNION.—INSTRUCTIONS to ARCHITECTS and CONDITIONS. The proposed New Workhouse and Buildings are to be erected on a site near Foleshill Hall. Accommodation is required for 15 Paupers, with Wards, Yards, and other Conveniences, suitable for their complete classification, in proportions as follows, namely:—

Men infirm from age or other cause	36
Able-bodied Men and Youths above 15	14
Women infirm from age or other cause	30
Able-bodied Women and Girls above 15	20
Boys under 15 years old	15
Girls under 15 years old	15
Lying-in Women	6
Sick Males	6
Sick Females	8
	150

Detached Wards for Vagrants of both sexes, 6 of each.
Receiving Wards.
Refractory Cells in three Compartments.
A Dead-house.

A Board-room, suitable for 25 Guardians.
Clerk and Registrar's Office, with Closets for Books and Papers. The Safe in the present Register Office to be removed to a site adjoining the Register Office.

Accommodation for a Master, Matron, Schoolmaster, and Schoolmistress, situated with respect to their duties.

A Dining hall, suitable for the whole of the Inmates to dine at one time.
A Workroom for able bodied Men.
A Schoolroom.

The plans to be so framed that the Children may be kept totally apart from the Adult Inmates.

The Sleeping Accommodation to be equal to 300 cubic feet of space for each inmate in health, and 600 cubic feet for each sick person.

A Well in the able-bodied Men's yard, with a Pump to be fixed therein, to be worked by manual labour, of sufficient power to supply the establishment with water.

Washhouse and Laundry.
Supply of Hot and Cold Water Taps.
Cisterns for Cold Water, with requisite Fittings.
Requisite Fittings in the Lavatories and Water-closets, with sunk Pool for filth from Water-closets.
Tanks under ground, to store the rain-water from the roofs, with Flushings to the Drains.
Pumps in the Wash house.
The house to be provided with open Fireplaces, and a complete system of Ventilation.
Stalling for Horses, and an Open Shed, 30 feet by 20 feet.
Good Kiln Bricks to be used in the buildings. The floor-line to be two feet above the surface of the land.

Further extension of the Dormitories must be provided for, with due regard to uniformity; and the day-rooms must be sufficiently extensive to accommodate an additional number of inmates, not exceeding 50.

The Architect must state the cost of completing the works according to his plans. The maximum sum proposed to be expended on the building is 3,500*l.*

Architects are required to furnish the following plans, with general specifications and estimates. The plans, except the block-plan, to be drawn to a scale of eight feet to an inch.

1. A block-plan, showing the situation of the building on the land, and the proposed drainage.
2. A plan of each floor.
3. One transverse and one longitudinal section of the principal buildings.
4. Elevations.
5. A plan of the roof.

Each set of plans and specifications must be sent in with a motto affixed, and a sealed letter, containing the name and address of the Architect, having the same motto. The letters will not be opened until the Board of Guardians shall have finally decided upon the plans and specifications accepted. The plans to be sent addressed to the Guardians of the Foleshill Union Rates hill; and the letters addressed to the Clerk.

The Guardians will not be responsible for any injury which the plans may sustain, and the plans will be returned to the unsuccessful candidates, with the letters, on application.

All plans are to be delivered on or before the 24th day of NOVEMBER next, and no plans will be received after that day under any pretence.

The Architect producing a plan accepted by the Guardians, and approved by the Poor Law Board, will be employed at a sum not exceeding 5*l.* per cent on the outlay, and the plans and specifications will become the sole property of the Guardians.

No Architect shall be entitled to make a charge, or to receive any remuneration for his plans or specifications which shall not be accepted.

The Guardians do not bind themselves to accept any of the plans which may be submitted.

By order of the Board of Guardians,
THOMAS DEWES, Clerk.

Coventry, 19th September, 1856.

TO SURVEYORS and OTHERS.—PREMIUMS for PLANS.

—The Trustees for Sale of a Freehold Estate of 500 acres, including the Beulah Spa, and near the Crystal Palace, require PLANS for LAYING OUT the same for building purposes, showing the necessary roads, sewers, &c. the whole to be clearly defined and apportioned in suitable lots, and laid down to a scale of two chains to one inch, from actual admeasurement. The following premiums are offered:—For the plan adjudged the best by the trustees, 150 guineas; for the second, 100 guineas; for the third 50 guineas. The plans to which the above premiums shall be awarded, will be retained by, and be the property of, the trustees. Further particulars may be obtained of Mr. PEACOCK, Builder, near the Jolly Sailor Station, Norwood, close to the property. The Trustees will meet on the 1st day of DECEMBER next, to examine the plans, which are to be previously forwarded, enclosed and sealed, to the Secretary's office, Auction Mart, London, addressed to the Trustees of the White Horse, Norwood Estate.]

TO SURVEYORS. — NOTICE. — NORWOOD, BEULAH SPA ESTATE, near the Crystal Palace.

It having been intimated to the Trustees that the time mentioned for the Delivery of the Plans is insufficient, they have determined to EXTEND the same to MONDAY, DECEMBER 8, at the same place.

COMPETITIONS.

WELLINGTON TESTIMONIAL.—To SCULPTORS and ARCHITECTS.—The Committee are desirous of receiving DESIGNS for a COLUMN and STATUE to be erected in honour of the late Duke of Wellington, at Liverpool.

The amount at present at the disposal of the Committee is about 6,000*l.* and if their intentions can be properly carried out for that sum, they are desirous that it should be, but any Artist will be at liberty to send in a separate design, either for the Column alone, or for a Column and Statue.

The competitors must accompany their designs by estimates of the cost, either for the Column and Statue combined, or separately, and stating the description of material which they propose to employ.

A premium of 50*l.* will be given for the design which, in the opinion of the Committee, is the best for the purpose intended.

Each design to be marked with a motto or device, and the name of the Author is not to appear, but to be put in a separate sealed letter, bearing on the outside corresponding motto or device.

The design for which the premium may be awarded to become the property of the Committee.

All communications to be addressed to the Chairman of the Committee, at the Town hall, Liverpool; and the designs must be delivered there, free of expense, on or before the 1st day of NOVEMBER next.

Town hall, Liverpool, September 20, 1856.

CONTRACTS.

NOTICE to BUILDERS.—ORDNANCE CONTRACT.—The Principal Officers of Her Majesty's War Department hereby give Notice, that they will receive Proposals for the following CONTRACT.—For the several WORKS proposed in the fifteenth QUARTERS for Barrack-stables, laundry drill-sheds, privy, ash-pit, &c.; also for drains, gas and water pipes, &c.; and converting soldiers' rooms into staff sergeants' quarters, at Richmond Barracks, Dublin. Persons desirous of Tendering for the same will receive every information on application at the District Commanding Royal Engineer's Office, Lower Castle-yard, Dublin, and may obtain such at any with the terms of Contract. The drill-sheds to be complete, and the joisting of the upper floor of the quarters for married soldiers laid by the 12th MARCH, 1857; and the remainder of the works completed on or before the 31st OCTOBER, 1857. The letters of Tender, with specifications, to be inclosed, transmitted under cover to "The Director General of Fortifications, War Department, Pall-mall, London," so as to be received on or before the 14th day of OCTOBER next, and to be marked on the outside, "Tender for Work at Richmond Barracks, Dublin."

Commanding Royal Engineer's Office, Dublin.
24th September, 1856.

ROYAL ENGINEER CONTRACT.—The War Department are about to enter into a CONTRACT for the CONSTRUCTION of a ROAD, BRIDGE, &c. at SHOEBURYNESS, such persons as may be desirous of TENDERING for the WORKS, may inspect the plans and specification there, and receive all necessary information relative thereto, by application to Mr. EDWARD WRIGHT, Clerk of Works, at the Royal Engineer Office, Grand Depôt, Woolwich, or to Mr. HOPKINS, Clerk of the Works, at Shoeburyness, between the hours of TEN a.m. and FOUR p.m. up to the 23rd instant. The Tenders to be delivered at the Office of the Director General of the War Department, Pall-mall, London, by noon, on the 24th of OCTOBER, 1856. The War Department reserves to itself the right of rejecting the whole or any of the Tenders.

Grand Depôt, Woolwich, October 3, 1856.

NOTICE to BUILDERS and CONTRACTORS, ORDNANCE WORKS.

The Commanding Royal Engineer of the Dover District hereby gives Notice, that sealed TENDERS will be received at the Office of the Director General of Contracts, Pall-mall, London, on or before MONDAY, the 20th day of OCTOBER, 1856, from persons desirous of CONTRACTING for ADDITIONS and ALTERATIONS to the Western Heights Barracks at Dover. Drawings and specifications of the works to be executed may be seen by persons fully competent to undertake the same, at the Royal Engineer Office, which may be obtained at the Royal Engineer Office, Dover, between the hours of TEN and FOUR o'clock, from THURSDAY, the 2nd of OCTOBER, to SATURDAY, the 11th of OCTOBER, 1856 (Sundays excepted). A person belonging to the Royal Engineer Department will attend on the 1st at the Western Heights, on WEDNESDAY, the 8th, and THURSDAY, the 9th, to explain the drawings. The party whose Tender may be accepted for the work will be required to enter into a bond, with two sufficient sureties, duly attested, in the sum of 1,000*l.* for the due performance of the contract. Tenders for the above works to be addressed to the Director General of Contracts, Pall-mall, London, and endorsed "Tender for Work at Dover."

N.B.—The War Department reserve to themselves the right of rejecting the whole or any of the Tenders.

Royal Engineer Office, Dover, October 1st, 1856.

TO PLASTERERS.—TENDERS &c

required for the whole of the labour in PLASTERING SIX PAIRS of SEMI-DETACHED VILLAS, in the Lansdowne-road, St. John's Wood, for Mr. THOMAS WILLIAMS, Architect, &c., 7, Coleman-street, City, by ten o'clock on MONDAY next, the 13th instant. Mr. Williams does not bind himself to accept the lowest or any Tender.

TO BUILDERS. — Builders desirous of

TENDERING for the ERECTION of a CHAPEL, at FOREST HILL, Sydenham, may see the plans and specification at the office of the Architects, Messrs. TINKLER and PREW, 4, Quality-court, Chancery-lane, on and after TUESDAY next. The Tenders to be delivered at TWELVE o'clock on WEDNESDAY, the 22nd instant. The Trustees reserve to themselves the right of rejecting the whole or any of the Tenders.

[For remainder of Contracts see next page.

CONTRACTS.

BRADFORD CORPORATION WORKS.—ST. LEONARD'S-ON-SEA.—MASONS and GENERAL CONTRACTORS.—The Waterworks Committee of the Bradford Corporation will meet at the Offices in Bradford on WEDNESDAY, the 22nd of OCTOBER, at ELEVEN o'clock in the FORENOON, for the purpose of receiving TENDERS or PROPOSALS for the following WORKS:—

CONTRACT A.—The excavating, forming, and completing of a STORE RESERVOIR, of about sixty acres in extent, near to Checker House, in the township of Draughton and parish of Skipton, with the Culverts, Waste Pit, and other Works connected therewith, including the Section in the Skipton and Otley turnpike road for about half-a-mile in length.

CONTRACT B.—The excavating, forming, and completing of a STORE RESERVOIR, of about 30 acres in extent, on the Barden Beck, in Barden Bottom and Park, in the township of Barden and parish of Skipton, with the Pipe Channels, Resinous Lake, Culverts, Valve Well, Waste Weirs, Waste Water Channel, and other Works connected therewith; also, the building and completing of a Branch Conduit of about 720 yards in length, from such Store Reservoir to the Main Conduit hereinafter mentioned.

CONTRACT C.—The excavating, forming and completing of a MILLOWNERS' COMPENSATION RESERVOIR, of about [illegible] acres in extent, on the river Dib, near to Grimwith, in the township of Appletreewick and Hartlington, in the parish of Burnsall, with the Culverts, Valve Well, Waste Weir, Waste Water Channel, large Basin, Resinous Lodges, and other Works connected therewith.

CONTRACT D.—The forming and completing of about 13¼ miles in length of the main Waterleader or Conduit for bringing an improved supply of water to the town and borough of Bradford, whereof about [illegible] miles will have to be executed by means of tunnelling and about 4¾ miles will consist of a cast-iron main pipe; and which Contract may be subdivided as follows:—

Division No. 1.—Main Conduit from the end of Barden Beck Branch, in the township of Burnsall, to Addingham Low moor, being a length of about 7,830 yards, including the Barden Tunnel of about 3,640 yards in length, the Drainage Tunnel of about 210 yards in length, and the Arched Tunnel of about 1,820 yards in length, with the ring and lining down of about 200 yards in length of Cast-iron Pipe of 20 inches in diameter, for crossing the Ings Beck Valley, near Low Laithe, and a Branch Conduit of about 1¼ mile in length for bringing the water from the above-named Beck Resort to such Main Conduit.

Division No. 2.—Main Conduit from the end of Division No. 1, at Addingham Low moor, to a public highway passing through Hollen Well, in the township of Sandbeds, and parish of Kildwick, being a length of about 7,275 yards, including the Silsden Tunnel of about 1,760 yards in length, the Swartha Tunnel of about 220 yards in length, the Dead Lane Tunnel of about 360 yards in length of tunnel, Pipe of 20 inches in diameter for crossing the Hollen Beck Valley near Holden Wood, and the Holden Beck Branch Conduit of about 310 yards in length, of which about 110 yards will be tunnelled.

Division No. 3.—Main Conduit, from the end of Division No. 2 at Hollen Well, to East Morton, in the township of Morton East and West, and parish of Bingley, being a length of 5,890 yards.

Division No. 4.—Main Conduit, from the end of Division No. 3 at East Morton, to a public highway at Heaton, near to the Service Reservoir in process of being formed, being a length of about 9,770 yards, including the Greenhill Tunnel, of about 220 yards in length, the Crossflatt Tunnel of about 345 yards in length, and the Heaton Lane Tunnel of about 1,250 yards in length of Cast-iron Pipe of 20 inches diameter, for crossing the valley of the Morton Beck, at East Morton; and a further length, of about 4,000 yards in length of Cast-iron Pipe, for crossing over or entering the valley of the river Aire, including the passing of the river Aire, and the Leeds and Liverpool canal, below Hirst Mill, near Shipley.

Tenders must be sent in at the lowest or any of the Offices of the Engineer, and Plans and specifications may be seen, and further information may be had, from and after MONDAY, the 20th day of OCTOBER, on application to Mr J. W. LEATHER, Civil Engineer, Leeds.—By order,

W. H. HUDSON, Town Clerk.

Bradford, September 23rd, 1856.

TO BUILDERS.—Persons desirous of TENDERING for the ERECTION of a WESLEYAN CHAPEL, on the Park-hill Estate, Highbury, may see the drawings and specification, and after TUESDAY the 14th day of OCTOBER next, may get the Architect, Mr C. LAWS, 12, Bouverie-street, Mecklenburgh-square, Seeled Tenders to be delivered at the Vestry of Liverpool Wesleyan Chapel, Islington, on MONDAY, the 20th of OCTOBER, at SEVEN o'clock in the evening. The Committee do not bind themselves to accept the lowest Tender; and the party accepted will be required to provide two sufficient sureties for the due performance of the Works.—October 9, 1856.

THE YORK UNITED GAS-LIGHT COMPANY.—To GASHOLDER MAKERS, IRONFOUNDERS, &c.—Parties desirous of TENDERING for the CONSTRUCTION of a TILES-ON-EDGE GASH HOLDER, main diameter 50 feet 8 inches, and 30 feet high, in two lifts, with columns, guides, girders, &c., complete, in accordance with specifications at the Company's Office, Monk bridge, York, daily from TEN to FOUR o'clock, from MONDAY, the 29th to WEDNESDAY, the 8th days of OCTOBER next, inclusive. Security will be required for the due performance of the Contract. Tenders will be received at the Company's Office up to TEN o'clock on THURSDAY, the 30th instant, but no pledge is given that the lowest or any Tender will be accepted.

JOSEPH BRADDOCK, Engineer.

York, October 1st, 1856.

BUILDERS desirous of TENDERING for the ERECTION of a PAIR of VILLAS and a PAIR of COTTAGES on the Stratford estate of the Temperance Permanent Land and Building Society may have the drawings and specifications on and after the 13th instant, at the Office of the Architect, Mr. WILLIAM ELLISON, 19, Stainsby-road, Lombard-street; also at the Offices of the Society, 34, Moorgate-street, City, where Tenders are to be delivered by SEVEN o'clock in the evening of MONDAY, the 20th instant. The Lowest or any Tender not necessarily accepted.—MONEY ready to be ADVANCED by this Society to any amount on loans and lands; for terms apply, between TEN and FOUR, to HENRY J. PHILLIPS, secretary.

SMETHWICK LOCAL BOARD of HEALTH.—To LAND SURVEYORS, &c.—Survey and Plans for the Smethwick Local Board of Health.—Hereby Notice, that they are prepared to receive TENDERS for a SURVEY and PLANS of the District of the Hamlet of SMETHWICK, in accordance with the Public Notice, to be seen, with Conditions and Particulars, at the Surveyor's Office, Crocker Hill, and specimen plans, and a plan showing the boundaries of the district and describing the proposed to be part of it, may be seen on application to Mr. NICHOLS, Surveyor to the Local Board of Health, at the Offices of the Board, Holt's Crescent, Smethwick. Sealed Tenders, addressed to the Chairman of the Local Board of Health, are to be sent to Mr. RALPH DOCKER, Solicitor, Clerk to the Local Board, Temple Bar-street, Smethwick, on or before the first day of NOVEMBER next. The Local Board do not pledge themselves to accept the lowest or any Tender.

RALPH DOCKER, Clerk to the Local Board.

Temple Bar-street, Smethwick, October 1st, 1856.

TO SANITARY ENGINEERS, SURVEYORS of BOARDS of HEALTH, &c.—SEWAGE IRRIGATION.—The Hitchin Board of Health is desirous of receiving PLANS for PURIFYING and DEODORIZING the SEWAGE flowing from the town, at present rendering the River Hiz offensive. Plans, accompanied by any explanatory observations deemed necessary, and an estimate of the cost, to be sent to Mr. GODWIN, Clerk of the Local Board, before TUESDAY the 21st day of NOVEMBER next. No plan will be received after the Board shall have received the report of their Engineer, pursuant to the foregoing notice, nothing to be paid for, or known by Mr GODWIN. It will save time if a letter be first sent to him, stating the nature of the Premises to be applied for, on which he may expect to be called up in Person.—By order of the Board,

SAMUEL GODWIN, Clerk to the Board.

Hitchin, Herts, September 29, 1856.

CONTRACTS.

TO CONTRACTORS and BUILDERS.—TENDERS are required for the ERECTION of a DWELLING-HOUSE at Bramley, near Leeds. The plans may be seen, and forms may be had, at the Office, Towergate, Northbridge, between the hours of TEN and FIVE, from the 1st to the 8th day of OCTOBER, and at the Shop of Mr. FLEMING, Berwick-upon-Tweed, until the 28th.

F. R. N. HASWELL, Architect.

North Shields, September 24th, 1856.

LLANDUDNO IMPROVEMENT ACT, 1854.—SEWER CONTRACTORS.—Parties desirous to CONTRACT for the CONSTRUCTION of the MAIN SEWER in the Town of Llandudno may see the plans, sections, and specifications, prepared by T. MACDUGALL SMITH, Esq. C.E. at the Office of the Commissioners, between the hours of TEN o'clock a.m. and FOUR o'clock p.m. daily. Tenders, under seal, to be sent to the Office before MONDAY, the 27th of OCTOBER next. The Commissioners do not bind themselves to accept the lowest Tender; but in the event of one being accepted, the party or parties will be required to give security for the due performance of his or their contract. The Commissioners have on hand a quantity of sewerage bricks, pipes, invert and junction blocks, which the Contractor will have Liberty to use.

WANTED, a well-experienced competent Person, to act as CLERK of the WORKS to superintend and take charge of the above Works being properly carried out.—Applications, stating terms, age, and testimonials, or references, to be made to the Commissioners' Office, before the 25th of October next.

JOHN WILLIAMS, Clerk to the Commissioners.

Improvement Commissioners' Office, Sept. 29 1856.

GLASGOW CORPORATION WATER-WORKS.—LOCH-KATRINE AQUEDUCT.—KELTY and DUNTREATH CONTRACTS.—To CONTRACTORS.—The Magistrates and Council of the City of Glasgow, as Commissioners under the Glasgow Corporation Water Works Act 1855, are now ready to receive, and hereby invite TENDERS for the EXECUTION of either or both of the LOCH KATRINE AQUEDUCT, which will be comprised in Two Contracts, viz. "No 4, or Kelty Contract," extending from the Valley of the Duntreath to the Valley of the Endrick, being a length of about 31 miles; and, "No 5 or Duntreath Contract," extending from the Valley of the Endrick, by Killearn, to Strathblane, being a length of about 7 miles. In No. 4 there will be Two Tunnels of the respective lengths of 1,175 and 1,418 yards, with various other ones, varying from 20 yards to 728 yards in length, and upon Two and Seven Aqueducts. In No. 5 there will be Two Tunnels 216 and 864 yards respectively in length, and various Masonry Aqueducts. Each Contract will include all relative work. Plans, sections, drawings, and specifications, all of which are now ready for inspection, and to which WEDNESDAY, the 15th inst. in the Town-hall, at the Cross of Glasgow, entry by No. 12, Trongate-street. Copies of specifications and quantities may be obtained, by intending Contractors on application to the Subscriber, at his office, 25 Millers-street, Glasgow; and any further information may be obtained at the Offices of J. F. BATEMAN, Esq. the Engineer, in Manchester; and from Mr. HILL, Assistant Engineer, Loch Ard; and Mr MOORE, Assistant Engineer, at Milngavie, who will point out the line of Works.

Tenders for the construction of the Works, addressed to the Commissioners, sealed, and marked "Tender for Kelty Contract" or "Tender for Duntreath Contract," as the case may be, must be delivered to Mr. BURN, at his office, 25, Millers-street, Glasgow, on or before WEDNESDAY, the 29th OCTOBER current, at TWELVE o'clock noon. By order of the Committee,

JOHN BURNETT, Secretary.

Waterworks Office, 23, Miller-street, Glasgow, Oct. 6, 1856.

TO ROAD-MAKERS and CONTRACTORS.—The Commissioners of the City of London Freehold Land and Building Society are desirous of receiving TENDERS for MAKING a ROAD through the Estate at Tufnell Lower Norwood. The specification may be seen at the offices of the Society, 41, Fore-street, City. Tenders must be delivered before THREE o'clock on TUESDAY, the 14th inst.

JAMES HIGHAM, Secretary.

THE following TENDERS were received by Messrs. TAYLOR and CHAMBERLAIN for MAKING ROADS and DRAINS and PROVIDING PLACES TO LAY OUT an ESTATE at Forest-hill, Surrey, belonging to R. Burras, Esq. The estate being on an elevated site, from which a commanding and uninterrupted view of the surrounding country is obtained, renders it eminently suitable for its intended purpose. Advantageous terms may be made on application at the Architects' offices, 7, Adelphi-street, Strand. The quantities not supplied:—

	Roads	Fences.
Mr Padbon	£.450 0	£15 0
Mr Goodman	1145 0	152 10
Mr Cubitt	1,150 0	
Mr Nelson accepted	971 15	
Mr Barrett		163 0
Mr. Trego accepted		89 10

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in stating that the following extract from SIR RAYMOND JARVIS, Bart., TYNTN HOUSE, ISLE OF WIGHT, —Second Testimonial.—" March 10th, 1852.—In reply to your letter, received this morning, I can state, with much satisfaction, it answers perfectly. Many Builders, and other persons are lately examining what I have used of the Hose and Pipe of different sizes the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."

N.B. From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

THE GUTTA PERCHA COMPANY, PATENTEES, 18, WHARF-ROAD, CITY-ROAD, LONDON.

HANCOCK'S PATENT VULCANIZED INDIA-RUBBER PILLOW HOSE PIPES, WASHERS, ENGINE PACKING, Leather and Canvas Hose, Rings for Hawser pipes, Valves, Plugs, Rubber Door Springs, and Solid Round Rubber Cord of all strengths. Brilliant Cushion and Rubber Sheeting for Carriages, &c.

S. TAYLER Bitterseas.

GURNEY'S WARMING APPARATUS, for CHURCHES PUBLIC BUILDINGS, and PRIVATE HOUSES.—This Apparatus is a modification of that invented by Sir Goldsworthy Gurney, now used by him for warming the House of Commons and House of Peers. It is constructed so as to be available for private houses, churches, and other buildings. It is simple, inexpensive, and powerful—the fuel may be coal, coke, or gas—combining the laws of conduction and convection of heat, to temper and warm air for respiration, without drying or reducing its natural hygrometric state. For further particulars apply to Mr. WOODCOCK, 5, Bessborough-gardens, Pimlico, who will supply the Apparatus, and is empowered to grant licenses for same as under Use patent.

REGISTER STOVES, with PATENTED IMPROVEMENTS. DEANE, DRAY, and CO. invite the attention of purchasers to their Stock of STOVES for drawing and dining rooms; also, a large assortment of PATTERNS, suitable for sitting-rooms offices, bed-rooms, &c. In Fenders and Fire Irons, DEANE, DRAY, and CO are constantly introducing every novelty at the lowest prices. DEANE, DRAY, and CO. Stove, Range, and General Ironmongery Warehouse, London-bridge. Established A.D. 1700.

DR. ARNOTT'S SMOKE-CONSUMING GRATE.
Will this Grate become universally used?
It only answers two of every other consideration—
1. A saving of 50 per cent in fuel.
2. Its being a cure for a Smoky Chimney.
3. Its not requiring one half the attention of an ordinary fire.
4. Its being perfectly safe.
A Prospectus, with a Second Series of Testimonials, just issued, from all parts of the country, will be sent on application to
F. EDWARDS, SON, and CO., 17, Ludgate-hill, Oxford-street.

VENTILATING STOVES! SUSPENSION STOVES!—Approved by thousands of purchasers, and recommended as the two best, cheapest, and most economical fuel-saving stoves for halls, shops, counting-houses, bed-rooms, &c. Prospectuses, with opinions of upwards of 1,000 patrons, sent post-free — DEANE, DRAY, and CO. Stove Range, Ironmongery and Furnishing Warehouse, London-bridge.

WARMING and VENTILATING.—ALFRED MAY begs to call the attention of Architects Builders, and others to his system of WARMING by HOT WATER, Lunatic Asylums, Workhouses Churches and other Public and Horticultural Buildings, Mansions and Offices.

A. M. having had great experience in the above line, is enabled to guarantee the efficiency of such works as may be intrusted to him for execution; he has just completed, to the entire satisfaction of the architects, the warming and ventilation of the Barracks and Sir Anthony Rothschild's new mansions and conservatories

Manufactory, Eagle-court, Dean-street Holborn; and at 50, Pembroke-street, Queen's-square, Bloomsbury.

Artificial heat applies for drying linen on a very economical and effective system.

HEATING BY  HOT WATER.

JOHN WEEKS and CO. King's-road, Chelsea, HOT WATER APPARATUS MANUFACTURERS. Buildings of every description, and of the most extensive dimensions, can be efficiently warmed by Hot Water. JOHN WEEKS and CO. can give innumerable references of Churches, Dwelling-houses, Warehouses, &c., where they have fixed their Hot Water Apparatus. Also to be seen in extensive operation at their Premises, King's-road, Chelsea.

BATHS and HOT-WATER APPARATUS. J. TYLOR and SONS' ILLUSTRATED CATALOGUE of BATH WORK, &c., to be had on application. Estimates and Plans for Fitting given. J. TYLOR and SONS, Manufacturers, Warwick-lane, Newgate-street, London.

MR. S. EGAN ROSSER, Warming and Ventilating Engineer, &c. successor to the late Mr. John Sylvester, C.E., has REMOVED from Great Russell-street, Bloomsbury, to No. 6, CANNON-ROW, PARLIAMENT-STREET, WESTMINSTER.

TO IRONMONGERS AND PLUMBERS, ESTABLISHED.
D. HULETT and CO. Manufacturers of GAS CHANDELIERS HALL LANTERNS, GLASS LUSTRES, &c. &c. A large assortment of the newest designs always on view. Also of improved Bath Brass Patterns and Mounting of every description. Manufactory and Complete Pattern Book and Price List, 10s.—35 and 36, High-street Mews.

FOUNDRY AND IRON WORKS,
85, DRURY-LANE, and CHARLES-STREET, DRURY-LANE
GLOVER, BROS.,
solicit the attention of the trade to their extensive stock of PATTERNS for CASTINGS of EVERY DESCRIPTION, either Ornamental or Useful.

Patterns of Girders, Columns, Balconies, Railing, Ornamental Carriage and Park Gates, Lamp and Street Posts, Tanks, Pipes, Wheels, Pinions, Lathes, Stoves, Grates, Range and Hot-plate Metal. An improved Soot Door, at a low price.

A large stock of Rain-water Pipes, Plain and O.G Gutters, Air-bricks, Sash Weights, Air-tight Sewer Grates, Stable Fittings, Hurdles, &c.

Plain and Ornamental Vases 20 per cent cheaper than Terra-cotta.

Estimates given for Iron Buildings, Wrought-iron Roofing Greenhouses, Staircases, Wrought-iron Girders, Fireproof Doors, Book-cases and Fenders, Cisterns and Boilers and every description of Ironwork to specification on the shortest notice.

Work executed with every attention to quality and despatch.

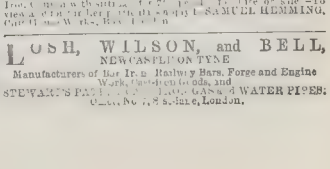
GLOVER BROS. IRONWORKS,
168, DRURY-LANE, and CHARLES STREET.

CANNON IRON FOUNDRY, 80, Goswell-street, St. Luke's. JONES and BLAXTON, having made great additions to their STOCK of PATTERNS, beg to inform the Trade that they can now supply them with Plain and Ornamental Iron Columns, Girders, Railings, Gates, Iron Coping, Balconies, Window Guards, Verandahs, Ornamental Staircase Panels, Iron Staircases, Tomb Enclosures, Trellis Fronting, Lamps and other Brackets, Cantilevers, Newel Bars, Water Closet Work, Area Gratings, Fly and other Wheels, Wheel Plates, &c.

BAKERS' OVEN WORK, Force Backs and Troughs, Rain Water Pipes and Gutters, Sash Weights, Furnace Bars, Stoves, Ranges, &c. always in stock.

IRON FOUNDRY, Harrow-street, Lant-street, Southwark.—W. K. BARTLETT, manufacturer of Girders, Columns, Cast-beams, Railings, and Newel Bars, Iron Coping, Pavers, Tomb Enclosures, Area Gratings, Sash Weights, &c. Also Fly and other Wheels, Rigger, Pinions, Engine and Lathe Gearings; Force Backs, Furnace Bars, Rain Pans, Pipes, Sauk Plates, and other Castings, by patterns or drawings.

FIRE-PROOF CONSTRUCTION.—FOX and BARRETT'S PATENT.
This improved system of fire-proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.



The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete, so constructed that each floor becomes in effect a beam of artificial stone, with ribs of iron; the structure possessing great strength, and equally and forming a fire-proof foundation, adapted to receive a finished surface, either of the ordinary flooring boards, or of cement, asphalte, tiles, slate, or other material.

Many of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as regards the necessity for cast iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one.

Further information may be obtained of the Proprietor of the patent,—Mr BARRETT, 13, York-buildings, Adelphi.

GARDNER'S PATENT STEAM GENERATOR and SMOKE CONSUMER produces more steam with less fuel consumed, and less labour and entire removal of smoke. These patents have come into such high repute amongst the employers, durability, and great economy. They are self-acting, and in working parts thereto are not to be excelled.

They are applicable to all Furnaces, Steam Engines, Marine Engines, Dyeing, Pottery, and other Works, Private Dwellings, Large Kitchen Ranges, Hot-water Apparatus, &c. &c. &c. Apply to the PATENTEE, 2, Norfolk-street, Middlesex Hospital; to Messrs. SHERIDAN and HILL, 10, Dorset-street, Fleet-street; or to ZEBEDEE GARDNER, Works, Wednesbury.
Testimonials, &c. may be seen upon application.

IRON CHURCHES, STORES, &c.—FOR SALE, Sheds and Offices, Iron Churches, Dwelling-houses, and every description of Buildings, suitable to all climates. Iron Roofing for Private Houses, Mills, Manufactories, Warehouses, &c. Detached Cottages for sale.—To view a Church kept on the premises, SAMUEL HEMMING, Church and Iron Builder, London.

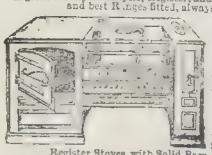
LOSH, WILSON, and BELL, NEWCASTLE-ON-TYNE
Manufacturers of Best Iron Railway Bars, Forge and Engine Work, finished Goods, and
STEWART'S PATENT SCREW GAS and WATER PIPES:
Offices, No. 8, Spring-gardens, London.

PATENT MACHINES for WORKING in WOOD.—These celebrated Machines have been awarded a number of prize medals by many scientific institutions, and also by the Great Exhibition in London, and are now extensively used by the Indian, American, and all the principal governments in Europe; also by eminent Contractors, Builders, Shipwrights Machinemakers, and other workers in wood. Their operations are in every respect perfect, either in hard or soft wood, for planing, squaring up, moulding, tenoning, mortising, grooving, rebating, sawing, and boring, which they perform in a very rapid and superior manner, at a greatly reduced cost.—Sold only by WILLIAM FURNESS, Patentee, 26, Lawton street, Liverpool, from whom full particulars may be obtained, and all the machines can be seen at work.

MACHINERY for SAWING, PLANING, MOULDING, &c.

SAMUEL WORSSAM and CO. beg to call the attention of Contractors, Shipbuilders, proprietors of Saw-Mills, and others, to their improved Inventions and Adaptations in Saw Frames and Benches, Roller and Chain Planing Machines, Endless Saw Frames, and all other kinds of Machines, for Sawing, Planing, Grooving, and Moulding Wood. They have constantly on hand machinery, either wholly or partly made so that they can at all times on short notice supply them. S. W. and CO. beg to state that they have hitherto confined their attentions to this sort of machinery, and have had the honour of supplying some of the most distinguished companies, ship builders, and contractors in the world with their machines, for home and foreign use. One of their Saw Benches and also a smaller one, with Boring Apparatus, may be seen at the Machinery Department, Crystal Palace.—A descriptive Catalogue, with Drawings, may be had on application to SAMUEL WORSSAM and Co. Engineers, &c. King's-road, Chelsea, London.

WOOD-CUTTING MACHINERY,
JOHN M'DOWALL and SONS,
WALKINSHAW FOUNDRY, JOHNSTONE, near Glasgow,
MANUFACTURERS of VERTICAL SAW-FRAMES
(driven by straps),
For cutting balks of timber, from 6 feet on the side down to the smallest deal frame.



Patent vertical saw-frames, of the foregoing dimensions, with steam-power attached; circular cross-cut radial sawing machines; patent moveable ditto; patent horizontal cross-cut sawing machines, for heavy timber; planing machines, for working boards from a ¼ of an inch thick to 6-inch deck plank; revolving planers, for squaring and shaping heavy timbers, as used by ship-builders, &c; patent curvilinear sawing machines, for circles, sweeps, and straight cutting, well adapted for ship-builders; power mortising and tenoning machines; moulding machines, single and double; veneer mills of all sizes, with all appendages; scale-board machines, for hat-boxes, &c.; patent silent feed motions for saw-frames; and every description of machinery for cutting and shaping timber, all constructed of iron, of the best materials, and first-class workmanship. Mr. M'Dowall has been in the engineering and millwright business for upwards of 30 years, but during the last 24 years he has directed his attention particularly to the manufacture of wood-cutting machinery, as evidenced by the numerous patents he has obtained for its improvement, and by the extensive orders his firm has been favoured with from the British and other European Governments and private establishments in almost all parts of the world; and from their large and commodious premises, and first-class plant made for every department of the work without regard to cost, the largest contracts can be executed with a regularity, accuracy, and despatch, which cannot be exceeded by any other firm in Europe.—Applications as above for further particulars, will be promptly attended to.

CHUBB'S LOCKS, with all the recent improvements; STRONG FIRE-PROOF SAFES, CASH and DEED BOXES.—Complete lists of sizes and prices may be had on application.
CHUBB and SON, 57, St. Paul's-churchyard, London; 28, Lord-street, Liverpool; 16, Market-street, Manchester; and Horsley-fields, Wolverhampton.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. ROOBBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Foundry, Nails (wrought and cut), Copper and Zinc; Patent Locks of all descriptions; China, Glass, and Wood Furnitures of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilator, 4s; and the new registered Venetian Ventilator, so much admired, &c. &c. 6d. each.
J. H. BOOBBYER (late STURCH and BOOBBYER), established nearly 200 years, for the supply of Goods from the best Manufactories, at the lowest prices.
14, Stanhope-street, Clare-market, London.

JOHN TANN'S NEW PATENT RELIANCE LOCK and CHEMICAL TILLED WROUGHT-IRON FIRE-PROOF SAFES, DOORS, ROOMS, &c. Manufacturers of cash, deed, and paper boxes, embossing and copying presses, letter balances, and every description of lever locks and street door latches. To be had at the General Lock and Safe Warehouse, 30, Wallbrook, City. List of prices on application.

CLARK and HUNT'S IRONMONGERY, STOVE, and METAL WAREHOUSE, 159, Shoreditch.

FACING FOR BUILDINGS COMPANY—TAYLOR'S PATENT.

BUILDINGS PERFECTLY RESISTANT TO WET WITHOUT ADDITIONAL EXPENSE, OR THE USE OF COMPO,
REQUIRING THE CONSTANT EXPENSE OF PAINTING. EXTERNAL WALLS FACED WITH AN INDESTRUCTIBLE MATERIAL.

STONE-FACED BUILDINGS AT LITTLE MORE COST THAN CEMENT.

No necessity for Iron Cramps and Bond-stones, and the Stone Ashlar never injuriously weighted by the settlement of the Mortar joints of the inside Brickwork. The INSIDE of CHURCHES and OTHER BUILDINGS FACED WITH STONE instead of Plastering. Also Dining halls, Lobbies, Staircases, &c. of Private Residences. It can be had ready for fixing from the quarries at a small cost for carriage, or prepared at home. Can be used with the ordinary Bricks of any locality, and by the ordinary workman. The CHURCH faced inside and outside in this manner, and the other Buildings at SPRING GROVE HOUNSLOW, and elsewhere, can be inspected, and all particulars obtained, of

Mr. JOHN TAYLOR, ARCHITECT, OFFICES OF THE COMPANY, 40, KING-STREET, CORNER OF CHEAPSIDE.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854 was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

ROYAL BOTANICAL GARDENS, REGENT'S PARK,

And by the most eminent members of the Royal Agricultural Societies of England, Scotland, and Ireland; at whose great national shows it has been exhibited, and OBTAINED THE PRIZE, for being the best and cheapest article for roofing; also used for under slates at the Royal Agricultural Society's House, in Hanover-square. Its advantages are lightness, warmth, durability, and economy. It is impervious to rain, snow, and frost, and a non-conductor of heat and sound. The Felt can be cut to any length, by 32 inches wide. The price is only ONE PENNY PER SQUARE FOOT. Samples, with full directions as to its uses and the manner of applying it, with TESTIMONIALS, some of them of seven years' experience, from Architects, Builders, Noblemen, and Gentlemen who have extensively used it, sent free to any part of the town or country. A Dry-hair Felt, for covering Boilers, &c. is also manufactured, by which a saving of about 25 per cent in fuel is effected. The TRADE are respectfully enjoined to send their orders DIRECT to the FACTORY, as the surest means of being supplied with the genuine article, and in lengths best suited to their roofs. They are likewise CAUTIONED AGAINST MISREPRESENTATION, as THIS ONLY WORKS in Great Britain where the above roofing is made are F. McNEILL and CO.'s Manufactories, LAMB'S-BUILDINGS, BUNHILL-ROW. Roofs covered with the Felt to be seen at the Factory, also the new Vice-Chancellor's Courts, the passages and offices leading to Westminster Hall, and other buildings at the New Houses of Parliament.—A Liberal Discount allowed to the Trade.

By Royal  Letters Patent.

VALUABLE FREEHOLD LAND, EAST BARNET.—TO BE SOLD by PRIVATE CONTRACT, about THIRTY ACRES (in separate fields or plots) of FREEHOLD BUILDING LAND, finely situated in the vicinity of the Great Northern Railway station, and admirably adapted in every respect for building purposes, having extended frontages upon the high road on each side of the railway, and also upon newly-formed roads. The situation is noted for its salubrity, scenery, and facility of communication with London. — For further particulars, apply at Mr. THYNNE'S Offices, 11, Great George-street, Westminster.

BRICKFIELD TO BE LET, in full work, in consequence of the decease of a principal, situate about twelve miles west of London, the Great Western Line passing on one side of the property, and the Grand Junction Canal on the other, with a commodious dock and landing stages; about 23 acres of land, 22 thereof containing excellent brick-earth, together with roomy dwelling-house, and all out buildings, and about 1 acre of ground attached thereto. A great portion of the land not yet required for brick making, is profitably and safely underlet. About eighteen years of lease yet unexpired.—Apply by letter, to H. Y. Messrs. Henington's, Stationers, 142, Fenchurch street, London.

FREEHOLD LAND TO BE LET, on [illegible] Leases, the Rev. WILLIAM FORD, [illegible] M. P., and WILLIAM [illegible], Esq., of Bedford Row, offer for Building Purposes, to be let on Leases for Terms of Years, a valuable PIECE of FREEHOLD LAND for Building Leases, for a term of ninety years, in Park-street, Upper Islington, and Essex-road, Islington, with [illegible] and land in front, and Stable in rear. For further particulars apply to Mr. ALFRED WEBB, Timber Merchant, 1, Old-street, St. Luke's.

FREEHOLD LAND TO BE LET, on Building Leases for ninety-nine years. Money advanced to [illegible] Plots of Land to be let for the purposes in eligible situations.—Apply at the Offices of Messrs. MORGAN and PHIPSON, Auctioneers, 3, Dean-street, Soho-square, Strand.

FREEHOLD LAND TO BE LET, on the [illegible] Road, Tottenham, in the occupation of Mr. [illegible], for ninety-nine years. This land has not only the advantage of river [illegible] but also the Great Eastern Railway on the Public Road, and is [illegible] from the Station. Plans of the property may be seen, and particulars had of Mr. JOHN OAKLEY, 11, Queen-street, Cheapside; of Messrs. ADLARD and SUTTON, Solicitors, 3, Queen-street, Cheapside; and of Messrs. KINGSFORD and DORMAN, Solicitors, No. 25, Lincoln's-inn-fields, Strand.

FREEHOLD ESTATE. — For SALE, a valuable FREEHOLD ESTATE, in the Parish of [illegible], in the County of Middlesex, comprising a Dwelling-house, with Coach-house, Stable, and other Buildings, and about 8,000 to 10,000 square yards of Land, which will be found peculiarly suitable for the erection of Villa Residences, and is situate within a short distance of the Railway Station, and is now undergoing rapid improvement.—Apply, by letter to H. P., 6, Montague-street, City.

FINCHLEY.—LAND fronting the Regent's Park-road, and fronting the road, TO BE LET, on Building Leases for ninety-nine years, with power of entrance in most Plots from one to four acres for large villa residences; smaller plots for cottages. Plans and particulars to be had of Mr. Apply to W. A. BOULNOIS, Esq., Architect, 6, Waterloo-place, Pall-mall; or of Messrs. BARKER, BOWKER, and PEAKE, 1, Gray's-inn-square.

BEULAH SPA HOTEL, TO BE LET, on lease, or the FREEHOLD TO BE SOLD.—The hotel comprises the old and new building, and about four acres of land. The premises, which are in the Parish of Norwood, have an extensive frontage to the high road, and are within a short distance of the Crystal Palace. The house is at present unoccupied, except the Top.—For particulars, apply to E. N. CLIFTON, Gresham House, Broad-street, City.

TO BUILDERS and CAPITALISTS.—FOR SALE by PRIVATE CONTRACT, about TWELVE ACRES, valuable BUILDING GROUND situate in the township of Whitkirk, and adjoining the high road of Tynemouth. The ground is [illegible] and commands fine full and extensive views on the east, overlooks the Whitley, or North Shields, is about one mile distant from the Tynemouth Railway Station, and is approached by a good and [illegible] road.—Particulars may be obtained on application to Mr. WM. DUNN, Solicitor, Pilgrim-street, Newcastle-upon-Tyne; or to Messrs. RICHARDSON and HOSS, Architects, Darlington, with whom plans of the estate are deposited.

TO BUILDERS, CONTRACTORS, and OTHERS. TO BE LET on Lease, for a long term several Plots of FREEHOLD GROUND, well adapted for villa or working-class residences. The property contains about three miles from London, [illegible] and is free.—Apply to Mr. W. H. DEAN, Surveyor, Stratford; or to Mr. GEORGE POWNALL, Surveyor, No. 57, Bloomsbury-square, London.

BUILDING LAND TO BE LET for 900 years, near the new Railway Station, Norwood, and elsewhere.—Apply to Messrs. [illegible] BLAKE and SON, W. S. Indoor, 22 College-hill, Cannon-street, City.

NEW WINDSOR ESTATE. — Valuable BUILDING LAND TO BE LET, in Plots for first and second class Villa Residences, with Stabling, which are much needed in the neighbourhood, the Railway Station, Great Western, Eton, and Old Park and Lower Walks, and commanding the finest views of the Castle and Home Park. Also a Plot of Land, with a frontage to the Great Western Railway. Application to be made to the Solicitor, Windsor. Assistance will be lent to proper parties.—For particulars apply to Mr. WILLIAM SIM, Architect and Surveyor, 2, Princes-on-Strand.

BUILDING LAND in the most eligible part of Old Ford and Bow.—TO BE LET, on most advantageous terms, a few PLOTS in each a desirable road, for modern and [illegible] detached and semi-detached villa residences, and of a [illegible] much admired neighbourhood, already occupied by a first-class tenantry. The ground is [illegible] and level to the road.—Apply to Mr. COOPER, Surveyor, 7, Caroline-place, Queen's Face, Bethnal-green.

BUSINESS PREMISES.—Capital Manufactory or Business Premises to be let, with or without Steam Power, suitable for a Carpenter, Builder, Cabinet or Pianoforte Maker, &c., situate within [illegible] Works, Oxford-street, Hackney. Also a Counting-house and Warehouse in Oxford-street. A valuable opportunity for any person commencing business in the carpentering line, as a respectable tenant would be introduced to the customers of a gentleman retiring.—Address to D. C. 14, Duke-street, Portland-place.

GREEN-STREET, LEICESTER-SQUARE. — To BE LET, on moderate BUSINESS or MUSIC, No. [illegible] Green-street, [illegible] premises with [illegible] Application within, and particulars obtained of W. C. REED, Architect, 61, Chancery-lane, City.

WHARF and PREMISES.—TO BE LET on the [illegible] SHELWHARF, on the Regent's canal, near the Victoria Park, having a frontage of about 140 feet, with large shed (the upper part adapted for a granary), dwelling-house, [illegible] Apply, if by letter, to QUINTIN, Architect, [illegible]

TO CARPENTERS and BUILDERS.—To be LET, with immediate possession, an [illegible] JOBBING BUSINESS, situate in a leading thoroughfare in Islington.—For particulars, apply at Mr. PEARSON'S, 11, High-street, Islington.

TO PLUMBERS, PAINTERS, GLAZIERS, &c.—TO BE LET, an OLD-ESTABLISHED BUSINESS, in a country market-town, where a good trade has been carried on for [illegible] years. The premises [illegible] together with [illegible] Dwelling-house, Shop, and Warehouse. No agent need apply.—Address, A. T. 4, Northumberland-street, Gospel.

MAIDSTONE.—A lucrative and valuable genuine BUSINESS TO BE DISPOSED OF.—SITE M SAW-MILL TIMBER and DEAL TRADE, with a good connection, in full trade. The [illegible] has been established upwards of [illegible] years, with House, [illegible], &c., taken on lease. To an active, [illegible] terms. The above premises afford an advantageous opportunity, as the fullest information will be given.—Apply to [illegible], Auctioneer, Maidstone.

TO BUILDERS, MANUFACTURERS, TIMBER-MERCHANTS and OTHERS.—PRIMAL'S, in excellent condition, and in every thoroughfare. TO BE DISPOSED OF.—Apply to A. B. 31, Old-street, St. Luke's.

WORKSHOP and PLOT of GROUND, with a Building convertible into a Residence, TO BE LET, near the Mansion, at Kingsland. The Workshop is [illegible] on the ground floor, and [illegible] Apply by letter to Mr. LAING, Architect and Surveyor, [illegible]

TO BUILDERS and SMALL CAPITALISTS. TO BE SOLD, very cheap, as Freehold, giving votes for Middlesex, or on Lease, for ninety-seven years, at low ground-rents, TWO UNFINISHED SIX-ROOMED COTTAGES, [illegible] Agreement with Owner, Southgate, Middlesex, [illegible] about 3 feet long by 30 feet wide, and of the depth of about [illegible] feet. Will suit for parties requiring extensive premises during the winter season, both rooms being well fitted up and Hot with gas. Also a ROOM, 17 feet long by 19 feet wide, with a room adjoining, 18 feet square and a small ante-room. These rooms are fitted up with fireplaces and stoves, and would be found suitable for a school or lecture-room. Possession may be had immediately [illegible] Apply to Mr. J. B. DOWNING, the Secretary; or Mr. FULLER, Superintendent, at the Baths, Westminster-road, Lambeth.

COMPLETION OF THE TRAVELLER'S LIBRARY.

Now complete in 25 vols. 16mo. price 5s. each,

THE TRAVELLER'S LIBRARY: a Series of Works of acknowledged merit, not exceeding in compass the limits of a small box. The collection is well adapted for family and school-room libraries, or in separate portions for presents and rewards.

"If we were called upon to lay the first stone of a Mechanics' Institute or Book Society's Collection, it should be composed of the hundred and two parts [illegible] TRAVELLER'S LIBRARY. It is the best [illegible] Here are Mr. Macaulay's best writers, the anthologia of Sydney Smith, some admirable literary essays by different authors, several [illegible] of science, narratives of travel in eight Europeans, four American, four African, and three Asiatic countries, and examples from the works of Southey and Dumas. Bound together, they form twenty-five convenient volumes, which any society of a hundred and five members may possess, upon payment of one shilling each. An association of this kind, formed in every small town, would thus create sufficient basis for a free library upon a moderate scale. Good books are not beyond the reach of working men if working men will combine to obtain them."—*Leader*.

*** The "Traveller's Library" may also be had as originally issued in 2 parts, in cloth, forming 2 vols. 2s. 6d. each; or any separate parts or volumes.

London: LONGMAN, BROWN, GREEN, LONGMANS, and ROBERTS.

The Builder.

Vol. XIV.—No. 711.

WITH reference to very important works both in progress and in contemplation, wherein if error be committed the evil done would be of no common magnitude, we would say a few words on the *diffusion of gases and ventilation.*

Many of the laws of nature are simple when understood: man may in some cases subvert them; in other cases they are beyond his control. Much skill and labour are required to convert natural products and to change natural combinations to man's use: the chemist and the engineer have each their special work. The chemist can accomplish many things in his laboratory, which are commercially impracticable, on account of the expense involved: the work of the engineer is also limited very much to results which pay. The diffusion of gases follows a subtle but well-known law; all the consequences of such diffusion are not, however, fully comprehended. In the diffusion of gases electricity is excited, and we know something of the rapidity of this effect. The diffusion of gases can scarcely be controlled by mechanical means; in ventilating arrangements this should not be relied on if attempted. Many gases injurious to health are diffused with extreme rapidity: place and expose camphor in a room, then open doors and windows,—the diffusion will not be stopped, nor the scent be materially diminished; if even the air could be pumped out with a strong current, the taint would remain as long as any of the camphor existed. Decaying and fermenting animal and vegetable substances act much in the same way as camphor; gases are liberated and diffusion takes place.

The change of air in rooms and hospital wards ought not to be made at high velocities; some of the best regulated hospitals calculate upon a change equal to one foot vertical per minute; that is, in a room 15 feet high the whole air should not be changed at a greater rate than once in fifteen minutes. Gases are diffused much more rapidly than this: for a limited space one gas will pass into another gas (hydrogen into common air, for instance) as into a vacuum. No allowable artificial current man can create will prevent such diffusion, if the gases are brought into proximity; no ordinary artificial trapping will stop it. Many gases pass through fluids, and so called solids, very readily. Hydrogen gas will pass easily through the pores of stucco, so that plastered walls and ceilings are no barrier to the diffusion of cesspool emanations: hence the intolerable and incurable nuisance experienced where such receptacles are used. Latrines and cesspools generate hydrogen and its compounds; they cannot, therefore, be placed in contact with hospital wards or rooms without creating and maintaining a nuisance, and doing serious injury to the patients or inhabitants.

The law of the diffusion of gases may also be tested thus: throw any animal substance, such as bones, hair, feathers, &c. on to an open fire; the heat of the fire and the draught of the chimney will not prevent gases so liberated from being diffused through the air of the room, or indeed of all the rooms in a house.

There are gases heavier than common air,—carbonic acid and others; there are gases lighter than common air,—hydrogen and others: both these gases, and their compounds (which are generated by decaying and fermenting animal refuse), are exceedingly injurious if breathed; they are the gases found in the fever and cholera haunts of towns.

Taking these facts, as detailed, into consideration, it will become evident that rooms, and especially hospital wards, should be so constructed as to be entirely free from a chance of such contamination, as chemistry proves, the impossibility of the evil being prevented by mechanical means. To draw the air of a ward through a latrine will not prevent the foul gas of such latrine passing into the ward, even though the flue-draught is strong,—as strong as fire can make it. Cholera travels against the current of the monsoons as readily as with it; even the steam force of a tornado cannot retard its progress; the dread mysterious something which generates or developes cholera follows the law of gaseous diffusion, passing through atmospheric air as through a vacuum.

The ventilation of rooms and of hospital-wards to be safe and agreeable should be imperceptible to the sense of feeling: there must not be palpable draughts, and yet the whole body of air within the room or ward should have motion; this slow, quiet, unseen, and unperceived motion can only be obtained by means of diffuse areas of inlet and of escape, the whole circumference of the floor, the whole circumference of the ceiling Small and isolated openings, however quick the draught established, can only remove a portion of the air, and set up a current towards the point or points of inlet or outlet, as the case may be. Effective ventilation cannot be carried on through flues of small area.

Sewers and drains, even the best and most perfect, when in use, are gas-retorts; the solids and fluids constantly passing through or present in them are the producers of gas; and those lighter than common air—hydrogen, &c.—flow upwards. If, therefore, sewers and drains are connected with rooms and hospital wards, these foul gases will penetrate even through water and plaster. How, then, can a sewer or drain be "trapped?" Many persons think it is exceedingly easy to sewer and drain a house or building situate on a hill. This is a mistake. More care is required to prevent contamination than where sewers and drains have a moderate gradient, as those gases of decomposition which are lighter than common air ascend the quick gradients more rapidly; just as water flows down with increased velocity. The high parts of a town frequently suffer from epidemic diseases more than houses at a lower elevation: but this is where they are connected with sewers and drains having no proper and adequate means for ventilation. Sewers and drains ought never to pass beneath houses or hospitals: if possible they ought never to be directly connected with a house or hospital. They should stop at the outer wall; and there must be means for full and free external ventilation, so as to prevent even a possibility of contamination by the law of diffusion. If foul gases are admitted within a room or hospital, they will not be ventilated out through flues, however ingeniously contrived. The evil may be diminished, but it will not be destroyed.

LIVERPOOL FREE LIBRARY AND MUSEUM COMPETITION.

Our readers are aware that the sixteen designs drawn in completion of so many sketches chosen out of 115 in a previous competition, are now on view by the public, in a suite of rooms in St. George's Hall, Liverpool. As this competition has excited much attention in Liverpool, the number of visitors daily are very great.

As might have been anticipated, the designs for the most part affect Classic or Italian guise. We have one displaying Byzantine elements, but no representative of the Gothic. There are some that show a considerable amount of originality in general composition, while too many remind us of what we have seen before, either at home or abroad; and very few have made that free and independent use of the elements which constitute a design in the full sense of the word original. The suggestion of a dome-covered entrance-hall by the committee, in the instructions issued to architects, has been acted upon by several, and we have domes of every shape and proportion—square, octagonal, hemispherical, segmental, some of which crown colonnaded rotundas, that for size might vie with St Paul's itself; and where a dome of some kind is not adopted, there is generally a receding attic in its stead; so that most of the designs present a pyramidal pile externally; one or two of them something too much like St. George's-hall, either from the adoption of the attic just mentioned, or from the introduction of the dwarf intercolumnar walls, though the least reflection might have shown that the latter are far too peculiar to be repeated, especially on a site contiguous to that of the original.

One or two of the most beautiful designs considered abstractedly are altogether unsuited in expression to the intended purpose, being almost surrounded with colonnades, which, besides really diminishing the light, prevent the windows having that prominence essential to the true expression of the destined use of the edifice. The design selected by the committee for the first prize errs in this respect as much or more than any other as it almost entirely suppresses the window, and substitutes a row of niches, which might have a very good effect in a building purely monumental, but are absurd in one for a practical purpose, such as a library and museum. Windows are said to be so omitted for the sake of architectural effect, but the result is architectural absurdity: for windows, in this climate especially, are essential to true architectural effect, and you might as well put out a man's eyes with a view to increase his beauty, as for the sake of architectural effect to exclude the window.

While one competitor ignores the window, another is ashamed of his roof, and foolishly hides it by an enormous and false attic, which has no better effect than causing the wings to overpower the central pedimented portico.

The plans of the different floors show but in few instances anything like ingenuity, and in still fewer do we find very satisfactory arrangements for admission of light. The prize design, we think, has too compact a general outline for the security of a sufficiency of this indispensable element, without the substitution of an interior court for the central hall. Others have sacrificed the capability of lighting to the unskilled-for effect of external colonnades, as alluded to in speaking of the exteriors.

What excited in us considerable surprise on a first sight of the plans was, that notwithstanding the low sum named as the limit of the cost, most of the competitors had adopted a wasteful general arrangement: vast central "halls of columns," square and oblong, surrounded by corridors that would alone swallow up half the proposed 20,000*l.*; and circular saloons in emulation of the Pantheon vie with each other in magnificence,—which seems far more thought of than practical utility.

At least two-thirds of the competitors, we should think, violate the condition as to cost, and not a few would each require an outlay of from 70,000*l.* to 100,000*l.* to realise them in a durable material, with all their sculptural embellishments.

Some are expensive designs, even in respect of their mere shells. In one instance, the greater part of the boundary-walls are not in one vertical plane from top to bottom, but have the upper story receding within the plan of the lower, thereby greatly increasing the cost of erection.

But it is not in the matter of cost only that the conditions are violated; four of the designs, and among them the prize design, have mixed the library and museum,—*i. e.* these departments are in different stories of one building, and under the same roof, in contempt of an express condition that the library should form a distinct and separate block.

Even the plan of the site, which was issued along with the instructions, has been set at naught. One competitor, for the sake of magnificent interior arrangements, has overstepped the longitudinal boundary line by 50 feet; and another, in bringing walls perforated with windows up to the east and west limits of the site, has rendered increased extent of land necessary to the adoption of his design. The author of a very showy set of drawings before mentioned has shirked the difficulties of a very rapidly-inclined site, and placed his building on a dead level.

It is worthy of mention that the most imposing sets of drawings seldom proved, upon examination, to be the best designs. Some of the most gorgeous in colouring and pictorial accessories being little more than a stringing of the commonest elements together, without fancy or feeling; and were we to enter into the relative merits of the several designs, we fear we should go somewhat counter to what has been expressed by the votes of the competitors, and to the verdict of the committee, with whom good, or rather showy drawing and colouring, must have supplied the place and been mistaken for fair proportions and fine composition, originality, and other intrinsic qualities.

On the whole there is much to discourage the lover of art in this collection of designs,—a collection which cannot fail to induce the conviction of the vanity of expecting a satisfactory result under the present system and means of selection.

Public competition, in the abstract, no one, we think, could object to. We can conceive it so conducted as to become a most powerful means, not only of impulse to the study of architecture, but by bringing out nameless talent and sending in talentless names, of putting its professors in their right places. But what might thus be of incalculable value to our art, seems in practice to be all a farce.

We do not say this because the right man never gets the offered premium. If no other injury were perpetrated than that, it would be of comparatively little matter. We speak strongly, because in its present state it cannot have a good influence upon the study of architecture; for, as it becomes known that committee-men are incapable of judging of the relative merit of the works submitted to them, merit is of course not studied. Committee-men know nothing at all about the plans of the floors, therefore anything will do for a plan. Committee-men cannot recognise or appreciate originality, therefore originality is not sought. Committee-men award the premium to the author of the prettiest picture, and therefore the contest is not for the best plan and most beautiful and original exterior design, but for the showiest water-colour drawing. And to such an extent has this gone on, that even architects themselves would find it difficult to penetrate the dense atmosphere of claptrap, in the shape of colouring and getting up, which envelopes them, to the real merits and demerits of the designs. We have seen sets of drawings in which the very plans were glowing with vermillion and all the colours of the rainbow, in which the sections for drawing and colouring were absolute gems, while the perspectives were coloured by eminent water-colour artists, probably at great expense to the author, which, as architectural designs, were not worth the paper they covered.

That in a competition open to all, the majority of the designs sent in should be valueless it is natural to expect; because while the very humblest of the profession are as likely to respond to the invitation as the highest, we know very well that not one man in ten who writes himself architect is capable of designing a public building of any importance. But this renders more urgent the need of some better means than is at present resorted to of making the selection. What is the best we are not prepared to say, and will content ourselves with observing, as we have before said, that we have no faith in the plan which takes the verdict of the competitors, whose duty and interest it sets in the most striking opposition to each other; each being called upon in common honesty to declare for the design he considers the greatest rival to his own, and record a vote that might turn the scale against himself. But there are other objections to this mode: to say nothing of professional and local jealousy, and other influences. Are those who merely string the tritest elements together without the exercise of the least invention—window and pilaster, pilaster and window; or not content with that, copy an entire façade,—are they likely to respect the originality that rebukes their hum-drum productions? Nay, are they not likely to resent in others any breaking up of new ground, or deeper plunging into the wells of beauty? We believe that by no plan of selection could a truly fair decision be arrived at, unless the designs were all similarly drawn and tinted, say, in sepia or Indian ink; for such is the influence of superior drawing and colouring, that if a collection of designs, after being exhibited and judged of as they came from their respective authors, were re-drawn and coloured by the same hand,—the perspectives from the same point of view,—and with the same solar and atmospheric effects upon them, and in this new guise again submitted to an equally capable tribunal, or the same tribunal, supposing it could forget its former decision, the result would be totally different; and designs, which were perhaps all but unnoticed before, would become for their originality and beauty, the centre of attraction.

THE ARCHITECTURAL ASSOCIATION.

The public *conversazione* and opening meeting of the present session of this Association took place on Friday evening, the 3rd inst. at Lyon's-inn Hall, Newcastle-street, Strand;—the president, Mr. Arthur Allom, Associate of the Institute, in the chair.

Letters were read from the Right Hon. Sir Benjamin Hall and Mr. Decimus Burton, regretting their inability to be present on the occasion. A letter was also read from the Office of Works, accompanying copies of the plans and particulars for the New Government Offices, for the use of the Association.

The hon. secretary then read a report of the proceedings of the Association during the past year. It commenced by expressing the thanks of the committee to Mr. Tite, M.P. for the kind interest he had evinced in the welfare of the Association, both on the occasion of their last opening meeting, and on other occasions. Great difficulty had been experienced during the session for want of papers. Notwithstanding, several papers of considerable interest had been read. A crisis ensued, and on the 2nd of May last resolutions had been proposed having for their object the dissolution of the Association. They were, however, almost unanimously rejected, and from that time greater interest in the affairs of the Association had been manifested by the members generally. At the early part of the session, and after much consideration, a memorial had been presented to the Royal Institute of British Architects, praying them to institute such a course of examination as they might think necessary, in order to test the qualifications of candidates intending to practise as architects. This memorial was received and discussed by the members of the Institute; but the committee regretted that the objects of the memorialists had been totally misunderstood, both by the members of the Institute who had spoken, and by others who had written upon the subject. The committee received an answer to their memorial, in which they were told that the course proposed was as yet premature, and that the council could not proceed further in the matter until they had gained some experience in the working of the examinations of candidates for district surveyorships. The committee thought the subject was of so much importance, and so fraught with good for the future welfare of the young architect, that they felt bound to give it still further consideration; and they asked for the sincere and earnest support of the members of the Association in a matter of, as they considered, so much consequence. On the 17th of June last, the committee received a very important letter from the Royal Institute of British Architects, in which a suggestion was made for amalgamating the Architectural Association with the Institute. The matter had been taken into consideration by the committee, at four meetings held during the recess, and a resolution had been passed to the effect, that it would not be expedient for the Association to amalgamate with the Institute on the terms proposed. The subject, however, would be laid before the members generally, in November next, when a final decision on the subject would be come to. A list of the papers read during the past session was given, and thanks were returned for various donations.

In conclusion, the report called attention to the syllabus of papers and subjects for sketches for the present session, and urged upon the younger members of the profession the necessity of giving the Association increased support.

Mr. R. Kerr, in moving the adoption of the report, said,—Two circumstances mentioned in the report deserved a passing word. He was glad that the proposition for a dissolution of the Association had been rejected, whatever might have been the motives of those by whom it was made. Another singular circumstance seemed to have occurred very recently—namely, the proposition of the Royal Institute of British Architects that the Association should be amalgamated with the Institute, or, as he should call it, absorbed in the Institute. He was not aware, until the report was read, that such a proposition had been discussed and preliminarily disapproved of, but he was very glad that it was so. He considered that, although the proposition from the Institute was highly complimentary to the Association—just as much so as the other proposition to which he had alluded was the reverse—yet at the same time it was a proposition which deserved to be taken into consideration with a great deal of caution. That Association was founded for the purpose of affording to the young members of the profession the means of self-improvement by mutual instruction. The principle on which it was founded was one which had been carried out through this and other countries in various departments of science with very great success. The operations of that Association had been eminently successful; but they must expect that in that, as in other things, there must at times be some falling off. It did not, however, follow that the principle upon which it was founded had in the slightest degree proved inapplicable, or that the Association itself had been unsuccessful in its operations. He might be bold enough to say that that Association had done more practical good amongst the young men of the architectural profession within the last ten years than any Association of the kind ever established in this country. Ten years ago the profession was in a very different position from that in which it is now. Everything was then the "five orders." Nine out of ten of those present did not now know probably what the "five orders" were—in the sense, at least, in which it was then used. At that time every thing was the "five orders:" there were even five orders of Gothic architecture: at least it was attempted to be shown that there were; and "five orders" of a great many other things, which he would not then say anything more about. During the last ten years, however, the character of architectural design had been greatly changed; the picturesque had been studied more than the classic or the stately, and therefore the peculiar vigour exhibited by the youthful mind had been more called into requisition than the studied sense of those who were more advanced. That Association, he concluded, had been eminently conducive to the fostering of this peculiar energy of the youthful mind, and therefore he had no hesitation in saying that it had done more practical good amongst the class to which it appealed, than almost any other association with which they were acquainted. He had not the slightest doubt that the proposition of the Institute was prompted by the most disinterested and excellent motives. No one wished the Institute more success than he did; but there was one thing (and he did not speak offensively) in connection with the Institute which he did not like: he did not like its charter. In a country like this, and an age like this, Government patronage and Government authority, instead of being conducive to the benefit of any public movement, are invariably found to clog its progress. A most remarkable instance of the operation of the same principle had been displayed in the affairs of the late war. At the time that Government refused the offer of a private mercantile firm to provide the army in the Crimea with comfortable clothing and housing at a reasonable rate, our brave army were perishing on the ground from starvation and cold. There was a deplorable illustration of the difference between private enterprise and Government management and routine. In a country like ours, so long as private enterprise

was allowed to carry on its operations on its own basis, the energy and genius of a nation like this is sure to lead it to success; but the moment Government authority and patronage and routine come into play, the very reverse is the case. The Institute of British Architects was, he might say, a Government institution. He had no doubt that the practical management of that Institute was characterized by disinterestedness, gentlemanliness, and highmindedness; but at the same time he contended that if the Institute were not clogged with that unfortunate charter, but were based upon the enterprise of British public spirit, it would do a great deal of good, while many at present were disposed to say it did not do much good. Now, why should an institution like the Architectural Association become merged with the Institute of British Architects? Let them co-operate with them in every possible way, submit themselves to the authority of the men who compose it, allow themselves to be governed by their dicta, and perhaps they would be safe in so doing to a great extent. But a society of that kind once started in England never could be merged. If the Association were dissolved, before twelve months there would be another of a similar kind organized. In conclusion, he gave some practical advice for the carrying on of the business of the present session, which he hoped would be more successful than the last.

Mr. Gray seconded the adoption of the report, which was agreed to.

The Chairman then read an address of some length, commenting on the condition of the metropolis, which, he said, became more intolerable every day; the want of taste shown in public works, instancing the Nelson Monument in Trafalgar-square, the proposed Government competitions, the desired embankment of the Thames, the appropriation of the closed graveyards, the public monuments, and the want of proper Dining Houses in the metropolis. He suggested that the railway companies should aid in bringing building stone, in pieces of moderate size, at a cheap rate to London; and concluded with setting forth the prospects of the Association (now numbering 125 members), and expressing his opinion in favour of the union, not fusion, of the various architectural bodies of the metropolis, under a liberal policy. We are prevented from giving the address in full, by the more than ordinary demands on our space this week, but may recur to it next week, if not prevented.

Professor Donaldson said, he would not have risen to offer any remarks, but his friend, Mr. Kerr, whom he had known and respected for many years, happened to throw out some observations in reference to the Royal Institute of British Architects, which were not founded upon the actual circumstances of that Institute. Perhaps the meeting would pardon him for attempting to set the Institute right in their estimation. Mr. Kerr had started with the proposition, that when a company or society had got a charter of incorporation, it was necessary that it should be under Government influence and management. An idea so fallacious could not have been started by Mr. Kerr, if he had considered the subject beforehand; because the charter was merely meant to give to the Institute possessing it a legal standing in society: it did not give any influence to the Government, or empower any other body to interfere in any way with its management or control. The truth was, the Institute, after having been carried on for some years, had acquired considerable property in the public funds, as well as a valuable library and collection, and they felt that there was no safeguard for the property they possessed, if it remained vested in private individuals, and they thought it due to the profession, and the position which the Institute held, that they should give that property the security which the public had a right to expect. That was the whole and sole cause of their having a charter of incorporation, in order that they might stand — well or ill he did not pretend to say — but that they might stand as the representatives of the profession, and thus having a *locus standi*, that the property possessed by them might be under the protection of the law. The Institute had a generous regard for the whole members of the profession, and hearing that the Architectural Association found themselves in some difficulty, the council felt that they would not be wanting in the interest which they felt for every class of the profession, in coming forward and offering them the hand of friendship, to prevent them from disbanding themselves, and being consequently deprived of the opportunities for improvement. They said, "Let us go forward, and say we have a place here: if in any way we can combine you with ourselves, we shall be happy to do so, by offering you the use of our library, and place of meeting, and any other advantages we have at our disposal." That was the proposition that the Institute wished to make, and that was the whole and sole charge that could be brought against them. They felt that antagonism is bad for a profession, though rivalry is sometimes beneficial to it. The objects of the Institute had been to promote the interests of art generally, and not of the profession itself,—to uphold the character of the profession, to maintain it for the good of the art,—that was the sole object the Royal Institute of British Architects had in view. He had listened to the address which had been delivered by the president with interest, but he differed in opinion from some of the sentiments expressed in it. He recollected London some twenty-five years ago: there was then hardly a straight street in it. The streets were so narrow that two omnibuses could hardly go abreast. The streets were dirty, and the Thames was filthy, and there was hardly a garden around London. But since that time see the progress that had been made. The president had said that London becomes more and more intolerable: he (Professor Donaldson) said that it became more and more tolerable; it improved every day. Look at Cannon-street: was it not large and broad? were not those great mercantile magazines worthy of being palaces? He might allude to a large number of other buildings of modern structure around London, and ask, whether it really became "more and more intolerable as a place of residence." Regent-street did not exist thirty-five years ago: the Strand was not then as it is now. Let us have a century or two, as had been passed by foreigners in improving their cities, and London would be able to vie with any capital in the world. The chairman had alluded to the sewage of the Thames. If his memory served him well, three or four years ago competition was invited on this subject, and forty or fifty designs were sent in, not one of which suited the purpose for which they were required; and he did not know whether for the next ten years they would have a mode of sewage such as was desired. It had been said that Government interference was always bad, but there were numerous instances of entire failure where there was a total absence of all Government interference whatever: he need only give as one instance that of the Nelson column. Mr. Kerr had said that under certain circumstances they should go to the Institute, submit themselves to it, and adopt their rules; but the Institute did not require submission: they considered it would be unworthy of men and of architects to talk of submission. They must come, if they came at all, upon equal terms—make their own terms, in fact, with the Institute in an honourable way, worthy of men and of architects. The Institute might have been supposed to be placing themselves in an invidious position in coming forward to make the proposition they had made; but they disregarded any remarks that might be made on their conduct, being actuated solely by a desire to benefit the members of the Association; and if they could not succeed in their object, the fault did not rest with the Institute, but with the members of the Association themselves.

Mr. Jennings said the general feeling of the elder members of the profession was that there should be as complete union as possible in the profession. They considered at all times that there must be many things of which every individual was more or less ignorant, and that the elder branches of the profession might often, from experience, be enabled to impart information to them; hence the utility of association and unity. He felt quite satisfied that the present charter was attended with some inconvenience as far as amalgamation of the entire number of architects of London was concerned; but he did not conceive there was any insuperable difficulty in the way. If there was a desire on the part of both institutions to unite, he thought that it was not impossible to do so, and that some plan might be devised to carry it out with satisfaction to all parties.

Mr. Edwin Nash considered that the division of a profession into two bodies was injurious to its interests. If a union between the Association and the Institute could be devised in such a way that the junior members should be left free to exercise themselves in that industrious and energetic manner they had done there, it would be a good thing; but if they joined the Institute and merely attended the meetings which take place at the Institute, instead of benefiting, he thought they would be in a worse position than at present. The suggestion now made by the Institute for such a union he considered required remodelling before it could be accepted or acted upon.

Mr. Edward Hall, being called upon, observed that the present question of union in the profession had concerned with it the interests of art and architects for years to come. He had long felt that the mutual relations of established architects and other members of the profession, were not what they should be; and there was not the same intercommunion of ideas, and disposition to give credit on either side, which he noticed, for example, amongst the engineers. At the same time, whatever was decided upon for the Association, independent action had, to a certain extent, benefit, such as a noble author discovered, judging from the title of his work,—"Progression by Antagonism." He believed, with deference to Professor Donaldson, that the interests of *art* were to be served by advancing the interests of the *profession*, and somewhat more than the Institute had done; and also (without touching upon the reasons) he held that the architecture of London *had not* advanced in a ratio commensurate with the population (the real point), or in a manner parallel with the improvements in some other capitals. He did not consider that the Government, in calling for designs for particular offices, and a plan for general disposition of offices, at the same time, had inaugurated a happier state of affairs: if the general plan had any value, it would be as likely that the sleeve of a garment cut by one tailor would happen to fit the coat of a different workman, as that the general scheme and the details here should fall together; and at least one set of premiums must be wasted.

Mr. Papworth said, with regard to the union of the several bodies under one roof, it was only three years since he undertook to be the medium of communication for bringing about a combination of the Institute, the Museum, and the Association, on one piece of ground. At that time the Association decided that it would rather remain alone; and he supposed that decision would influence to a certain extent their answer to the proposition recently made to them by the Institute. That proposition was one which he had pressed upon the members of the Association for the last few years; seeing that as they had not a library, and as the Institute had a very good one; and that as it must be a perfect matter of indifference to the Association whether they met at that end of the town, or a little more west; and that as it would be very possible to make arrangements for using the library and the reading-rooms, and for other advantages of that sort, without the Institute at all interfering with their regulations,—he could not understand why the Association should not accept the proposition: he did not see why they could not have meetings of their own without even the presence of the Fellows. But latterly, his own ideas upon the subject had begun to change. He began to imagine that it would not be a good thing for the profession if the Association were to accept the offer. He would tell them why. During the time they had existed, they had been always spurred on by a want of something; but when they had got everything, what would they do? Again, when they had got a library at their command, were they sure that they would use it? He had some ground for that remark, for he could assure them that he had never seen five gentlemen at a time in the library of the Institute.

Mr. Kerr wished to correct what seemed to be a false impression arising from the remarks he had made respecting the Institute. He did not for a moment intend to convey the idea that the Institute was under Government control. He merely meant to lay down the principle that State patronage in any form was not found conducive to the success of any scientific movement of a public character. He was inclined to think that although the charter might be necessary for its library and property, the Institute would find it more advantageous to the profession at large if it had no charter and no property. He was convinced that if the Institute would open its doors to every one who liked to go into its meetings, as they did at the Association, and permit its library to be used by such of the profession who desired to use it, they would find those privileges very much appre-

ciated, and a very great deal of good feeling would be created by it. He must again express his very great respect for the Institute itself, and for the administration of its affairs by those who are at its head, and he should be sorry if any expression of his were considered as intended to convey a slur upon the Institute in any way whatever. But the Association could not be amalgamated with the Institute practically: it could not be done in the form proposed. At the same time he thought that if the Institute would accord to the members of that Association the practical benefits of the use of its library, and the permission to attend its meetings, the boon would be thankfully accepted, and prove highly beneficial.

Some further discussion took place, in which Mr. [illegible] and other gentlemen took part, and then

Mr. Gray moved a vote of thanks to the visitors, and particularly to those who had taken part in the discussion.

Professor Donaldson, as the elder member of the [illegible] would take upon himself to return thanks for the honour they had been received that evening. Their presence there was the best proof of the interest which they took in the Association. The Institute had come forward themselves with a proposition which they considered would be [illegible] to the interests of the Association, and [illegible] did not approve of that proposition it was perhaps for them now to appoint a committee to meet the Institute and see if a plan could not be agreed upon for the benefit of the Association.

A discussion then ensued as to the propriety of making the meeting to be held in November next, for the discussion of the question of amalgamation, a public one, when a motion was put and carried that such a course would be desirable.

THE DWELLINGS OF THE WORKING CLASSES ABROAD.

The following communications with reference to efforts for improving the dwellings of the working classes in various parts of the continent, were briefly alluded to in the report of Mr. H. Roberts, and the other commissioners who on this subject was referred at the International Philanthropic Congress lately held in Brussels, and reported on by us last week. The buildings erected, or in progress in France, are now so numerous, that with some exceptions, they were, like those in England, not named.

Prussia.—M. Huber, Professor in the University of Berlin, said,—I was to remark that after London Berlin is the first large town in which a society for dwellings for the [illegible] was established, and that this society is the first that I know of which adopted the principle of giving to the classes for whose benefit these houses were built the opportunity of becoming their proprietors. It is not a trifling undertaking which is here referred to, for the society has embarked 300,000 thalers, and has built a dozen groups of houses, containing about 200 dwellings, in which about 1,000 individuals are lodged. There is this feature in the society, that it is under the protection of H.R.H. the Prince of Prussia, whose patronage is very real. I have been for several years secretary to the society, and I can add in that the Prince really presided over the general meetings of the shareholders, and had a very accurate knowledge of everything relating to the undertaking.

Professor Schubert.—In the town of Konigsberg, where I reside, and which has a population of 30,000, a society has built two houses for families of the working classes. These houses comprise forty dwellings, each with two apartments, and a detached kitchen. The cost of the building was defrayed, one half by donations, the other half by shares, which for the first years bore no interest. The rent of these dwellings is excessively low: they are let by preference to the most honest workpeople: they are well constructed and very healthy. The cholera, which since 1846 has appeared five times in Konigsberg, attacked much less frequently the inhabitants of these houses than the workpeople residing in other places, and for the latter years not one case of cholera has been observed.

Holland.—M. Jonkes, Avocat Général de la Cour Provinciale.—The improvement of the dwellings of the labouring classes may be noticed in Holland, and mainly in several of our towns. At Amsterdam there exist already three societies, which have constructed healthy dwellings, provided with excellent water, and having good ventilation. These houses are let at low prices to the necessitous classes. But another measure appears to me indispensable; that is, the forbidding the occupation of unhealthy dwellings, for it is often the case, that although better dwellings may be obtained, the unhealthy are chosen because their rent is lower. The town of Rotterdam has, in this respect, set the example. A regulation of the commune forbids, in this town, the dwelling in unhealthy houses. Without this law, and I cannot sufficiently insist on this point, I believe that everything which may be attempted for the improvement of dwellings will be unsuccessful, for the lowest priced dwellings are always preferred.

Baron Van Breugel pointed out and dwelt on the advantages of a plan adopted at the Hague, where workpeople's dwellings have been so arranged as to combine the building in block, with the separation of each family, and to provide for free ventilation. The houses are in rows, with garden ground on each side. one tenement occupies the ground-floor, another the floor above. The entrances are placed on opposite sides or fronts of the building: in one is that to the ground-floor dwelling, and in the other that to the first floor dwelling: thus there are entrances in both fronts of the houses, whilst to each family is appropriated the plot of garden ground through which they enter their tenement.

M. Van Oye described the beneficial results arising from the construction, on sanitary principles, of one hundred workmen's dwellings, at Groningen, in Holland. Since they were built, the cholera has five times visited that town; and, although situated in the most unhealthy quarter, in these houses, which contain from 400 to 500 inhabitants, there has been but one case of cholera; and in that instance the doctor stated that the germ of the malady existed when the man took up his residence in the house fifteen days previously. The workpeople contend for the occupation of these houses: their admission is the reward of order and good conduct. The financial results are quite satisfactory: the shareholders receive 4 per cent. and a considerable portion of the capital is redeemed.

Sweden.—Dr. C. G. Gruehs, first municipal physician, at Stockholm, said that, in that city, an association of workmen has been formed amongst themselves, with the view to the improvement of their condition, and the mutual advancement of their well-being. In Stockholm and in Gottenburg, as well as in some other places, the public attention and interest have been directed to the hygienic question in relation to the working classes. The Capital, considering that a clear and wholesome dwelling is one of the first and most important means of securing the health and happiness of the working classes, set about obtaining funds for the building of workmen's dwellings. To the present time, thirteen piles of dwellings for families are built in different directions: they contain together 157 tenements, each consisting of a room and a kitchen, or of a single room, with chimney and stove, besides the necessary appendages, cupboard, cellar, dust-place, and privy. In some cases there is also a washhouse, drying-room, and bath. The rent, determined by the general town council, varies from 48 to 120 rixes per annum, according to the situation and the amount of accommodation. One of these dwellings has been erected by voluntary contributions, given with a benevolent object; and there has not been a better appropriation made of the sum subscribed by the inhabitants of Stockholm, as the expression of their joy and their thankfulness for the re-establishment of the king's health, after a serious illness, which drew forth this expression of the love of his people, in the winter of 1852-53. This dwelling referred to, was recently opened, and contains accommodation for twelve families. it is situated on a spacious and elevated plot of ground. the apartments are well disposed, and provided with separate dependences for each family. The other workpeople's dwellings have been built with funds lent by the Fire Insurance Company of Stockholm, bearing interest at 4 per cent. and repayable by annuities in a period of twenty-five years.

All the dwellings of the labouring classes are placed under the surveillance of the general town council.

Plans for baths and washhouses, at Stockholm, have been recently prepared by a very distinguished architect; and with these buildings are combined dwellings for work-people.

In the town of Gothembourg, for several years there have been workmen's dwellings, built in part by voluntary subscriptions, in part by loans on the guarantee of the town. These houses are capable of lodging more than 100 families; and lately a person has generously given 200,000 francs, with a view to found a *cité ouvrière*, directing that the rents of the houses shall be appropriated to the erection of new buildings, by which means this establishment will be always on the increase.

Dr. Faye, professor and physician to the King of Sweden, reported, that in Christiana, the capital of Norway, a commencement has been made, and two large establishments of dwellings for the working classes have been formed by a society of shareholders, who receive 4 per cent. interest. Several owners of factories have similar establishments for the work-people in their employ."

The Belgian Government has issued a small octavo pamphlet, of sixty pages, on the "Amélioration des Habitations d'Ouvriers," containing "Circulaires du Gouvernement; Résolutions et Propositions du Congrès Général d'Hygiène, 1852; Rapports du Conseil Supérieur d'Hygiène et de la Commission Permanente des Sociétés de Secours Mutuels."

This *brochure* is referred to in the report made to the *Congrès de Bienfaisance*, as given in the *Moniteur Belge*, Sept. 23: it contains details, at considerable length, with reference to what has been done in France, Germany, &c. as well as allusions to England.

The establishment of a society in Brussels, for the [illegible] of workmen's [illegible] in that city, was announced the last day of the Congress. The capital to be 250,000 francs, with power to increase to 1,000,000 francs.

One admirable example has been set by M. Pauwels, the large manufacturer of railway carriages, close to his works. He has built and fitted up, on the English plan, a lodging-house for forty single men employed in his works, and is [illegible] [illegible] houses for families.

THE UGLINESS OF OUR DWELLINGS.

OPENING MEETING OF THE LIVERPOOL ARCHITECTURAL SOCIETY.

The opening meeting of the Liverpool Architectural and Archæological Society was held on Wednesday, the 1st inst. the President, Mr. S. Huggins, in the chair. The student's prize for the best design of the side of a square, consisting of twelve houses of from 8 to 12 yards frontage, was presented to Mr. Pepper, the author of the design marked "Excelsior."

After some conversation on obtaining uniformity of size in materials used in building (by no means to be advocated without great qualification),

The President, according to custom, delivered an address. It was an able and suggestive composition, touching on many things, but we are compelled to restrict ourselves to the latter portion of it, which treated of ordinary street architecture and every-day building. This we give in full.—

Generally speaking, the ugliest thing about us is a common street dwelling-house, with its five or six holes in the wall, lintelled by a shapeless patch of stone. Cast your eye upon any other object around you, not at the works of God, but at the other works of man; look at a ship, a coach, a steam-engine, at most musical instruments, a harp, a guitar—look at these, and then look at what is very properly called a common dwelling-house, and say, is not anything, everything you see, more beautiful, or rather less ugly, than that? I believe at no other period of the world could this have been said, which appears the more strange when we consider that it is one in which the importance of the individual in society is so fully acknowledged; and I never hear of the happy homes of England but I feel a regret that the great bulk of them should be so void of those graces which might make them happier, and have a refining and ennobling influence upon the mind, besides strengthening that love of home which some degree of beauty in domestic architecture would not fail to foster.

What makes the matter worse is the ugliness complained of being from one mould. A variety of ugly things would often be a relief to the eye.

I was wondering the other day, while walking through one of our ordinary streets of brick-built houses, whether in any other age—whether at any time, even in China, could be found so many windows and doors exactly alike. "Heads and sills to the windows," said the first specification which we copied in our pupilage, "heads and sills" still echoes the one we drew up yesterday, and heads and sills are supplied by the mason from the same unvarying mould. Five or six windows thus adorned, along with a circular-headed opening, filled in with a bit of entablature, and a couple of wooden columns for a door, compose the front of tens of thousands of our street houses: and thus we go on. Builders of small houses, it is true, have at length got hold of a second idea for a window; but it is a false one. Bay windows are very

good things in their place. A bay window projecting from the front or side of a house may give you a prospect from a room which you could not otherwise have; but a long row of bay windows looking right into each other, obstructing one another's view, and destroying the privacy of the rooms they belong to, is an absurdity that one would hardly expect to see carried to such an extent as it has lately been in Liverpool.

Besides, bay windows and pigmy porticoes and porches, or any other projection from the fronts of small houses, marking too strongly the extent of each front, only produce littleness, and make small houses look smaller than they are, which, Heaven knows, is needless. We have, I think, a better resource than this from the monotony complained of in the shape of coloured and moulded bricks, to which I think we must look for infusing beauty and variety into our small houses. Where expense is not feared there is nothing like stone for window and door dressings; but where ideas of economy exclude stone, bricks will be found a useful and artistic means of relief and embellishment in the hands of an architect of taste. Neither durability nor beauty need be confined to palaces and large mansions. Small houses need not be either mean or fragile. Architectural beauty was not sought in palaces or great mansions only during the great periods of art. Ruskin says the most elaborate piece of architecture in Venice is a small house at the head of the Grand Canal, consisting of a ground-floor, with two stories above, three windows in the first and two in the second; and adds that many of the most exquisite buildings there and elsewhere are of no larger dimensions. But we may have a beauty that will charm the sight without the richness of decoration or elaborateness of design of the buildings of Venice. There is a beauty of form and proportion only that will operate upon the mind of the susceptible observer like ceaseless music.

But I have not quite done with my strictures on street architecture. Where, in a better class of houses than those I have referred to, something like architecture is exhibited, it is still all shallow front show, and this is, perhaps, the greatest eyesore of all: the pretension of houses to be more than they really are. It is as insanely ridiculous as it would be for a man to wear an embroidered waistcoat or front garment, while out at elbows or in hanging rags behind; for the back and sides are often as much seen as the front. But such absurdity is only exhibited in houses, and thousands who would scorn pretence in everything else, who dress well and thoroughly, and have real substantial dinners every day served up on solid mahogany, live in houses in which the architecture is all superficial—a mere wash of decoration in front, while all the rest is deformity itself.

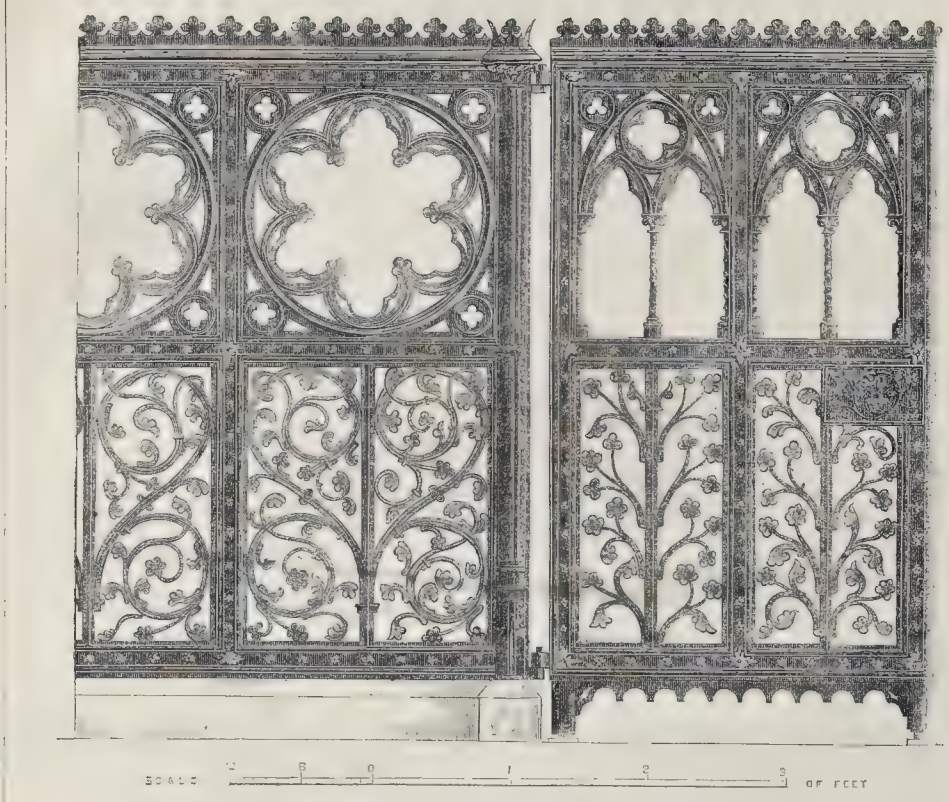
What is the cause of all this? for it is a sufficiently important phenomenon to require an especial cause. There are a variety of causes, I take it, but on one or two only have I time to speak.

A prime cause of ill taste or of carelessness on the subject of domestic architecture is, I believe, a diminution of the ancient love of home. Men have now less reverence for the houses of their forefathers, and less wish to rear dwellings on which their descendants shall look with pleasure. Our houses are built to serve the present generation only, and of course we are proportionally indifferent as to their beauty. To whatever this be owing—whether to the spirit of enterprise among the masses, which creates such sudden and great changes in the circumstances of men, or to other causes, it is not natural to the human mind. It is in human nature to reverence antiquity, which gives great increase of dignity to a building. But there is another source of these evils, and among the rest I reckon the sordid money-grudging spirit of the age, and the faintness of our love for the beautiful and poetic, compared with that with which we cling to the worship of Mammon. If the work were written which was suggested by Mr. Pieton one evening last session, tracing the architecture of each country to the moral and mental condition of its people, much of what is seen in our works at present would have to be referred to this cause; to a sordidness and vulgarity of taste that is unworthy of being addressed in high poetry or art, except to satirise and pour contempt on it; and, which, indeed, is never penetrated except when some indignant outbreak of the poetic spirit, like Hood's "Song of the Shirt," awakens it to a momentary sense of its degradation.

As sure as finished thought and devotion to the beautiful are written on the temples of Greece—as sure as martial glory and luxury beam from the amphitheatres and triumphal arches of Rome—as sure as the mosques of Cairo and the Moorish palaces of Spain speak of the poetic and imaginative doctrines of the Koran—so sure, generally speaking, in other and very different characters, is money-grudging—contract and "no extras," inscribed on the architectural achievements of this generation. Everything is spoiled by a false economy, and nothing is so good and complete as it might be.

This is seldom to any extent the fault of the architects; nevertheless, I am convinced that architects are greatly to blame for it. Certainly the degraded feeling that leads to these evils may be traced in the operations of the artist himself. It is now, in a majority of instances, all money—not love—that prompts him to produce; for this alone he enters the profession, and art is followed solely for gain. The prayer of the sons of Eli, "Put me, I pray thee, into one of the priest's offices, that I may eat bread," expresses now too fully his motive for entering the profession. But art will not be so treated. She must be followed for her own sake. All that have obtained her richer gifts have so wooed her. Michaelangelo thus wrought in her temple. He refused payment for his services at St. Peter's, and worked for the love of art and glory of God; and this feeling, I take it, animates, in a greater or lesser degree, all true artists, who have an abstract love for art, and, if they can only live, are capable of entirely waiving all considerations of pecuniary remuneration, and find an entirely satisfactory enjoyment in it. I doubt not that Milton could have written his "Paradise Lost," with only the paltry 10*l.* or 15*l.* he got for it in view, and that the certainty of as many thousands would have been insufficient to support him through so many laborious days without the love of his art and the desire to produce what men would not willingly let die. Some, I know, would tell me that whatever the delight and advantages of art, money is the real substantial thing after all. Money is, I grant, a very essential thing in this world; but it is not the real and substantial thing, but is merely a scaffolding to the fabric of our true happiness, which consists of far different materials. We must undoubtedly have bread to eat and raiment to put on; but man does not live by bread alone. Bread, raiment, shelter, even of the most perfect and sumptuous kind, are not our being's end and aim. There are affections, and desires, and aspirations in the human breast that the wealth of the Rothschilds could not satisfy. The true, solid, substantial things are those enjoyments which are peculiar to our moral and intellectual nature; the exercise of the faculties with which God has endowed us in the contemplation and discovery of truth; the indulgence of the exalted emotions arising from the view of the physical and intellectual harmony of the universe; the privilege of revelling in the bright dreams of poetry and science, and basking in the rays of genius; communion with the noble living and the noble dead; the exercise of the pure and domestic affections and household virtues; in short, all those pleasures of which humanity alone is capable, and which distinguish man from the brute. These are the substantial, the real, the undying things.

We are still capable of all this. We have the same moral and poetic nature as our forefathers, but we have allowed it to be violated; gifted with powers to pierce the solemn mysteries of nature, and read the handwriting of the Infinite; a voice to question the past and anticipate the future; and a faculty to reconstruct what it sees, and create new worlds of its own, fairer and brighter than that it inhabits. With this as our celestial dower, we bestow our chief care upon what should be looked on as the mere means of physical existence, and sell our birthright for a mess of pottage.



I am weaving, I fear, something of the sermon in the warp and woof of my address; but these reflections really belong to my subject. If they were not of consequence to ourselves, they would be to art, which must be based on high moral feelings and principles. Purity and nobleness of life I have ever held to be necessary as an inspiration to the intellect, in which view I am borne out by Milton, when he says that the poet who would hope to write well ought himself to be a true poem. "It is not enough," remarks Schiller, "that all intellectual improvement deserves our regard only so far as it flows back upon the character; it must, in a manner, proceed from the character, since the way to the head must be opened through the heart."

I have already alluded to the injurious influence of the contract system. This system—which produces bad workmanship, introduces unseasoned and inferior materials into buildings, and, worst of all, degrades the architect into a sort of policeman—must be done away with, and we must return to the old one of measure and value before our architecture, however beautifully it is designed, can be worthy the name: for good design is thrown away if not well executed. Measure and value is a system against which no honest man can object, and, day work being evidently unjust to the employer, it is the only one that can possibly be satisfactory to all parties: for, in at least three cases out of four, so many are the contingencies inseparable from building, it is utterly impossible to pre-estimate a building of any magnitude. I once heard a builder boast that he could estimate to a shilling the cost of a large house to be erected; but it bears absurdity on its face, and I unhesitatingly assert that in a majority of cases no architect, no surveyor, no man living can tell beforehand what a house will cost—that is to say, what sum the builder is fairly entitled to receive for it.

On the subject of town improvements I have hitherto confined myself to those qualities which are demanded by the eye and the sense of beauty; but we have other organs and senses which ought to be satisfied, and which happily delight in those qualities which are essential to the comfort and health of the body. It is really astonishing, now that the laws of the atmosphere have become known to us, that some of the very simple means which have been devised for at least the discharge of foul air from apartments, have not become universal in our houses and public buildings. I am no advocate for the monstrous and unnatural appliances under which some public buildings groan, and which might give the visitor to their lower regions the idea that to be warmed and ventilated was the sole object of their erection. But I think that some means for the exit of foul air should as invariably follow lighting by gas as a shadow its substance; and that the application of a simple mode of ventilation to buildings ought to be made compulsory on owners of houses. Though in almost every house gas is burnt for several hours every day for the greater part of the year, strange to say, not one in ten has any escape for the foul air. And I deem it no trifling proof of the indifference to such matters, that the Architectural, Philosophical, and Polytechnic Societies of Liverpool,—societies which have treated eloquently of town improvements, and expounded sanitary laws,—should have met for years in an apartment in which, though lighted by deleterious gas, no means whatever of ventilation have been provided.

The advantages of warming and ventilation would, I think, be best secured to the working classes by their dwellings being built in flats, which is the most economical, and I should think in other respects desirable, as three or four apartments on one level must be infinitely more convenient and pleasant than the same number placed one above another, and connected by stairs little better than ladders.

Means of health and comfort should take precedence of decoration. Baths and water-closets should be provided in houses before marble chimney-pieces or plaster cornices, or even panelled doors. While a house is without a proper supply of pure water, efficient sewerage, and the means of discharging the poisonous products of combustion and respiration, its

IRON SCREEN AND GATES: WESTMINSTER ABBEY.

architectural character is of little consequence. While inhaling the miasma of the neighbouring churchyard, the effluvia of open cesspools, slaughter-houses, and so forth, in their midst, the architectural beauty of public buildings and streets is an insult to the people, who would be more benefited by, and, I trust, more grateful for, the smallest purification of the atmosphere they breathe than by the creation of a Roman magnificence around them.

WESTMINSTER ABBEY.

THE TRANSEPT.—NEW WORKS.

Westminster Abbey has a new Dean, on whom much as to the architectural improvement and works of maintenance there will depend. We take the occasion to show what has lately been done in this noble fane, the interior of which need not fear comparison with that of any other in the world. It presents a glorious picture, ever varying, and the most constant student of its beauties finds new charms developing themselves before him, and ever feels increased admiration of the skill and taste that raised the wondrous pile.

Containing as it does, too, the ashes and memorials of so many of the great and noble of the land, it is natural that a large amount of public interest should be felt in its preservation; and many are anxious to restore the ancient tombs to their original appearance, to renew the canopies which from time to time have been destroyed, to paint and gild where needed, and to restore the mosaic work on the shrine and on the floor in the Confessor's Chapel. It is to be deplored that dilapidation should have been allowed to go on to such a great extent as is apparent; but it is felt that it would be wrong to destroy the idea of antiquity which is conveyed by the time-made colours, which constitute one of the charms of the place. Much, however, may be done to ensure the durability of the monuments for many centuries to come, without interfering with their value and truthfulness; and this we hope will not be neglected. We described a few weeks ago (p. 471) the process adopted to strengthen the face of some of the monuments and stonework by the injection of a solution of shellac. It seems to have done much good, and should be carried further. We have already noticed the judicious restoration of the ironwork of Queen Eleanor's tomb, the shrine of Henry the Fifth, and the entrance from the cloisters to the Chapter-house. This week we give an engraving of the changes which have been made in the transepts. Many of our readers will remember, that a few years ago a huge wooden screen blocked up the fine view across this portion of the church. This has been removed, and a screen of open ironwork substituted, by which means, too, seats for the accommodation of a large number of persons are made available in Poet's-Corner and in the north transept: further, a new pulpit has been set up, and the result is very satisfactory. Perhaps, however, if the screen had been made a couple of feet lower, so that the eye might have been allowed to pass over it without interruption, we should have liked it better.

Our view represents the transept looking north, and shows the new ironwork alluded to, which has been put up from the designs of Mr. Scott. We give half the gate, and a portion of the grille, on a larger scale. The work is for the most part of wrought iron; it is 30 feet in length on each side, and was executed by Mr. Potter, for the sum of 700*l.* but cost him, we are told, much more. The same worker has in hand a rail for the sacrarium.

Some ugly wooden panelling on the south side of the sacrarium, is to give place to carved work by Rattee, now in course of preparation.

Amongst the minor restorations, we may mention, that one of the detached twisted columns, of which there were anciently four at the angles of Edward the Confessor's shrine, has been gathered together from here and there, and made to take its original place again. It is of Purbeck marble, and was formerly ornamented with mosaics like the rest of the shrine.

It is proposed to fill the windows of the clerestory throughout the church with stained glass, in the shape of single figures, illustrating the "Te Deum." Thus "All Angels," "Cherubim and Seraphim," "The glorious Company of the Apostles," the "Noble Army of Martyrs," and "The Holy Church throughout all the World," would find their representatives. The cartoons for six of the windows for the south side of the part used as the choir, west of the transepts, are being made by Messrs. Bell and Clayton, and two of the windows adjoining the transept are completed. The figure in each is about 8 feet high, and an increase in the size in others is talked of. The height of the interior is very considerable; to the top of the window it is 100 feet from the pavement; nevertheless, the expediency of making the figures larger than life seems questionable, tending as it certainly does to make the building appear less. The windows executed, seem to us a little too heavy in colour, and need white glass: but all who know the difficulty of the question, will speak with diffidence upon it.

Attention has often been directed to the manner of *showing* the Abbey, and it would seem to be time that some less objectionable method than that now pursued should be resorted to. In Poets'-corner and the nave, the

WESTMINSTER ABBEY: THE TRANSEPT, LOOKING NORTH.

visitors are allowed to ramble about without guides, and contemplate them quietly. Amongst the tombs of our kings and queens this is not permitted. The mode in which a flock of visitors are hurried over the space which is reserved for exhibition is so offensive to good taste, that it cannot fail to destroy, in a great measure, the effect which would be otherwise produced.

It has been shown that the public may be trusted in galleries and choice gardens without any injury resulting. Why should they not be so trusted in Westminster Abbey? If, however, there is danger in this, there is a staff of officials, who now act as guides, who might be so placed as to guard every part by their presence. Then let the tombs be ticketed, and the guardians be directed to make themselves acquainted with the true history of the department which they oversee, so that they may be able to give an intelligent answer to a question, and the end would be answered.

EDUCATIONAL MOVEMENT IN THE METROPOLIS.

An important movement for the advancement of education has been made by Mr. Pepper, at the Polytechnic Institution. The Society of Arts, as our readers know, propose to examine candidates, and to give diplomas for competency in various branches of knowledge. To prepare for this, classes have been organized at the Polytechnic under able professors at a very small charge. The course of instruction will terminate a few weeks before the time appointed for the examination of students at the Society of Arts, thus allowing such as feel disposed to make the attempt to obtain a certificate from the Society, which may prove the foundation of fortune. A register has been opened at the Society of Arts of the names of those who obtained certificates at the last examination there, and it is to be hoped that large employers of labour will fill vacancies from this list. Already some good appointments have been made, and several influential men have promised others.

A crowded meeting inaugurated the classes at the Polytechnic on the 6th inst.—Dr. Booth in the chair—when the Rev. J. Butterworth Owen made an admirable and apposite address, and several other gentlemen addressed the meeting. The intention is excellent, and entitles Mr. Pepper to our best thanks. We trust that the proposed classes will be so well sustained as to serve as an encouragement for similar endeavours in other parts of the metropolis. The day is not far distant, it may be hoped, when every district will have its trade-school to which our young workmen may flock for instruction.

EDMONTON AND TOTTENHAM.

We have received a letter with reference to some recent observations in our journal on proceedings at Edmonton and Tottenham (p. 511), from Mr. William Warne, chairman of the Tottenham Local Board, pointing out that *Tottenham* should be read in the article for "Edmonton," as the locality where sanitary endeavours are being made. The two adjoin so closely that a casual inquirer might easily overlook the line of division. "In Edmonton," says Mr. Warne, "no attempts have been made to supply the inhabitants with water, or to abolish cesspools; whereas, here, in Tottenham, nearly 2,000 of these pestiferous receptacles have been abolished within the last few years, thirty miles of water mains and the like lengths of sewers and drains laid down, of which thirteen miles at least are public sewers. In addition, sewage works have been constructed for deodorising and solidifying the town refuse, which works are, I believe, with only one exception, the largest and most complete in England, and the sewers admittedly the most successful in their operations. It is inaccurate to state that there has been a failure in the magnificent artesian wells made here a few years since, which continue to supply water of the finest quality and in an abundance which would have amply sufficed for the supply originally contemplated; but that there should be a deficiency in the water supply *now* will not seem surprising to those who know how much the population of the district has increased, and the service extended to more than double the number of houses originally intended to provide for. The demand, indeed, for more water, and for its extension to the numberless new houses springing up in the parish, has necessitated the construction of much larger works and service, the contracts for which have been lately entered into, and will, without doubt, accomplish all that the advocates of a system so important in its effects can desire. In the parish there is abundance of good water, which only requires to be lifted from its bed, and more powerful means to accomplish this end. There are but few wells into the chalk in the parish beyond those referred to, and those only on the premises of the affluent, none of which have ceased to be used, nor is there any desire or power on the part of the Local Board to disallow their use. The water the Board supply is, as far as at present practicable, on the 'constant' service and high pressure, every cottage having a supply for domestic and sanitary uses, all refuse being carried away into the main sewers. The steam-engine works night and day, and is capable of raising upwards of 200,000 gallons in twenty-four hours, though at the present moment this quantity is not quite reached. When the new works are completed, an almost unlimited supply of water may be expected, and though there are many inhabitants who complain of the expense, they will before long learn to appreciate the advantages, which, in the opinion of those best acquainted with the practical working of the system, amply compensate for the bagatelle it now costs the parish in rates, and will reconcile them to the additional expense, estimated under 6d. in the pound, which the carrying out of the new works will necessarily entail. Justice to the Engineer of the Board, Mr. Pilbrow, whose well-devised plans have proved so far successful, renders this communication necessary."

PROVINCIAL NEWS.

Cambridge.—The chief stone of a new Lunatic Asylum for the county and borough of Cambridge and the Isle of Ely was laid by the Earl of Hardwicke on the 30th ult. The site is on a hill near the high road from Cambridge to Fulbourn, and about two and a half miles from Cambridge. The top of the hill has been levelled, to form an extensive platform, upon which the asylum with the airing-courts and pleasure-grounds will stand, enclosed by an ornamental boundary-wall. The structure upon which the foundations are built is the clunch rock. The architectural style of the building is Elizabethan. The length of the building is 610 feet, and its height from the level of the ground 60 feet: the centre with its tower rises considerably higher; and there will be numerous smaller towers placed at certain distances along the wings. The number of patients it is proposed to accommodate is 250, but space is provided for enlargement should it be required. The materials used for the structure of the walls are white perforated bricks from Messrs. Beart's kilns, bonded with red bricks and Derbyshire stone dressings for the principal entrance, cornices, windows, and external doors. The whole area enclosed within the airing-court walls is 27,367 square yards. All smoke chimneys will be of uniform height, and all fire-places on inside walls. The building will be fire-proof, except the roof and some of the floors. The floors of the chapel and day-rooms will be fire-proof, and constructed on Fox and Barrett's patent principle. The building will be surrounded by a dry arched area, and the footings covered with a layer of asphalte. The warming and ventilating will be by open fires, with air chambers behind them, supplied through channels. The window sashes are of cast iron, with ventilators to open and shut. To guard against fire to the furniture or bedding, large cisterns are to be placed over the stairs to feed the fire-plugs upon the several floors; and to guard against the effects of frost, all piping will range on the inner walls.

Byfleet.—The new schools and master's residence in course of erection in this parish are from designs by Mr. S. Smirke, and are capable of accommodating 150 children. The whole cost, together with purchase of land, &c. will be about 900*l.* which sum has been raised by the parishioners and friends, together with a grant from Government.

Dudley.—A school-room has recently been erected by the Primitive Methodists, near Constitution-hill. It is a brick structure, designed by Mr. Worrall, architect, and built by Mr George Plumb, both of Dudley. The school has been erected in about three or four months: its cost is 400*l.*; 160*l.* of which have been subscribed. The opening took place on Sunday in last week.

Neath.—On Friday before last a meeting of the Town Council of Neath was held for the purpose of letting the contract for the erection of a substantial stone and mortar wall, 2 feet thick and 3 feet 6 inches above the surface of the ground, to enclose the corporation land between the quay and the Neath canal. Tenders had been advertised for and six were forwarded. The council accepted that of Messrs. Morgan and John Williams, who agreed to erect the wall, as specified, for the sum of 5s. 6d. per perch.

Bebington.—The new schools in connection with the parish church at Bebington were opened on Wednesday in last week. They are in the Gothic style of architecture, and occupy about three-quarters of an acre of land behind the rectory, the site being the gift of Mr. George Orred. The schools, which are intended for boys, girls, and infants, will accommodate about 400, and were erected at a cost of 700*l.* Mr. Gee, of Liverpool, was the architect.

Leeds.—On the 23rd ult. the Bishop of Ripon (now Durham) laid the foundation-stone of the new training schools to be erected at a cost of 5,000*l.* In presenting an address from the clergy to the bishop, the vicar of Leeds (the Rev. Dr. Hook) alluded to 113 churches the bishop had been instrumental in building and founding.

Durham.—The visiting justices for the county of Durham are about to erect a new lunatic asylum. The cost will be about 30,000*l.*

Buckie.—The *Banffshire Journal* reports the laying of the first cope-stone of the western pier of the fishermen's new harbour at Buckie, on Thursday week,—a great day for this heretofore primitive town. The contractor for the works is Mr. Stewart. He commenced operations on the 18th of June, 1855, and has now the west pier fit for coping, while the parapet rises several feet above what will be the level of the quay. Within the piers, as projected, the area of the harbour at high water will be about three acres and a quarter. The west pier is upwards of 600 feet in length. The east pier is formed for a considerable distance, but fully a half of it is yet to be constructed. When completed, it will extend to 216 feet, the extreme end of it going farther out into the sea, and overleaping the head of the west pier, leaving an entrance of 70 feet. The tides at Buckie, as compared with the other towns on the coast of the Moray firth, are by no means heavy, and it is expected that this harbour, even in stormy weather, will be one of very easy access, and of complete safety.

CHURCH-BUILDING NEWS.

Peterborough.—St. Mark's church, in the Decorated style, and at a cost of 4,000*l.* was consecrated on Friday the 26th ult. With one exception, namely, the spire yet to be done, it has been erected by Messrs. Ellis and Son, builders, Peterborough, from the designs of Mr. Edward Ellis, of London. It consists of nave, north and south aisles and chancel, and is capable of accommodating 700 persons. The extreme length of the church is 110 feet, by 50 feet broad, and an interior elevation of 40 feet. The windows are filled with stained glass: the roof timbers are stained: the seats, which are all open and stall-wise, two-thirds of which are free, are made of yellow pine, stained and varnished.

Brigg.—The works connected with the cemetery here have been let to Mr. Jackson, of Lincoln.

Ipswich.—St. Helen's Church, Ipswich, was re-opened on Wednesday in last week. The alterations, which have been carried out by Mr. Barnes, architect, and Mr. Firman, builder, are somewhat extensive. Two new windows

have been added to the west end of the edifice, and the tower, which was before in a dangerous state, has been repaired: the interior of the building has been decorated, and new seats have been added for the aged poor and children.

Tenbury.—The church of St. Michael and All Angels, newly erected at Old Wood, near Tenbury, was consecrated on Monday in last week, by the Bishop of Hereford. The edifice is cruciform and in the Middle Pointed style. It has been erected at the expense of the Rev. Sir Frederick Arthur Gore Ouseley, bart. D.M. and professor of music at Oxford, who will be the incumbent, and who has not only endowed the church, but contiguous with it has founded and endowed a college to afford a liberal education to orphan sons of the poorer clergy and others, and also for the cultivation of choral music. The college is not yet completed: it contains dormitories for thirty boys. The outside of the church is plain and unpretending, but the interior is elaborately carved, painted, and decorated. The church and college will cost not less than 30,000*l.* The buildings are of sandstone, dug upon the site, and grained and chased with Bath stone. The roofs are covered with Delabole slating, and a blue stone from the Forest of Dean has been used for the several columns and shafts. The gables are surmounted by crosses, and the western is pierced for two bells. Mr. Woodyer is the architect, and Mr. Chick his clerk of works. Messrs. Wheeler, of Reading, are the contractors, and the undermentioned tradesmen have been employed, viz.; Messrs. Woochaffe and Lakes, carpentering and glazing; Mr. Fisher, decorating; Messrs. Minchall and White, carving; Messrs. Hardman, stained glass; Messrs. Filmes and Mason, ornamental iron work. The font cover was executed by the Wood Carving Company in Lambeth. The length of the church is 114 feet, the chancel being 43 feet 6 inches, and the height from the ground to the cross, 74 feet. The width, including the transepts, is 67 feet. The nave is 22 feet wide (with the aisles, 45). From the apex of the ceiling to the ground is 45 feet. The nave and aisles are intended to accommodate about 600 persons. The church consists of a choir of three bays, with a polygonal apse, north and south transepts, and nave, with three large and one smaller bay to the west. There are lean-to rests to the choir and nave, beneath a lofty clerestory, communicating by moulded and corbelled niches with the transepts. The sacrist or vestry is on the south side, adjoining the south aisle. A vaulted passage leads from it round the south transept into the south nave aisle. There is a lean-to north arch. Excepting the aisles, porch, and vestry, the church is groined and vaulted throughout in wood. The ceiling over the choirs is treated with colour slightly, but over the apse more elaborately. The pavements are entirely composed of Minton's tiles. The altar-table under an elaborate canopy, surmounted with a gilt metal cross, stands in the chord of the apse. The stalls and other choir fittings are of oak, the choir boys' desks being of wrought iron. A lofty iron screen, with folding gates, divides the choir from the nave, and there are screens of the like material in the double arches leading into the choir aisles. The former screen is surmounted by seven candlesticks. The screen is coloured ultra-marine, and decorated with gold. The south transept will be entirely filled by a magnificent organ of fifty-six stops, by Flight. The pipes are richly decorated in diaper pattern. When completed the pipes will be projecting, and spread out in front in the Spanish form (fan-like shape). The nave will be filled partly with open and moveable benches, and partly with church chairs. The choir and apse are lighted by nine twilight windows, filled with stained glass, containing figures of angels. The east window represents our Lord seated in majesty; St. Michael kneeling at his feet, with the usual symbols in allusion to the dedication. From the ceiling of the chancel a number of lamps are suspended, in which camphine will be used. Miss Rushout, of Burford House, contributed part of the stained glass.

Hutton Ambo (near Malton).—On Tuesday in the week before last, the new church and burial-ground at Hutton Ambo, near Malton, were consecrated. The funds for the erection (about 1,200*l.*) were partly raised by voluntary subscriptions, and partly by a rate on the inhabitants of the township. The site for the church was given by Mr. F. J. S. Foljambe; and the building, which is in the style of the thirteenth century, will accommodate about 200 persons. The architectural designs were originally made by Messrs. Andrews and Gould, of York, but, owing to the decease of Mr. Andrews, the church has been solely erected under the superintendence of Mr. Gould. The exterior of the structure has been built of Hildenley stone, from a quarry on the estate of Sir G. Strickland, Bart. M.P. and the interior fittings are of deal, stained. The timber in the roof, which is an open one, is also stained; and the west gable is surmounted by a bell gable for two bells. The church is not at all ornamented. The contractors for the work were—Mr. John Hall, of Hutton Ambo, the mason; Messrs. Shaw and Young, of York, the joiners; Messrs. Hodgson, of York, the plumbers; Mr. R. Clapham, of York, the plasterer; Mrs. Wood, of York, the slater; and Messrs. Haden, of Trowbridge, Wiltshire, supplied the heating apparatus

Newcastle-upon-Tyne.—On Friday in the week before last the ceremony of laying the foundation-stone of the two chapels to be erected in the cemetery intended for the joint use of the parish of St. John's, and the townships of Westgate and Elswick, was performed in presence of the members of the United Burial Boards of the parish and townships, the architect, and the contractors for the work. The cemetery is to be laid out on a design furnished by Mr. Johnstone, architect, and comprises twenty acres of ground purchased from Mr. Grainger, at the rate of 400*l.* per acre. The situation is elevated, being on what were formerly known as the Measure Hills. One of the chapels will have a spire of 102 feet in height.

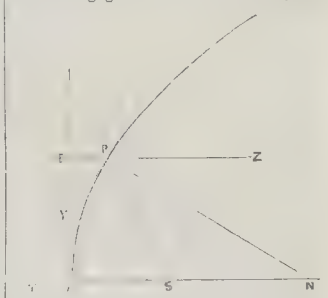
Gateshead.—A new Roman Catholic church and schools are to be erected in Gateshead. The plans of Mr. A. M. Dunn for the church have been selected, and the design includes a dwelling-house, with accommodation for three priests. This will be followed by the erection of schools, &c. The committee are now taking measures to commence at once with the erection of the edifice, which will contain 1,200 sittings.

STAINED GLASS.

Hamble Church.—A stained-glass window has been put up in the east chancel of this church, as a memorial to the late Captain Matthew Barton Bradby, R.N. presented by his widow. The window is a three light, early decorated, with tracery, and contains the figure of St. Andrew (patron saint of the church), resting on his emblem, the X cross, in the centre opening under a canopy, the general design being Geometrical Mosaic. The tracery contains the dove in the centre, and the Alpha and Omega on each side. Messrs. Baillie and Co. of Wardour-street, were the artists.

Ely Cathedral.—Two memorial windows have lately been inserted, one in the south aisle of the choir, the gift of the Rev. J. H. Sparke, chancellor of the diocese, historical of John the Baptist, by Messrs. A. Lussau and Co. of Paris; the other in the north aisle of the nave, a memorial window to the late J. Maddy, D.D.; artist, Mr. Preedy. Amongst other improvements and restorations, the reredos, the gift of Mr. J. D. Gardner, is now near completion; and it is thought that when complete and the east end windows filled with stained glass, the choir will vie with any other in the kingdom.

St. Anne's Bede-house Chapel, Lincoln.—The Rev. R. Waldo Sibthorp has just had a new stained-glass window fixed up in his chapel, which is the work of an amateur, a native of Lincoln. This window is a triplet, on the south side of the chancel, and has been made at the cost of Miss Nelson. It is a memorial window. The style is that which prevailed chiefly in the fourteenth century. The subject is three saints, each under a canopy: the central figure is the prophetess Anne, mentioned Luke ii. 36, and to whom the chapel is dedicated. The saint is here represented as in the attitude of prayer. In the east light is inserted a figure of St. Paul, having in one hand "the sword of the Spirit," and in the other "the word of God." The westernmost light represents St. Matthew, with a pen in one hand and the gospel in the other. The "clear obscure" is produced by the use of unusually thick glass. The artist (the Rev. Mr. Usher) has consented, says the *Lincolnshire Chronicle*, to execute another window for Mr. Sibthorp's chapel.



GEOMETRICAL PROPERTIES OF CONIC SECTIONS.

PARABOLA.

The parabola is a curve which may be said to lie intermediately between the ellipse and the hyperbola. It is produced by cutting one side of a cone by a plane parallel to the other side; whilst in the case of the ellipse, the cutting-plane passes through both sides, and in the hyperbola it is parallel to the axis. The parabola is, in fact, an extreme case of the ellipse; for if we lengthen the major, and shorten the minor axis of an ellipse, we approach nearer and nearer to a parabola; so that we may obtain a curve which shall approximate as nearly as we please to a parabola in the portion near the focus, by drawing an ellipse whose foci are very wide apart.

The parabola has but one focus, which is near its vertex, and is not an enclosed curve like the ellipse, since it only cuts the axis once, namely, at the vertex. It will be evident from what we have said in previous articles, that there may be an infinite number of different ellipses and hyperbolas: there is, however, but one parabola, that is to say, all parabolas are merely the same curve on a larger or smaller scale, just as all circles are the same curve larger or smaller as the case may be, but all bearing the same proportions in their several parts.

To draw a parabola by points, the focus and vertex being given: let A be the vertex, S the

focus, A S the axis. Draw A B perpendicular to A S, and from S draw any line, S Y, cutting A B in Y: draw T Y perpendicular to S Y, and produce it to P, so that Y P = T Y, then P is a point on the curve. So also by drawing other lines from S, we can find any number of points. The line T P is the tangent at P, for it is a property of the parabola, that *the perpendicular from the focus on the tangent meets the tangent in the line drawn from the vertex perpendicular to the axis.* From Euclid's geometry, we know that S P = S T; therefore, *to draw a tangent from any point P on the curve,* take S T = S P, and the line joining P and T will be the tangent at P.

Draw the normal P N (perpendicular to the tangent at P), meeting the axis at N; and draw B P Z parallel to the axis; then by Euclid—

Angle B P T = angle P T N,
= angle T P S;

Or, the tangent P T bisects the angle S P B; therefore, N P, which is perpendicular to P T, bisects the angle S P Z, so that S P and P Z make equal angles with the normal P N. Hence it follows that if a reflecting surface is formed by the revolution of a parabola about its axis, and a light is placed in the focus S, all its rays which fall on the surface will be reflected in a direction parallel to the axis. This species of reflector is therefore used in lighthouses and signal lamps, in which it is required to throw the light to a great distance without dispersion. It is this property which gave rise to the use of parabolic sounding-boards, which it was the

fashion some years since to mount behind church pulpits, but which have been discontinued from the annoyance they caused to the preacher. For, since sound follows the same laws of reflection as light, if a sound is produced at the focus of a paraboloid of revolution, it will be greatly strengthened by being reflected in one direction from the surface. But in applying this principle to aid a preacher, it was forgotten that if a sound proceeding from S to P was reflected in the direction of P to Z, or parallel to the axis, by the same rule all sounds produced opposite to the reflector or sounding-board would be concentrated at S. So that every noise which was made opposite the pulpit would fall with double force on the preacher's ear. Besides this, his own voice when reflected immediately behind him would produce a buzzing in his ears as it passed him. Above all, it is evidently impossible for a preacher always to keep his mouth at the same spot, and any deviation from the focus would destroy all the advantage of the sounding-board.

The parabola may be applied to Gothic architecture to form the Tudor arch, which is usually drawn with four centres; but the sudden change of curvature thereby produced destroys much of its elegance, which would not be the case were the parabola employed instead.

E. W. Tarn, M.A.

ART ABROAD.

Leutze's Milton.—M. Leutze, of Dusseldorf, who has already distinguished himself amongst the German painters, has finished a picture, which may be called the apotheosis of the English Commonwealth—"An Evening Party at Milton's." At that period, evening parties began soon, between five and seven; then the ladies retired, when the males continued in some serious converse, and then separated. Such a party is represented here. In the middle of the picture, somewhat to the right, sits Milton, the writer of "Paradise Lost," indicated by an engraving of Raffaelle's "Fall of Man," suspended above him. Milton is represented playing on the organ, while he looks over his shoulder at the company. To the right of the organ sits Milton's wife, with her son, a little boy. To the left of the organ stand two English females, of rare beauty, which pleasantly make up the right side and groupe of the picture. In the middle stands a large press, with books, globes, &c., pointing to the great erudition of the Latin Secretary of the Lord Protector; and a bust of Cato, the unflinching republican looking sternly and admonitively on the company. On the right side of the press leans a dreamy, pensive youth, John *Dryden*, at one time a friend to the Commonwealth. Near him, somewhat in advance, appear two men, hand in hand—one stern and thinking, the other vaguely gazing before him. The first is Algernon *Sidney*, a great promoter of the plans of the Protector, afterwards treacherously executed. The other figure, that of a very fine man, is that of John *Thurlow*, private secretary to the Lord Protector. To this group succeeds towards the left foregrounnd, a third group, *Cromwell* and his family, and friends. Cromwell, a compact figure, sits pensively resting on his *big* sword, and on the left of him his wife, familiarly but erroneously called *the drudge*. On his mother's left knee, rests her son Richard, the ephemeron. To the right of the father reclines *Bridget* Cromwell, finely and nobly formed. On the back of her chair reclines *Ireton*, a deep countenance, gazing down on his future wife. Behind him stands John *Seldon*, president of Oxford. The picture has been copied by the engraver, M. Dinger, who prepares a plate of this truly English representation. The size of the drawing is 21 inches by 15 inches.*

Monument to Froissart.—A monument has been erected to this ancient chronicler at Valenciennes, his native city. It consists of an architectural semicycle, in front of which rises the statue. Eleven arcades compose this mural structure, and between the archivolts two bronze medallions represent contemporaries of Froissart, mostly men of Valenciennes—Baldwin, Count of Flanders, Emperor of Constantinople; Philippa of Hainault, wife of Edward III. of England (whose secretary and *protégé* Froissart had been); Claudin-le-Jeune, music-master to Henry III. and Henry IV., called the Phœnix of Musicians, and inventor of the violonsolo. To the left and right of the semicycle, in the walls in front of these structures, and forming a frame to the statue, are two allegorical basso-relievos, in stone, representing the Escaut and La Rhônette, which flow through Valenciennes. The hemicycle (the stern architectural forms of which are much admired) was designed by M. Henri Lemaire, and built by M. Petiaux, architect, of the city of Valenciennes. The statue rests on a pedestal of granite, dressed with blocks of marble, which bear the inscription:—"Et si aucun quiert savoir qui je suis, je m'appelle Jehan Froissart, natif de la bonne et franke ville de Valenciennes." The statue, of white marble, is also by M. Lemaire, who has done full justice to the pensive and elegant gait of the old chronicler.

* Did Cromwell ever *visit* Milton? *Query* to the *German* painter.

SUGGESTED ARCHITECTURAL CONGRESS IN BELGIUM.

A writer in the *Journal Belge de l'Architecture*, M. Vincent, urging the desirability of requiring architects to obtain a diploma, and of protective enactments, suggests that an Architectural Congress should be held in Belgium, to discuss that and other questions affecting the progress of the art. "Although included amongst the fine arts," says he, "architecture requires from those who dare venture on so laborious a career, profound knowledge in the mathematical and physical sciences—knowledge on which often depends even success in the study of art properly so called. Architecture, then, is the veritable bond of union between art and science, since it emanates equally from these two branches of the intellectual mechanism. On this ground," he continues, "it has a right to all the care, encouragement, and protection that can be given to it."

The editor of the *Journal*, who is a constant and careful reader of our pages, admits that the discussion of the diploma question in this country has shaken his belief that the enforcement of a diploma will prove a remedy for the evils of which true architects complain, but lends himself warmly to realize the suggested idea of an Architectural Congress, and invites all who feel interested to communicate with him. "There are many other things to do besides establishing the necessity for a diploma," he writes: "thus, to name but one, we would identify ourselves with the complaint addressed to the government by the *Société Palladio*, that the State employs its engineers instead of architects when it concerns itself with buildings."

THE GREAT DRAINAGE QUESTION.

Before Lord Palmerston divested himself of parochial troubles and the sewage question, adroitly turning over these Augean labours to his noisy antagonists, I had sent his lordship my scheme, which reached his hands at Broadlands, but had not the courtesy of acknowledgment. Perhaps it went (*cum multis aliis*) to Greek-street, Soho.

The main features were the carrying the sewage along the beds of both sides of the river, by double lines of iron pipes, and bringing these lines together by means of the Thames Tunnel, and thence running on to Barking-marshes, the rain-fall to find its way by natural gravitation to the Thames; and when the sewage reached its destination, I proposed to lift the whole by water-wheels of 50 feet diameter, supplied by aqueducts from the confluence of several rivers within thirty miles of Barking. This scheme, as far as I know, was in its general details a novel one; but it now seems to have some influential advocates, who, strangely enough, assume the parentage. The scheme, though large, is not of Roman dimensions, since a hundred miles of acqueduct to them would not have presented insurmountable engineering difficulties. My water-wheels were to drive endless chains of buckets, and their action would be less interfered with than the vast pumping machinery which has been projected. The Thames Tunnel may be bought for a song, and has the capacity of a *cloaca maxima*. The only suggestion I should see fit to adopt of the "three proposals" of Mr. Bazalgette, is that of carrying the sewage farther from London than Barking, not alone in justice to that doomed locality, but also to obtain large lakes of salt-water, into which the sewage might run, and in this way become greatly deodorized, and eventually made use of by the farmer.

The wisdom of London is at fault on their "Grand Drainage Question." The ratepayers are becoming alarmed, and the Metropolitan Board of Works almost *in extremis!* Allow me to throw this live shell among them, if only to show that the world is not standing still as well as the latter. A. F.

METROPOLITAN BOARD OF WORKS.

At a special meeting on 6th inst. previous resolutions that the discharge of the main outfall sewer be made at a point *west*ward of Erith were revoked. A motion by Mr. Carpmael, to the effect that the engineers' report, so far as it relates to the outfall at B on the plan (mode No. 2, as given by us in the *Builder* of last week) be approved, was lost by a majority of two; and an amendment on this motion by Mr. Savage, to the effect that the outfall for the sewage should be at a point that would prevent it returning back within the metropolitan limits, or at least that the Board were not prepared to approve of any plan of a contrary description, was also lost; so that the question, as a whole, stands (at least till Wednesday next, as adjourned) precisely where it stood some time ago.

MIDDLESEX INDUSTRIAL SCHOOL COMPETITION.

The honourable magistrates of this county are sanctioning an extraordinary proceeding, which it is to be hoped they will put a stop to on reflection. Mr. Pownall, the son of a member of the committee of the above schools, was appointed one of the professional advisers of the committee to assist in the selection of the competition designs. He has now taken the unprofessional step of offering a design, for which he has had the opportunity of stealing the ideas of the forty competitors. Can any comment be necessary? I send you my name; but sign myself— Honesty.

STEREOSCOPIC EFFECTS WITHOUT ANY STEREOSCOPE.

It is not practically or generally known that the vivid reality of effect in stereoscopic pictures can be readily attained without any stereoscope at all, or any other substitute for it but the eyes themselves. Though theoretically aware of this, it was not without a little surprise that last week, on accidentally looking at some double photographs prepared for the stereoscope, and almost involuntarily adopting a practice of "crossing" the eyes slightly, by means of which I have long been in the habit of seeking, empirically as it were, for stereoscopic effect where it was not to be found, but so, to some extent, vivifying (as I thought) the perspective and the shade and light of pictures and engravings,—all of a sudden the two images on the card before me coalesced, and the life-like stereoscopic picture stood forth between its two *supporters*; and I found that if the attention be fully fixed on that picture, and hence withdrawn as much as possible from the two lateral components, the stereoscopic effect becomes as perfect and beautiful, and as steady and permanent before the sight, as in any stereoscope whatever. Some may find a little difficulty at first in acquiring the habit of throwing the eyes into the right focus; but, in such cases, there is a very simple mode of assisting the object in view,—a mode by means of which I have even taught a child how to see the third or stereoscopic picture between the two actually before the eyes. This mode is, simply to place the double picture at a little distance before the face, and lay a large card, or a fold of writing paper, or other flat thin substance, *on edge*, between the two, so as not to intercept the light in its progress to either picture; and then to bring the opposite edge of the card, &c. in contact with the face between the eyes, so that each eye can only see the picture on its own side. The two pictures will then, probably coalesce, so as to exhibit only one,—namely, the third, or stereoscopic; and, if this be steadily looked at, the card may be gently drawn away altogether, downwards, from before the face, and the stereoscopic picture will remain as vivid as ever, only flanked occasionally, it may be, by the subjective or lateral ones, with which, moreover, it may even be leisurely compared and contrasted; or the attention may be allowed to range over the details of the stereoscopic picture, at equal leisure, and for any length of time, without destroying the illusion. In this way the eyes are soon taught how to seek and where to find the stereoscopic, or solid and life-like, picture, without even a card or anything but the slight "crossing," as it is usually, though very incorrectly, called, of the eyes, while in search of the right focus,

and which will eventually require only a second or two to establish, when the double picture is rightly placed before the face. In purchasing stereoscopic photographs, the goodness of the stereoscopic effect of each may thus be judged of in little more than the time requisite to look at it in the ordinary way. As regards the stereoscope itself, I have resolved to discard it altogether as a somewhat useless incumbrance, the effect, as I think, being more pleasant, as well as convenient, without it. Even the stereoscope, however, it must be remembered, is not capable of displaying to *every one's* eyes the stereoscopic effect, and others may not be able to dispense with it as I do.

J. E. D.

SOCIETY OF ARTS' PREMIUMS.

The new list of subjects for communications on which the Society of Arts are willing to award premiums contain many which address themselves specially to our readers. It may be useful to mention some of them:—

For an account of the materials used as slates, slabs, and flags, in the principal towns in the United Kingdom, with information as to their durability, cost, chief use, and general statistics.

For the production of glass by the use of the constituents of which the French sands are composed, such glass to be of a quality equal to that produced from these sands.

For an economical and efficient method of producing designs on stained glass for windows and ornamental purposes, by which the cost of production shall be reduced, and the use of lead frames rendered unnecessary.

For an essay on the means at present in use for preserving iron from the injurious action of water or exposure to the atmosphere; how far they are efficient as a means of preserving that material when used in connection with the Arts, in the construction of ships, or for engineering purposes.

For an account of the machinery and processes employed in the manufacture of nails.

For an account of the machinery and processes employed in the manufacture of screws.

For a cheap portable machine for cutting, squaring, and dressing stone for building purposes.

For an account of the machinery and processes at present employed on the continent for earth-boring.

For an account of any recent improvement in sawing and shaping machines.

For the best specimens of cisterns suitable for household or other purposes, made of glass in one piece.

For a cheap quality of glass, applicable for drains, water-pipes, sinks, shelves for larders, dairies, &c. in which coarseness and want of transparency are not regarded.

For a new kind of thick glass suitable for fixing in floors to light lower rooms, vaults, &c. which by the arrangement of its two surfaces will give the greatest amount of light.

For an account of the various artificial stones and terra-cottas introduced and employed for purposes of construction, stating their properties, advantages, and imperfections, and their relative cost as manufactured, both inclusive and exclusive of loss by breakage in the kiln.

For an essay on the various concretes, cements, hydraulic mortars, and lutings for pipes, tanks, &c.

For an essay on architectural and decorative ornaments; the materials employed, their mode of manufacture, and the comparative cost of production.

For the best form of kiln for the manufacture of draining tiles, hollow bricks, roof tiles, paving tiles, or common bricks; which kiln shall be the cheapest and simplest to construct, with the least quantity of materials for transport, shall consume the smallest quantity, and effect the most perfect combustion, of fuel, with or without means of drying in the kiln itself or in a shed attached to it: to be verified by trial works and the cheapest production of perfect goods.

For the best method of economically deodorising sewage and other waters, and of precipitating or otherwise extracting the matters held by them in solution or suspension.

For an essay on the management and maintenance of public roads, with special reference to their altered position, since the introduction of railways.

PROCEEDINGS UNDER METROPOLITAN BUILDING ACT.

PULLING DOWN RUINOUS BUILDINGS.

At Guildhall recently, Mr. Chas. Harwood was summoned before Mr. Alderman Carter, to answer the complaint of the Commissioners of Sewers for the City of London that he had failed to pay the sum of 13*l.* 14s. 6d. being the amount of costs and expenses incurred by the said Commissioners incidental in pulling down a house and premises, No. 99, Cheapside, after the same had become lawfully due and had been demanded.

Mr. Tyrrell appeared for the Commissioners of Sewers, and Mr. James Bowker for Mr. Harwood.

This was the first case that has occurred under the New Building Act, which gives the Commissioners of Sewers the power of ordering all ruinous and dangerous houses to be pulled down; and in default of the owners doing so, after notice being given to them, the Commissioners have power to pull them down and recover all expenses for so doing. In this case the legal notices were served upon the owner, and upon his neglecting to comply with the order the Commissioners of Sewers razed the house No. 99, Cheapside, and now called upon the defendant to reimburse them the expenses they had been put to.

Mr. Bowker took several legal objections to the claim.

Formal evidence was then given as to the legal service of the various notices served upon the defendant, and the work being done, and also as to the reasonableness of the charges. The builder's charge was 6*l.* 12s. 6d.; the surveyor's, 2*l.*; and the solicitor's, 5*l.* 2s. Evidence was also given as to various demands for payment; but though one of them asked for over 28*l.* there was none that asked for the exact amount claimed.

Mr. Bowker contended that the magistrate had no jurisdiction in the matter. It was not a case in which he had power to act in a summary manner, as the defendant was not the owner in the sense of the Act of Parliament; that the order of March 5, upon which all the subsequent proceedings had been based, was illegal; and that the demand for 13*l.* 14s. 6d. had never been made. The first rule of the Act was, that the owner immediately entitled to the premises, or the occupiers thereof, should be liable, and have their remedy against the parties to whom they paid their rent; and by the 6th rule, the magistrate had jurisdiction only as to the owner, described in rule 1. The defendant was not the occupier, nor was he the owner immediately entitled to such possession as would bring him within the meaning of the Act of Parliament. He was not wholly entitled to the rent of these premises at any time, and the 6th rule of the 92nd section gave jurisdiction against the owner as described in rule 1, and against no other party. By a deed which was executed in 1854, Mr. and Mrs. Harwood parted with all their interest in it for a long term of years. The deed, which he produced, was an agreement for a lease, dated June 20, 1854, and by it there was in effect a subsisting lease to a Mr. Ernest for ninety years, at 600*l.* a year, and that gentleman was to rebuild it. He had paid Mr. Harwood the 600*l.* a year, and therefore he was the landlord immediately entitled to the possession of the premises. The defendant had never received any money from any tenants.

Mr. Tyrrell replied, that the deed proved the ownership to be vested in the defendant, and he had the power of compelling any other party interested to bear his portion of the expense. As regarded the solicitor's charges, they were fair and reasonable.

Alderman Cubitt was of opinion that the objections were insufficient, and ordered the money to be paid in a fortnight.

On the application of Mr. Tyrrell, he was allowed two guineas for the costs of this application.

Notices of Books.

VARIORUM.

A pamphlet on "Public Works in India," in the form of a Letter to the Right Hon. R. V. Smith, M.P. president of the Board of Control, by Mr. John Bourne, has been published by Messrs. Longman and Co. In this letter, which, though addressed to Mr. Smith, is dedicated to Colonel Sykes, the chairman of the East-India Company, Mr. Bourne illustrates the necessity of irrigation and internal navigation being largely promoted in India to develop the resources of that country and prevent the failure of the railways. In an accompanying map, the navigable rivers, the completed lines of railway, and the coal-fields of India, are shown. The author proposes to navigate the rivers by means of steam vessels of light draught of water, towing trains of shallow barges. As to railways, he recommends the introduction of the light and economical American system into India, a country which, in its circumstances, more resembles America than England. He hopes that the present chairman of the East-India Company who has long supported the river navigation here proposed, is destined to carry it out while in his present influcutial and favourable position.——"Marvels of the Globe" is the leading title of "Two Lectures on the Structure and Physical Aspects of the Earth," by Mr. W. S. Gibson, F.G.S. one of the registrars of the Court of Bankruptcy. The substance of these very instructive lectures was recently delivered to the Tynemouth Literary Institution, and the Mechanics' Institute of Wandsworth. Mr. Gibson, we may remark, is the author of several descriptive and historical treatises on the architecture of Northumberland, and other essays. ——In the "School Series," edited by the Rev. G. R. Gleig, M.A. Inspector-General of Military Schools, a very useful and clear little "Class Atlas of Physical Geography," by Mr. Walter McLeod, Head Master of the Model School, and Master of Method in the Royal Military Asylum, Chelsea, has been published: it contains much more information in a small compass for half-a-crown than some larger works of far higher price.

Miscellanea.

Walworth Working Men's Lecture and Reading Rooms.—This Institution held an Exhibition to open its autumnal proceedings on Tuesday and Wednesday last, comprising some excellent paintings by Webster and others, bronzes, statuettes, photographs, architectural and other models, natural productions and curiosities—lent by gentlemen of the locality, the Society of Arts, the Art-Union of London, and others. A large number of the working population availed themselves of the opportunity of inspecting the collection, and addresses were delivered by Mr. W. A. Wilkinson, M.P., Mr. T. A. Smith, Mr. Cooke, and Mr. Selway.

Sad Accident.—On the 25th ult. Mr. J. Ashby, of the New Palace, Westminster, in attempting to board a steamboat, which had just got under weigh from Old Shades Pier, London-bridge, on its passage to Westminster-bridge, unfortunately missed his footing, fell into the river, and was drowned. Mr. Ashby for several years discharged the duties of a clerk of the works at the new Houses of Parliament.

Workman's Class, School of Art, York.—With reference to the experimental class formed by Mr. Swallow, free for working men, mentioned last week, Mr. Swallow writes us, that his object is "to teach them the elementary principles of drawing, so that at the end of the course they may be enabled to enter the usual classes of the school, and pursue more advanced studies on payment of the ordinary fees. There is no promise that they should do so, but I hope that by making the lessons popular I shall create a taste, avoid the constant beginning, fill up my classes, and increase the efficiency of the school. At each lesson I endeavour to develop a principle contained in some well-known form, and show how any similar subject should be treated. The class is very popular. There are sixty-four working men of all sorts of trades, carpenters, joiners, coach-painters, coach-makers, tin-plate workers, black and white smiths, stonemasons, glasscutters, and tailors; in fact, almost as many trades as there are men."

Cost of Irish Lunatic Asylums.—Professor Donaldson is now at Dublin, investigating, as commissioner of inquiry, into the expense of erecting the lunatic asylums of Ireland, the estimates sent in by the governors of certain districts for the completion of the asylums, in the terms of the report made by Mr. Donaldson and Mr. Wilkes, as joint commissioners, and presented to Parliament during the last session.

Newcastle Society of Antiquaries. — The October meeting was held on Wednesday in last week, at the Castle of Newcastle, Mr. Matthew Wheatley in the chair; when Mr. Archibald Dunn, of Newcastle, architect, and Mr. W. B. Beaumont, M.P. Bywell, were elected members. Mr. White stated that he had lately noticed that the famous runic cross at Bewcastle had been painted,—the cross blue, the runic lines black. *Runes* had been supplied in black where none existed on the original. Mr. Charlton and Mr. H. Turner excused the circumstance as so far commendable, as it would preserve the stone. Mr. J. Latimer exhibited several Roman relics from Adderstone, and read a paper on the discoveries lately made, which is reported in the *Gateshead Observer*, together with a paper on the wall of Antoninus, by Dr. Bruce, and other proceedings at the meeting.

Leeds Town-hall.—At a special meeting of the Leeds Town Council, held on Monday in last week, it was resolved by a majority of 28 to 13, to adopt the Building Committee's report, and to grant a further sum of 5,500*l.* for the requirements therein contained. In the report approved of, the committee recommended the council to sanction the erection of a tower on an enlarged scale (as proposed by the architect, Mr. Brodrick), in connection with the scheme of ventilation and warming proposed by Messrs. Haden, of Trowbridge, and for which their tender (2,600*l.*) had been accepted. The committee also recommended a grant of 5,000*l.* for the erection of an organ. The tenders for the enlarged tower had exceeded the sum already granted by the council, but a saving would be effected by erecting it in connection with the mode intended to be adopted in ventilating and warming the building. The tower as submitted to the council, was 211 feet in height, the width of the columns 40 feet, and above the roof 50 feet, and the architect increased the height to 224 feet, and the width above the roof to 53 feet.

Curious Restoration.—In this restoring age (says the *Gateshead Observer*), a restoration, more evil than mediæval, is threatened in Newcastle. A tradesman announces his removal to new quarters, "until the damages recently done by" certain "alterations are completely restored!"

The Birkenhead Dock Works.—The great pool at Wallasey is to be deepened, and works are to be constructed there as part of the great scheme of dock extension at Birkenhead. Mr. George Thompson's tender for the work is 123,186*l.*

Sale of Goding's Brewery.—The extensive premises known as the "New Lion Brewery," situate in the Belvidere-road, Lambeth, has been sold. The auctioneer said that the premises occupied as the brewery ran on either side of the Belvedere-road, and occupied a large site of ground abutting on the river Thames. The brewery premises and stabling are let on lease for fifty years, from 1855, to Sir C. Ogle, bart. and H. Jenkins, esq. (determinable at the lessees' option at the end of the first fifteen years), at 1,750*l.* per annum. The ground on which the brewery stands was held from the Archbishop of Canterbury by J. Goding, esq. for seventy-eight years, at 77*l.*: the premises adjoining the brewery are held for a similar term, at 151*l.*; the stabling and buildings on the south side held for sixty-seven years, at 100*l.* being a net rental of 1,422*l.* per annum. He stated that he might call the 1,422*l.* a mere ground-rent. The hammer fell at 18,000*l.* at which figure the property was positively sold.

Gas.—The half-yearly meeting of the Surrey Consumers' Gas Company was held on Thursday in last week, when the usual rate of dividend, of 8 per cent. per annum upon the paid-up capital of the company, was declared.——The works of the Thornbury Gaslight Company are now almost completed, and, says the *Bristol Mirror*, the private dwelling-houses were for the first time lighted on Monday evening in last week.——The progress of the Clevedon Gasworks, according to the same paper, is likely to be rapid, as the foundations of the buildings are in, and the gasholder tank is nearly finished. The contracting engineers are Messrs. Stears and Son, of London. The company is formed under the Limited Liability Act, which appears to have caused the undertaking to be entered into with confidence by the inhabitants, and particularly by the intended consumers.

Laying on Time.—If we are well informed (says the *Salut Public* of Lyons), it is the intention of the municipality to have 150 electric clocks placed up in various parts of this city, giving always the same time in every quarter. Private persons, on payment of a small annual sum, can have a similar accommodation established within their houses.

Brighton Cemetery Competition.—The Burial Board for this parish, after considering the designs forwarded for their inspection, have adopted those sent in by Mr. R. Wheeler, of London. The plans have received the sanction of the bishop of the diocese and the Secretary of State, and estimates are to be procured forthwith.

Aluminium an Object of Trade.—A cargo of cryolite, we hear, has arrived at Copenhagen from Arksut, West Greenland, the ultimate destination of which is Paris, it being resolved to test the manufacture of aluminium on a large scale. Should the result be so successful as to reduce the metal to a moderate price, large supplies of cryolite can be obtained at Arksut, the deposits there being inexhaustible. A quantity of it was brought to England in 1850 by Commerce-raad-Lundt, but at that period the useful purposes to which aluminium could be applied were not generally known, although discovered in 1828 by Wöhler to be a metal.

The Building Trades and the Half-holiday Movement.—A meeting of the members of the building trades was held in Manchester on Tuesday, at which it was resolved — "That the Saturday half-holiday, as now before the public, is desirable, inasmuch as it would greatly conduce to the social, domestic, and moral advantage both of employers and employed;" and, "that this meeting being fully convinced of the importance of the foregoing resolution, pledges itself to give its co-operation to carry out the above object." A memorial to the employers was agreed to.

New Farringdon-street. — Allow me, through your pages, to complain of the shameful and dangerous state of the streets and roads in the neighbourhood of what I believe is to be called, if ever finished, New Farringdon-street. The course of that street is bad enough, but the roads intersecting it are much worse. As winter approaches, they will be absolutely unsafe, as well as disagreeable. They have now long continued in that state. In the neighbourhood of any country town they would be indicted, but as no one seems to know here in which branch of the "circumlocution office" the nuisance should be complained of, I take the freedom of asking your notice of the matter.—J. D.

Preserving and Disinfecting Timber.—Lieut. C. Scott Jackson, of Cannon-street, has patented an improvement in preserving and disinfecting timber, and other substances, by applying solutions of salts of zinc and iron in combination.

The Visitors to Peterborough Cathedral.—That natural ambition and anxiety to secure something like a shadow of immortality which induces the anything but immortal Buggins or Huggins to scrawl his glorious cognomen on the pyramids and obelisks of Egypt, to be handed down to future ages along with those of Cheops or of Rameses, at one time largely displayed itself on the walls of Peterborough cathedral, as on those of many others of our public edifices; but a less objectionable basis for Buggins's *cacoethes* than the walls and pillars of the edifice itself was at length discovered in the happy idea of a visitors' book, which, like an efficient lightning conductor, has had the excellent effect of drawing off the source of mischief to the edifice into a more harmless channel, at the same time securing to Buggins something like a substitute for that immortal recollection which he ever craves of his fellow mortals. The 40,000 names and remarks inserted in this useful book since February 6th, 1854, have been analysed by a local critic, and found to be composed, as might be expected, of an immense proportion of the "silly" order, and a very minute infusion of the "reflective;" some of the latter with a dash of the former even in *their* composition. Rude, silly, commonplace, critical, and reflective, are the appropriate terms used in the analysis. One "silly" condescendingly allows that the edifice is "highly commendable." Perhaps he was some celebrated judge at cattle shows. As to the various *habitats* of these originals, the analytic critic says,—"The greater number of visitors reside in the town and neighbourhood. London contributes the next greatest number. The colleges, including clergy, stand next. Visitors from Birmingham are numerous; from Manchester not so many as one might expect. Nottingham, Sheffield, Liverpool, contribute variously, and Scotland and Ireland are not unrepresented. Among the foreign and colonial addresses are Berlin, Barbadoes, Auckland, New Zealand, Adelaide, United States, East Indies, Demerara, &c. There appears to have been a fair proportion of ladies, who are, however, sparing of remarks." The visitors' book has not been altogether devoid of proper or of useful remarks and suggestions neither, and it merits imitation.

Toronto, Canada West.—The Hamilton correspondent of the *Canadian News* says,—Great improvements are going forward in our city this year, both in the way of building and improving the streets. A large number of very handsome buildings are in course of construction, among them, the new St. Andrew's or Scotch Church, one of the finest buildings of the kind in the province. The spire, which is of stone, and 200 feet in height, has just been completed. It is truly an ornament to the city. The Canada Life Assurance Company are now completing a new building of stone, with an iron front, which is to cost 10,000*l.* Another new church is in course of erection, also a large wholesale dry goods establishment, the most substantial building in the city, and a new hotel of very large dimensions. Numerous private residences are being erected in various parts of the city, and, on the whole, a greater number of buildings are going up this year than last. A system of sewerage has been partially carried out in the business part of the city.

Workmen's Tools.—Nearly 2,000*l.* have been raised for the workmen who lost their tools by the fire on the premises of Messrs. Broadwood.

Plaster Cast Work.—A short time ago an article appeared in your valuable work, respecting the very indifferent manner in which plaster ornament is executed in the present day. As a practical man of many years' experience, allow me to state that the principal cause is, that of late years the practice of "jelly moulding" has come into use, which has superseded the old plan of undercutting or casting, and fixing the different parts that require relief separate. The jelly mould is all in one piece, and, of course, a cast from the same is not to be compared with the former mode, either in sharpness or relief: if the parts are too much undercut to allow of its casting, they are stopped up, and so they remain. But that is not all. As in order to make the cast leave the mould before it heats (as in that case it would spoil the mould), the plaster is gauged with alum-water to make it stiffen quickly: in time the alum, if too strong, will work its way to the surface, and destroy the paint. As a proof of what I state, allow me to refer to the plaster ornament as executed at Arthur's Club, in St. James's-street, some years ago, under the late Mr. Hopper, by F. Bernasconi, which is a credit to both; and on the other hand, to the ornament lately executed at a club in progress hard by the latter, the whole of which, or nearly so, has been jelly moulded. You will there see blocks in the cornice more like bricks, as the caves are cast solid on the blocks instead of separate or undercut; and the rest of the ornament is mostly after the same fashion. The builder, to save expense, adopts the plan attended with the least labour.—A Practical Man.

The Drainage of London.—To get over som of the difficulty in this matter, I venture to suggest a scheme which would also economize the working expenditure by the employment of the sewage by direct application to the land as a fertilizer, of the immense value of which every day produces fresh evidence. Take all the mouths of the existing sewers by tunnels across the river Thames to the south side: continue them on at a low level to a line sufficiently removed to drain all the "south side" into them; and here build one intercepting sewer, and in a convenient position establish a pumping-station: from this pumping-station continue a line of sewer by tunnel and covered aqueduct right through the country, to deliver into the English Channel at a point in Sussex. A route may be chosen which will cut through the midst of hundreds of acres of waste land,—the very thing wanted for the sewage manure,—and at convenient points erect sewage manure tanks, and pumping-apparatus, which could be done far away from the habitations of man, and in many places on land not now worth 1s. per acre. Here the said sewage could be distributed and applied *direct*, without any cost for compression, drying, carriage, &c. and which would enhance the value of the land enormously for agricultural purposes. Properly and completely carried out, I question whether very much overplus would find its way into the sea. Still I would provide for all contingencies by a sewer of sufficient capacity throughout.—T. G.

Revolution in Mechanics.—From a mixture of India rubber and gas-tar, there has been combined a substance in the United States, said to be as valuable for its elasticity as for durability and elegance: it is of a jet black colour, and will take the finest polish. The choicest specimens of furniture, as well as objects of ornament or fancy, can be made of it, which may bring on a revolution in some portions of mechanical art.

Light on the Turkish Coasts.—A hundred new lighthouses are to be built on the Turkish coasts of the Black Sea and Mediterranean.

Paris and Mulhausen Railway.—The *Débats*, in reporting the progress made in the construction of the Paris and Mulhausen Railway, describes the viaduct which traverses the valley of the Marne at Nogent. This viaduct, it states, presents a development of more than 800 mètres, or a little less than the length of the Rue Richelieu. It is composed of thirty arches, each fifteen mètres in breadth, and of a bridge across the Marne, formed by four grand arches, each fifty mètres broad, or more than twice the breadth of the Rue de la Paix. At the lowest part of the valley the height of the arches is twenty-nine mètres (87 feet), or exactly the height of the triumphal arch at the Barrière de l'Etoile. What gives to this construction a peculiar merit is the grandeur of its proportions, and also the nature of the materials with which it is built. Hitherto enormous blocks of stone were employed in the construction of large arches; but the engineer at Nogent has made use of smaller materials, which are bound together by a species of mortar which has the virtue of obtaining a stony hardness: the arch is thus transformed, as it were, into a single block. By this means a great economy of money and time is obtained, and the construction of the Nogent viaduct was completed within eighteen months. The expenses of the construction of the viaduct and the bridge will not amount to 6,000,000f. The bridge is destined to support a weight of 10,500,000 kilogrammes. The weight of each arch exceeds 5,500,000 kilogrammes, and the keystone of each weighs 8,200 kilogrammes.

Master-masons of Antwerp.—A curious and, I believe, peculiar custom still exists at Antwerp among the guild of masons. Henri Conscience, the great Belgian writer, who was perambulating the town with me, informed me, as we passed their hall, that whenever a new master-mason was to be elected, it was necessary that, previously to being initiated into his somewhat important position, he should prove himself worthy of the dignity about to be conferred on him, by pulling down and rebuilding with his own hands the façade of one portion of the building, which has consequently been re-erected innumerable times, though the remainder of the edifice is sufficiently venerable. If the candidate shrunk from this trial, there was no alternative but to yield his claim.—*Flemish Interiors.*

Splitting Tree-stumps.—Experiments have been tried on the premises of Messrs. White, timber-merchants, Manchester, to test the efficacy of an invention to split the stumps of trees. A hole is bored half-way down a stump, and a cartridge is placed in the orifice. A piece of iron to effect percussion is then placed in the hole on the cartridge, and is secured in its place, when, by the fall of a heavy substance on the iron, an explosion of the cartridge is the result, and the stump is rent. The invention is due to Captain Norton, who was present at the trials.

TENDERS

For constructing 1,900 feet of 3 feet 9 inches by 2 feet 6 inches Brick Sewer, along Titchbourne-street, Connaught-terrace, and Upper Porchester-street, Paddington. Mr. William Merry, surveyor :—

ADVERTISEMENTS.

IMPORTANT AND UNRESERVED SALE.—Effects of the late George Gwilt, sq. F.S.A. F.R.S.A &c.

MESSRS. PUTTICK and SIMPSON beg to announce that they will SELL by AUCTION, on TUESDAY, the 14th of OCTOBER next, and following day, on the PREMISES, No. 8, Duke-street, Southwark, at ELEVEN for TWELVE punctually, the FURNITURE and a large quantity of the LIFE and WORKING MODELS collected with great judgment and at a vast expense. The well-known taste of the late proprietor needs no comment. Besides the usual furniture, will be found scientific instruments, philosophical apparatus, rare and choice musical instruments, between 40 and 50 valuable books, small plate, &c. &c. To be viewed on previous to sale, by catalogue (1 each) to end of the Engineers, 191, Piccadilly; FRANCIS HOBLER, Esq. Solicitor, Bucklersbury; and on the Premises 7 and 8, Union-street, Borough.

TO CABINET-MAKERS, BUILDERS, AND OTHERS.

MESSRS. KENNEDY and BONNY will SELL by AUCTION, at QUEEN'S BENCH WHARF, near Paddington, on TUESDAY, OCTOBER 14th, 1856, at ELEVEN for TWELVE o'clock precisely, 10 lots, 17,000 feet of WAINSCOT PLANK (English) well-seasoned and varying from 2 inches to 4 inches in thickness. Also about 80,000 in BANGOR SLATE, in various sizes. May be viewed at any time prior to the day of sale, and catalogues had on the premises, No. 6, Bastwick-street, City; at the Wharf, and at the Auctioneers' Offices, London.

CHELMSFORD. TO FARMERS, BUILDERS, and OTHERS. TO BE SOLD BY AUCTION, by

VALPY and STOKES, on THURSDAY, the 23rd of OCTOBER, 1856, on the PREMISES, Pertle-road, Upton, the Two Valuable Brick-making PLANTS, with all the requisite Sheds, Utensils, &c., belonging to the extensive and long-established BRICK-MAKING BUSINESS of Mr. JAMES WHITE, consisting of about one million of white and stock bricks, and a large quantity of red; also the Steam-engine, Boiler, Pumps, Shafting, Gearing, Iron Pipes, Tramroads, Horses, Carts, and other Effects. Also about 80 tons of iron drain-pipes; also, the kiln, as fixed. Williams's pipe-machine, barrows, boards, hovels, moulds, &c. &c.; about ten tons of prime mixed wood, for burning; Two Cottages, adjoining the brick-field, with drying stages for pipes, &c. &c. Sale to commence at TEN for TWELVE o'clock precisely. Coal may in the meantime be had at the Place of Sale; Office of the Auctioneers; and at the neighbouring Inns.

TO BUILDERS, STONE-MASONS, AND OTHERS.

MR. A. BOOTH will SELL by AUCTION, on WEDNESDAY, the 15th of OCTOBER, 1856, at TWELVE for ONE o'clock, on the PREMISES, No. 21, Bridge-place, Hammersmith, the STOCK-IN-TRADE of a PATENT STONE-PRESERVING WORKS; 200 chimney-pieces, in imitation, black, Sienna, and porphyry, marble tombs, flower-vases, clock-and-bracket-cases, correct ornamental pavement, one hundred and fifty paper balls-tracks, trusses, &c.; Bath and Caen stone in slabs and blocks, small stone trucks, lathe, cart and trucks, steel tools, twenty saws, an Eames' sheet-iron brick safe, counting-house fittings, portable weighing machine, desks, and office fittings, &c.—May be viewed on day prior and on morning of Sale. Catalogues forwarded by post, or may be obtained on the Premises, and of Mr. ANDREW BOOTH, Accountant and Estate Agent, No. 1, Catherine-hill, Camden-road (opposite the Beehive Tavern).

TO BUILDERS, CABINET and PIANO-FORTE MAKERS, AND OTHERS.

MESSRS. BOND will SELL by AUCTION, at No. 20, ROSS WHARF, Great College-street, Camden-town, on TUESDAY, OCTOBER 21, at TWO for THREE precisely, 15 YELLOW and WHITE PLANKS deals, inch battens, prepare, &c. and other lots, in inch and inch deals, a quantity of our stuff, sundry planks, &c. the remainder of a lot for absolute sale. Catalogues had of the Auctioneers, Messrs. Bond, Caledonian-road, Barnsbury; and of Mr. JAMES on the Wharf.

ARCHITECTS, BUILDERS, ENGINEERS, and SURVEYORS, can be IMMEDIATELY SUPPLIED with COMPETENT ASSISTANTS (temporary or otherwise). The most responsible situations can be guaranteed. The registry is open, to employers or lads, without charge. Application (by letter) to Mr RICHARD [illegible] Office, No. 4, Trafalgar-square.

TO JUNIOR ARCHITECTS.

AN Architect, in good practice, and who has been very successful in obtaining premiums, having thereby obtained five new buildings in course of erection, is desirous of ENGAGING the assistance of a GENTLEMAN of talent and experience, who would enter into an arrangement for a certain period, and receive a share of the commission from premises now in course of erection, or to be erected during the said term.—Address, NEMO, care of J. Barrett, esq. 12 York-buildings, Adelphi. Leaving existing terms, age, experience, style most practised in, if a coloured, to whom articled, &c. References will be given and required. Shorthand knowledge of specific value, as drafts, &c. in styles, is essential.

WANTED, a first-rate HOUSE PAINTER, GRAINER, and WRITER, to take the lead as Working Foreman of Painters; good references as to character indispensable. Also, a handy Journeyman hand Belhanger.—Apply, by letter only, to A. M. Jones' Nursery, Hampstead.

WANTED, a Young Man, as CLERK, in a Decorative Establishment.—Apply, stating age, particulars, and salary required, to G. P. Office of "The Builder."

TO BUILDERS' CLERKS.

WANTED, by a London Builder, an experienced CLERK, competent to keep a set of books, make estimates, take out quantities, and make up accounts.—Address, stating terms and full particulars, to Mr. T. C. CLARKE, Architect, &c. 167, Leadenhall-street.

TO STONE-POTTERS.

WANTED, a competent BURNER, one that understands the burning of stone pipes, &c. To a thorough competent man liberal wages will be given.—Address, T. H. P. at Mrs. Phillips's, Shorehampton, near Bristol.

TO RAILWAY ASSISTANTS.

WANTED, TWO competent RAILWAY ASSISTANTS, well acquainted with levelling and measuring works. Also, Two Draughtsmen who have been used to bridge-works. State amount of salary required, also reference as to qualification, &c.—Address, E. G. Office of "The Builder."

TO ORNAMENTAL DRAUGHTSMEN

WANTED, a GENTLEMAN conversant with the various details of GOTHIC ORNAMENT. One who has studied that portion most applicable to painted glass preferred.—Apply by letter, to N. W. LAVERS, 30, Southampton-street, Strand.

TO SURVEYORS' AND BUILDERS' CLERKS.

WANTED, a respectable, trustworthy Young Man, of good address, accustomed to the duties of a builder's or surveyor's office, and fully competent to give occasional assistance in measuring and making up the accounts of extras and omissions, estimating, &c.—Address, stating age, previous employment, &c. to C. D. care of Messrs. Waterlow and Sons, London-wall.

TO PLUMBERS, &c.

WANTED, a THREE-BRANCH HAND. If accustomed to gas-fitting, would be preferred. Wages, 30s per week.—Apply, from Three to Five, at 11 and 12, Bedford-street, Regent-street.

WANTED, by a London firm, an intelligent, active Man, as YARD FOREMAN. He must be a carpenter by trade.—Address, stating age, particulars, and wages required, to L. M. Office of "The Builder."

TO ARCHITECTS.

WANTED, by a good Draughtsman and Designer (resident in the country), extra profession 1 EMPLOYMENT from a London office (either in making tracings of or copying drawings or otherwise. Every description may be relied on.—Address, C. E. Old Bell Inn, Holborn.

TO BUILDERS.

BENJ. FOWLER & CO. WHITEFRIARS-STREET, FLEET-ST.

PARIS EXHIBITION. — ENAMELLED SLATE.—TWO FIRST-CLASS MEDALS!—Mr. MAGNUS is the only exhibitor whose productions received this double honour; also the Prize Medal at the Great Exhibition of 1851, and the Medal of the Society of Arts in 1848. This beautiful material, handsomer and more durable than marble, is now finding its way into palaces, into the mansions of the nobility at home and abroad, into the highest class of public buildings, as well as into humbler dwellings. The cost is immeasurably below that of any other production that can at all compete with it. It is applicable to a variety of useful and ornamental articles, too numerous to be separately specified. Among the chief are chimney-pieces and ornamental stores for all apartments; plain and exquisitely decorated slabs for the tops of hat tables, chiffoniers, consoles &c., baths, lavatories, altar-tablets, tablets, columns, vases pedestals, and brackets; washhand-tops, billiard tables, linings to halls vestibules, and dairies.—Price list can be had on application to Mr. MAGNUS, 39 and 40, Upper Belgrave-place, Pimlico.

N.B. Plain slate work executed from a single article to the most extensive contracts, for home and abroad.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs FREEMAN, Millbank street; and at Messrs Drabw's Belvidere-road, where terms may be obtained.

TO BUILDERS AND OTHERS.

AT the LOWEST PRICES.—TIMBER, DEALS, MAHOGANY, and WAINSCOT. A large assortment of seasoned prepared FLOORING and MATCH-BOARD Mouldings of all patterns. Also an extensive stock of Dry White Yellow, and Pine Cut Well Staving, Battens Paving Boards, Oak Planks, Sash Cills, &c. Timber of all kinds, Planks, Deals and Battens, fetched from the docks, sawn by patent machinery in the best manner, and delivered at the shortest notice. THOMAS JACKSON, Sawing and Planing Mills, Commercial road, Pimlico, London.

TO ENGINEERS, PATTERN MAKERS, and JOINERS.—A very superior lot of fine clean WELL DRIED PLANKS, can be had at 3, Old street, St. Luke's.

SIGN-BOARD and FACIA BOARD.—A lot of long Pine Board can be had at No. 31, Old-street, St. Luke's.

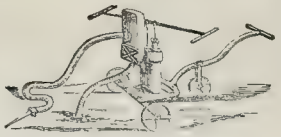
TO GENTLEMEN, ARCHITECTS, and OTHERS.—A magnificent STOCK of seasoned ENGLISH OAK QUARTER PLANKS, for wainscot and furniture, from 11 inch to 6 inches in thickness, of unusual width, and of fine colour and branch, constantly ON SALE, at J. and T. DIMMOCK and CO.'S Timber-yard, Stoke upon-Trent, Staffordshire, close to the railway station.

FURTHER REDUCTION OF PRICES.—SAMUEL PUTNEY invites the attention of buyers to his large and well-selected STOCK of DEALS, and the reduced Prices of prepared Flooring, &c.

Inch Yellow Flooring	18s per square.
1-inch ditto	18s.
Pine Planks, 12 3 by 12, from	21 per 120
Yellow Deals, from	20 "
Spruce Deals from	18 "
Yellow Battens, from	12 "

A List of Prices forwarded on receipt of a postage-stamp.

N.B.—All Sawn Goods delivered within two miles free of cartage Boroughhead, Southwark, and Elm street, Gray's-inn-lane.



ANOTHER GREAT REDUCTION.—Yellow Deals, 3s. 3d.; Spruce, 3s.; Pine Planks, 3s. 6d. Mahogany, 6d.; 2½ Yellow Battens, from 1.3. 10s. Carriage free to any part of town.—T. FORMAN, 1, Walnut tree walk, Lambeth-walk.

MAHOGANY and WAINSCOT seasoned by Solignac's Patent Process.—JOHN COLMER solicits an inspection of his stock. The above process enables him to season his wood in comparatively short space of time, for sale at prices generally charged for wet wood.—Address, PATENT WOOD SEASONING WORKS, Lady Lake's-grove, Mile-end-gate.

EDWARD SIMMS begs to inform Builders and the trade, that he has now on hand at his manufactory the first of its kind ever established, a large assortment of PREPARED FLOORINGS and MATCH BOARDING, seasoned and ready for use, from ¼-inch to 1½-inch thick, in White or Yellow Deal, Oak, or Pitch Pine. Also Dry Deals, in all thicknesses. Sliding Battens, Panelled Linings, Oak Sills, Plank, and Scantlings. Mouldings in clean Pine, to any design. A pattern list forwarded on application.—Address, E. SIMMS, Flooring Manufactory, and Sawing, Planing, and Moulding Mills, Kingsroad, Chelsea.

FLOOR BOARDS, &c.—R. SLADE begs to inform Builders and the Trade, that he has now on hand a large assortment of FLOORING and MATCHED BOARDING, from ¼ inch to 1½ inches thick, seasoned, and ready for use; also, Mahogany, Moulding, Wainscot, and all kinds of Timber required for Building purposes.—Address, R. SLADE (late E. Simms), Flooring Manufactory, Wilton-road, Pimlico.

NOTICE of REMOVAL.—EDWARD SIMMS begs to inform his customers and friends that he has REMOVED his business from Whitecross-st., Finsbury, to the KING'S-ROAD, CHELSEA, where their orders will be promptly executed as heretofore.—Please address, E. SIMMS, King's-road Saw mills, Chelsea, opposite Manor-street.

B. FOWLER, HOLMAN, and CO.

SOLE MANUFACTURERS OF HOLMAN'S PATENT DOUBLE-ACTION CESSPOOL, SEWER FLUSHING, LIQUID MANURE, AND UNIVERSAL FORCE PUMP.

The simplest, cheapest, and best thing of the kind before the public; admirably adapted for thick substances; valve ways three times usual size, made to suit liquors of all kinds, hot or cold, is portable, or can be fixed with perfect ease. Delivers a large quantity at small labour. A really good article, commanding extensive home and export sale.

ALFRED ROSLING begs to inform his Customers and the Building Trade generally, that he is enabled to allow a discount of 15 per cent. upon his list prices for Mouldings.—A large stock of dry flooring at low prices.—Southwark-bridge Wharf, Bankside.

MOULDINGS BY MACHINERY. Capping, Sash-bars, Beads, &c. to any Design, carefully packed and sent to all parts of the Country. A Pattern List sent on application to

E. SIMMS,

SAWING, PLANING, AND MOULDING MILLS, KING'S ROAD, CHELSEA.

LETT'S WHARF PATENT SAWING, PLANING, and VENEER KNIFE-CUTTING MILLS, Commercial-road, Lambeth. The Proprietors beg to announce to the Trade that they have completed their new arrangements, and will be happy to execute all orders entrusted to their care with despatch and punctuality. Wet and dry docks, and powerful cranes for landing heavy goods, offer facilities not to be obtained elsewhere. A large assortment of seasoned prepared flooring match boarding, &c. &c. always in stock at reduced prices.

ROBINSON and BARTRAM, SAWING and PLANING MILLS, BELVIDERE-ROAD, LAMBETH, and SWAN-STREET, BERMONDSEY, on the completed powerful MACHINERY for SAWING TIMBER, for building purposes, are ready to receive ORDERS in this respective and beg to assure the friends that all favours shall be executed in the best manner, and with the most punctuality and despatch.

ACORN TIMBER WHARF and SAW MILLS, CANAL BRIDGE, OLD KENT-ROAD, LONDON. A Monthly Price Current forwarded on application. RICHARD MAY, Proprietor.

ST. PANCRAS SAWING, PLANING, and MOULDING MILLS, Cambridge-street, Old St. Pancras-road. GEORGE NOKES and CO. invite the attention of Builders and the Trade generally, to their STOCK of DRY FLOORING, at the following prices, for cash:—

1-inch white, 13s. 6d. per square; 1-inch white, 13s. per square; 1-inch white, 18s. per square; 1-inch yellow, 15s. per square; ¾-inch yellow, 16s. 6d.; 1-inch yellow, 20s.

Timber, deals, planks, &c. at the lowest remunerative prices. A liberal discount allowed on mouldings for exportation. Book of designs forwarded on application.

GRAINING by MACHINERY.—The present system of graining is far surpassed by the use of BELLAMY'S PATENT GRAINING MACHINES, by which an ordinary workman can produce better work, and at an immense saving of time. The designs are perfect imitations of the choicest specimens of fancy woods and patterns of the first artists.

The Patent Graining Company are now prepared with a large and well-assorted stock of instruments, which they offer to grainers, painters, builders, and others without royalty.

Grained paper in imitation of all kinds of fancy woods of the choicest description, in the piece, or in sets for panels, &c. wholesale and for exportation. Pattern-boards and cards for the trade on great variety.

Painters, Grainers, Decorators, Merchants, and others are respectfully invited to inspect the patterns, and see the process at the Company's Offices, 30, Minories, London.

TO FRENCH POLISHERS, CABINET-MAKERS, BRASS-WORKERS, &c.—A considerable reduction has taken place in the prices of French polish, white and brown hard spirit varnishes, spirit stains, and Bronzing liquid. The present price is 6s. 6d. to 7s. per gallon; white French polish, 10s. per gallon; white shellac, 18s. 6d. per lb.; gums, shellacs, and acid at the lowest prices. A net cash list forwarded on application to JAMES SLIPPER, 87, Heather-lane; and 14 and 15, Dorrington-street, Holborn, London.

A SUBSTITUTE FOR PAINT, AND AT HALF THE COST.

STEPHENS' DYES or STAINS for WOOD. The following extract from a letter the Proprietor has obtained leave to make public:—Newington, Colchester, Feb. 5, 1856. "Sir,—I have used your Stains for finishing some Oak Stairs, and I consider it the best adapted for the purpose, being the nearest approach to the real wood of any I have ever used.—I am, sir, your obedient servant, "SAMUEL GRIMES, Builder.

"To Mr. Henry Stephens, 54 Stamford-street, London."

Samples and prospectuses free to any part of the kingdom.

WOLSTON'S TORBAY IRON-PAINTS, warranted to stand the action of the Atmosphere, Steam, Gases, Noxious Vapours, Damps, and Salt Water; also intense heat without blistering. These Paints have been tested for five years in Her Majesty's Dockyards, and the Official Reports made thereon, which testify that 24lbs. of Wolston's Torbay Iron-Paint will effectually cover as much surface as 112lbs. of either White or Red Lead, and that they resist atmospheric action better than Lead Paints. For the Public Works, Galvanized and other Iron Roofing, Fencing, Shipping purposes (Wood or Iron), Stucco and Cement Fronts, economy and durability will be secured. To Builders and Painters, for all painting purposes, the saving will be immense. Manufactured at the TORBAY IRON-PAINT and ORE WORKS, Brixham, Devon, London Depôt, Chamberlain's Wharf. Letters or orders addressed to Mr. WOLSTON, at the Works, or No. 54, John-street, Bedford-row, will have immediate attention.

TO BUILDERS

THE Advertiser requires a WAREHOUSE erected on certain land half a mile from London-bridge, and is willing either to rent the same on lease, with option of purchase, or will erect the same for any other arrangement as may be mutually agreed upon.—Address, A. B. C. Leopard Coffee-house High-street, Borough.

BATH, PORTLAND, and ROMAN CEMENTS.—The London and West of England Cement Company can offer to the Trade the best natural HYDRAULIC CEMENTS at reduced prices. The Company particularly recommend the best quality of their Bath Cement for all modelling cornices, decorations, &c. as having all the qualities requisite for an interior cement, and being quite unaffected by extremes of weather. The Company also supply BLUE LIAS LIME, lump and ground, which will carry more sand than any in the market.—Communications to be addressed to the General Offices, 80, Old Broad-street, London; to Mr. M'KINLAY, 3, Carolina-place, City-road; to Mr. TIMEWELL, the Depôt, 9, North Wharf-road, Paddington; or to the Works, Dunball Bridgewater.

SOUTHAM BLUE LIAS LIME DEPOT. Glazed Stoneware Sewage Pipes. Brick, Lime, and Cement Merchants, TATHAM and CO. 14, South Wharf, Paddington.

PORTLAND and BATH CEMENTS. TATHAM and CO. 14, South Wharf, Paddington.

PARIAN CEMENT, reduced in price 25 per cent. This article is valuable for inside stucco, and especially for skirtings, for flooring on brick arches, &c. It takes paint in a few hours after its application on walls or laths, is without efflorescence, and may be papered in a couple of days. A finer quality forms a beautiful Scagliola, with any admixture of colours.—Manufactured by FRANCIS, BROTHERS, Cement Works, Nine-elms, London.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames street, London; and also at the manufactory, Fatersham, Kent.—N.B. These Cements supplied for shipment, on advantageous terms.

THE PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs ROBINS and Co. to WHOM THE PRIZE MEDAL WAS AWARDED in 1851 are prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes to which Cement is applicable. Orders received at Great Scotland-yard and at the Works.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first class quality for the home and foreign trade. Portland Cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brickwork, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

PORTLAND and ROMAN CEMENTS.—T. H. BOORMAN, WILD, and CO. MEDWAY LIME and CEMENT WORKS, LOWER HALLING, near Rochester. Agent at the Works—Mr. THOMAS WEEKES. Agents in London, Messrs. GEORGE POTTER and Co. Limemerchants, Purfleet-wharf, Earl-street, Blackfriars, and No. 19, North-wharf road, Paddington.

PORTLAND and BATH CEMENT.—FULLWOOD THOMPSON and CO request the attention of Merchants and Contractors to the quality of their Portland and Bath Cement, which they manufacture on an improved system, securing regularity of strength and colour, and at a less cost than is attainable by most other makers.

These cements set under water in a few minutes, and are not affected by extreme heat or cold.

FULLWOOD THOMPSON & CO. will be happy to send prices and samples in reply to application by post. They deliver free into the Bristol and Exeter Railway Company's trucks at their works or free on board in the Port of Bridgewater.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL. Light, Dark, and Portland Cements equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire bricks, Grindstones, Cement Chimney tops, dittc Vases, Rodding, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano

JOHNS and CO.'s PATENT PERMANENT STUCCO WASH (perfectly non-absorbent). STUCCO CEMENT, STUCCO PAINT.—CLARK and BENGOUGH, Manufacturers, Grand Surrey Canal Bridge, Old Kent-road. Office, 4, George-yard, Lombard-street.

PORTLAND and ROMAN CEMENT. PLASTER of PARIS Manufactured by J. M. BLASHILL and SONS, at Millwall, Isle of Dogs. Warehouse, No. 1, Wharf Paddington-basin.

11 George-yard, Lombard-street, City.

ELMLEY CEMENT WORKS.—ROMAN and PORTLAND CEMENT of the first quality, manufactured on the above works. Also STOCK and KILN-BURNT BRICKS, hand made and machine made, for shipment or otherwise.—Apply to G. BOOTH, Agent, as above.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its constituent properties; that it is not affected by frost, and does not deteriorate in damp localities. See one of COMPARATIVE EXPERIMENTS on the strength of this and other Cements used at the Institute of Civil Engineers, to be obtained from the Makers, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that readily takes colouring, sold exclusively by JOHN BAZLEY WHITE and BROTHERS Millbank-street, Westminster; and 1 Nott-street, Liverpool.

CHARLES RICHARDSON, 3 & 6, SOUTH WHARF, PADDINGTON BASIN. COWLEY AND KENT BRICKS, PORTLAND, ROMAN, AND OTHER CEMENTS, TAMWORTH GLAZED SEWAGE PIPES BLUE VITRIFIED BRICKS, COPINGS, PIPES, &c.

3 & 6 South Wharf, Paddington.

NOTICE.

CHARLES RICHARDSON takes the earliest opportunity of informing Engineers, Architects, Contractors, and others, that he is now burning GREAVES'S BLUE LIAS LIME for the Great Western Railway from Harbury to Bull's-bridge and Paddington, from whence it can be delivered at a less cost than any of the four Thames canals, or railway stations, and not being affected by either frost or damp ground, in any quantity, and as agreed upon between the parties.

All applications for price and terms will meet with prompt attention.

N.B. Please observe the lime is ground at the works, not in London.

BLUE LIAS LIME.—Messrs. GREAVES and KIRKHAW having completed their Works on the Birmingham and Oxford Line of the Great Western Railway, at Harbury, are now prepared to supply LUMP and GROUND LIME of the finest quality, direct from the kilns, and the stations on the Great Western Railway.—Greaves's Blue Lias Lime.—Portland, Roman, and Parian Cements.—Works, at Harbury, Stockton, and Wilmcote.—Stations, Warwick.

HUBBUCK'S PATENT WHITE ZINC PAINT,

The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers, are enabled, by their process, which is patented, to supply Pure White Zinc Paint at the price of White Lead. Neither heat nor tropical climes act upon it. It is entirely free from any poisonous or pernicious property. Those direful maladies paralysis and painters' colic, will be altogether avoided. The Powdered White Zinc may be had for grinding in Oil, and where it is used with Size, Varnish, &c. To prevent the paint here against Zinc paint, which, the sole agents of this article must otherwise produce, it is now sold by the Wholesale Paint-dealers in Original Packages, each cask stamped, HUBBUCK—LONDON—PATENT. And other, so marked, the quality is unwarranted. THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers, Paint and Varnish Works opposite the London Docks, London.

N.B. OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT FOR REFINING.

CHADWICK'S CEMENTS.—To Railway and Dock Directors, Gas and Waterworks Companies, Coal-Mine Proprietors, Builders, Contractors &c.—JOHN CHADWICK, Manufacturer of the Patent Lithic, Roman, and Portland Cements, made on the same principles and from the same materials as used by the late firm of SWINDELLS and BROTHERS. J. C. is prepared to enter into contracts with any of the above branches that may favour him with their orders, and will advertise to be derived from the above Cements manufactured by J. C. over all others are the great saving in hydraulic properties.—Samples and references may be had on application either at the Works, Ashton New-road; or the Warehouse, 5, Bro-street, Shude hill, Manchester.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank street Westminster.

BLUE LIAS LIME.—CHAS. NELSON begs to offer to consumers a supply of Blue Lias Lime direct from his Quarries in Warwickshire, the quality of which is tested by several of the largest building firms in the metropolis and approved by them; and those who have favoured C. N. with their patronage during the last three years have always expressed themselves satisfied with his system of weighing or measuring the same. When the lime is delivered by boat, the master has instructions to produce (on demand) the canal ganger's pass, by which the purchaser may know the exact weight delivered.—Orders addressed to the London Depôt, 21, South Wharf, Paddington, or J. D. BLYTH, Sole Agent, will have immediate attention.—Quarries and Manufactories, Stockton, near Southham, Warwickshire

PLASTER of PARIS manufactured by T. P. BLYTH, Baldwin-place, Gray's-inn-lane, Holborn. The trade and shippers supplied on advantageous terms. Roman and Keene's Cement, Tiles, Plasterers' Hair, Pan and Plain Tiles. Fire Goods &c

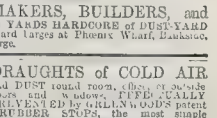
IMPROVED AIR-BRICKS.

WILLIAM GILBERT, Manufacturer of all kinds and colours of Tiles, Quarries, Drain-pipes, Moulded Bricks, Brackets, Vases, Chimney pots, Stoneware Glazed Sewerage Pipes, Ornamental Quoin Blocks, &c
Tunstall, Staffordshire.

BEADON'S EAVES GUTTER TILES.—Mr. LAWES is prepared to CONTRACT for the EREC-TION of the above TILES on roofs of all descriptions, in the neighbourhood of London, at 7d. per foot; above 100 feet, 6d.—Office, 1, Adelaide-place, London-bridge.

BEADON'S PATENT IMPERISHABLE GUTTER-TILES,
For Spouting Roofs of Houses (either old or new, whether of thatch, slate, or tiles), and other structures.
SOLE AGENT,
J. B. LAWES, 1, Adelaide place, London-bridge.



This is the cheapest kind of spouting known; for, besides its lower cost, it will last without paint or repair as long as the building itself. It will bear the weight of any ladder; and in case of accident a labourer can repair it. It occupies the room of a large amount of roofing, effecting a great saving in slates, tiles, &c. It is especially applicable to the backs of houses in town, cottages, and agricultural buildings.

Price 4d. each tile of about 13 inches long; stop-ends and outlets, 6d. Any mason can put them up, or, if over 100 feet are required, a man will be sent to fix them at 8d. per foot. This charge to include tiles delivered in Agent's yard, cement, and labour. May be had in London, Gloster, Bridgwater, and Rugby.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that he LONDON DEPOT for this WARE is REMOVED to No. 21, WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "Terro-Metallic" is the sole property right of the Proprietor; and, thirdly, that the "REMAINS OF THE CRYSTAL" page 881, of the Great Exhibition, rank the Manufacture known as "Terro-Metallic Interlaces," Tunstall, Staffordshire, as the first of the kind in the world.

CONIAM'S PATENT IMPROVED ROOFING TILE. These tiles are light from overlapping each other by a raised edge, which also prevents the drift of rain or snow, and at the same time, offer a considerable saving in timber. To be obtained of C. PHILLIPS, Potter, Weston super-Mare.

HOGG'S GARDEN EDGE TILES: a cheap, elegant, and durable substitute for Box Edging.
12s. per Hundred, or 1d. per yard.
Exhibited at Court of Inventions, Crystal Palace, and at the Office of "The Builder."

Full particulars from Mr. R. BLACKLT Witham, Essex.

PANTILES, PAVINGS, &c. — J. H. ANDREWS, Wisbeach, Cambridgeshire, begs to offer pantiles at 50s. per 1,000; floor bricks and 6-inch pavings, at 30s. 6d. per 1,000; 9-inch pavings, at 25s. 6d. per 1,000; plain tiles, at 35s. per 1,000, delivered. Cash prices. Delivered on trucks in London or Eastern Counties Railway.

TO ROAD-MAKERS, BUILDERS, and OTHERS.—1,000 YARDS HARDCORE of DUST-YARD PICKINGS to be put on rails and barges at Phoenix Wharf, Blackfriars, Southwark, free of charge.

DRAUGHTS of COLD AIR and DUST round room, chest, or outside doors and windows, EFFECTUALLY PREVENTED by GILL'S GOODS patent INDIA-RUBBER STOPS, the most simple and efficient method of making air-tight joints to doors of carriage work, cabinet work, &c. These Stops can be had any length or pattern. Self-acting spring stops, for the bottoms of doors.
The Trade supplied.
JOHN GREENWOOD, Patentee,
19, Arch-street West, London-bridge.

DRAUGHT and DUST EXCLUDER 1d. to 6d. per yard, easily fixed to doors and windows. Is the Patentee, R. HELBRONNER, 215, Regent-street. Wholesale and retail.

PATENT TERRA-COTTA. Tracery for Parapets and Terraces, Mullions, Pinnacles, Moulded Bricks, Coats of Arms, Crosses, Label Mouldings, Finials, Terminal Vases, Balusters, Capitals and Bases of Columns, Paving, Facing Bricks, Coping, Kitchen and other Sinks, Chimney Shafts, and Tiles, and numerous other Articles, manufactured by J. M. BLASHFIELD, on Patent improved terra-Cotta, at Mill wall, Isle of Dogs; and sold at No. 1, Wharf, Trafalgar-street, Paddington Basin.

ROYAL POLYTECHNIC. — Patron—H R H PRINCE ALBERT—Time Tables and Tickets, 5s. each class only, be obtained of the Money-taker, and admit to the Annual Evening Classes now opened in connexion therewith. The Examinations of the Society of Arts.—All applications for information must be accompanied with an envelope, stamped and addressed.

O. McCARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, White friars, Fleet-street, City. Sand, from above or below bridge, delivered by the yard or per barge. Ballast screened or unscreened by the yard or per barge. Stocks, lime, and old bricks. Rubbish delivered per barge, in any quantity, alongside the Thames.

CROGGON and COMPANY,

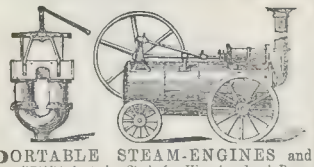
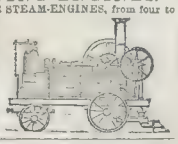
Contractors supplied to any extent.



R. RICHARDS and CO. PUMP MANUFACTURERS and ENGINEERS.
Pumps in Wrought and Cast Iron and Brass, bored by machinery, and fitted in the best possible manner, suitable for excavators, roads, brickmakers, farms, gardens, stables, liquid manure, ships, barges, well sinking, &c. adapted for any depth. Hydraulic Pumps for deep wells.
PUMPS ON HIRE.
Pumps of any size, single or double barrel, up to double 12-in. diameter, kept ready for use at reduced prices.

N.B. The above can be worked either by hand, horse, or engine power.
Iron Pails 3os. per doz. painted.
Ditto .... 4os. per doz. galvanized
Upper Ground-street, Blackfriars Bridge, Surrey Side.



TO BUILDERS AND PLUMBERS.
The attention of the Trade is called to JOHN WARNER & SONS' PATENT VIBRATING STANDARD PUMP,
which is recommended for the simplicity of its construction, and the ease with which it works.
By the introduction of the vibrating standard, the cumbrous carriage and expensive lines and guides are unnecessary, rendering the price considerably less than Pumps made on the old plan.
Beer and Water Engines for raising fluids from a depth not exceeding 28 feet; also, Garden Engines constructed on the same principle.
JOHN WARNER & SONS,
8, Crescent, Jewin-street, London,
Manufacturers and Patentees.

Sheringham's Ventilator for the admission of pure air through an

EXTERNAL WALL

With single pulley, from 6s. each; with leading pulley, from 6s. 6d.

These Ventilators are arranged that the admission of any required quantity of pure air may be regulated for the different seasons of the year without draught or inconvenience, and as they are placed in the external wall, their action is not impeded when the casement is closed. For cases in which an abundant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 196, Blackfriars-road, and 117, Union-street, Borough; and of all respectable ironmongers, builders, &c.

Surplus Lands and other valuable Freehold Property, on the Caterham Railway, the Rose and Crown Public house, Cottages, &c, on the road from Croydon to Godstone, in the county of Surrey.

MESSRS. NORTON, HOGGART, and TRIST have received instructions to offer for SALE, at the Mart, on FRIDAY, OCTOBER 17 (instead of the 24th, as previously advertised), at TWELVE, in Twenty-two lots, the SURPLUS LANDS and other FREEHOLD PROPERTY on the Caterham Railway, commencing at the Warlingham Station, and ending at the rear of Coomb-farm, comprising altogether about 170 acres. Lots 1 to 16 inclusive will consist of a brick-built dwelling-house, near to the entrances of Marden Park, with gardens and paddock; a smaller cottage, and numerous eligible plots of building land, varying in quantity from one to 10 or 12 acres, possessing very extensive frontages to the high road leading from Croydon to Godstone, and immediately contiguous to the Caterham Station. Lot 17. A valuable Freehold Estate, on the opposite side of the railway, close to the station, bounded on one side by a road leading to Warlingham, and on another by a road called Burnwood-lane, containing nearly 80 acres, and capable, by the construction of a new road, of being made available for very extensive double frontages. Lot 18. A valuable Plot of Freehold Building Land, immediately adjoining the Warlingham Station, having a considerable frontage to the road, and containing about 2 acres. Lot 19. A valuable Freehold Estate, on the other side of the railway, and close also to the Warlingham Station, bounded by a new road and Salmon's-lane, and containing nearly 20 acres, and immediately adjoining about 30 acres. Lot 20. A valuable Plot of Freehold Building Land, adjoining Lot 19, with considerable frontage to the new road, containing nearly two acres. Lot 21. The Rose and Crown Public-house, close to the Warlingham station, with offices, garden, and orchard. Lot 22. Three Cottages, garden, and orchard, near the Rose and Crown Public-house. The Caterham Railway has opened to the metropolis a district full of beauty for building operations. The soil is excessingly dry, on a chalk subsoil, and consequently very healthy. Stone, bricks, lime, sand, and gravel can be obtained on the spot at a remarkably cheap rate, and it has the advantage of being in the neighbourhood of several packs of hounds and good shooting. At the terminus is a very comfortable hotel, with first-class stabling for hunters, erected for the accommodation of sportsmen, and the access to London will be frequent and easy, with the prospect in a short time of a terminus at the west end, and great facilities will be afforded to the public and to building operations by the issue of season tickets at extremely low prices, which tickets, under certain arrangements, will be in force for seven years. Particulars, with plans, may be obtained at the Caterham Railway office, Hillersdon Chambers, London bridge; at the Grayhound, Croydon; of Mr. Adam Smith, Parish clerk who will show the lots), at the Caterham hotel, Caterham; at the stations on the Caterham railway; the White Hart, Godstone; the White Hart, Reigate; the Ward Arms, Westerham; the Horse Arms, East Grinstead; of Messrs. Drew and Gray, Solicitors; of Messrs. Drinkwater, Solicitors, Croydon; of Messrs. Davidson and Bradbury, Solicitors, 22, Bucklersbury; and of John Dingwall, Esq., Solicitor, Tokenhouse-yard; of Messrs. Banks and Bury, Architects, 27, Sackville-street; at the Mart; and of Messrs Norton, Hoggart, and Trist, 62, Old Broad-street, Royal Exchange.

Very important and valuable Freehold Building Ground at Paddington, lying between the Grand Junction Canal and the Harrow-road.

MESSRS. NORTON, HOGGART, and TRIST have received instructions to SELL by PUBLIC SALE, at the MART, on TUESDAY, OCTOBER 28, at TWELVE (unless previously disposed of by private contract), a very important and exceedingly valuable PLOT of FREEHOLD BUILDING GROUND, land-tax redeemed, admirably considered for frontage to the Harrow-road, communicating with the Queen's-road, Porchester-road, and Westbourne-terrace bridges, extending in depth to the Grand Junction Canal, and having a wharf on the Junction Canal and the Harrow-road. This valuable spot offers sites for about fifty houses. The buildings in the immediate neighbourhood consist chiefly of respectable private houses, and it is about the only unbuilt-upon space of land for building—May be viewed, and particulars, with plans, had of Messrs. Clayton, Solicitors, 7, Mincing-lane, Lombard-street, at the Mart, and of Messrs. Norton, Hoggart, and Trist, 62, Old Broad-street, Royal Exchange.

IN BANKRUPTCY.—ISLINGTON.—A valuable LEASEHOLD BUSINESS PREMISES, situate in Clerkenwell-street, New North-road, with double range of upper and lower workshops, planing and joiners' shop, ironmongery warehouses, sawing-houses, large yard, fitted with timber stages and racks; counting-house, and dwelling-house, suitable for a person of an extensive trade in the building line, together with a pair of substantial brick-built Six-roomed Dwellings to Nos. 13, 14, 14 and 15 in the above-named street, also Nos. 1, 2, 3, and 4 dwarf cupboards; folding-doors, approached by a flight of stone steps, from pollen-ground, and yards in the rear, of the estimated value of 100 per annum, held for a term of eighty years from 1830, at a low ground-rent. The whole will be SOLD by AUCTION, by Mr. ALFRED DAY, at the AUCTION MART, near the Bank of England, on MONDAY, the 27th of OCTOBER, at TWELVE for THREE o'clock precisely, by direction of the Official Assignee in the bankruptcy. May be viewed till the sale.—Particulars may be had of Messrs. Phillips and Lilley, Solicitors, 7, Newgate-street, Lincoln's-inn; of Mr. Bowyer, Solicitor, Basinghall street, City; and of the Auctioneer, 23, City-terrace, City-road, near the Eagle Tavern.

In Bankruptcy.

MR. ALFRED DAY, at the AUCTION MART, near the Bank of England, on MONDAY, the 27th of OCTOBER, at TWELVE for THREE o'clock precisely, by direction of the Official Assignee in the bankruptcy of Mr. Rowland and Evans, Bankrupts.—May be viewed till the sale.—Particulars may be had of Messrs. Phillips and Lilley, Solicitors, 7, Newgate-street, Lincoln's-inn; of Mr. Bowyer, Solicitor, Basinghall street, City; and of the Auctioneer, 23, City-terrace, City-road, near the Eagle Tavern.

In Bankruptcy.

MR. ALFRED DAY has received instructions from the Assignees, to SELL by AUCTION, on the PREMISES, Clapham-street, Kennington, Surrey, on TUESDAY, OCTOBER 14, and following day, at TWELVE o'clock, without reserve, the fourth and last portion of the extensive STOCK, PLANT, and EFFECTS of a Builder; comprising an 8-horse steam-engine, a 3-horse steam-engine, a 10-horse locomotive boiler, circular saw-table, up and down frame ditto, planing-table, grooving, mortising, moulding, and tenoning ditto; Silvester's patent dovetail machine, Smith's and Hand's ditto, and cedar plank, in various thicknesses; pine planks, yellow deals, Christiania ditto, sheet and pipe lead, force pumps, closet pans, firkins of white lead, pails, brushes, oils, colours, ironmongery, bags of nails, brads, pullies, locks, sash-weights, ditto fastenings, bolts, hinges, cut and wire, paper-hangings, plate and sheet glass, coloured ditto, thirty cargo-nine boards, cards, sawing machines, office desk and fittings, iron safe, stools, nests of pigeonholes, glue-pots, timber stage, the whole of the gas fittings and effects.—May be viewed on the Saturday and Monday previous to the sale. Catalogues may be had of Messrs. Phillips and Lilley, Solicitors, 7, New-square, Lincoln's-inn; of J. Nicholson, Esq. Official Assignee, 24, Basinghall-street; and of the Auctioneer, City-terrace, City-road, near the Eagle Tavern.

TO TIMBER MERCHANTS, BUILDERS, CARPENTERS, AND OTHERS.

MR. LEREW will SELL by AUCTION, on the PREMISES, 43, Union-street, Somerstown, on MONDAY, OCTOBER 13, at ELEVEN for TWELVE, 2 Lots, Wall's Lease, 40 Years, 15 Lots, Leasehold, and HAVEN'S Lease of 14 years, 1 Lot, Leasehold, comprising, dry cut staff, 35 doors, ranges, stoves, ironmongery, scaffold poles, ladders, &c. Also, on Saturday Nov. 8, Valuable Household Furniture, Pianoforte, &c. Catalogues of the Premises; and of the Auctioneer, Carlton-terrace, Hampstead-road.

SALES BY AUCTION.

SYDENHAM.—For absolute and unreserved Sale.

MR. MARSH has received instructions from the Executors of the late Thomas Hunt, Esq. to SELL by AUCTION, without the slightest reserve, on the PREMISES, Wells Road, Sydenham, on TUESDAY next, OCTOBER 28th, at THREE for FOUR o'clock, in Sixteen Lots of 10,000 each, Seven capital STOCK, SECOND DITTO, PLACE, and other BRICKS. The Premises are close to three Railway Stations, and in the highly excellent state. May be viewed the day prior and morning of sale, and catalogues obtained on the Premises, and at Mr. Marsh's Offices, 3, Charlotte-row, Mansion-house.

TO CONTRACTORS, TIMBER MERCHANTS, BUILDERS, CABINETMAKERS, PACKING-CASE MAKERS, and OTHERS.

MR. MARSH has received instructions to SELL by AUCTION, on the PREMISES, Messrs. Robinson and Bertram's Saw Mills, Swan-street, Grange-road, Bermondsey, on WEDNESDAY next, OCTOBER 15, at TWELVE o'clock, the genuine and first-class STOCK, consisting of about 2,000 squares of dry prepared flooring, in two to four yard lengths; consisting of 1¼ x 7, 1 x 8, 1 x 9, and ¾ x 7 (3 cut 2) inch dry yellow, 2 x 9, and 2 x 7 (3 cut 2) inch, 1 x 7, and 1 x 9 dry white deals and battens, and about 3,000 3 x 7 and 3 x 9 yellow, and 2½ x 7 and 3 x 7 dry yellow and white deals and battens, and 14 11 best dry bricklayer pine planks, and other useful timber. Luncheon will be provided for purchasers.—May be viewed the day prior and morning of sale, and catalogues obtained on the Premises; at the Swan Tavern, and upon the property; and at Mr. Marsh's Offices, 3, Charlotte-row, Mansion-house.

TO TIMBER MERCHANTS, BUILDERS, COACHMAKERS, CHAIRMAKERS, CABINETMAKERS, AND OTHERS.

MR. MARSH has received instructions to SELL by PUBLIC AUCTION, on the PREMISES, Yorkroad, Lambeth, near the Terminus of the South Western Railway, on TUESDAY, the 28th OCTOBER, at TWELVE o'clock precisely. Seventy Loads very superior American Beech Planks, Twenty Loads dry Ash Plank Twenty Loads English Elm Timber, Twenty Loads English Oak Timber, Ten Loads Lime-tree Planks, Five Loads Lime-tree Plank, Two Walnut trees, 360 Feet Deals, with a quantity of useful Quartering and other goods, particulars of which will appear in catalogues. Catalogues issued two days prior to Sale, and had of W. Cooper, Esq. 13, George-street, Mansion House; Duke of York, York road, Lambeth; Place of Sale; and of the Auctioneer, Philpot-street, Commercial-road East.

GODSTONE, Surrey—Valuable Freehold Land, within a few minutes' walk of the Railway Station.

MR. MARSH has received instructions to SELL by AUCTION, at the MART, on THURSDAY next, OCTOBER 23rd, at TWELVE, in seven lots, about eighty acres of valuable FREEHOLD BUILDING LAND, in the parish of Godstone, Surrey, possessing very extensive frontages both to London and the road to the railway station, divided into lots ranging from five to twenty acres, affording to purchasers an excellent opportunity for selecting most charming sites for the erection of mansions or first-class villa residences, and as it is proposed to restrict the erection of houses to one on every five acres, each purchaser will be ensured against the annoyance of being surrounded by houses of inferior character. Stone, bricks, lime, sand, and gravel can be obtained in the immediate locality, at a remarkably cheap rate. In addition to the numerous trains to and from Redhill and Reigate from the metropolis daily, the property is within 2 miles of the Caterham Station on the Croydon line, by which it is believed will be extended to the Godstone Station, by which it is proposed will be brought three miles nearer to London and the two tunnels between Godstone and London avoided. Season tickets are issued by the South-Eastern Railway Company at very reduced prices. The situation is remarkably healthy, and the neighbourhood proverbially healthy and picturesque.—May be viewed, and particulars, with conditions of sale, obtained at the Mart; of Messrs. Bannow, Solicitors, Greenwich; at the principal Inns in the locality; and at Mr. Marsh's Offices, 3, Charlotte-row, Mansion-house.

The remaining and most valuable portion of the Surplus Property of the South-Eastern Railway Company, at Hastings, about 20 Miles of which are important Freehold Building Land, presenting desirable opportunities for building speculations.

MR. MARSH has received instructions from the Directors of the South-Eastern Railway Company, to SELL by AUCTION, at the SWAN HOTEL, Hastings, on TUESDAY, the 28th of OCTOBER, at THREE o'clock precisely, 182 PLOTS of the remaining and most valuable portion of the Company's SURPLUS LAND at Hastings, offering most desirable sites for the erection of shops and private residences, adjoining the town, and possessing frontage to the railway and to the railway station, to the road from Battle, and proposed new road conferring great advantages on the property. May be viewed; and particulars and conditions of sale, and plans, obtained at the several railway stations; the Swan Hotel, Hastings; of Mr. Thomas Ruse, Surveyor to the Company, Hastings, London-bridge Terminus; and at Mr. Marsh's Auction and Estate Offices, 2, Charlotte-row, Mansion House, London.

Important Sale of Freehold Building Land, at Tottenham, Plumpton, Sutton, and Stopher.

MR. MARSH has received instructions to SELL by AUCTION, at the MART, opposite the Bank of England, on THURSDAY, OCTOBER 23rd, at TWELVE o'clock, in lots, several very valuable PLOTS of FREEHOLD BUILDING LAND, situate at Edmonton, Tottenham, Sutton, Surrey, and Stepney, possessing important frontages, and exceedingly eligible for building purposes. Particulars and plans may be obtained at the Angel, Edmonton; Greyhound, Croydon; and at Mr. Marsh's Offices, 2, Charlotte-row, Mansion House, London.

Valuable Waterside Premises on the Regent's Canal, Kingsland-road, with Cement Kilns, Steam Engines, & at Islington, near Liverpool-road.

MESSRS. EVERSFIELD and HORNE are instructed by the Mortgagees to SELL by AUCTION, at the MART, in NOVEMBER, in two lots, the beneficial LEASE of the extensive and well-known PREMISES, situate on the Canal Wharf near the Cambridge Kingsland road, together with a great expense by Messrs. Frean and Co. for the manufacture of cement, but equally applicable for many other purposes. Held for a long term, at a moderate ground-rent; also an improved rent of 34l a year, arising out of a plot of ground opposite Tuscany Wharf.—May be viewed by leave of the tenants and particulars had of Edwards Jennings, Esq. Solicitor, 1, New Inn, Lincoln's-inn, at the Mart, and of the Auctioneers, 54, Parliament-street, or Coal Exchange.

GRAY'S-INN LANE. Important Business Premises, suitable for Builders, Whitewrights, Pianoforte makers, Coal Proprietors, or Jobbers.

BUILDERS' BENEVOLENT INSTITUTION.—The NINTH ANNIVERSARY DINNER will be held at the LONDON TAVERN, on WEDNESDAY, 29th inst. Mr Alderman WILLIAM LAWRENCE, President, in the Chair.

Gentlemen desirous of promoting the interests of this Institution, by becoming stewards will be pleased to forward their names to the Treasurer, Mr. GEORGE BIRD, 38, Edgware-road; or to the Secretary, at the Offices, 19, Southampton-street, Bloomsbury.

A. G. HARRIS, Secretary.

COMPETITIONS.

TO SURVEYORS and OTHERS.—PREMIUMS for PLANS.—The Trustees for Sale of a Freehold Estate of two acres (including the British Spa and near the Crystal Palace, requires PLANS for LAYING OUT the same for building purposes, showing the necessary roads, sewers, &c. the whole to be clearly defined and appropriated in suitable lots and laid down to a scale of two chains to one inch, from actual admeasurement. The following premiums are offered: For the plan adjudged the best for the purpose, 10 guineas; for the second, 5 guineas; for the third 3 guineas. The plans to which the above premiums shall be awarded will be retained by and be the property of the trustees. Further particulars may be obtained of Mr PEACOCK, Builder, near the Rail Road Station, Norwood, close to the property. The Trustees will peremptorily on the 1st day of DECEMBER next to examine the plans, which are to be previously forwarded, enclosed and sealed, to the Secretary's Office, Auction Mart, London, addressed to the Trustees of the White Horse, Norwood Estate.

TO SURVEYORS. — NOTICE. — NORWOOD, BRULAH SPA ESTATE, near the Crystal Palace. It having been intimated to the Trustees that the time mentioned for the Delivery of the Plans is insufficient, they have determined to EXTEND the same to MONDAY, DECEMBER 8, at the same place.

WELLINGTON TESTIMONIAL.—To SCULPTORS and ARCHITECTS. The Committee are desirous of receiving DESIGNS for a COLUMN and STATUE to be erected in honour of the late Duke of Wellington, at Liverpool.

The amount at present at the disposal of the Committee is about £5000, and if they have not sufficient to be carried out for that sum, they are desirous that it should be, but Artists will be at liberty to send in a separate design, either for the Column alone, or for the Statue and Pedestal.

The competitors must accompany their designs by estimates of the cost, either for the Column and Statue combined, or separately, as stating the basis (and if made, which they propose to employ.

A premium of £50 will be given for the design which, in the opinion of the Committee, is selected for the purpose.

Each design to be marked, with a motto or device, and have one of the Author is not to appear, but to be put in a separate sealed letter, bearing on the outside a corresponding motto or device.

The design, for which the premium may be awarded to become the property of the Committee.

All communications to be addressed to the Chairman of the Committee, at the Town-hall, Liverpool; and the designs must be delivered there, free of expense, on or before the 1st day of NOVEMBER next.

Town-hall, Liverpool, September 20, 1856.

TO ARCHITECTS and OTHERS.—The Burial Board for the Parish of Aylesbury is desirous of receiving PLANS, DESIGNS, and separate SPECIFICATIONS and ESTIMATES, comprising one or more plans and specifications, for LAYING OUT, PLANTING, and PEOPLING a NEW BURIAL GROUND, with suitable entrance gates, and for BUILDING a LODGE and TWO CHAPELS thereon. The ground contains 6 acres, and is adjoining the present burial ground; further information obtained at the Office of the Board. The Board will not be bound to employ the person whose designs, plans, or drawings, may be adopted; but in the event of his not being employed, will pay him a premium of ten guineas, and his designs, plans, drawings, and specifications shall then become the absolute property of the Board. The amount of the estimated expense, under each of the following heads, must be stated, viz.—Laying out ground; Planting; Fencing; Entrance Lodge; Chapels; Boundary Walls; Roads, Paths, and Drainage. Each plan must be accompanied by a sealed letter containing the name and address of the author, and have a motto or device thereon, which will be noted on the plan when made and the plans, &c., if approved of, to be open. The Board do not bind themselves to accept the lowest or any tender.

By order of the Board,

J. M. LENSON, Clerk to the Board.

Aylesbury, October 10, 1856.

COMPETITIONS.

TO SURVEYORS and OTHERS.—PREMIUMS for PLANS.—The local authority of the borough of Lurkhall, in the forest of Rogate, Sussex, require PLANS for the LAYING of SEWERS with levels, sections, &c. the whole to be clearly defined and laid down to a scale of one chain to the inch. The following premiums are offered for the plans adjudged the best by the Committee, 20l.; for the second best, 10l. The plans to which the above premiums shall be awarded will be retained by, and be the property of the local authority. The Committee will meet on the first MONDAY in DECEMBER next to examine the plans, which are to be previously forwarded, enclosed and sealed, to their Office, Station-yard, Redhill, where further particulars and a map of the borough may be seen.

FREDK. BONNY, Inspector.

TO ARCHITECTS and SURVEYORS.—WHITE HORSE ESTATE, NORWOOD.—Competitors for the Premium of 10*l.* offered by the owner of this estate for the best plan for building purposes, can have a copy of one recently made from actual survey, and guaranteed to be correct, for one guinea.—Apply to Mr SMITH, Surveyor, Edenbridge, Kent

TO ARCHITECTS. — The Scarborough Cliff Bridge Company are desirous of procuring DESIGNS for ENLARGING and otherwise IMPROVING the SPA SALOON, accompanied with detailed working drawings, specification, and estimate. The Concert room is to be made efficiently large to accommodate 1200 persons, exclusive of an orchestra for fifty performers, and to afford room to one, and other refreshments. The Company will award to the author of the best design in their judgment, the sum of 50*l.* and to the author of the second best design, the sum of 20*l.* Designs and specification for which premiums are awarded will become the property of the company who will not bind themselves to employ the author to superintend or carry out the works. The company will pay either of the premiums unless a sufficient Tender be made for the actual execution of the works within the amount of the author's estimate. The designs must be deposited with Mr ROBERT WARD, the Secretary to the Cliff Bridge Company, Scarborough, free of all expenses, on or before the 29th NOVEMBER next, marked with an emblem or motto on the outside, and enclosing a sealed letter, with the name and address of the author. The designs not approved will be returned to the authors on application. By order of the Committee of the Cliff Bridge Company.

ROBERT WARD, Secretary.

Scarborough, October 18, 1856.

CONTRACTS.

TO BUILDERS.—WEST BROMWICH SCHOOLS.—Parties desirous of TENDERING for the ERECTION of the above Schools, can see the Plans and Specifications at the Offices of RICHARD CUDDICK, Esq. Solicitor, No. 2, West Bromwich, on and after MONDAY, the 13th inst. and Tenders to be sent to the same place on or before the 27th inst. The lowest Tenders will not necessarily be accepted.

JAMES WILSON, F.S.A. Architect

1, Belmont, Bath, October 8th, 1856.

TO BUILDERS. — MAGOR SCHOOLS, MONMOUTHSHIRE. — Plans and specifications for SCHOOL BUILDINGS, to be erected close to the Magor Station, on the South Wales Railway, may be seen at the Rev. JOSEPH MATHEWS, Ash Cottage, near Magor. Tenders to be sent to either of them, addressed as before the 21st OCTOBER. The lowest or any Tender cannot necessarily be accepted.

PRICHARD and SEDDON,
Diocesan Architects, Cardiff.

THE CONSERVATIVE LAND SOCIETY.

Trustees.

Viscount Ranelagh.
Right Hon. R. A. C. N. Hamilton, M.P.
Hon. C. Lowther, M.P.
J. C. Cobbold, esq. M.P.

To ROAD CONTRACTORS, &c.—The Executive Committee are prepared to receive TENDERS for CONTRACTING a ROAD, BUILDING a WALL, and other WORKS on the St. Margaret's Estate, Isleworth, Middlesex. The drawings and specification may be seen at the Offices of the Surveyor, Mr. GEORGE MORGAN, 31, Parliament-street, on and after MONDAY, the 20th of OCTOBER, between the hours of ELEVEN and TWO o'clock. Tenders to be delivered on or before TWELVE o'clock on SATURDAY, the 25th of the same month, at the Secretary's Offices, and endorsed "Tenders for Roads," &c. The Executive Committee do not bind themselves to accept the lowest or any Tender.

CHARLES LEWIS GRENFELL,
3, Northumberland-street, Strand.

TO BUILDERS, CONTRACTORS, and OTHERS.—NEW WINDSOR CEMETERY.—The Council of the Royal Borough of New Windsor, as the Burial Board of the aforesaid Borough, are prepared to receive TENDERS for the ERECTION of TWO CHAPELS, CURATORS' HOUSE, ENTRANCE GATES, BOUNDARY FENCES, &c. and for the Formation of the Roads, Paths, and Drains connected with the Cemetery. The plans, drawings, specifications, and forms of tender can be seen, and bills of quantities obtained, at my Offices, Windsor, on WEDNESDAY, the 15th inst. and from that day until FRIDAY, the 24th of October, between the hours of TEN and FIVE. Tenders, in the usual form, and addressed to the Chairman of the Burial Board, Architects, Messrs. DUTTON and WOODMAN, 1, Grey Friars-road, Reading. The Tenders are to be prepared and delivered in separately, as follows:

No. 1.—For Erection of Chapels, Curator's House, and Entrance Gates, &c.

No. 2.—For Boundary Fences, &c.

No. 3.—For Roads, Paths, and Drainage.

Contractors may tender for one or more of the lots of the works. All tenders must be delivered at my office in sealed envelopes addressed to me, HELEN Clock, and on MONDAY (return or NOVEMBER next, endorsed "Tender for Cemetery Works," and not addressed to any individual member of the Council.

The Council do not bind themselves to accept the lowest or any tender.

HENRY DARVILL, Town Clerk.

Windsor, October 13, 1856.

CONTRACTS.

ROYAL ENGINEER CONTRACT. — The War Department being about to enter into a CONTRACT for the CONSTRUCTION of a ROAD, BRIDGE, &c. at SHOEBURYNESS, on the Essex coast, may be desirous of TENDERING for the WORKS, may inspect the plans and specification thereof, and receive all necessary information relative thereto, by applying either to Mr. CARTWRIGHT, Clerk of Works, at the Royal Engineer Office, Grand Depôt, Woolwich; or to Mr HOPKINS, Clerk of the Works, at Shoeburyness, between the hours of TEN a.m. and FOUR p.m. up to the 22nd inst. The Tenders to be delivered at the office of the Director General of Contracts, War Department, Pall-mall, London, on or before TWELVE o'clock on the 23rd of OCTOBER, 1856.—The War Department reserves to itself the right of rejecting the whole or any of the Tenders.

Grand Depôt, Woolwich, October 3, 1856.

Tenders to be delivered at the Office of the Director General of Contracts, War Department, Pall-mall, London, on or before TWELVE o'clock on the 23rd of OCTOBER, 1856. The War Department reserves to itself the right of rejecting the whole or any of the Tenders.

Grand Depôt, Woolwich, 11th October, 1856.

NOTICE to BUILDERS and CONTRACTORS.—ORDNANCE WORKS.—The Commanding Royal Engineer of the Dover District hereby gives Notice, that sealed TENDERS will be received at the Office of the Director General of Contracts, Pall-mall, London, on or before MONDAY, the 27th day of OCTOBER, 1856, from persons desirous of CONTRACTING for WORKS to be EXECUTED in improving the fortification at Dover Drawings and specifications of the works to be executed may be seen by persons fully competent to undertake the work (none others need apply), and forms of Tender obtained at the Royal Engineer Office, Archcliff Fort, Dover, between the hours of TEN and FOUR o'clock, from FRIDAY, the 17th inst. until SATURDAY, the 25th of OCTOBER, 1856 (Sundays excepted). A person belonging to the Royal Engineer Department will attend each day at the Western Heights Barracks for—TEN to TWELVE o'clock, to point out the works and explain the drawings. The party whose Tender may be accepted for the work will be required to enter into a bond, with two eligible securities, jointly and severally, to the amount of a penalty of £1000 for the due performance of the contract. Tenders for the above work to be addressed to the Director-General of Contracts, Pall-mall, London, and endorsed "Tender for Work at Dover."

N.B.—The War Department reserve to themselves the right of rejecting the Tender of any of the Tenderers.

Royal Engineer Office, Dover, October 15th, 1856.

NOTICE to BUILDERS and CONTRACTORS.—ORDNANCE WORKS.—The Commanding Royal Engineer of the Dover District hereby gives Notice, that sealed TENDERS will be received at the Office of the Director General of Contracts, Pall-mall, London, on or before MONDAY, the 27th day of OCTOBER, 1856, from persons desirous of CONTRACTING for ADDITIONS and ALTERATIONS to the Western Barracks at Dover. Drawings and specifications of the works to be executed may be seen by persons fully competent to undertake the work (none others need apply), and forms of Tender obtained at the Royal Engineer Office, Archcliff Fort, Dover, between the hours of TEN and FOUR o'clock, from FRIDAY, the 17th inst. until SATURDAY, the 25th of OCTOBER, 1856 (Sundays excepted). A person belonging to the Royal Engineer Department will attend each day at the Western Heights Barracks for—TEN to TWELVE o'clock, to point out the works and explain the drawings. The party whose Tender may be accepted for the work will be required to enter into a bond, with two eligible securities, jointly and severally, to the amount of a penalty of £1000 for the due performance of the contract. Tenders for the above work to be addressed to the Director-General of Contracts, Pall-mall, London, and endorsed "Tender for Work at Dover."

N.B.—The War Department reserve to themselves the right of rejecting the Tender of any of the Tenderers.

Royal Engineer Office, Dover, October 15th, 1856.

LLANDUDNO IMPROVEMENT ACT, 1854.—To SEWER CONTRACTORS, &c.—Parties desirous to CONTRACT for the CONSTRUCTION of the MAIN SEWER in the Town of Llandudno, may see the plans, sections, and specifications prepared by T. MACCOLL SMITH, Esq. C.E. at the office of the Commissioners, between the hours of TEN o'clock a.m. and FOUR o'clock p.m. daily. Tenders, under seal, to be sent into the Office before MONDAY, the 27th of OCTOBER next. The Commissioners do not bind themselves to accept the lowest Tender; but in the event of one being accepted, the party or parties will be required to give security for the due performance of his or their contract. The Council must also find a quantity of screwing jacks, pipes, invert and junction blocks, which the contractor will have to take at a price.

WANTED, a well-experienced competent Person, to act as CLERK of the WORKS, to superintend and take charge of the above Works being properly carried out.—Applications, stating terms, accompanied by satisfactory testimonials or references, to be made to the Commissioners' Office, before the 25th inst.—By order,

JOHN WILLIAMS, Clerk to the Commissioners.

Improvement Commissioners Office, sept 22 1856.

SUSSEX COUNTY LUNATIC ASYLUM. — BUILDERS.—Notice is hereby given, that the JUDGES intend to receive TENDERS for the BUILDING of a PAUPER LUNATIC ASYLUM for the County of Sussex, to be erected on the Estate of Sir Thomas READ, the 1st day of DECEMBER next, on or before which day further Tenders will be received by the Committee of Visitors at the Shire Hall, Lewes, and not afterwards.

By order of the Committee of Visitors,

JOHN CHILLMAN, Clerk.

CONTRACTS.

BRADFORD CORPORATION WATER-WORKS.—TO EXCAVATORS, MASONS and GENERAL CONTRACTORS.—The Waterworks Committee of the Bradford Corporation will be prepared to receive TENDERS for the EXECUTION of the following WORKS on WEDNESDAY, the 29th day of OCTOBER, at ELEVEN o'clock in the FORENOON, for the purpose of receiving TENDERS or PROPOSALS for the following WORKS:—

CONTRACT C.—The excavating, forming, and completing of a STORE RESERVOIR, of about sixty acres in extent, near to Chelker House, in the township of Draughton, and parish of Skipton, with the Culverts, Waste Pit, and other Works connected therewith, including the diversion of the Skipton and Otley turnpike road for about half-a-mile in length.

CONTRACT D.—The excavating, forming, and completing of a STORE RESERVOIR, of about sixty acres in extent, on the Barden Beck, in Barden Broad Park, in the township of Barden and parish of Skipton, with the Channels, Residuum Lodges, Culverts, Valve Well, Waste Weirs, Waste Water Channel, and other Works connected therewith; also, the building and completing of a Branch Conduit of about 720 yards in length from such Store Reservoir, to Main Conduit hereinafter mentioned.

CONTRACT E.—The excavating, forming, and completing of a MILLOWNERS' COMPENSATION RESERVOIR, of about nine acres in extent, on the river Dibb, near to Grimwith, in the townships of Appletreewick and Hartlington, in the parish of Burnsall, with the Culverts, Valve Well, Waste Weir, Waste Water Channel, Gauge Basin, Residuum Lodges, and other Works connected therewith.

CONTRACT F.—The forming and completing of about 17½ miles in length of the main Aqueduct or Conduit for bringing an improved supply of water to the town and borough of Bradford, wherein about 5 miles will have to be covered by means of tunnelling, and about 44 miles will consist of a cast-iron main pipe, and which Contract may be subdivided as follows:—

Division No. 1.—Main Conduit from the end of Barden Beck Branch, in the township of Barden, to Addingham low moor being a length of about 7,830 yards, including the Barden Tunnel and parish of Skipton, with the Draughton Tunnel of about 1,760 yards in length, and the Chelker Tunnel of about 1,830 yards in length, with the leading and laying down of about 930 yards in length of Cast-iron Pipe of 36 inches in diameter for crossing the Ings Beck Valley, near Draughton, and a Branch Conduit of about 330 yards in length for bringing the water from the above named Chelker Reservoir to such Main Conduit.

Division No. 2.—Main Conduit from the end of Division No. 1, at Addingham low moor, to a public highway passing through Holden Wood, in the township of Silsden, and parish of Kildwick, being a length of about 7,875 yards, including the Silsden Tunnel of about 1,970 yards in length, the Swartha Tunnel of about 960 yards in length, the lead leading and laying down of about 200 yards in length of Cast-iron Pipe of 5 inches in diameter for crossing the Holden Beck Valley, near Holden Wood, and the Holden Beck Branch Conduit of about 310 yards in length, of which about 110 yards will be tunnelled.

Division No. 3.—Main Conduit, from the end of Division No. 2, at Holden Wood, to East Morton, in the town ship of Morton East and West, and parish of Bingley, being a length of 5,890 yards.

Division No. 4.—Main Conduit, from the end of Division No. 3, at East Morton, to a public highway at Heaton, near to the Service Reservoir now in progress there, being a total length of about 9,270 yards, including the Greetland Tunnel, of about 320 yards in length, the Gilstead Tunnel, of about 545 yards in length, and the leading and laying down of about 1,200 yards in length of Cast-iron Pipe of 30 inches in diameter, for the valley of the Morton Beck, at East Morton; and a further length, of about 4,900 yards in length of Cast-iron Pipe, of the diameter, for crossing the valley of the river Aire, near the passage of the river Aire and the Leeds and Liverpool Canal, below Thorpe Mill, near Shipley.

The Committee do not bind themselves to accept the lowest or any other Tender or proposal. Plans and specifications may be seen, and further information may be had, from and after MONDAY, the 6th day of OCTOBER, on application to Mr. J. W. LEATHER, Civil Engineer, Leeds.—Bye-order,

W. H. HUDSON, Town Clerk.

Bradford, September 23rd 1856.

* Instead of the 22nd, as before advertised.

The Council will not pledge themselves to accept the lowest or any other Tender. No allowance for estimates. ALEX. MEEK, Town clerk.

Devizes, October 8, 1856.

CONTRACTS.

GLASGOW CORPORATION WATER-WORKS.—LOCH KATRINE AQUEDUCT—KELLY and DUNTREATH CONTRACTS.—To CONTRACTORS.—The Magistrates and Council of the City of Glasgow, as Commissioners under the Glasgow Corporation Water Works Act 1855, are now ready to receive, and hereby invite TENDERS for the EXECUTION of further portions of the Loch KATRINE AQUEDUCT, which will be comprised in Two Contracts, viz.:—"No 4, or Kelly Contract," extending from the Village of the Duchray to the Valley of the Endrick, being a length of about 6½ miles; and, "No. 5 or Duntreath Contract," extending from the Valley of the Endrick, by Killearn, to Strathblane, being a length of about 5 miles. In No. 4 there will be Two Tunnels of the respective lengths of 1,175 and 1,418 yards, with various shorter ones, varying from 20 yards to 726 yards in length, and various Iron and Masonry Aqueducts. In No 5 there will be Two Tunnels, 318 and 880 yards respectively in length, and various Masonry Aqueducts. Each Contract will include all relative work. Plans, sections, drawings, and specifications, will then be ready for inspection on and after WEDNESDAY, the 15th inst., in the Town-hall, at the Cross of Glasgow, entry by No 12, Trongate-street. Copies of specifications and quantities may be obtained, by intending Contractors on application to the Subscriber, at his Office 24, Miller-street, Glasgow; and any further information may be obtained at the Offices of J. F. BATEMAN, Esq. the Engineer, in Manchester; and from Mr. HILL, Assistant Engineer, Loch Ard; and Mr MOORE, Assistant Engineer, at Milnavie, who will point out the line of Works.

Tenders for the construction of the Works, addressed to the Commissioners, sealed, and marked "Tender for Kelly Contract," or "Tender for Duntreath Contract," as the case may be, must be delivered to Mr. BURNET, at his Office, 24, Miller-street, Glasgow, on or before WEDNESDAY, the 29th OCTOBER current, at TWELVE o'clock noon.—By order of the Committee,

JOHN BURNET, Secretary.

Waterworks Office, 24, Miller-street, Glasgow, Oct. 6, 1856.

SMETHWICK LOCAL BOARD of HEALTH.—To LAND SURVEYORS, &c.—Survey and Plans for the District.—The Local Board of Health hereby give Notice, that they are prepared to receive TENDERS for a SURVEY and PLANS of the District of the Hamlet of SMETHWICK in accordance with the Public Health Act, 1848. Conditions and particulars for the survey and forms of Tender may be had, and specimen plans, and a plan showing the boundaries of the district and describing the proposed town part of it, may be seen on application to Mr. NICHOLS, Surveyor to the Local Board of Health; at the Offices of the Board, in Rolfe-street, Smethwick. Sealed Tenders, addressed to the Chairman, specially endorsed "Tender for Survey," must be sent to Mr. RALPH DOCKER, Solicitor, Clerk to the Local Board of Health, Rolfe-street, Smethwick, on or before the 1st day of NOVEMBER, 1856. The Local Board do not pledge themselves to accept the lowest or any other Tender.

By order, RALPH DOCKER, Clerk to the Local Board.

Rolfe-street, Smethwick, October 6th, 1856.

PARTIES desirous of CONTRACTING for the ERECTION of a CALVINISTIC CHAPEL, at Llandudno, may see the plans and specification on and after MONDAY, the 13th, at our Office, Llandudno. Tenders to be delivered, not later than NOVEMBER 8, to Mr. WILLIAMS, Tai, Newyddyn. The Committee do not bind themselves to accept the lowest Tender. The Contractor will be required to find sureties for the due performance of the several Works.

WEHNERT and ASHDOWN.

43, Charing-cross, London, and Llandudno

TO STEAM-ENGINE MAKERS.—The Town Council of the Borough of Dorchester, acting as the Local Board of Health for the same borough, are desirous of receiving TENDERS from persons willing to CONTRACT for the ERECTION, with duplicate boilers, of suitable STEAM POWER and PUMPS, at Dorchester, to raise 1000 gallons of water per hour from a well to a height estimated at 140 feet, and to force the same to a further elevation of 30 or 40 feet. The parties Tendering are required to specify the description and power of the steam-engine and pumps they propose to erect and the necessary consumption of fuel per hour to work the same and to forward their Tenders to Mr. SYDENHAM, Town Clerk, Dorchester, on or before the 1st NOVEMBER next. The Council do not bind themselves to accept the lowest or any Tender.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, weight, singly or in peals.

TUNED BY MACHINERY

Stocked and wheeled ready for fixing. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system, which give superior tone and facility for ringing.

ZINC ROOFING, INCLUDING TIMBER OR IRON FRAMEWORK,

IS AS

CHEAP AS SLATES OR GALVANIZED IRON, LIGHTER, AND MORE DURABLE.

Certificates, and Models of various descriptions, may be seen, and estimates obtained on application to

THE SURVEYOR OF THE VIEILLE MONTAGNE ZINC MINING COMPANY, 12, MANCHESTER BUILDINGS, WESTMINSTER.

ROOFS CONSTRUCTED UNDER HIS SUPERINTENDENCE GUARANTEED TO REQUIRE NO REPAIRS FOR AT LEAST TEN YEARS.

THE OLD METAL BEING ALWAYS RETAKEN AT HALF-PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.

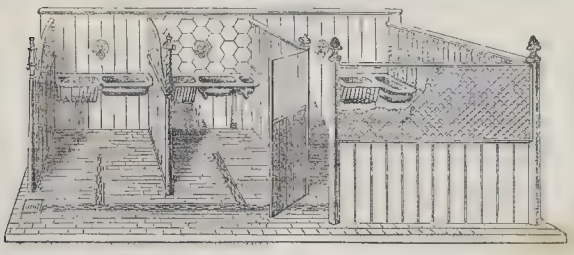
Many roofs covered with zinc thirty-five years ago have never required repairs.

WROUGHT-IRON GIRDERS

For BRIDGES and BUILDINGS,
MANUFACTURED AND GUARANTEED AS TO STRENGTH.
CAST-IRON GIRDERS for BRIDGES and BUILDINGS.
Castings of every description.

ROLLED WROUGHT-IRON FLITCHES
For TRUSSING BETWEEN TIMBER.

SPIKES, RIVETS, CUT NAILS, WROUGHT DITTO, SCREWS, BOLTS AND NUTS, BAND IRONS, CHAINS, &c.



CONTRACTORS' PLANT, RAILS, EARTH WAGGONS,
And IRON WORK for WOOD WAGGONS, &c.

MATTHEW T. SHAW, 64, CANNON-STREET (late with C. J. Mare & Co.)

Such arrangements are made for Despatch and Punctuality that Orders can be executed in a few days.

NEW PATENT INVENTIONS FOR STABLE REQUISITES.

AWARDED A PRIZE AT THE PARIS EXHIBITION, AND PATRONISED BY THE ENGLISH AND FRENCH GOVERNMENTS.

COTTAM and HALLEN, of Winsley-street,

Are the original inventors of the PATENT ENAMELLED MANGER, WATER-TROUGH and WROUGHT IRON RACK, united to an iron top-plate, and forming one complete and useful fixture, having Cottam's Patent Noiseless Halter Guide and Collar-Rein attached, the tail of which is taken to the back of the manger, and works with ease and freedom up or down the guide-bar. Cottam's new Patent Seed-Box, of galvanised sheet iron, is an important addition to the above fittings, being simple in construction, light and durable, promotes cleanliness, and is economical in its results. Also, the Patent Saddle and Harness Bracket combined, which can be used with great advantage where space is an object, as it can be turned up out of the way when not in use.

Improved Harness Holders, for preserving the shape of the harness, and preventing its cracking. Patent Loose-Box Fittings, Head and Durable Corn-Bins.

Improved Surface Drain, with safety covers. Sanitary Traps, and every article for the harness room and stable, kept in stock, plain, galvanized, and enamelled. Iron Gates, Fencing, Hurdles, &c.

The new Illustrated Catalogue for 1856, and estimates gratis, upon application to

COTTAM AND HALLEN, 2, WINSLEY-STREET, OXFORD-STREET.

FLAVEL'S PRIZE KITCHENER.

The only Kitchen Range which obtained a Prize Medal and special approbation at the Great Exhibition, 1851.

These Ranges are strongly recommended for their simplicity of construction and their economy and cleanliness in use.

The top forms a Hot-plate, and the open fire removes many of the objections which are felt to close Ranges.

They are made in all sizes, from 3 feet to 18 feet in width, suitable for large or small establishments.

They are admirably adapted for the Cure of Smoky Chimneys.

SOLE AGENTS:
BENHAM AND SONS,
19, WIGMORE-STREET, LONDON;
and at the Crystal Palace, Sydenham.

BARTON'S PATENT SAFETY STABLE FITTINGS, and ENAMELLED MANGERS.

THESE FITTINGS will be found to possess all the latest and most important improvements, and are of the best manufacture. An assortment of Stable furniture in stock. Iron Hurdles, Gates, Fencing, Tomb-railings, &c. New illustrated Catalogues forwarded on receipt of two postage stamps. JAMES BARTON, Ironfounder, &c. 373, Oxford-street, London.

IMPORTANT to ENGINEERS, MILLOWNERS, &c. NORTH WOOLWICH ELASTIC STEAM PACKING (Canvas and India Rubber), at 1s. 6d. per pound. Rings 3d. per lb. extra, as supplied to her Majesty's dockyards. CAUTION.—Non-genuine unless stamped, thus S. W. SILVER and Co.—Works, North Woolwich.

TESTIMONIALS

"Commercial Mills, Cornbrook, Manchester, Oct. 6, 1854.

"GENTLEMEN,—We have been using almost exclusively, for the last three years, your Packing for stuffing boxes and steam and water joints, previous to which time we tried all the sorts which came under our notice, but yours we consider decidedly the best and most economical. We are, yours respectfully,

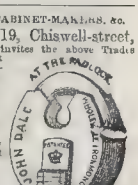
"JOSHUA SCRIVENER and SONS."

"King and Queen Iron Works, Rotherithe.

"London Nov 11, 1854.

"GENTLEMEN,—We have tried your Patent Packing for some time in our steam-engines, and also in steam-pipe joints, and find it efficient and economical, and to be much superior to the ordinary hemp packing. It is especially serviceable in the slide valve.—Yours truly, "HOWARD RAVENHILL and CO."

"Works, Deptford, Jan. 29, 1856.



"I have pleasure in stating that the Packing of Messrs. S. W. Silver and Co.'s has been in use in the various parts of the engines on board the steam-ships of the company, and given every satisfaction. "J. BEARDMORE, Engineer,

"General Steam Navigation Company."

Copies of further testimonials forwarded on application to S. W. SILVER and CO. Nos. 3 and 4, Bishopsgate-street Within, opposite the London Tavern.

TO BUILDERS, CARPENTERS, CABINET-MAKERS, &c.

JOHN DALE, 18 and 19, Chiswell-street, Finsbury-square, respectfully invites the above Trades to the inspection of his immense stock of ironmongery, which cannot be surpassed in variety, quality, and cheapness by any house in London.

RADIATING & REFLECTING STOVE.

WILLIAM S. BURTON'S

New Register Stove combines completely the well known principles of both Stephen's and Sylvester's celebrated Patent stoves, while it has others equally valuable, which are peculiarly its own, and for which a patent has been granted. Its reflecting and radiating powers are perfect, it is very simple, and cannot be put out of order, consumes but little fuel, is most cleanly and cheerful in use, while its general appearance, no fender being needed, is most imposing.

Prices, complete, black or bronzed, from 2l. 10s.; bright, 3l. 5s. and upwards. One may be seen in action in his showrooms, which contain such an assortment of fenders, stoves, ranges, fire-irons, and general ironmongery, as cannot be approached elsewhere, either for variety, novelty, beauty of design, or exquisiteness of workmanship. Bright stoves, with bronzed ornaments and two sets of bars, 4l. 15s. to 13l. 13s.; ditto, with ormolu ornaments and two sets of bars, 8l. 8s. to 22l. Bronzed fenders with standards, 7s. to 3l. 12s.; steel fenders, 2l. 12s. to 11l.; ditto, with rich ormolu ornaments, 2l. 15s. to 18l. Fire-irons, from 1s. 9d. the set to 3l. 3s.

The late additions to these extensive premises (already by far the largest in Europe), are of such a character that the entire of EIGHT HOUSES is devoted to the display of the most magnificent stock of

GENERAL HOUSE IRONMONGERY

(including Cutlery, Nickel Silver, Plated Goods, Baths, Brushes, Turnery, Lamps, Gaseliers, Iron and Brass Bedsteads, Bedding, and Bed Hangings), so arranged in sixteen Large Show Rooms as to afford to purchasers long facilities in the selection of goods that cannot be hoped for elsewhere.

Illustrated Catalogues sent (per post) free.

39, OXFORD-STREET; 1, 1a, 2, and 3, NEWMAN-STREET; and 4, 5, and 6, PERRY'S-PLACE, London.

Established 1820.

TYERMAN'S PATENT HOOP-IRON BOND,

FOR BUILDING PURPOSES.

ADOPTED BY SEVERAL DEPARTMENTS OF THE GOVERNMENT.

TARIFF OF PRICES beyond the current Price of Hoop-iron.

Gauge.	In. wide.	Per 1,000 ft.
No. 16	1½	7s. 4d.
15	1¾	7s. 6d.
15	1¾	8s. 0d.
15	2	8s. 6d.
15	2¼	9s. 0d.

THE PATENT BOND (which is prepared from the ORDINARY HOOP IRON, by notching it at intervals of 1¼ inches) is now being extensively used in the leading GOVERNMENT WORKS, DOCK BUILDINGS, BANKS, ASYLUMS, BARRACKS, WAREHOUSES, PRISONS, ENGINE-HOUSES, and MANUFACTORIES, as well as in other PUBLIC and PRIVATE WORKS, in London and in all parts of the kingdom.

Sole Manufacturers—THOMAS PERRY and SONS, Highfields Works, Bilston.

London Depôt—ST. ANN'S WHARF, EARL-STREET, BLACKFRIARS.

ECONOMIC COOKING-STOVE.—

DEANE, DRAY, and CO. recommend with confidence their IMPROVED COOKING-STOVE to the notice of the public. It is cheap in first cost, simple in construction, easy of management, capable of doing a large amount of work with a comparatively small consumption of fuel, and is manufactured in sizes suitable for large or small families. In operation daily in the stove and fender department of Deane, Dray, and Co.'s establishment, where may also be obtained engravings with prices, or forwarded free by post.—DEANE, DRAY, and CO., opposite to the Monument, London-bridge. Established A.D. 1700.

DR. ARNOTT'S SMOKE-CONSUMING GRATE.

Will this Grate be come universally used?

It advantages over every other consist in—

1. A saving of 50 per cent in fuel.
2. Its being a cure for a Smoky Chimney.
3. Its not requiring one half the attention of an ordinary fire.
4. Its being perfectly safe.

A Prospectus, with a Second Series of Testimonials, just issued, from all parts of the country, will be sent on application.

F. EDWARDS, SON, and CO. 41, Ludgate-street, Oxford street.

VENTILATING STOVES! SUSPENSION

STOVES!—Approved by thousands of purchasers, and recommended as the two best, cheapest, most healthy, and economical for churches, chapels, halls, schools, warehouses, shops, greenhouses, bedrooms, libraries, &c. Prospectuses, with prices, sent post-free.—DEANE, DRAY, and CO. Stove Range, Ironmongery and Furnishing Warehouse, London-bridge.

HEATING BY HOT WATER.

JOHN WEEKS and CO. King's-road, Chelsea, HOT WATER APPARATUS MANUFACTURERS. Buildings of every description, even of the most extensive dimensions, can be effectually warmed by Hot Water. JOHN WEEKS and CO. can give innumerable references of Churches, Dwelling-houses, Warehouses, &c., where they have fixed their Hot Water Apparatus. Also to be seen in extensive operation at their Premises, King's-road, Chelsea.

BATHS and HOT-WATER APPARATUS.

J. TYLOR and SONS' ILLUSTRATED CATALOGUE of BATH WORK, &c. to be had on application. Estimates and Plans for Fixing given. J. TYLOR and SONS, Manufacturers, Warwick-lane, Newgate-street, London.

MR. S. EGAN ROSSER, Warming and Ventilating Engineer, &c.

(successor to the late Mr. John Sylvester, C.E.) has REMOVED from Great Russell-street, Bloomsbury, to No. 6, CANNON-ROW, PARLIAMENT-STREET, WESTMINSTER.

A PRIZE MEDAL for SUPERIOR LOCKS

was awarded to J. H. BOOBBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Foundry, Nails (wrought and cut), Copper and Zinc; Patent Locks of all descriptions; China, Glass, and Wood Furnitures of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilator, 4s.; and the new registered Venetian Ventilator, so much admired, &c. &c. 6d. each.

J. H. BOOBBYER (late STEICH and BOOBBYER), established nearly 200 years, for the supply of Goods from the best Manufactories, at the lowest prices.

14, Stanhope-street, Clare-market, London.

JOHN TANN'S NEW PATENT

RELIANCE LOCK and CHEMICAL FILLED WROUGHT-IRON FIRE-PROOF SAFES, DOORS, ROOMS, &c. Manufacturers of cash, deed, and paper boxes, embossing and copying presses, letter balances, and every description of lever locks and street-door latches. To be had at the General Lock and Safe Warehouse, 30, Walbrook, City. List of prices on application.

TO IRONMONGERS, BUILDERS, &c.

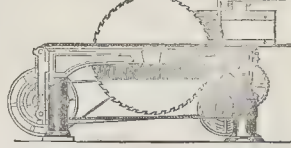
PATENT WROUGHT-IRON WELDED

TUBE for GAS; galvanized ditto for water; high-pressure cocks, &c. Manufacturers of Dr. Arnott's Improved Ventilators. HULETT and CO. 5, High Holborn.

NEW PATENT MACHINE for

MORTISING and TENONING HARD or SOFT WOOD and BORING WOOD or IRON.

House and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to call at the Patentees', POWIS, JAMES, and Co. Wholesale Builders and Cabinet Makers, Ironmongery Establishment, 58, Watling-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing these three separate kinds of work by one machine; and as it is self-feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.



P.S. Steam Engines and Machinery attracted for

AMERICAN MACHINERY.—L. D. OWEN

and CO. Importers, have on hand at 187, Tottenham court-road, London, Woodworking Machinery, manufactured by Messrs. Buck and Co. consisting in part of Planing, Tonguing, Morticing, Mortising, and Sawing Machines, of the best structure, which they offer at prices which cannot fail to suit.

N.B. Machinery from the works of Messrs. Buck and Co. may be seen in operation at the Royal Arsenal, Woolwich.

MACHINERY for SAWING, PLANING, MOULDING, &c.

SAMUEL WORSSAM and CO. beg to call the attention of Contractors, Shipbuilders, proprietors of Saw-Mills, and others, to their improved Inventions and Adaptations in Saw Frames and Benches, Roller and Chain Planing Machines, Endless Saw Frames, and all other kinds of Machines for Sawing, Planing, Grooving, and Moulding Wood. They have constantly on hand machinery, either wholly or partly made, so that they can at all times on short notice supply them. S. W. and CO. beg to state that they have hitherto confined their attentions to this sort of machinery, and have had the honour of supplying some of the most distinguished companies, ship builders, and contractors in the world with their machines, for home and foreign use. One of their Saw Benches and also a smaller one, with Boring Apparatus, may be seen at the Machinery Department, Crystal Palace. A descriptive Catalogue, with Drawings, may be had on application to SAMUEL WORSSAM and CO. Engineers, &c. Kings-road, Chelsea, London.

NAILS and IRONMONGERY

From BIRMINGHAM direct

Builders, Contractors, and others, supplied with Nails, Iron, and Ironmongery of every description, at the

LOWEST BIRMINGHAM PRICES,

A complete LIST of which will be forwarded upon application to BLYTH and BIANCHI,

Nail Manufacturers and General Factors, BIRMINGHAM; or at 16, Gresham-street, LONDON.

WOOD-CUTTING MACHINERY,

JOHN MCDOWALL and SONS,

WALKINSHAW FOUNDRY, JOHNSTONE, near Glasgow,

MANUFACTURERS of VERTICAL SAW-FRAMES (driven by straps),

For cutting balks of timber, from 5 feet on the side down to the smallest deal frame.

Patent vertical saw-frames, of the foregoing dimensions, with steam-power attached, circular cross-cut radial sawing machines; patent moveable ditto; patent horizontal cross-cut sawing machines, for heavy timber; planing machines, for working boards from a ¼ of an inch thick to 6-inch deck plank; revolving planers, for squaring and shaping heavy timbers, as used by ship-builders, &c.; patent curvilinear sawing machines, for circles, sweeps, and straight cutting, well adapted for ship-builders; power morising and tenoning machines; moulding machines, single and double; veneer mills of all sizes, with all appendages; scale-board machines, for hat-boxes, &c.; patent silent feed motions for saw-frames; and every description of machinery for cutting and shaping timber, all constructed of iron, of the best materials, and first-class workmanship. Mr. M'Dowall has been in the engineering and millwright business for upwards of 36 years, but during the last 24 years he has directed his attention particularly to the manufacture of wood-cutting machinery, as evidenced by the numerous patents he has obtained for its improvement, and by the extensive orders his firm has been favoured with from the British and other European Governments and private establishments in almost all parts of the world; and from their large and commodious premises, and first-class plant made for every department of the work without regard to cost, the largest contracts can be executed with a regularity, accuracy, and despatch, which cannot be exceeded by any other firm in Europe.—Applications as above for further particulars, will be promptly attended to.

COLLINGE'S PATENT HINGES.—

Manufacturers, CHARLES COLLINGE and CO. 64 and 65, Bridge-road, Lambeth, where a great variety are always on view for church, park, railroad, coachhouse, and other gates and doors of large and small dimensions, a ton weight moving with these hinges as easily as a wicket. Ornamental hinges, adapted for drawing-rooms, &c.; doors fitted with them may be removed and replaced in an instant. Rising and double-acting spring hinges, and superior gate fastenings, at moderate prices. None genuine unless marked "Charles Collinge, Patent, Lambeth." Plain and ornamental cast and wrought iron-work, for building and other purposes. Engines, machinery, patent axletrees, sugar-mills, &c.

FACING FOR BUILDINGS COMPANY—TAYLOR'S PATENT.

BUILDINGS PERFECTLY RESISTANT TO WET WITHOUT ADDITIONAL EXPENSE, OR THE USE OF COMPO,

REQUIRING THE CONSTANT EXPENSE OF PAINTING. EXTERNAL WALLS FACED WITH AN INDESTRUCTIBLE MATERIAL.

STONE-FACED BUILDINGS AT LITTLE MORE COST THAN CEMENT.

No necessity for Iron Cramps and Bond-stones, and the Stone Ashlar never injuriously weighted by the settlement of the Mortar joints of the inside Brickwork. The INSIDE of CHURCHES and HER BUILDINGS FACED WITH STONE instead of Plastering. Also Dining halls, Lobbies, Staircases, &c. of Private Residences. It can be had ready for fixing from the quarries at a small e for carriage, or prepared at home. Can be used with the ordinary Bricks of any locality, and by the ordinary workman. The CHURCH faced inside and outside in this manner, and the other uildings at SPRING GROVE HOUNSLOW, and elsewhere, can be inspected, and all particulars obtained, of

Mr. JOHN TAYLOR, ARCHITECT, OFFICES OF THE COMPANY, 40, KING-STREET, CORNER OF CHEAPSIDE.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854 s manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only, scription of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and RROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS NECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

BONUS.

THE DIRECTORS OF THE

STANDARD LIFE ASSURANCE COMPANY request attention to the advantage of joining the Company before the 15th of November next, when the books will be closed for the current year, and the lists of Policies completed for 1856, with reference to the right of participation at future Divisions of Profits. Such Policies will rank for Five Years' Bonus in 1861, and will secure One Year's additional claim for Profits at each future Division over later Entrants.

EXAMPLES OF BONUS ALREADY DECLARED.

Date of Policy.	Sum in Policy.	Bonus Additions to 1855.			Sum in Policy with Bonus Addition.

LONDON,—82, KING WILLIAM-STREET.

CHAIRMAN OF THE BOARD

The Right Honourable the Earl of Aberdeen.

ORDINARY DIRECTORS

Thomas H. Brooking, esq. 14, New Broad-street.
John Griffith Frith, esq. Austin Friars.
Alexander Gillespie, esq. 3, Bullitor-court.
John Scott, esq. 4, Hyde-park-street.
Sir Anthony Oliphant, C.H.
Francis Le Breton, esq. 3, Crosby-square.

THE STANDARD LIFE ASSURANCE COMPANY was established in 1825, and its progress has been most successful. During the ten years from 1845 to 1855, the Assurances effected amounted to upwards of Four and Half Millions sterling; and during the year from 1854 to 1855 alone, the New Assurances amounted to upwards of 600,000l.; being the LARGEST BUSINESS transacted in Great Britain during that period by any Assurance Office.

The LARGE FUNDS which the Company have accumulated are invested on the security of Land and in Government Securities, and these securities are subject to investigations by professional gentlemen at intervals of five years. Such an investigation took place last year, when the Committee reported that "the whole of the Investments are of the very best and safest description, and they have no hesitation in stating their belief that there is not one of them which would not be accepted as a security if it was now proposed to the Board for the first time."

The INCOME of the Company is about a Quarter of a Million sterling.

The position of the STANDARD, and its whole terms and conditions, are such as to give it the strongest claim on public support.

WILL. THOS. THOMSON, Manager.
H. JONES WILLIAMS, Resident Secretary.
LONDON, EDINBURGH
82, King William-street. No. 3, George street.

Agents in all the principal Towns in the Kingdom.

RICHARD MAY, Proprietor.

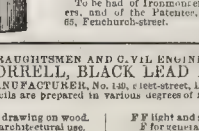
ST. PANCRAS SAWING, PLANING, and MOULDING MILLS, Cambridge-street, Old St. Pancras-road.—GEORGE NOKES and CO. invite the attention of Builders and the Trade generally, to their STOCK of DRY FLOORING, at the following prices, for cash:—

¾-inch white, 13s. 6d. per square; ¾-inch white, 15s. per square; 1-inch white, 18s. per square; 1-inch yellow, 15s. per square; 1¼-inch yellow, 18s. 6d.; 1-inch yellow, 20s.

Timber, deals, planks, &c. at the lowest remunerative prices. A liberal discount allowed on mouldings for exportation. Books of designs forwarded on application.

GRAINING by MACHINERY.—The present system of graining is far surpassed by the new or BELLAMY'S PATENT GRAINING MACHINES, by which an ordinary workman can produce first-class work, and at an immense saving of time. The designs are perfect imitations of the choicest specimens of fancy woods and patterns of the best artists. The Patent Graining Company are now prepared with a large and well-assorted stock of instruments, which they offer to painters, painters, builders, and others, without royalty.

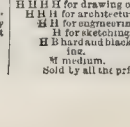
Grained paper in imitation of all kinds of fancy woods of the choicest descriptions, in the piece, or in sets for panels, &c. wholesale and for exportation. Pattern-boards and cards for the trade in great variety.



Painters, Grainers, Decorators, Merchants, and others are respectfully invited to inspect the patterns, and see the process at the Company's Offices, 30, Minories, London.

LETT'S WHARF PATENT SAWING PLANING, and VENEER KNIFE-CUTTING MILLS, Commercial-road, Lambeth. The Proprietors beg to announce to the Trade that they have completed their extensive arrangements and will be happy to execute all orders entrusted to their care with despatch and punctuality. Wrought and Rough Deals, and powerful cranes for landing heavy goods, offer facilities not to be obtained elsewhere. A large assortment of seasoned prepared flooring, match boarding, &c. &c. always in stock at reduced prices.

TO FRENCH POLISHERS, CABINET MAKERS, BRASS-WORKERS, &c.—A considerable reduction has taken place in the prices of French polish, white and brown hard spirit varnishes, spirit lackers, and pumice spirit. The present price is 8s. 6d. to 7s. per gallon; white French polish, 10s. per gallon; white shellac, 1s. 8d. per lb.; gum shellacs, gold and white, at the lowest prices. A net cash list forwarded on application to JAMES KIPPER, 57, Leather-lane; and 14 and 15, Dorrington-street, Holborn, London.



WOLSTON'S TORBAY IRON-PAINTS warranted to stand the action of the Atmosphere, Steam Gases, Noxious Vapours, Damps, and Salt Water; also intense heat without blistering. These Paints have been tested for five years in Her Majesty's Dockyards, and two Official Reports made thereon, which testify that 63lbs. of Wolston's Torbay Iron-Paint will effectually cover as much surface as 112lbs. of either White or Red Lead, and that they resist atmospheric action better than Lead Paints. For all Public Works, Galvanized and other Iron Roofing, Fencing, Slopping purposes (Wood or Iron), Stucco and Cement Fronts, economy and durability will be secured. To Builders and Painters, for all priming purposes, the saving will be immense. Manufactured at the TORBAY IRON-PAINT and OIL WORKS, Brixham, Devon; London Depôt, Chamberlain's Wharf. Letters or orders addressed to Mr. WOLSTON, at the Works, or No. 24, John-street, Bedford-row, will have immediate attention.

VENTILATION.—PURE AIR.

EXTERNAL WALL.

With single pulley, from 6s. each; with leading pulley, from 6s. 6d. These ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and they are fixed in the external wall, shell action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 126, Blackfriars-road, and 127, Union-street, Borough; and of all respectable ironmongers, builders, &c.

SMOKY CHIMNEYS.—TWO YEARS' TRIAL, and PERFECT SUCCESS of PETER'S PATENT WIND GUARD, in curing the most inveterate Smoky Chimneys, induces the Patentee to recommend all persons suffering from that nuisance to try one.

Price 10s.

To be had of Ironmongers and Builders, and of the Patentee, at his Office, 65, Fenchurch-street.

TO DRAUGHTSMEN AND CIVIL ENGINEERS.

H. MORRELL, BLACK LEAD PENCIL MANUFACTURER, No. 149, Fleet-street, London.

These Pencils are prepared in various degrees of hardness and shades.

H H H H for drawing on wood.	F F light and shading.
H H H for architectural use.	F for outlines.
H H for engineering.	H black for shading.
H for sketching.	B B ditto ditto.
H B hard and black for drawing.	B B B 3 0 ditto.
M medium.	B B B B ditto ditto.

Sold by all the principal Stationers in town or country.

The Builder.

Vol. XIV.—No. 715.

PROJECTIONS and projecting buildings in the metropolis are just now occupying the attention of many of our town readers. In another part of our impression, a report of a case, at the Clerkenwell Police Court, will be found, wherein it will be seen that the District Surveyor, forced, as we have reason to believe, by pressure from without, to act against his better judgment, summoned the owners of certain houses in the New-road, Pentonville, who had built over their forecourts, on the ground that the additions so made were projections beyond the general line of fronts, and that as they had not obtained the permission of the Metropolitan Board of Works, these were contrary to the Building Act. The 26th section of the Act says,—

"Except in so far as is permitted by this section in the case of shop-fronts, and with the exception of water-pipes and their appurtenances, copings, cornices, facias, window dressings, and other like architectural decorations, no projection from any building shall extend beyond the general line of fronts in any street, except with the permission of the Metropolitan Board of Works hereinafter mentioned."

The sitting magistrate ruled (as was settled over and over again by the official referees under the late Buildings Act), that these additions were not projections from a building, but buildings themselves, and therefore did not fall within his jurisdiction.

Considerable misapprehension appears to exist with respect to projecting buildings, and district surveyors have been blamed for not interfering, when, in truth, they have no control in the matter. The provision against the erection of buildings "beyond the regular line of buildings" is made in the Metropolis Local Management Act, section 143 of which says,—

"No building shall, without the consent in writing of the Metropolitan Board of Works, be erected beyond the regular line of buildings in the street in which the same is situate, in case the distance of such line of buildings from the highway do not exceed 30 feet, or within 30 feet of the highway where the distance of the line of buildings therefrom amounts to or exceeds 30 feet, notwithstanding there being gardens or vacant spaces between the line of buildings and the highway.

And in case any building be erected contrary to this enactment, it shall be lawful for the vestry or district board in whose parish or district such building is situate to cause the same to be demolished or set back (as the case may require), and to recover the expenses incurred by them from the owner of the premises in manner provided by this Act."

The Board of Works have had under consideration for some time a letter to the District Surveyors with reference to this matter (see p. 546, *ante*), requesting them to inform builders and others who may desire to build on forecourts that the consent of the Board must first be obtained, and to call the attention of the Board to any cases in which their warning may have been disregarded. This request, if made, the District Surveyors will doubtless attend to, but they have no power to go further.

Touching the interpretation of the expressions, "the general line of fronts in any street," and "the regular line of buildings," the Board, in the letter referred to, say they "regard these terms as implying the line of houses in the street, *as originally designed and built, without reference to subsequent additions*, or so far as built when these Acts came into operation."

There are many cases in which no declaration of the Board could enforce such a reading, and sending it out will simply serve to cause delay and vexation. We have a case in point before us at this moment. The forecourts, 30 or 40 feet in length, of a range of houses have been built over for some time past, with the exception of one about the centre. On this the owner is about to build, and he is informed by the surveyor to the Local Board that he must obtain the consent of the Metropolitan Board of Works before he begins, or he will involve himself in trouble. No declaration in the world can make the term "regular line of buildings" apply in this case to any but the line of shops on each side already brought out: the owner will, of course, therefore pay no attention to the intimation, beyond denying the necessity, and as no Local Board of sane men would think of fruitlessly involving the parish in law, by causing a building put up in such a position to be demolished (the only course open), the requirements of the Board are brought into contempt.

We are quite as anxious as the Metropolitan Board can be to preserve the thoroughfares from invasion (our endeavours to that end date very long before theirs), but it is useless to attempt to go beyond the law and apply the same rule to all cases, without reference to circumstances.

In respect of "projections," the Board have been very stringent, and loud are the complaints which reach us both of injurious delay and injustice. Take one case: the builder of a house, in a rural suburb, standing some distance from the footway in its own garden, desired to have a small bow-window. The adjoining house on one side is in the same hands, and there is garden ground on the other, yet the Board refuse the application. Surely this is an unnecessary interference with private will, and is, moreover, greatly opposed to the improvement of our street architecture.

The Board should be careful: if they are not swamped by the sewers, they may get impaled on "projections."

THE PROGRESS OF ARCHITECTURE IN OUR OWN COUNTRY.*

In 1820, the year when George IV. began his *reign*, the Glyptothek, at Munich—by Klenze—was commenced for the Crown Prince, afterwards Louis of Bavaria, out of the savings of his private purse. This building more than any other, exemplifies what there is of value in the distinctive characteristics of modern German architecture. There is a generic difference between the design here and that of the Walhalla. The latter building, externally, is little more than a reproduction of the old Greek temple,—placed, however, upon a grand site—and not, like the parallel efforts in Anglo-Greek architecture, incongruous in its accessories, and half developed as to details. The Walhalla was not actually commenced till the year 1830. Internally, it has greater novelty of design.† In the Glyptothek, however, the architect has held in view principles of art in the application of old styles, such as in the course of these papers, we have recognised and maintained as those which should be acted upon in all parallel cases. Schinkel—who, in the museum at Berlin, and others of his buildings, worked the Classical styles in the same spirit—has left on record his opinion of the means through which original architecture may be produced at the same time that adequate regard is paid to precedent. The notes were given to the world by Dr. Waagen. Schinkel refers to the *indiscriminate* use of old models, and of the error in another case, of designing a building *solely* with reference to its intended use and construction; he perceives how far practical considerations should prevail so as to render the appearance of a building consistent with the purpose,—yet how far, on the other hand, artistic feeling should conjoin with the influence of ancient monuments, to give the character of a work of art. The artist-architect, he says, must consider what the age demands as *essential* in architectural works; he must review the past, and see what has already been produced for similar objects, and what modifications may be necessary; and, lastly, he must determine in what manner the *imagination* must work, so as to create *new matter*, and so that that may harmonize with the ancient part,—so that, without losing sight of the original *style*, the design may produce the impression of an entirely new one, in which assimilation to the old style may still be recognized, and afford an additional charm.* Such was the principle which was actually carried out in the best works of Schinkel and Klenze. How far was it not in advance of the system adopted in the use of the Greek models in England?

We therefore apprehend that we differ greatly from the measure of the modern German school, taken by Mr. Gwilt, a writer from whom we must always differ with regret. Mr. Gwilt, in a work to which we have before referred,† and which was written expressly to disprove the high estimate formed of the school, felt that the Germans had "trusted too much to decoration, and too little to general forms;" that "in the endeavour to unite the Grecian school, strictly so called, with the arrangements of the Italian school, they have produced a style which partakes of the beauties of neither, because the one is destructive of the other;" and he doubted whether such union would be *ever* tastefully made.

That there are no errors of general design and detail in the buildings of Berlin and Munich, we would not say. In the latter city, indeed, with all its architectural splendour, there are things which we, especially, with the views of art which we have expressed, must regret. One work is an imitation of the Pitti palace at Florence; another essays to reproduce the Arch of Constantine; another the Loggia dei Lanzi; another the Basilica of St. Paul-without-the-Walls, at Rome; and so on,—but not universally. In the elaborate interior decoration of some of these buildings, and in many details of architectural ornament by Klenze, Gärtner, Zeibland, Ohlmüller, and others, a fertility in design is displayed, such as contemporary English architects had no field for, afforded to them; and the talent for which, therefore, they generally neglected to cultivate. Bavaria, indeed, possesses many buildings partaking of a higher principle of art than the imitations which have been referred to.

That which we regard as the distinctive style of Germany from about the time when Schinkel and Klenze began their career, in common with the style which generally prevailed in England, was one which bore *a certain* relation to Greek architecture. A relation, indeed, the German bore, but one that was essentially different to the relation of the English architecture. Instead of gaining that pleasure of association between a new work and an old style, which Schinkel has referred to, the English architect lost that pleasure in the very act of attempting solely the imitation.

Unsuccessful as all imitation, then, is—from the very nature of imitation—the architect never could have the opportunity of imitating. We speak not of pecuniary means. That is a point worth considering in a fair estimate of British works; but it is a point which has been somewhat too often advanced, as though in extenuation of radical errors against *art*. In the English "Greek" architecture, an imitation of a portion of a Greek building—the portico—and that portion even wanting the elements of plan which made the chief expression of the Greek portico,—was set on to an undecorated structure which was distinctly separate and opposite to it in every feature. There was no combination, no design; in short, no *art*. The nature of the error we may hope is now understood; and had not the taste for the classical styles passed out of fashion, the merit of some few English architects who were capable of rising above the general character of Anglo-"Greek" architecture, might be appreciated

* See page 522, *ante*.

† A view of the interior was given in the *Builder*, vol. x page 505

* These views will be found at greater length, in the *Builder*, vol. vii. p. 484, "Schinkel on Art-Education."

† "Elements of Architecture," &c.

better than it is. Gandy, and in some degree Wilkins, Inwood, and Basevi, were of the minority that we allude to. In the general fashion of Anglo-Greek architecture, there is ever the appearance of unsuccessful attempt,—not that incompleteness which is inevitable in all human works—or that, perhaps incidental to the best art, which allows the mind of the observer to fill up something,—but a pretension along with which you are asked to suppose this thing away, or take that thing as real, or to receive, in short, as good art and evidence of design, a result, whereof the prominent expression tells the absence of the very intellectual operation which goes to produce art. Some portion of the art-result, as we shall shortly argue, may be due to mere form—that is, regarding form apart from what has also to be viewed with reference to art—namely, structure. The observer, however, must be party, as it were, to the separate appeal as preferred to his eye; he must recognize that such an appeal is justifiable in the particular case, for the attainment of the beautiful in form, —the value of which last itself, he appreciates,—though his understanding will not bear being asked to subvert itself, in order that an actual structural requisite shall be departed from. Thus, on the one hand, art-caprice in forms which have structural office, and, on the other, the notion that sometimes gets abroad, that mere truth of structure is all that is needed to produce art and beauty, seem to be both prejudicial to the result of good architecture.

These considerations are worthy of being held in view in any comparison of the works of England and Germany.—Mr. Gwilt seems to have taken exception chiefly to the details,—which we regard as not generally discordant with the style, and as singularly original in conception; he objects to what he calls the combination of Greek and Italian architecture, and he seems to us to give too little credit to the perception of the real beauties of the original style, and to the new inventions which are manifest. But it will be well to describe one or more of the German works.

The Glyptothek at Munich is a building occupying an area of ground about 220 feet square, and consists of a *suite* of halls or galleries surrounding an internal court, from which, excepting the two apartments at the back, the whole building is lighted. It consists of a single floor, raised in the main part of the plan about 5 feet above the ground level; and the general height is about 42 feet. Externally, the architecture pertains to the Greek character; but internally the halls are domed and arched over in the Roman system. The view in the *Builder* (vol. x. p. 185), from Klenze's work, will serve to explain the character of the style and decoration,—but wanting the colour, which, considering the purpose of the building and the views of the architect, it is essential to take into consideration in judging of the result. The principal front has in the centre an octostyle portico, with, however, a range of four columns behind, in antis, and a single doorway in the rear wall. The pediment and roof are carried up to a greater elevation than the wings of the front, the entablature of the main order passing clear over those wings. The height to the top of the acroterium is 68 feet. It shows the slight perception of the chief beauties of classical architecture, that this portico was during long, almost a solitary modern instance of the use of two ranges of columns. Indeed, until the building of the National Gallery and the Royal Exchange,—where, however, the rearward columns are less numerous and on a different principle,—the portico of the Glyptothek was generally referred to as unique. We have, however, mentioned the use of two ranges of columns, though on a different principle of plan, by Harrison, of Chester. The order at the Glyptothek is Ionic,—the capitals having sculptured neckings, and the shafts of the columns being unfluted. The pediment is enriched with sculpture. The wings, which, as we have said, are less in elevation, have their own entablature and an attic, and these last do not butt against the central block of building in the ordinary way; for, there is a slight recess, so that the mouldings may return—an angle being thus produced uniform with the angle of the building,—an anta pilaster being at the angle in each case. The space between these antæ, in each wing, has three "tabernacle niches" with statues. The pediments of the niches have acroteria, and the cornice of the entablature has a range of antefixæ, closely set. It is through ornaments of this description, which he is fond of introducing, and which have both Greek character and novelty of design,—that much of Klenze's merit in the treatment of details consists. Mr. Gwilt, however, we shall find is of a different opinion.

The whole front stands upon three exceedingly deep steps, a resource which is of some value in the old Greek temples. The value of a basement of steps has been, perhaps, too little turned to account in modern buildings. In the Glyptothek, however, we are not sure that there is no impression of an inconvenience at the entrance; and which requires the filling up of the deep risers with practicable steps. Again, another architect would probably not have made the steps the same in height, along the front—considering the difference between the centre and the wings: but the unison of the design is served by the arrangement.

Mr. Gwilt complains, first, that the wings have no more relation to the central building than to any other building. The antifixæ do not perform their real office of hiding the joints of tiles, the attic at the back being in contradiction to them: the niches might have been taken from Diocletian's palace, with the addition of Greek foliage on their pediments; and they are so large as to overpower the portico; "steps are made for ascent," and "are only proper and beautiful as the ascent they afford is easy;" and finally, there is no correspondence in character between the external and internal architecture. There is some force, it must be admitted, in most of these objections. The design, however, remains a work of great beauty, and far in advance of anything produced at the same time in England. The difficulty of managing the portico we have referred to on a former occasion. It is desirable that such a feature should appear endwise to a block of building; but on this principle, where there are wings attached, unison of character is not easily retained; and the portico, as at the London University College, is apt to be stilted up, so as to suggest the practical inconvenience which at the college, seeing that the entrance is never used, we infer must actually exist.

Of the other objections, the point as to the accordance of interior and exterior, surely approaches to hyperoriticism. Would discordance be discovered? If so, it must be painfully obvious in another remarkable work, of much more recent date, where comparatively little has been said of it,—namely, St. George's Hall, at Liverpool.

We must omit description of the decorations of the Glyptothek,—not because they are of no importance in the history of art, but because they do not happen to belong to our more immediate question. The galleries and apartments, however, we may say, include the Egyptian Hall, the Etruscan Hall, the Hall of Ægina,* Hall of Apollo, and Hall of Bacchus, the Hall of Niobe, Hall of the Gods, Hall of the Trojans, Hall of Heroes, Hall of the Romans, Hall of Sculpture, and another called the Hall of Modern Sculpture. The vivid colouring of the walls and ceilings of a museum is justified by Klenze, who has said:—"Too great simplicity has prevailed in Italy and other countries in the treatment of museums; and the dull stony hue adopted, does not at all suit ancient monuments: a certain richness of decoration is necessary, and deep colours should be used on the walls, to make these antique statues appear to advantage." It may be well to note, as expressing an opinion acted upon out of England, that imitations of coloured marbles are used generally. It is also worth mentioning, that whilst on the frieze opposite the entrance, there is an inscription ascribing the formation of the collection, and the erection of the building, to the king, Louis,—over a door on the left is an inscription in honour of the architect, and over one on the right, an inscription in honour of the painter Cornelius.

* The Hall of Ægina is that which is shown in the view before referred to.

The other chief building about which Mr. Gwilt might be at issue with us, would be Schinkel's Museum, at Berlin. This building forms an unbroken oblong of 276 feet by 170 feet; and the principal façade, which is at one of the longer sides, consists of a grand colonnade of eighteen fluted Ionic columns of 40 feet in height, and broad antæ at the angles. The columns rest upon a solid stylobate, or podium, of the same height as the basement story of the other fronts, and unbroken, except by a flight of steps in the centre, occupying the width of seven intercolumns. Within, this central portion has four columns in antis, beyond which is a low screen with open-work bronze doors, inclosing the staircase,—the upper part of which, however, appears, and gives the distinctive character to that part of the building viewed from the exterior. The general rearwall of the portico is enriched with marbles, and was designed to receive paintings in fresco. The entablature of the order supports sculptured eagles, one over each column. A rotunda occupies the centre of the building. This has a gallery borne by columns, and is domed over at the top. Mr. Gwilt objects to the appearance of the staircase, as contradictory to the idea of a single story, conveyed by the order; to the general want of variety; to details, such as doors cutting through the stylobate at the sides of the building; and to many other points,—one of which may now be worth inquiring into.

In the museum by Schinkel there is what neither the writer above named, nor many English architects, will approve, namely, a want of agreement structurally and decoratively between the domed ceiling of the central hall, and the raised centre of the building, quadrangular on plan, which conceals the dome externally, and which, with angle pedestals and sculpture on them, is an important feature in the design. But whilst we recognize and have argued for the consideration of both structural propriety and effect,—as required along with other attributes in design, to ensure the best result,—we must feel that it is impossible to give equal force to all those attributes under ever varying circumstances, and that it must rest with the particular architect to choose the proportion which each ingredient of composition should bear to the others. Now, we fearlessly assert, that, in all old styles, so high has been the value attached, and properly attached, to *effect*, that not only details, but portions of a structure, will be found designed and built, at all events as to their main principle of form and structure, for no purpose but effect. What was the often quoted example of the Gothic spire? Aye! and many another leading feature of the old cathedral plan and section? We know that the attempt has been made to suggest use for the stone-vaulted ceiling below the actual roof covering. Of course, with people of this day, in their houses, a ceiling has its use. But can it be supposed that such use was perceived by the mediævalists, or that if it had been, we should have had, as we have, the majority of old churches *un*ceiled in stone or plaster; in short, can it be doubted that the stone-groined, ribbed, and bossed ceiling owes its origin solely to the desire for effect. The external dome covering in the case of St. Paul's Cathedral is, therefore, not wholly indefensible, any more than it is in the majority of other chief structures with domes; and it may be inquired whether the opposite principle of treatment, as in the Pantheon and Santa Sophia—where the external and internal curvature in the main correspond—in having the supposed structural propriety, does not sacrifice externally, the greater part of the especial beauty of the form. However, all that we contend for is, that the problem of reconciling the internal domed ceiling, which it is not desirable to carry to great height, with the external dome which it may be reasonably desired not to keep low, may be viewed in all, and not in one only of its bearings. The eye and even the judgment, we say, will tolerate much that is designed solely for effect: the unprejudiced observer requires not positive identity of form and structure, but simply does *not* tolerate glaring inconsistency, or prominent want of unison, between one and the other. It may, therefore, at once be conceded, that such

a fault, if it become one, of exalted apprehension of the value of mere effect, is to be found in the works of the German classical school. In the Pinacothek, by Klenze, an arched ceiling is formed under an enclosure of square sectional outline; but the case is really one which is too frequently found to require any lengthened notice, had it not been prominently advanced in disparagement of both the German and other sections of the classical school.

Mr. Gwilt objects to the Museum, that it seems more like the composition of a scene-painter, than of an architect. We, however, recognising a distinction between the two, and believing that mere scene-painters' art can never produce good *architecture*, believe also that the painter-like power of composition which Schinkel possessed, and for which his education specially qualified him,—the power which Reynolds recognised in Vanbrugh, and for which the education of the theatre has often stood architecture in good stead,—is one of those things which not less than regard for structural propriety is needed at this day, to bring back the art into the way of realizing its grandest results.

THE EARLY WATER SUPPLY OF LONDON.

Once upon a time a few pleasant streams of water were sufficient for the purpose of supplying a considerable part of old London with one of the necessaries of life. These were the river of Wells, the Wall-brook, Old-bourne, Langbourne, and others, which ran cheerily along and provided the citizens with a temperate beverage before the invention of the tea-pot.

As far back as the beginning of the thirteenth century, the streams were pronounced to be insufficient for the purpose to which they had been put, and certain merchants from abroad who dealt in wood, being prevented (as were other foreigners) from landing their wares, the wood-dealers offered to the Corporation of London 50 marks per annum, and a fine of 100*l.* to be allowed to warehouse their goods, and this having been agreed to, the fine was largely added to by several worthy London traders, and water was brought from six springs, or heads, as they were called, at Tybourne: this supply was brought to the City by means of lead pipes of 6-inch bore.

For the reception of the Tyburn water a cistern of lead, castellated with stone, was first erected in Westcheap, in 1285.

The necessity for additional fountains or conduits soon became urgent. Old-bourne (Holborn), a rivulet spring which rose near the Middle-row, not far from the bottom of Gray's-inn-lane, became polluted, and passed ignominiously into a sewer. Wall-brook, which entered the City through the wall, between Bishopsgate and Moorgate, emptying into the Thames at Dowgate, was stopped by the numerous bridges, &c. which were erected in this direction. Langbourne rose near the east end of Fenchurch-street, and ran to Sherbourne-lane, where the stream divided and was lost in the Wall-brook on Dowgate-hill.

The river of Wells was much obstructed in the neighbourhood of Clerkenwell by the mills of the Knights of St. John of Jerusalem, and other similar works, which were situated where Turnmill-street lately was, and Hockley-in-the-hole, a spot to which we have referred in the *Builder* lately, and eventually became a foul ditch, which it was necessary to arch over and mingle with the murky waters of the Fleet.

The number of conduits in London supplied with water from the neighbouring fields, soon increased to nineteen. There was one at Aldgate, and others at Cole-abbey, Aldermanbury, Cornhill, Fleet-street, Cripplegate, Lothbury, Dowgate, Holborn-hill, Stocks-market, and other places.

In 1401, the prison called the Tun, in Cornhill, was converted into a conduit for the Tyburn water. Although the prison was converted to this wholesome use, it seems that a cage for the jail birds was still kept attached, as were the stocks and a pillory, in which were exhibited bakers, millers, and other dishonest traders.

John Wells, mayor, improved the City con-

Conduit formerly in Pall-mall.

Map showing Heads of Water.

duits; and in 1439, the Abbott of Westminster granted to the mayor and citizens of London, "one head of water, containing 26 perches in length and one in breadth, together with all its springs, in the manor of Paddington."

In the days when John Wells was mayor, the Fountain heads, Tyburn, &c. were pleasant places, and a praiseworthy spirit was shown by the City officers to preserve their purity; and it must have been a sight which would afford both pleasure and amusement, to see the mayor accompanied by the aldermen and citizens, during their periodical visits to the *heads*, from whence the conduits were supplied; hunting a hare before dinner, and a fox after dinner, in the fields beyond St. Giles, near Tyburn.

About 1453, Will Eastfield, mayor, founded a conduit, near Shoe-lane, supplied from Paddington, and communicating with the *Great Conduit-head, in Marylebone-fields*. In 1478, the inhabitants of Fleet-street got leave to found conduits at their own charge, one to be set at the standard above mentioned, near Shoe-lane, and the other at Fleet-bridge. The former of these was richly decorated. The tower was of stone, with images of St. Christopher on the top, and angels round about lower down, with sweet sounding bells. Before them, when open by an engine placed in the tower, they at divers hours of the day and night chimed such tunes as were appointed. This work seems to have soon got into decay, for we find that it was rebuilt in 1582, and cost, including charges in others of the fountains, 2,000*l.*

The water-supply at the Stocks-market was not protected by any building, and the frequenters of the place addressed the worshipful the Lord Mayor as follows:—

"Beseeching your good lordship and masterships, the inhabitants dwelling about the stocks, that by the space of five or six years past a vent of water hath run by a pipe of lead besides the stocks—which pipe of lead, by reason that it is not closed, is daily hurt with horses and carts,—it may therefore pleasure your good lordship and masterships, and all of our masters of the common council, to grant and give licence unto the said inhabitants, upon their own proper cost and charges, to make or cause to be made a little postern of stone, with a cistern of lead therein—drawn out in cocks to the common weale of the said inhabitants there about dwelling. This at the reverence of God and in the way of charity."

In addition to the water of "Father Thames," the brooks and conduits—there were also several springs—the Holy-well, near Shoreditch; Clement's-well, Clerkenwell (not far from the west end of the church); Skinners'-well, near Clerkenwell-green, where the plays of the parish-clerks were enacted: more to the east were Foy's-well, Tod's-well, Loder's-well, and the horse-pond in Smithfield: the streams running from these wells formed a considerable portion of the water of the river of Wells above alluded to. There were also Crowder's-well, adjoining to St. Giles's Churchyard, on the north-east; Dame Annis the Clear, at Hoxton; and not far from this was a spring, enclosed by a conduit, part of which ran into a deep pond, where so many accidents happened, that it was called the "perilous pool." A goldsmith and citizen of London, named Kemp, who had purchased the land, converted the Perilous-pool into large pleasure-baths, which he called the Peerless-pool. Great credit is due to this gentleman for being the first to shadow forth an idea of bathing for the million. Some interesting particulars respecting the management of this place will be found in "Hone."

We must not omit to mention the White Conduit at Pentonville, which became famous in consequence of its surviving so many similar erections. Three fields north of this conduit were the remains of a Roman camp, probably part of that used during the contest with Boadicea and the Britons. About a dozen years ago a considerable extent of entrenched work, which formed part of this ancient defence, could be traced.

The water-works of the Dutchman at London-bridge, and the introduction of the New River, rendered the supply from the conduits of less importance, and the increase of the traffic causing them to become obstructions, many of them were removed; and at the present time, so far as we are aware, they have all vanished, with the exception of one at Knightsbridge, of which we give an engraving.

In searching recently amongst the prints and drawings in the King's Collection at the British Museum, we came by accident on a carefully-executed but old-fashioned plan, with the following heading, which gives a good idea of the manner in which the water supply was formerly managed;—"A Survey of the Conduits, &c. to Whitehall, St. James's, &c. in 1718."

In the Hyde-park, or *Hide-park*, as it is spelled in the sketch, on the south side of the *lamp road* from Kensington, are nine dots, with lines branching from one to the other. These are marked on the adjoining engraving:—

"SOFT WATER.

1. The principal head, emptying into 9.
2. The principal head of Westminster Abbey main.
3. Another head, emptying itself into the said main.
4. Ditto.
5. Mrs. Birket's conduit, to serve her houses at Knights-bridge.
6. A small head, which empties into No. 9.
7. Ditto.
8. Another head that runs to 9.
9. *The receiving conduit, called the* STANDARD."

This conduit, of which we give a view, may still be seen in Hyde-park, close to the first shops that occur after passing the Duke of Wellington's house in going towards Brompton, and nearly opposite what was the "Chinese Exhibition."

10. The cistern upon the main, which serves St. James's.
11. A cesspool-house upon the main, which serves Whitehall."

"So much," as honest John Stow would have said, "for ye soft water supply of Mrs. Birkett's houses at Knightsbridge, St. James's, Whitehall, and Westminster Abbey;" and no doubt favoured individuals had reason to be thankful in contrast with their neighbours.

"HARD WATER.

12. This at Mary-bone-street, the principal head in Lord Harborough's cellar.
13. Sherrard-street, Soho, corner of Queen-street, the second head.
14. The third head: this in Queen-street, towards Windmill-street, Soho.
15. At the corner of Coventry-street and Princess-street the Receiving Conduit," which was probably similar to that at Knightsbridge, or the "pants" or fountains, which are still remaining at Newcastle-upon-Tyne, Durham, &c.

"16. In a court leading from Whitcomb-street a small head branches into the main." It runs along the side of Hedge-lane, then a green road without houses, which passed between the present Suffolk-street and the National Gallery, and from thence to Charing-cross, the King's-mews, &c.

17. The grand well emptying into 20.
18. The head discharged at 19.
19. The receiving-conduit conveying the water to 20—(17, 18, 19 in the King's-mews).

20 was a stone cistern in Inner Scotland-yard. The author of this map observes that the Hedge-lane ducts—conduits and mains—are out of repair by neglect and encroachment.

It is curious to notice the changes which have been made since 1718. The heads of soft water 1 to 9 were on the margin of what is now the Serpentine (then not formed), and have merged into that water.

In the King's collection there is a drawing of older date, which we engrave, of a conduit on the site of what is now St. James's-square, and was then a green with bushes in it. In the background of the print is St. James's and Westminster Abbey, before the building of Wren's western towers. This conduit was probably that on the main marked 10 on the plan.*

Great as is the need in many respects even now for improvement in the water supply of the metropolis, it is difficult to give an idea of the former state of things. Lilly, the astronomer, in his Life, mentions that he himself and London apprentices generally, at that time, were employed for some hours during each day in carrying water from the Thames for household use. The wells of London must, like the rivulets, have been long unfit for human use, and it is fearful to think of the condition of the "hard water" supply to Whitehall, which had its source in Lord Harborough's cellar and heads in the places pointed out in the plan. The soil, long before the water was disused, had been saturated by numerous cesspools and other pollutions.

* The letters on the upper part of the map had reference to some contemplated remarks on the water-supply and drainage of the Golden-square district, but these we postpone.

THE LIVERPOOL MUSEUM AND FREE PUBLIC LIBRARY COMPETITION DESIGNS.

THE sixteen selected designs for the Liverpool Museum and Library are now exhibiting to the public at the St. George's Hall. The committee have recommended the two plans on which to confer the first and second premiums, and have thrown them open to inspection, I suppose, that they may hear what the public have to say in the matter. Feeling a deep interest in a proper selection being made, I have paid the plans several visits, and now ask the privilege of venturing my opinions on them, leaving others to judge if these opinions be correct. Before entering upon my criticism, it will be necessary, that all may more thoroughly understand the subject, to state some of the requirements set forth by the committee.

The site proposed for the building is a slightly irregular parallelogram, 250 feet frontage by 180 feet deep, bounded on the back and front by two streets, and on the sides by houses and shops, not in possession of the committee. The principal *façade* will face the open ground on the western side of St. George's Hall: the difference of level at the extreme corners of the building is 16 feet, and it will stand on a much lower level than the hall.

It will be seen from this description that two essential points are to be kept in view, viz. to place the structure on a high base, to prevent, if possible, the dwarfing effect of its magnificent neighbour the Hall, and to light the rooms independently of windows in the sides, which might be built up at any time by the owners of the adjoining land. The sizes and purposes of the several rooms were also set forth, a distinct block of buildings for the library, and a suite of rooms for the Derby museum, being insisted upon. A central hall, surmounted by a dome, to serve as a gallery for statues and other works of art, was suggested for the consideration of the competitors; and lastly, the cost was not to exceed 20,000*l.* The lending library, at first proposed, was afterwards abandoned.

The first impression received on viewing the plans, is the very general adoption of the dome and central hall as a distinguishing feature, the competitors evidently considering this the first condition of success. Every variety of cupola is here to be seen, from that at St. Paul's to a Turkish minaret: circular, square, ogive, flat, elliptical, with lanterns, both plain and highly decorated, are all here; but what is surprising, almost the only plan in which the dome is omitted is recommended for the first premium. It seems, therefore, that competitors should consult their own judgment rather than the loose suggestions of those who have not studied the subject. A few of the competitors, doubtful of the utility of making an architectural feature of it, have timidly kept it down to saucer proportions, thereby producing a positive objection externally.

The artistic labour exhibited in some of the perspective views is excessive, that being generally considered also a great essential for success; but however much they strike the eye as pictures from the artistic handling, brilliance of colour, and picturesque treatment of the figure groups, a person of correct taste cannot but regret that in many instances this treatment has a tendency to mislead, and is employed effectually to the neglect of the higher qualifications of art.

The designs may be divided into two classes, that most generally adopted being an arrange-

ment of the rooms around a central hall, forming a compact block, so condensed in plan as to allow space for obtaining light by windows in the sides; the other being quadrangular, with an open space in the centre for obtaining light. The design recommended for adoption is a combination of both systems.

Under the first class is to be placed the design marked "Cupola," containing a very large central hall, circular in plan, with a gallery around the interior supported on columns, and the whole crowned with a very flat dome, intended to be used both for a sculpture gallery and museum. Apart from the undesirability of exhibiting two such different classes of specimens together, the design, though superior to many, contains its own condemnation, in being incapable of extension. There is also not that distinction between the library, museum, and Derby collection, very properly insisted on in the particulars of requirement. The style is Italian, a very large portico forming the entrance, and giving the façade rather a dumpy appearance.

The plan marked "Experto crede" contains the germs of a good design, but is not worked out as practically as it should have been. The evils of competition are in this plan well exemplified; for the designer having in his mind's eye the success of plans that evince a total disregard of the means at disposal, has determined to take the first premium at all hazards.

He has surmounted the library—here the principal feature, and a copy of the one erecting at the British Museum, with a very ornate dome of preposterous dimensions. The plan has the merit of being the only one in which sufficient space has been left for storing the volumes, 80,000 of which have to be provided for. The façade is a handsome one, depending on fenestration for effect. Coupled attached columns indicate the height of the top story, the absurdity of columns several stories in height, as in many of the designs, being well avoided. The museum occupies the whole of the front, and is capable of extension, but the rooms want unity of arrangement, appearing as if divided off at random.

"Bis dat cui cito dat" is a very elegant design, but does not characteristically show its purpose. The requirement of two distinct blocks of building has been met, but in doing so the plan has lost unity of arrangement. The architect must be unacquainted with the ground, or he never would have placed the entrance to the library in a back street. The beauty of a square room for a reading-room is questionable, and the arrangement of the museum, in galleries around rooms the full height of the building, reminds one too much of the universal exhibitions. The decoration of the interior is extravagant.

"Pro fide Christiana"—a very creditable design, but too cubical-looking. The cupola is well designed in itself, but combines badly with the rest of the building. One cannot but be struck with the want of utility in all the cupolas. To make it an effective feature, it should have height, but not one of the competitors has been able to find a use for it commensurate with the expense. The central hall is effectively managed, and the libraries are distinct and well arranged, though deficient in store accommodation. The museum portion is not laid out on a sufficiently regular system, nor is it capable of great extension. Taken as a whole, the design is, however, one of the best.

In "Vasari," the quadrangular system is fully carried out—indeed to the injury of distinctness in the general divisions. The designer has very meritoriously been trying to produce a building within the means at the disposal of the committee: I regret to say the result has been a very bare interior. The whole of his perspective drawings he would have done wisely to have left at home, and trusted to the front elevation and accompanying model, which give a much more satisfactory explanation. The portico would be a failure, if executed. Considerable design has been shown in the elevation; the chief merit of which is that it expresses its purpose much better than the generality of the others.

The next design claiming notice is marked "Peter," who boldly declares that it would cost 50,000*l.* to carry it out. O, Peter, I honour thy truthfulness! It appears to be in part a reproduction of the Liverpool Custom-house.

"Usui Civium decori Urbium," is a "Paxton" design, the exterior studded with glass domes, not unlike those on the far-famed and universally admired Brighton Pavilion.

* * * * *

"Omega."—The elevation suggested by that of St. George's Hall. A forest of piers and columns disfigures this plan, which is not capable of extension. The manner in which the library is formed in the wings is worthy of praise. The heating apparatus has been gone into heavily.

"Alma."—The design recommended for the second premium possesses an elevation taken from the Hôtel de Ville, at Paris. Why the committee should have recommended this plan I am unable to conceive, as the style is quite out of character with the purpose of the building, and the cost would be enormous. It is incapable of future extension. Such a flagrant violation of the conditions should never be rewarded, or a great injustice will be done to many of the competitors.

"Con Amore."—The distinguishing feature in this design, and the one which most recommends it, is unity of arrangement. A central hall, with an arcade around, and open to the roof, intended for the display of statuary and painting, unites the several parts of the building. The stairs are ingeniously thrown back far into the building, in approaching which you have to pass through the hall. The harmonious effect of the interior is worthy of praise. The plan of the building resembles an inverted ⊥, the sculpture hall occupying the centre, and the wings on either side being in the form of the letter L, one of which is appropriated on the ground-floor to the library, and the other to the museum. The plan admits of extension in a more satisfactory manner than the others. In the elevation a series of terra-cotta reliefs, in long panels, on the upper story, is used to display the purpose of the building. The lower story advances beyond the main wall, which will be carried on arches: it is relieved with a series of niches, proposed to be filled, from time to time, with statues to distinguished Liverpool men. The two wings advance slightly in front of the lower story, and have a bold projection above. The central columnar portico is the most prominent feature: it has the defect of showing two stories high. The absence of windows, only one in each wing appearing in front, is a grave defect, for the light being obtained partly from skylights in the advancing lower story, and partly from semicircular lights in the main wall, hid from view by a balustrade, converts the wall into a mere screen, and is one of the common expedients resorted to for obtaining breadth of effect in classical architecture. St. George's Hall should be a warning to architects against resorting to such expedients, and though darkness may be tolerated in corridors, it will not be in a museum of which the professed purpose is to exhibit everything to the best advantage.

The library as before stated occupies a suite of rooms in one wing of the building, forming the letter L in plan: in the extreme corner is a staircase connected with the females' reading-room, which is situated above the students' room: this should have been on the same floor. The difference in the height of the rooms is objectionable, and will be anything but pleasing; for the principal reading-room occupying the re-entrant angle, is divided into two parts—one the full height of the building, with a gallery around; the other only one story high. The unity and completeness of the library portion has been sacrificed to that of the general plan, by squeezing it into a wing the counterpart of the museum. One large room for the general reading-room, one for the students, and one for the females, of easy access to the librarian, would form a far better arrangement, and one which is, I think, imperatively demanded, as a more complete monument to the munificent merchant who has advanced 6,000*l.* towards building it. There appears to be insufficient provision made for storing the books, an important point in connection with the plan. The library, generally, is not equal to what the public have a right to expect. It was to form, according to the requirements, a distinct and self-contained block; and Mr. Picton stated at the council meeting, that that condition had been complied with in this plan better than in any of the others: with all due deference to his opinion, I am unable to comprehend how a suite of rooms, with the museum over, constitutes a self-contained block. The future extension of the building is shown in block on the plan, but we are left in the dark as to whether the one in connection with the library is for the extension of that department: if so it will, when complete, be a still more irregular affair: if for the museum, how is it to be connected with the other wing? The museum does not provide sufficient accommodation in wall space, and the Derby collection is not sufficiently distinct from the other parts: indeed, it appears that, although the sculpture-hall constitutes a very handsome feature in itself, the space for the more useful portion of the museum and library has been curtailed to make a fine hall and entrance. I am also decidedly of opinion that the building wants elevation, considering the site on which it will be placed.*

The committee have had a difficult task before them, and have, I think, done all in their power to arrive at a correct decision: they cannot be blamed, therefore, in recommending this plan for adoption when the competitors themselves by their vote pronounced it the best. The council have, however, done wisely in referring the two plans to their surveyors; and, although disagreeable, it will be their duty, if the amount exceeds the stipulated sum, to call another competition, and give architects an example for their future guidance in Liverpool competitions, and to show them that the conditions are not made to be infringed. It may be all very well for the chairman to say, "Not one of the sixteen can be executed for the sum named." How many of the rejected sketches, I would wish to ask him, could have been executed for that sum? I feel convinced that if this plan were adopted, something more applicable than "Con Amore" would be produced. The competitors might have the 250*l.* divided among them according to merit, and a premium need not be offered for the second competition.

A general review of the merits of this large collection of plans, after having studied each separately, impresses one with anything but a favourable opinion of the good resulting from competition. The crudeness of many, the impracticability of most, and the want of elegance in the few that are practicable, are most striking. Considering that these sixteen designs were picked by an architect, from 116 sketches, I should have expected something much superior. If the 100 rejected sketches were inferior to the worst of these, displayed less arrangement in the plan, greater meagreness of effect, general poverty of design, and want of harmonious proportion with breadth of effect, then we may truly say the best men keep back. I recommend another competition only for the purpose of raising the morality of competition generally, and leading architects to attend to the first essential, which is to produce the greatest result with the least money—the most difficult problem an architect has to solve.

A.

LIVERPOOL MUSEUM AND LIBRARY COMPETITION.

You a month or two since forshadowed a doubt as to whether the result in the above competition would be altogether satisfactory. I was disposed then to quarrel with your want of faith; but events have proved you were right. After so much has been said and done in the matter, the result is most extraordinary. The instructions to the competitors were, that the library was to be kept distinct from the museum, in a "self-contained block." Arrangement was to be made for future increase, and the cost not to exceed 20,000*l.* The advisability of a dome was also suggested, and the building required to be in harmony with St. George's Hall.

Now, sir, so far from the committee selecting according to these rules, they have ignored them!

* The author of the selected design, "Con Amore," calls upon us, with a number of remarks equally unfounded and discreditable to him, to give "our reasons for not naming the author of the designs chosen" in this competition. As it would be useless to give reasons for not doing what we have, in truth, done, we will simply refer him to p. 536 of our Journal, and advise him before he again makes insulting charges to be sure that his grounds are good.—Ed.

The design of "Con Amore" deviates from many of the rules, and the design of "Alma" is in opposition to all! "Con Amore's" design has not the library clearly distinct, does not well arrange for extension, at least not without blocking up numerous windows, would cost probably 30,000*l.* and has no dome. "Alma's" design has not the library separate, has no provision for extension, would cost probably 60,000*l.* has no dome, and is not in character with the "Hall," —resembling much a large French hotel!

It appears to me, that when rules have been laid down for the guidance of the competitors, the decision is to be regarded as very much less a matter of taste than a matter of rule. It is that design which keeps closest to the "instructions" which, I think, should be chosen, not the most showy. At the late meeting of the Liverpool town council, one of its members very sensibly thus expressed himself with respect to the first-chosen design:—"I want to know," said he, "whether the decision, under the circumstances, is fair to the other competitors. I want to know what the cost of the building would be. If I am told that that work can be executed for 20,000*l.* I can only say that I do not think Mr. Picton himself would execute it for such a sum. It may be that other competitors have purposely kept their estimates much lower. They may not have given us so good a design, because, perhaps, they were afraid of exceeding the sum of 20,000*l.* Now, if you allow some gentlemen to figure away, and give you splendid designs which would cost 30,000*l.* or 40,000*l.* (and I should think the cost of this design would be nearer 30,000*l.* than 20,000*l.*), then I think it can hardly be said that the prize has been fairly awarded." Committees complain that the competitors disregard the rules: it is simply the consequence of committees setting these rules aside in adjudicating. Dashing, high-souled fellows, who are up to competitions as well as all other things, on principle bravely disregard all rules, and very properly often get their reward by the realization of their magnificent conceptions in bricks and mortar, or pocketing a premium; while those poor, feeble-minded men, who seek success by humble obedience to the instructions issued, are justly punished by the defeat and contempt which their pusillanimity and ignorance of competition committees so justly deserve. All that is left them to do is to pocket the affront (in lieu of the premium), and, like Scott's dwarf, throw up their arms, and cry "Lost! lost! lost!" A trial has been made, in the Liverpool competition, of getting the votes of the competitors,—a scheme which, I consider, has proved a total failure. Had the competitors met to openly discuss the respective merits of the designs, and then come to a decision by a show of hands, a good result might have been arrived at, but not by each sending in privately his opinion, after perhaps only a hasty and insufficient glance at the drawings, and the forming consequently an erroneous opinion of them,—in some cases perhaps not giving an honest opinion; and when, as in this case, the competitors have many of them disregarded the rules, it is not to be expected they will vote for those who have not: in doing so they would condemn themselves

There is some little chance still of matters being righted in this competition, but not much, as a disposition is now shown to allow "Con Amore" a few thousands more. The old result! M.

TASTE AND ARCHITECTURE IN THE METROPOLIS.*

Perhaps there was never a time when so much could be accomplished to raise the character of our art and the position of its professors as the present. If we look around, we shall perceive unmistakable evidence of a new and glorious field opening for the efforts of genius. With a Court willing to foster talent, a Government awakening to the importance of art, and a people able to pay for its realization, we have every reason to expect that the next few years will be an era in the architectural world of improvement and progress.

This overgrown metropolis, with its hundreds of miles of dull monotony, with its overcrowded thoroughfares, with its smoke-laden atmosphere, and with its noble river reeking with miasma, is becoming every day more unbearable to its inhabitants. All must feel that the time has come when some comprehensive schemes for the mitigation of these serious evils must be carefully planned and quickly executed. The danger for our Government to avoid is, the following in the steps of some of its predecessors, and expending vast sums of money in half-digested schemes, which have the effect of permanently increasing the difficulties already to be encountered.

Judging from past efforts made in such works, the mistakes that have been committed appear to have arisen from an absence of foresight in those who had the control of them, large sums having been expended upon public works which have proved inadequate to the growing necessities of this ever-increasing population.

With regard to the taste hitherto evinced in such matters, I am afraid that the nation has not much to be proud of; for, although there has been a considerable amount of practical knowledge displayed, the question of artistic effect has seldom been considered.

It has often struck me that a public committee of taste, composed of men of acknowledged ability, and perfectly accustomed to judge of works of art, would be an exceedingly useful body. They should have no personal interest to serve, and their actions should be open to the scrutiny of all.

Great public works, that are for the benefit of millions, and to last for ages, should not depend on, or be influenced by, any political party. To execute such works in a manner that they shall remain lasting memorials of a people's greatness in science and taste, requires long experience in order to perfectly appreciate every difficulty that may exist; the greatest foresight to avoid those which may arise in future; and considerable knowledge of art to guide the judgment in matters of taste.

How is it possible to insure these qualifications when the men who have the management of such important affairs are from day to day liable to be displaced by others who come to the consideration of, to them, a fresh subject with different views and altered plans. I am the more inclined to dwell upon this topic because all our shortcomings in matters of taste connected with metropolitan improvements may be traced in a great measure to this evil. * * *

The architectural profession will watch with some degree of anxiety the result of the forthcoming competition for the new public offices and Westminster improvements. Sir Benjamin, having justly earned the thanks of the profession for giving us such a glorious opportunity of proving the skill and talent that exist amongst us, will also receive our gratitude if his influence is exerted to insure a perfectly impartial decision, for we have too long suffered under the deadening effects of the chicanery so constantly occurring in competitions. If the Minister for Public Works should possess as much taste as he has energy, let us hope that he will remain long in despotic power; so as eventually to save us as a nation from being branded as a dull fat-witted people, incapable of appreciating matters of taste and art.

Judging from our neighbours in France, and elsewhere, art flourishes with more vigour under despotic powers than under our liberal government. We are accustomed to say that "two heads are better than one," but I fear questions of taste form the exceptions to the rule. At all events, I would rather trust one man of genius, with the consideration of our metropolitan works, than be forced to act upon the opinions of fifty chosen out of a mixed community; because I believe, as a nation, we do not possess that innate feeling for art, which is to be found among the people of continental states. In connection with Westminster improvements, it is necessary to consider whether the new National Gallery is to form any part of the scheme, as, I suppose, we may take for granted that it will not occupy the proposed site at Kensington. This question should be at once mooted, as no really comprehensive scheme can be devised without previously entering thoroughly into these considerations. Such an important structure would naturally form a feature in any proposed plan for such improvements. * * * * * * *

Another matter which should occupy the attention of practical and thinking men, is the eventual appropriation of the seventy closed graveyards of London. An architect of learning and taste, in a pamphlet, entitled "Ancient and Modern Westminster," published in 1839, writes as follows, concerning the Abbey monuments:—"But perhaps the best of all methods to effect a harmonious union between St. Margaret's Church and the Minster would be the erection of a tomb-house or cloister between the two, for the reception of the mural monuments, which so much disfigure and deteriorate the effect of the interior of the Abbey Church, whose venerable walls and pillars have moreover been most barbarously mutilated and defaced, by the vile manner in which these parasitical excrescences have been affixed. Most valuable as records of departed worth, these monumental tablets, if arranged *seriatim* in a tomb-house, within a moderate distance from the sight, would present an instructive lesson to the passer-by, while the exterior of the building would add breadth to the western front of the church, and materially assist in remedying the injuries which it has sustained in the deprivation, one after the other, of the picturesque edifices with which it was surrounded." Such a building would indeed be a fit and worthy tribute paid to departed greatness; nor could there be a more appropriate spot chosen for its realization.

But why not extend the scheme to all the closed cemeteries of the metropolis? The adoption of the plan of arched shrines, which is so admirably exemplified in the Central Cemetery at Liverpool, for the fine statue of Huskisson, would protect our marble and our bronze, and all perishable materials of sculpture, from the weather for centuries. It is evident that these graveyards must not remain in their present state, nor can they be allowed to become the receptacle for parish lumber, not at all an unlikely event unless attention is occasionally directed to them.

As the subject of national monuments now occupies the attention of the Government, the future appropriation of these places becomes an important item in the question. Many of them contain the ashes of some of the most eminent men that this country has produced, whose memories at present are barely saved from oblivion by the half-decayed and sunken footstones, overgrown with weeds, marking their last resting-place. There are some who must always live in their works, but others have rendered great benefit to their country, who are already, by the majority of people, unknown, and whose services, although acknowledged, have never been rewarded. What could be more graceful than to erect statues of them, artistically grouped in covered shrines, as near as possible to the spot containing their mortal remains; and make these places, which have proved so detrimental to the sanitary condition and to the moral feeling of the people, the means of instruction and example, by the honour thus awarded to true merit? At St. Mary Overie, Southwark, we might place Gower the poet, and Shakspeare's brother Edmond, Fletcher, and Massinger,—a group of theatrical names. The Temple Church would give us barons from Runnymede, and a hero of as great a civil strife, Selden, to adorn its porch. About St. Paul's, great city names might be assembled for a thousand years past. Bunhill-fields Cemetery should have John Bunyan, and many of the grave leaders of Dissent, in their living features, to encourage freedom of religious thought and piety for a thousand years to come. The same remarks will apply to more than fifty other graveyards of various extent all about this multitudinous town. We can all feel the propriety of what is now doing in this way beyond the walls. It would be a graceful and instructive homage to the mighty dead of olden times to apply the like care to the sacred repositories of their bones. Each little spot will be found to contain some name worthy of a special memorial; and the sanitary principle which has fitly closed these places will be the more respected as so many safety-valves for all times; besides their future destination and the endearing memorials of our good ancestors. And I have no doubt there are many of their descendants who would gladly subscribe towards the honour thus shown to their forefathers. The beauty of the precincts of some of our cathedrals is an encouragement to the proposed work; and there are not wanting, among our neighbours across the Channel, examples which show that the old graveyards, as well as old ramparts of cities no longer fortified, may be made to contribute largely to popular enjoyment.

* The following passages are from Mr. A. Allom's address at the meeting of the Architectural Association, reported in our last number.

PROPOSED ST. JAMES'S HALL: PORTION OF INTERIOR AT LARGE.

THE PROPOSED ST. JAMES'S HALL.

Sir,—Looking to the plans for the proposed St. James's Hall, London, I doubt if there be sufficient provision for entrances and waiting-rooms. The prospectus particularly states that "the facilities for approach and exit will be amply provided for;" but I conceive that the carriage approaches are not good, and, therefore, ask for your attention to them. It may be said that there are but two, for the one in Little Vine-street has no outlet, and is so narrow that carriages cannot turn without extreme danger; and yet this I suppose is the one which the prospectus describes "as the separate entrance for the convenience of her Majesty and the Royal family."

The two carriage entrances spoken of, in thoroughfares good enough in themselves, seem to me inappropriate for the purposes of the hall, as it is evident that only one carriage at a time can stop opposite the doorway you have engraved. Access to this and the other in Regent-street will have to be gained across wide pavements, with a throng of passers-by, who in such thoroughfares cannot be stopped by the police. It must also be borne in mind that, in situations like these, the Board of Works will not permit the erection of porticoes.

The hall itself, to be really convenient, should be nearly on the ground level. As it is proposed to let the smaller halls below, they will not be available as waiting-rooms; so that, with small means of carriage approach, the company, some two thousand in number, will have no where to wait but in the narrow lobbies. Conceiving that all this requires looking to, I would, with the best feeling, bespeak attention to the subject before it is too late.

The Sacred Harmonic Society are constantly drawing attention to the want of sufficient means of ingress and egress from Exeter-hall, but are unable to induce the proprietors to make any improvement in this respect.

Publicus.

The question addressed to the directors of the proposed new hall, is a very serious one, and will doubtless receive attention. We add, to our former illustrations of the intended building, a portion of the interior of the great hall, showing more clearly than in the small view the character of the decorations proposed by Mr. Owen Jones.

With reference to the just complaints against Exeter-hall, the directors of the Sacred Harmonic Society say in their last report:—"Whether these appeals will in time have weight with those who have an easy remedy in their own hands, or whether the question will be allowed to remain in abeyance until some awful calamity forces Government interposition to *compel* a safe and reliable mode of exit from all places of public resort (Exeter-hall included), the committee rest assured that the members of the society and the public will absolve them from any consequences arising from what has been described as the *'culpable neglect'* of others."

PROVINCIAL NEWS.

Aylsham.—On 29th ult. the foundation-stone of a new Town-hall, &c. was laid by the Marquis of Lothian. The proposed structure is to consist of a large apartment to be used as a town-hall, a corn-exchange, and a ball-room; and a newspaper-room, with a library and reading-room overhead. The dimensions of the large room are to be 29 feet by 59 feet, and of the other rooms 17 feet 6 inches, by 22 feet 6 inches. The large room will be open to the roof, and will be about 29 feet high. The upper portion of the roof will be of glass. The exterior of the building will be in red brick with stone dressings. The plans have been prepared by Mr. Bartram, under the direction of a committee; and the works are to be executed by Messrs. Burrell and Bartram. The necessary capital has been raised by a company of shareholders, and it is estimated that the total outlay (including 750*l.* paid for land) will be about 1,800*l.*

Weymouth.—Many of the workmen who were engaged on the new waterworks are now being discharged, in consequence of the approaching completion of the works. The reservoir on the

top of Membery-hill, which is several hundred feet above the level of the sea, is nearly finished, and will be capable of containing 11,000 hogsheads. This cistern will be kept constantly full, the water being raised by machinery from the bed of the river below.

Weston-super-Mare.—A public meeting of the ratepayers was held at the Town-hall, Weston-super-Mare, on Tuesday in last week, for the purpose of selecting a design for the new Town-hall. A premium of fifteen guineas was offered for the best plan of the proposed building, to be erected at a cost not exceeding 2,000*l.*; and twenty plans were sent in. After some discussion a committee was appointed to consider the plans, and report to another public meeting.

Worcester.—At a recent meeting of the Town Council and Board of Health for this city, the town clerk laid before the council three of the contracts for the drainage and water-works, in order that the common seal of the body might be attached to them. The surveyor, Mr. Purchas, estimated the cost of pipes at 5,800*l.*; the cost of pipe-laying at 2,400*l.*; of engines and machinery for waterworks at 2,500*l.*; and the sewerage works at 14,706*l.*; estimating also the annual expense of keeping all these in repair at about 330*l.* The contracts under notice were those for pipes, for pipe-laying, and for the waterworks, engines, &c. That for the sewerage was not yet signed by the persons who tendered.

Tewkesbury.—The Severn improvement is at length progressing towards completion, in accordance with the original plan of the promoters. The works at Tewkesbury comprise a lock 120 feet long by 32 feet wide, with which is connected a pound 165 feet long by 80 feet wide, enclosed by a third pair of gates, so that the whole distance between the upper and the lower gates, 285 feet, will be available as one lock-chamber, and a steam-tug, with her fleet of vessels, will be locked up at one lift without delay. The weir will be 500 feet in length, and of sufficient height to raise the low water at Tewkesbury 6 feet above its present level. Both the lock and the weir will be constructed in new channels, excavated for the purpose across the Ham, and thus the present very acute bend in the Severn at the upper lode will be cut off. The tenders, twelve in number, for the excavation of the new river course, were delivered on Thursday before last; and at the meeting of the Board of Works on the following day, the tender of Mr. William Tredwell was found to be the lowest, and being below the estimate of the engineer, it was accepted. It is intended, says the *Worcester Chronicle*, that the lock and the weir shall be constructed under the more immediate charge of the engineer, and therefore they will not be executed under contract. In addition to the works at Tewkesbury, it is proposed to complete the several embankments between that place and Gloucester, and to construct others where experience has proved they are required; and thus the whole of the navigation of the Severn, under the jurisdiction of the commission, will be perfected, except at the city of Gloucester, where much local improvement is required.

Devonport.—The foundation stone of the north wing of the new barracks was laid on Tuesday week, on which occasion the contractor, Mr. Roach, entertained a large number of the builders of the three towns, and several friends, in the mess-room of the old barracks. The workmen employed were also regaled in an adjoining building.

Aberystwyth.—The erection of the clock-tower here is far too slowly carried on. The architect, Mr. Owen, has recently inspected the work, and expressed his regret at the slow progress made, recommending the employment of additional workmen, to secure it against the effect of frost and thaw. It is to be hoped, by those living in the neighbourhood, that the committee will act upon the recommendation.

Newcastle-under-Lyme.—The opening of the new schools in connection with St. George's Church, Newcastle, took place on Tuesday before last. The schools stand at the entrance to the town from the Liverpool-road. The style is Early English, and a semi-ecclesiastical character has been given to the edifice, to identify it with the church to which it belongs. The schools, which are denominated "St. George's Mixed and Infant Schools," consist of a school-room, 67 feet long by 30 feet wide; a class-room, 20 feet long by 15 feet wide; each having a gallery and open timbered roof; and two rooms, each 15 feet by 6 feet, to be used as sub-class-rooms, and partly for hats, bonnets, &c. There is a dwelling-house attached. The exterior walling stone is from the Kerridge quarries, near Macclesfield, which harmonizes in colour with the Hollington stone dressings. Welch green slates have been used for the roof covering. Mr. John Evans, of Macclesfield, has executed the whole of the works (his contract being 1,345*l.*), under the direction of Mr. James Trubshaw, by whom they were designed.

Staveley (*Sheffield*).—Schools for the education of the children of the workmen of this mining district have been erected and opened. The building is modern in style. It contains schools for boys and girls, and a public hall in the centre. There is a separate entrance to each of the schools by a porch. The size of the school-rooms is 60 feet by 22 feet, and 28 feet high, and the centre hall is 45 feet by 35 feet, and 45 feet high, with painted open roof: there is a belfry, and the building is surmounted by a spire 76 feet high. The interior is furnished with an organ, built by Mr. Holt, of Leeds, for 200*l.* and there is a gallery in front of it for the accommodation of the choir. There are anterooms which may be converted into laboratories. Several small villas, closely adjoining, are intended as the residences of some of Mr. Barrow's agents.

Lincoln.—The wet weather of late, says the *Lincolnshire Chronicle*, has retarded building operations in Lincoln; but so soon as we have a change, several houses will be commenced above the hill, in St. Botolph's parish, and in St. Swithin's. A great drawback to extensive building will arise from the scarcity of bricks. Mr. Ward will require for the militia buildings all he can make, and the new brick-yard on Crosscliffe-hill cannot supply more than 200,000 beyond the number required for the erection of kilns and manager's house.

The Brooms.—Last week, the foundations were commenced of new schools, with class-rooms, &c. for 150 boys, together with a master's residence attached, in connection with the Roman Catholic Chapel at the Brooms. The buildings are arranged to allow of future extension, to accommodate the same number of girls. Mr. Arch bald M. Dunn, of Newcastle, is the architect, and Messrs. Gibson and Stewart, of the same town, are the contractors.

CHURCH-BUILDING NEWS.

Wooburn.—The church here was re-opened on the 11th ult. after being repaired and restored. The large tower, arch, and west window were planked up and unseen: high boxes and pews, in all shapes, sizes, and positions, filled the area of the church: a huge pile of rough woodwork on the right-hand contained pulpit, prayer-desk, and clerk's closet: on the left a large parlour-pew, canopied, blocked up the chancel arch; and the floor, pavement, and walls were much dilapidated. At a cost under 700*l.* according to the *Windsor Express*, the architectural character of the edifice has been resuscitated. The chancel floor is laid with encaustic tiles by Minton: on it stand the old brasses in York stone. The east window still invites replacement by a better. Nothing has as yet been done to the exterior of the church.

Thurlby.—The restoration of Thurlby Church having been completed, it was again opened on Tuesday in last week. An unsightly gallery in front of the lower arch has been removed, and the arch opened, and a portion of it is found to belong to the Saxon era. The windows have been newly glazed, and the stone-work replaced where necessary. A portion of the western end of the church, used as a receptacle for coals, rubbish, &c. has been cleansed and thrown open to each aisle, the northern part being appropriated as a baptistry, and the ancient Norman font placed in it. The chapel, used as a school-room, has been opened, and again attached to the chancel, and is now occupied by the organ and choir. The seats are open, and uniform with the original oak seats. The work has been executed by Messrs. Sneath, of Boston; Harrison, Story, and Jebb, of Bourn, and by persons residing in Thurlby.

Ipswich.—The work on the new church at California has been resumed. Mr. Brown, of Norwich, architect, has inspected the building, and coincides with the builder, Mr. Plumstead, that the walls were inadequate to support the intended roof (a point on which the latter and the architect of the work disagreed), and expressed no surprise at the fall of the east gable. Mr. Brown suggested several alterations which will, it is said, be embodied in a report to the committee.

Bury.—The foundation of St. Peter's Church, Bury, was laid on Friday before last by Earl Jermyn. The site is on a piece of ground approaching the Suffolk General Hospital. The length of the edifice from east to west will be 96 feet, width of nave 26 feet, with porch, surmounted by a tower and spire of modest proportions, on the south side: the materials are cut flint and rubble, with stone dressings: the style Early Decorated. It is calculated to contain 450 persons. Upwards of fifty workmen employed upon the building were provided, on the laying of the stone, with a substantial dinner, the builder (Mr. Farrow) occupying the chair, and his foreman (Mr. Jackaman) the vice-chair.

Buckingham.—Mr. Chesterman, of Banbury, who has contracted to erect the new Congregational Chapel for the sum of 1,152*l.* has commenced operations, and the old chapel and premises are now in ruins. The new building is to be in the Gothic style, and capable of accommodating about 700 people.

Faringdon (*Berks*).—One of the small Norman windows in the south aisle of the parish church has been filled with painted glass, as a memorial of the late Mrs. Bryan Reynolds, of this town.

Chieveley (*Berks*).—The new chapel at Curridge, in this parish, built by Mrs. Stacpoole and Miss Wasey, of Prior's-court, was opened on Sunday week. The building, which, besides the chapel and school, combines a residence for the master and mistress, was designed by Mr. Teulon, of London, and, under his superintendence, was built by Mr. Higgs, of Cold Ash. It is of the Early English style. The chapel terminates to the east in an apse, which is separated from the rest of the room by a wooden screen, across which a curtain is drawn during the week-days, and thus a small chancel is formed for Sunday use.

Sumbrook.—The church of St. Luke, Sambrook, was consecrated on the 2nd instant. It is designed in the Middle Pointed or Decorated style, and consists in plan of a nave, chancel, north aisle, vestry, and south porch. At the west end of the nave rises a bold shingled bell-cage, standing 40 feet above the ridge of the roof: it has perforated sides, and terminates in a double-broached spire, having gabled spire-lights in the lowest part. The north aisle is separated from the nave by an arcade of three arches. The roofs are all of lofty pitch, open timbered, and stained. The chancel is fitted up with oak benches, and paved with Minton's encaustic tiles. The east window is filled with painted glass by Messrs. Gibbs, of London. The pulpit, sedilia, and font are worked in Caen stone. The nave and aisles are filled with open benches of stained deal. The circular traceried window in the west wall has painted glass by Mr. Lavers, of London, and is placed by Admiral Roberts as a memorial to his deceased wife. The walls of the church throughout are ashlared with local stone. The church contains sittings for 230 persons. The builders are Messrs. Nevett, of Troubridge, who have also built the parsonage-house and schools; the whole being from the designs of Mr. Ferrey, of London, architect.

Edgbaston. (*Birmingham*). — The Congregational chapel was opened on Wednesday in last week. The building is capable of accommodating 1,000 persons. It is built of stone, from Tower-hill, Perry Barr, with Bath stone dressings, and is in the new Geometrical Decorated style. The plan comprises tower and spire, nave, transepts, and vestries. Internally, the nave is lighted by four windows on each side, and at the east end by a large triangle, ornamented with tracery. The internal dimensions are as follow: Length of nave, 83 feet; width, 41 feet; width of transepts, 26 feet; height to ridge of roof,

50 feet. The tower is 84 feet in height, and consists of three stages. The spire, which is entirely of Bath stone, and 86 feet in height, is divided by bands into three stages, and terminates with a finial, surmounted by an arrow for a vane. The chapel has been erected from the designs and under the superintendence of Mr. Henry Yeoville, of Birmingham, by Messrs. Barnsley and Sons, at an expense (exclusive of the ground, which cost about 1,400*l.*) of 5,500*l.*

Liverpool.—St. Philip's Church, Hardman-street, has been reopened, and considerable alterations and improvements have been made in the interior. A new chancel has been added, in which, says the local *Journal*, is placed an extremely rich and elaborate stained-glass window, the largest that has been for many years fixed in this town. The window is divided into three spaces of eight compartments in each space, representing the Patriarchal, the Mosaic, and the Christian periods: four figures and four groups illustrate each era. The tracery is filled with the emblems of the four Evangelists, the Trinity, and the Dove. It has been designed and executed by Messrs. Forrest and Bromley, of Liverpool. Messrs. William Jones and Co. of Liverpool, were the contractors for the joiner's and brick-work. There has also been fixed in the church a hot-air apparatus, supplied by Mr. William Bennett.

Oxford.—The restoration of the tower of the church of St. Mary the Virgin is drawing towards completion. The process of strengthening the tower, by forty-eight screw bolts, has been finished under the direction of Mr. Scott. As an additional security, the buttresses in the north-east and north-west angles of the tower have been strengthened by the removal of the belfry staircases, and replacing them with solid masonry. The staircases will, therefore, ascend from a different point. The other alterations now in progress consist in the elevation of the old belfry floor, so as to disclose the point of the moulded arch on the west side of the tower, hitherto obscured, and the renovation of the mural sculpture which runs round the whole interior. The work has been executed by Mr. Gardner, of Oxford, builder, under the superintendence of Mr. Sheffield, clerk of the works. A proposition, says the local *Herald*, was made last year for the entire restoration of the church, and the parishioners agreed to be responsible for 500*l.* towards carrying out that object, independent of private subscriptions, which were estimated at 250*l.* more. The expense of the restoration was estimated at 3,000*l.* out of which the chancel would cost about 1,000*l.*

Ancoats (*Manchester*).—An endeavour, made by a committee of ladies to raise a sum (400*l.*) sufficient for a stained glass east window for St. Andrew's church, has, according to the *Manchester Courier*, been very successful. A design has been furnished by Mr. Wailes, of Newcastle-upon-Tyne. The window, which is one of the largest in Manchester, consists of two tiers of lights, seven in number, with tracery in the head. As all the money for completing the design has not yet been subscribed, it is intended to fill in the tracery, and the upper series of lights first. The designs in the tracery represent the call of St. Andrew, the patron saint of the church, and his crucifixion: with the monograms of the Saviour,—J. H. S. and A. O. At the sides are represented "St. Michael and all angels,"—seraphim and cherubim. The compartments of the window contain our Saviour and the twelve Apostles with their symbols. The upper row of lights is surmounted with canopies, while the principal events of the life of the Saviour are delineated progressively, from the triumphal entry into Jerusalem, the consecration at the Supper, the announcement of the traitor, the sop being given to Judas, the agony in the garden, the betrayal by a kiss, and the bearing of the Cross. There are also the symbols of the four evangelists, the types of the offering of Isaac, Solomon on his throne, the Resurrection, the unbelief of Thomas, the commission to St. Peter, the Apostolic mission, the ascent from Bethany, and the descent of the Holy Ghost on the day of Pentecost. These subjects are all arranged according to one general design. Canon Richson ordered the window on the strength of the promises given, and it is expected that the upper portion will be completed this year, if possible before Christmas.

Scarborough.—The chief stone of the Roman Catholic church of St. Peter was laid on Friday in week before last. Mr. Goldie is the architect. The workmen partook of a supper at Milson's Castle Hotel, when about fifty-eight sat down.

FOREIGN INTELLIGENCE.

A prize of 10,000 *francs* has been offered by the Duke de Luynes, a known art-patron, to the person who shall discover the most important new process for the improvement of photography, especially for a means of fixing sun-pictures and making them durable. Artists of all nations are invited to compete, and the award will be made by the committee of the Photographic Society of France, of which M. Luynes is a member.

Cornelius's composition of the frescoes which have to adorn the niche of the high altar of the new cathedral of Berlin, will be exhibited at Dresden, according to the general wish of the art-world there.

The highest Monument in Europe.—A very massive cross has been erected on the summit of the Champ-rousse, one of the mountains which surround Grenoble. The situation of this spot is very commanding and conspicuous, close to glaciers and eternal snow. That such a vista has been always appreciated by men, is proved by the fact that a cross stood previously on the spot where the new one is now erected. When digging for the foundation, Roman coins were discovered.

METROPOLITAN BOARD OF WORKS.

At an adjourned meeting of the Board, on the 15th inst. a motion by Mr. Crellin, to the effect that the points of outfall originally proposed at Barking-creek and Woolwich-marshes be retained, and *deodorizing works* added there, was lost by the votes of eighteen members to two, on an amendment by Mr. Offor, which was "the previous question." A motion was then brought forward by Mr. Turner, to the effect that the sewage be discharged into the river at *Long Reach*; and an amendment thereon by Mr. Doulton, to the effect that plans be prepared by the engineer for discharging the sewage by two main sewers, one on each side the river, with outlets at Sea Reach, was lost by the votes of twenty-three to ten against it. The further consideration of Mr. Turner's motion was then adjourned till Wednesday next.

Mr. Wilkinson, in the course of the proceedings, proposed that members of the Board should visit Leicester and other places for information on the subject of deodorizing; and from communications which have been forwarded to us from Leicester we feel strongly persuaded that this ought to be done.

We are overwhelmed with correspondence in which the Board is blamed in no measured terms for waste of time with regard to this most important question. Simply driving on the Board to action in this particular and all-important matter might do more harm than good; but as it is most urgent that some efficient course should be adopted, and as we are persuaded the Board of itself is not competent to settle the question, is it not desirable (or requisite rather) that a committee of engineers and architects, in whom the public would place confidence, should be at once appointed to advise the Board on the course to be adopted?

COMPETITIONS.

Deptford Cemetery.—The Burial Board of St. Paul's, Deptford, have chosen the designs sent in by Messrs. Tinkler and Morphew, subject to the approval of the Bishop, and their being carried out for the stipulated sum. It may be remembered that these gentlemen have recently been appointed architects to the Lewisham Burial Board, whose land joins. The chapels are connected, and have porches and one bell-tower in the centre. The total quantity of land in the two cemeteries is thirty-three acres; and as the architects have the whole under their superintendence, it will afford them an opportunity of preserving a unity of design, which we hope will not be lost sight of.

SCENERY AND THE STAGE.

The "Midsummer Night's Dream," at the Princess's Theatre.—In selecting the play of "A Midsummer Night's Dream" for his fifth great revival, Mr. Kean has not had opportunity of adhering to chronological truth and costumic propriety with the strictness that made the plays of "Macbeth," "Sardanapalus," "Henry the Eighth," and "The Winter's Tale," such popular exponents of those most desirable qualities in dramatic representation.

Amongst the number of those unparalleled compositions which have rendered Shakespeare the delight of all ages, there is none more filled with beautiful poetry, glowing imagination, and playful *abandon* than this favourite effort of one who has so well deserved the title of "Fancy's child."

But whilst the early period of Greek history, to which the existence of the chief characters in the play, namely, *Theseus* and *Hippolyta*, is referred, presents, on the one hand, but the rude beginnings of that perfection of architecture which afterwards raised Athens to the pinnacle of fame for refinement and art; so, on the other hand, do the more modern, but most exquisite creations of Oberon and Titania, and, later still in period, the undercurrent of mirth that accompanies the play throughout, in the inimitable vagaries of *Quince*, *Bottom*, and their companions, draw us farther and farther from the indulgence of revelling in the classic. Nevertheless, what opportunity there was for architectural display has been seized upon; the period of highest excellence in Greek art embraced; and two scenes of great beauty in point of execution, and correctness and research in point of detail and precedent, have been produced.

Theseus, son of Ægeus, king of Athens, ascended the throne B.C. 1235, and laid the foundation of the future greatness of the Athenians. He united into one body the twelve independent states into which Cecrops had divided Attica, and made Athens the capital of the new kingdom. He added much to the city, and instituted the festival of the Panathenæa, in honour of Athena or Minerva, the patron goddess of the city. He divided the citizens into three classes; the *Eupatridæ*, or nobles; the *Geonori*, or husbandmen; and the *Demiurgi*, or artizans. After an absence from Athens, he was dethroned and murdered, through the treachery of Lycomedes. Hippolyta, queen of the Amazons, was conquered by Theseus, and, according to some authors, afterwards married to him.

Where anachronisms abound, it is wise to adopt a period of the greatest interest in history that will suit the purpose. The buildings of Cecropian Athens were probably rude in construction — perhaps of Egyptian type, and conveying but the shadowing forth of what afterwards resulted from study and advanced civilization. The time of Athens's greatest splendour therefore has been selected, and an extra claim established upon the attention and interest of the audience.

The first scene gives a general view of the city of Athens, as it might have been in its perfection, and discloses at once the principal buildings that have rendered it the study for all time. The point of view is a terrace adjoining the supposed palace of Theseus, and near the actual site of the Lyceum. In the centre is the Acropolis, and the position whence seen discloses at once the Parthenon and the two triple temples of the Erectheium and the Propylæa. To the left of the Acropolis is the Theatre of Dionysus or Bacchus, wherein the poetry of Æschylus, Sophocles, and Euripides was wont to be recited; and nearer stands the magnificent Corinthian, peripteral, decastyle temple of Zeus Olympius, called the Olympieius. In the distance is the Museium hill, surmounted by a temple. To the right, somewhat in the distance, is the Temple of Theseus, and streets, temples, porticoes, and public buildings of all kinds occupy the unappropriated space, and convey an excellent idea of the classic city. Much labour has evidently been bestowed in this architectural restoration, and with good effect.

In the last act are what may be called two architectural scenes. In the first, an interior

in the palace—in which Theseus and Hippolyta listen to the actors—the Corinthian capitals and entablature are polychromatised. The last scene, discovering Oberon and Titania and their trains, shows a vast peristyle in parallel perspective, consisting of a Corinthian colonnade upon each side, raised upon a lofty podium, enclosing an almost endless flight of steps, which conduct to a decastyle portico in the extreme distance. The revels of innumerable fairies up and down this wide extent conclude the play with becoming *éclat*.

An audience, filling every part of the theatre, expressed, by loud plaudits, their unqualified approbation of Mr. Kean's exertions in this revival. Perhaps the touching story of Pyramus and Thisbe,

"Juvenum pulcherrimus alter,
Altera, quas Oriens habuit, prælata puellis,"

was never travestied by a more comic party than was led by Harley and F. Mathews on Wednesday night. For the rest, the parts are ably supported, and in the general getting up of the play no expense or care has been spared. The pastoral scenery is beautifully painted, and was much appreciated.

Our short notice of this play would be incomplete without a few words upon one who, as long as the immortal work of Shakespeare is extant, will ever be associated with it in undying music,—Felix Mendelsohn Bartholdy. Born in 1809, this great composer before the age of 17, had already written the Overture to "A Midsummer Night's Dream," a masterpiece, which one of the greatest of our English musicians and profoundest of critics upon the art has pronounced to be "a perfect marvel of the human mind." The electrical effect produced in London by this inspiration of genius, seemed to mitigate in some degree the loss to the world caused by the death of Beethoven, and point to one upon whom his mantle had fallen. In 1829 Mendelsohn paid his first visit to England, and in a visit to Scotland again illustrated his susceptibility to impressions, and his power of depicting them by music, in his Overture to "Fingal's Cave."

From this period Mendelsohn rapidly progressed in reputation, producing numerous works that rank with those of Beethoven, Mozart, Spohr, Handel, Haydn, Rossini, and others whose works are "not of a day, but for all time." It was in 1843, whilst in Switzerland, that he completed the music to Shakespeare's dramatic poem of "A Midsummer Night's Dream," and on the 12th of October of that year, the play, with the music, was first performed in the private theatre of the King of Prussia, at Potsdam. Thus, twenty years after writing the overture, he elaborated the ideas contained in it, and developed the wondrous fancy of the first thought. The Scherzo in G minor, is one of the most effective orchestral works in that form ever written. In the lovely two-part song and chorus, "Ye spotted Snakes," in the Notturno, in E major, replete with tenderness and beauty, —in the fanciful agitato — in the magnificent Wedding March, which scarcely has its equal,— and in the brilliant and fairy-like chorus at the end of the play, he completed the grand conception of his youthful genius, and, as Benedict observes, "with such ingenuity, that the most difficult critic could discern no artificial joining of the parts, but seeming, in fact, as though the whole had been the offspring of one simultaneous inspiration." Mr. Hatton is a worthy interpreter of this great musician's works.

PROCEEDINGS UNDER METROPOLITAN BUILDING ACT.

PROJECTIONS.

At the Clerkenwell Police-court, on Tuesday, the 30th ult. Mr. William Hollingsworth and Mr. Samuel Allard were summoned by Mr. R. L. Sibley, district surveyor, for making an addition to the houses Nos. 6 and 10, Pleasant-row, Pentonville, "such additions being a projection from a building, and extending beyond the general line of fronts in the street, and such projection having been made in default of the permission of the Metropolitan Board of Works having been previously received or obtained, agreeably with section 26 of the Metropolitan Building Act, 1855."

Mr. Cooke, who appeared for Mr. Hollingsworth, stated that his client's building was, in reality, an addition to the house. The owner of the adjoining house had made an addition to his some time back. He contended that the New-road was not a street, but a turnpike road. Several distinct lines of frontage had long existed in the New-road—one of shops and one of houses, and there was no regular or general line. In this case the fronts had already, to a considerable extent, been brought out on each side, and the intervening space was being filled in by shops, so that this could not by any possibility be deemed a projection beyond the general line of fronts, and not being a projection, no consent on the part of the Metropolitan Board was necessary.

Mr. Sibley stated that the Metropolitan Board had refused permission to make the additions. Feeling the matter to be an important one, and not wishing to take upon himself the responsibility, he had been desirous of obtaining the directions as to what course he should pursue in the matter. The whole question at present was, whether these additions were in point of fact projections or not beyond the general line of fronts in the street; and it had been thought desirable, as the simplest mode of proceeding, to raise the question before a magistrate, and procure his opinion upon it.

Mr. Corrie, the sitting magistrate, reserved his judgment till the following Tuesday, when he said that in his opinion the word "street" included the New-road; that he did not, on a careful consideration and examination of clause 26 of the Metropolitan Building Act, 1855, deem that that clause applied in the case of buildings; that it appeared to him parts of buildings, architectural decorations, &c. were meant to be dealt with under that clause; that he considered it most unlikely that the Legislature could have contemplated a double jurisdiction, the course to be pursued in the case of buildings being clearly pointed out and specially provided for under the Metropolis Local Management Act; that in this case there was no projection from any building beyond the general line of fronts in the street, and his judgment was therefore in favour of the defendants.

The cases were accordingly dismissed.

VENEERING WITH VULCANITE.

In a recent article of the series lately quoted by us from the *Mechanics' Magazine*, on the subject of Vulcanite, are the following remarks on its use in veneering:—"The extraordinary toughness of the veneers prepared for the covering of furniture, however simple in form or ornate in design, is remarkable. The exquisite beauty of the slightly-relieved patterns upon some of this veneer ought not solely to weigh in its recommendation, inasmuch as, in the act of rolling or pressing the material into veneer, the process adopted may either involve the most finished and intricate designs, or simply a plain surface. There is an additional feature in this method of rolling or pressing these veneers and the material itself: a perfect and indelible polish is simultaneously obtained in those parts where it is required to give relief to the rest. In a word, finish is consequent upon the act of making the veneer, and the act of pressing or rolling the material into veneer is the ultimate act of its finish. But what is, perhaps, the most surprising fact to those not familiarly acquainted with the nature of the material, is to see done, or to take themselves a hammer, and strike the delicate tracery of the vulcanized surface in right earnest, without making the slightest impression upon it, or effacing its polish in the least. The handles of knives, cornices, brackets, and other articles in vulcanite which are electro-plated, may be struck a very severe blow with the hammer—a blow, indeed, which would leave its mark to some depth upon gold in the solid—without the merest perceptible indentation. Furniture veneered with vulcanite may be made to assume at once both finish and perfection of character, with an amount of labour scarcely appreciable. The facility with which this veneering may be effected upon any kind of woods is perfectly startling. The cabinet-maker has but to steep the veneer for a few minutes in boiling water, and a sheet of it becomes as tractable as moist paper. Thus he may veneer round and over the sharpest curves and angles, and cover a surface with the ease of the paperhanger." There are various specimens of this kind of veneering, we may add, as well as a great variety of other articles made of vulcanite, in the Crystal Palace at Sydenham.

By the way, is there not a limit to the obtainment of Vulcanite? And is it not time some chemist were turning his attention to the possibility of obtaining (as some time since suggested by us) an artificial substitute for the natural caoutchouc by the transformation of bituminous or resinous and albuminous compounds?

River Weaver.—Mr. E. Leader Williams, jun. C.E. has been elected engineer to this navigation. There were 115 candidates for the appointment.

Miscellanea.

Paving *versus* Puddles in St. Pancras.—Knowing you to be antagonistic to routine and abuse, I trespass upon your space in order to call the attention of "those in authority" to the neglected and disreputable condition of the footways in and about St. Pancras-road, whose many *toll-gates* would at least cause one to look for efficiency in the particular complained of. For the last few days of damp weather it has been impossible to walk from Old St. Pancras Church to the Workhouse without danger of breaking bones, or being half submerged in endless pools. From the Catacombs by the Church, to the Vestry-hall, paving, properly speaking, there is none; and on the opposite side of the way, by the turnpike, and quite round the Crescent, it is pristine soil, in moist weather speedily rendered into mud. So, likewise, from the foot of King's-road to the end thereof, the flags are broken and inefficient. This, too, in the immediate neighbourhood of the presiding genii's seat of government! *Lux a non lucendo* may be truly said. I am not of a vengeful disposition, but if your echo of my humble complaint reach not the ears of the Board of Purposes, of Works, or of action in some sort, I sincerely hope that the offending party or parties may speedily tumble over broken flags, and be precipitated into oozy streams of rain-water, that so this unworthy state of things may be put an end to.—Judex.

The Water Supply in St. George's, Hanover-square.—A tract by Dr. Druitt, one of the medical officers of health, forming a "Report on the quality of the Water used in the In-wards of the Parish of St. George, Hanover-square," has been printed by order of the vestry. It contains a chemical analysis of the waters from many of the sources of water supply, such as the Grand Junction, and the pumps connected with the surface gravel throughout the district. The Grand Junction water is regarded as on the whole satisfactory and wholesome at present; but some of the pump-water appears to be much otherwise, although in other cases the water from these sources is held to be remarkably good. Among the worst is the bottom pump in Hanover-square, which contains offensive mud, and that in Hertford-street, Mayfair, which is too highly charged with carbonate of iron even for medicinal purposes. The Berkeley-square well is sunk to the chalk or sand, under the London clay, and is of a very different quality from the surface gravel supply, being much softer and more alkaline, and less impregnated with organic matter: it is said to be strikingly similar to Seltzer water in composition, though much weaker and free from effervescence. As a cooling drink, in inflammatory tendency of the blood, it is recommended; but for tea it tastes soft and flabby; and, on the whole, to most persons, this water is said to be not so pleasant and bracing as the more crisp and hard waters of the surface gravel.

Alarm at Manchester Free-trade Hall.—During the inaugural ball last week, some alarm was caused by a sharp crack which was heard in the supper-room. The room was crowded at the time, and, a cry being raised, "The floor is giving way," there was a rush to the stairs and lobby. The excitement, however, subsided almost immediately: nothing further occurred to excite alarm, and the room was subsequently again crowded at different times. It was thought and said at the time that the noise was most probably caused by a slight explosion of gas between the floor of the supper-room and the ceiling of the assembly-room; but such was not the fact. The truth, according to the *Manchester Guardian*, is this:—Between the floor and the ceiling below there are substantial trussed girders, to which were added two stout iron tie-rods, for additional security. The noise which caused the alarm resulted from the stripping of the threads of the screw from the end of one of the rods, and the flying off of the nut. It is believed to have been caused jointly by the rod being screwed up too tightly, some defect in the threads, and the motion imparted to the floor by the large number of persons standing at the tables or moving about. The stability of the floor was not, however, at all affected, for, despite the long and severe test subsequent to the alarm, nothing was displaced or strained, nor was the slightest damage of any kind done beyond the starting of the rod.

Cork School of Art.—At the last meeting of the committee, Sir John Gordon in the chair, it appeared, from the report of the managing committee, that the number of pupils under instruction for the quarter amounted to 592, of whom 450 were pupils of the National Schools, and 142 were male and female students of the Central School, and the fees amounted to 83*l*. 8*s*.—an amount, as regards attendance and fees, far exceeding any former year at this season. It was resolved that the exhibition should open on the 22nd, when the mayor was to attend to present the prizes to the students.

Lecture on Labour at Keswick Mechanics' Institute.—On Friday evening before last a lecture was delivered in the lecture-hall of this institute by the Right Hon. Joseph Napier, LL.D. M.P. on "Labour and Knowledge in connection with the Condition and Prospects of the Working Classes." The Rev. T. Wilson, B.A. president of the Keswick Mechanics' Institute, presided. The lecturer, in course of his address, pointed out the difference between properly-regulated labour and drudgery, and urged that labour and knowledge in every sphere of life should go together. He pleaded for the claims of those more generally known as the working classes. To give to the working classes a taste for knowledge, and a desire to rise in their position by virtue and intelligence, was a work worthy of the greatest perseverance; for as the workman was superior to his work, so was the mind superior to matter, and it would be found that the human mind could not be left in its undeveloped and ignorant state without the suffering by society of those penalties which a state of ignorance involves. He animadverted on the notion entertained by some against a popular increase of knowledge, on the ground that presumption and infidelity would be fostered by it, and maintained that nothing was so presumptuous in itself, or so expensive and injurious to society, as ignorance. In showing the connection between knowledge and labour the lecturer pointed out how labour without knowledge is misapplied, and how knowledge without its application to labour is fruitless. He next proceeded to notice the influence of knowledge on labour amongst our manufacturing population. That powerful agent, steam (which was exceeded only by the wonders of the electric telegraph), had placed manufacturing industry in a new era. The great pyramids of Egypt, on which were employed 100,000 men for twenty years, would, by the aid of our steam agency, have been erected with comparative facility.

Away with the London Toll-bars. — The *Morning Chronicle* justly exclaims,—"Pikes must go! London in A.D. 1856 is a vastly different place from that London which witnessed the infancy of toll-gates. We are too much occupied now to waste our valuable time in one of the forty-six vehicles that are always blocked up for ten minutes every time Mrs. Brown takes the family coach through Notting-hill Gate. These gates must be altogether removed, and the roads will, to all intents and purposes, become the mere streets which they really are, and nothing more."

Accidents.—An engineer at the St. Martin's Baths and Washhouses, Leicester-square, while descending, on Monday in last week, into the Artesian well, to repair one of the pumps, fell off the rope-seat by which he was let down by windlass, and was killed on a stage a few feet from the water. A knot in the rope-seat had slipped, and must have been carelessly tied.——A stonemason, at Burnely, last week, while preparing a scaffolding in Trafalgar-street, fell against a wall, 15 feet below where he stood, and died in an hour or two afterwards.——A bridge just erected over the river Perry, at Yeaton, near Baschurch, has fallen, killing one man and injuring another. The centres were being knocked out, too soon it would appear, by advice of the deceased himself.——At Ripon, on Sunday before last, the roof of an occupied house fell in, but without injury to any one: the building is a very old one.

Suffolk Institute of Archæology, Statistics, &c.—The quarterly meeting of this society was held on Thursday in last week. The company met at Horringer church, where the president, the Rev. Lord Arthur Hervey, having alluded to the restoration of the church a few years since by Mr. A. J. Brooke, Mr. Tymms read a paper on its history and architecture. The archæologists then proceeded to Rickworth Rectory, the residence of the Rev. Lord Arthur Hervey, where in the dining-room the exhibition of antiquities was arranged. Various presents were here announced. The Rev. Henry Creed then read a paper on rings, considering them in their religious, superstitious, useful, and ornamental purposes. The paper was illustrated by a large number of examples. The president then read a memoir of the House of Hervey, and the company afterwards proceeded to the mansion of the marquis, where they were received by Earl Jermyn, M.P. Lord Hervey, and other members of the family, and variously entertained. Ickworth church, the mausoleum of the Hervey family, was next visited; also Chevington-hall and church.

"What Twopences will do."—In consequence of a notice appearing in your paper of two lectures I lately delivered at Lancing, I have had several applications for information from different parts of the country. I beg to inform your readers, through you, that I shall be happy to forward copies to any of them who will favour me with their address, or should they prefer it, an enclosure of three postage stamps would save me from expense. W. White, Jun.

45, Upper Bedford-place, Russell-square.

Destruction of the Teredo Navalis in Docks.—A French naturalist, M. Quatrefages, suggests that a weak solution of mercury (corrosive sublimate, we presume), thrown into the water, will destroy the milt of the teredo, and consequently prevent fecundation of the eggs, thus exhausting the molluscs in the bud. Professor Owen suggests that the power of the teredo to bore into wood and stone depends on muscular friction, the muscular substance being perpetually renewed while the wood or stone wastes away, of course, without renewal.

Opening of the Mechanics' Institute at Basingstoke.—The winter session of this Institute opened with a lecture by the Earl of Carnarvon, on the history of Hants, in which his lordship regretted the past deficiencies in county histories, and made some reflexions on the general attachment of all for the native soil and home of their fathers. Some nations, or governments rather, had endeavoured to tear up ancient land-marks, and even to root out native languages; but it was rather curious, he said, that wherever the Anglo-Saxon race existed, there a different spirit was to be found. It was the fashion of our cousins across the Atlantic to talk sometimes as if the old order of things had passed away, and the new world had really outweighed the balance of the old. But there was not one American writer of note who did not show, in almost every page of his writings, a yearning for that period when America and England should be one. There was hardly an American who came to this country who did not visit it as his home rather than as a foreign land. And even in the names which the rude and unlettered colonists had assigned to the places of their residences,—such as New England, New Hampshire, New Plymouth, New Portsmouth, Canterbury, and a crowd more,—they might see that England, as it were, was receiving a fresh tribute of allegiance, and the Americans themselves were unconsciously bowing before that same altar which they, in ignorance, worshipped. And if they chose to narrow their thoughts from great nations to home and things around, what man was there then among them who did not seem to dwell with pleasure on the stories he heard in his youth from his father or some earlier generation? Who had not thought with pleasure that the very same house in which he was born and educated, and the very same hearth on which he sat, had witnessed the birth and education of former generations, and of all that one loved of humanity;—that in the same church in which he weekly knelt, there his forefathers knelt. The meeting was a crowded one, and the proceedings formed a sort of wind-up to a conference of the Hants and Wilts Adult Educational Society, which had been held in the forenoon at Basingstoke.

The Architect of the New Theatre at Moscow.—The Emperor Alexander has given the cross of a commander of St. Vladimir to M. Albert Cavos, architect of the new theatre at Moscow, and has also settled upon him an annuity of 6,000 francs.

The Atlantic Submarine Telegraph. — The Magnetic Telegraph Company having placed ten subterranean gutta percha insulated conductors of over 2,000 miles each at the service of the experimenters during the hours of the night of 2nd inst.—Professor Morse, from America, who appears to have come over for the purpose, and Dr. Whitehouse and Mr. Bright experimented with the lines in connection, and, according to Mr. Morse's report, with perfect success, so as to establish the complete practicability of telegraphing between Europe and America, *vid* the Atlantic Ocean, and thus disproving or dispelling Professor Faraday's fears of the impracticability of such a mode of communication. Signals were telegraphed from one end of the 2,000 miles to the other, at the maximum rate of 270 per minute upon the telegraphic register, a speed commercially advantageous. A public dinner was given at the Albion Tavern, to Professor Morse, on Thursday in last week, in acknowledgment of his services in the development of the electric telegraph, and likewise with a view of expressing an opinion of the importance of a submarine communication with America. The chair was taken by Mr. W. Fothergill Cooke, one of the directors of the Electric Telegraph Company. In proposing the health of Professor Morse, the chairman stated his opinion that the system introduced by the Professor was the best, it being the most simple, permanent, and certain.

Houses for Workmen in Paris.—The *Moniteur* of the 23rd ult. mentioned that grants of money were allowed from the funds of the State for the construction of lodgings for workmen. These encouragements not only apply to buildings entirely new, but also to the owners of houses who would add one or more stories to them for the purpose of dividing them into small apartments. Proprietors may, on application at the secretary's office of the Minister of the Interior, inform themselves of the conditions on which the grants for the last-named operation may be obtained. The cost of lodgings has led to a very serious state of things in Paris.

The Iron Trade. — The quarterly meetings of the members of the iron trade, in the central districts, have been held during the past week. The decision of the preliminary meeting to maintain the prices which have for some time nominally ruled—namely, 9*l.* for bars, 10*l.* for hoops, and 10*l.* 10s. for sheets and plates, has been confirmed; but "these prices," says the *Staffordshire Advertiser*, "so far as the make of most houses in this district are concerned, considerably exceed the rates at which iron of very fair quality has for some time been sold." Pig iron is considerably lower than at the commencement of the quarter. Fair cinder pig for foundry purposes is quoted by the paper just named, at 3*l.* 12s. 6d. and good mine pig from 3*l.* 15s. to 4*l.* 2s. 6d. Even the Shropshire pigs, which, from their excellent quality, always fetch a high price, are offered at cheaper rates. Ironstone is more plentiful, and also tends downwards, 17s. 6d. being the price of the best qualities of blue flats.

Improved Working-class Dwellings at Bristol.—The first building purchased by the Bristol branch of the Metropolitan Association for the Improvement of Dwellings for the People, has been opened. It formed the old City School, in Christmas-street, a spacious range of three sides of a quadrangle. It has been altered on the plans of Messrs. Foster and Wood, and now contains thirty-three family dwellings, of two or more rooms, each with scullery, water supply, and many other advantages, which are too often wanting in the poor man's home. Only about two-thirds of the capital of 1,000*l.* is subscribed, but a second building is in rapid progress in Limekiln-lane, a neighbourhood in which lodgings are scarce and dear, and the committee are anxious to arrange for a third and fourth in other parts of the city, but they need more friends and more funds to enable them to prosecute the work.

Yorkshire Architectural Society.—The anniversary of this society was celebrated on Thursday before last, at York, the Rev. Canon Randolph in the chair. A satisfactory report, as regards the operations of the society during the past year, was read; but, from the discussion which followed, it appeared that the society is unable, from limited pecuniary means, to extend its usefulness. The society has incurred a heavy payment in the item of printing, as respected its connection with the United Society, whose proceedings were published in a lengthy, elaborate, and costly manner; and it was suggested whether it would not be expedient for the society to withdraw from the United Society, and print such of its own proceedings as were deemed advisable in a more simple form, and at a reasonable rate, whereby the society would have more funds at its disposal for effecting church restorations and other similar works.

Tests of Pure Water. — The following practical rules for testing the wholesomeness of the water, says Dr. Marcet, in the *Medical Times*, will be useful. — 1. The water must be perfectly colourless and transparent, leaving no deposit when allowed to stand undisturbed.—2. it must be quite devoid of smell. —3. When litmus paper is immersed into the water, the colour of the paper must remain unaltered.—4. The water when boiled must not become turbid.—5. About half a table-spoonful of the fluid being evaporated to dryness on the spirit-lamp, there must be a slight residue left at the bottom of the spoon not turning black from organic matters.—6. The residue obtained by evaporating to dryness a sample of the water in a porcelain cup upon the tea-urn, must not become black on the addition of a solution of sulphuretted hydrogen.

Gas.—The sale of shares of the Birkenhead and Claughton Gas Works, at the Clarendon-rooms, Liverpool, on Saturday in last week, induced the attendance, says the *Albion*, of a large company, and, although the whole 600 shares were not sold, the prices realised upon about one-third of the number offered was from 75*l.* to 78*l.* per share. The executors withdrew the remaining lots at 75*l.* each, 50*l.* paid, but, had they been inclined, they could readily have sold all at 70*l.* Mr. W. Jackson, M.P. offered a few general explanations, and Mr. Beloe read a statement, showing the nett profits to have increased from 4,800*l.* per annum, in 1847, to 8,900*l.* in 1856; and that the income from supplying water to shipping, had increased in the same period from 39*l.* per annum to 400*l.* Several of the purchasers are commissioners of Birkenhead: many shares were sold after the auction, but at full prices.

New Use for Lamp-posts. — A speculative gentleman recently proposed to hire the gas-posts and lamps, of the town of Chester, from the Watch Committee, and to give them 1,000*l.* a-year for their use. To reimburse himself, he intended to turn the posts and lamps into instruments of advertising; and he calculated upon making 25,000*l.* by it. The Watch Committee, however, rejected the offer, the shopkeepers being opposed to it, as an arbitrary and vexatious tax upon them.

Ventilation.—A simple contrivance for ventilating dwellings, churches, &c. has, it is said, been invented by Mr. M'Kinnell, secretary of the Glasgow Athenæum: it consists of two tubes, one within the other, the inner one with a broad flange on its lower end, spreading like the bell of a trumpet, within the room. This inner tube opens to the outer air, and is meant to allow the escape of the foul or heated air. Attached to the outer tube is an arm which passes to the outer air; and while the inner tube is causing an upward and outward current, the arm leads the exterior and pure air into the concentric opening formed between the two tubes, where there is a constant downward and inward current. The flange mentioned spreads the air in a thin film across the ceiling of the apartment. Acting upon the discoveries of Dr. Stenhouse, the inventor proposes to attach to the supply-tubes of his ventilator a thin sieve of crudely broken charcoal, through which the atmospheric air will pass in its way to the room—the charcoal acting as a deodoriser and detergent.

"The Book of the Thames."—Mr. and Mrs. S. C. Hall announce a work under this title, to be published in the "Art-Journal." The river will be described from its rise in Trewsbury Mead to its junction with the German Ocean at the Nore—a distance approaching 300 miles, navigable nearly to its source. Among the subjects illustrated will be the picturesque river scenery, ancient ruins and remains of antiquity, baronial residences, historic sites, places associated with memories of great men, bridges and locks, the botanical productions, the fish, the insects, peculiar to the Thames and its banks; and the barges and boats. The picturesque scenery, and its varied accessories, will be confined to Mr. W. S. Coleman; while for matters antiquarian they confide in Mr. F. W. Fairholt, whose drawings and notes cannot fail to be of great importance to the work. The work will appeal to a large and varied class of readers.

The Miseries of a Millionaire. — "It is stated," says the *Union*, "that Baron James de Rothschild is at present much in the same predicament as Frederick the Great of Prussia was, when he could not get a miller, whose tenement stood in the way of an improvement the king was making at Sans-Souci, to give up his property for love or money. The baron, it seems, has set his heart upon a piece of land belonging to an old lady, a neighbour of his at Boulogne-sur-Seine, and which is most inconveniently wedged in between his own domains. The land is hardly worth 50,000 francs, and yet the baron has successively offered from 100,000 francs to 1,000,000 francs for it without success. The old lady, not content with this, has brought an action against him to prevent his breaking up a road which he has brought from the commune, and which cuts his private park in two. She insists upon its being preserved, as a necessary communication with her own property."

Kilpeck Church, Hereford.—That beautiful specimen of rough Norman architecture, the door of which Mr. D. Wyatt has in the Crystal Palace, is most dreadfully neglected, the churchyard is in a filthy state, and the interior requires renovation, the hideous gallery pulled down, open seats instead of deal box pews, and some stained glass windows. Now the patron has 15,000*l.* a year, and for about 400*l.* the restoration might be made: as much was done a few years ago by a society.—C. de Vere.

Rolling Railway Switches. — Messrs. David and William Brown, of Smethwick, have specified their patent for improvements in rolling railway switches from railway bars, and in rolling taper ends on other bars requiring the same. This invention consists of the following methods of giving a taper figure to railway bars for railway switches and crossings, and in rolling taper ends on other bars requiring the same. The inventors mount a pair of rolls, the surface of which are eccentric to their axis; the said surfaces passing uniformly from a curve of a minimum to a curve of a maximum radius. During the revolution of the rolls, their surfaces gradually approach, and anything rolled between them is consequently tapered. A portion of one or both rolls is cut away, and the rail or bar to be tapered, the end of which has been properly heated, is introduced between the rolls when the cut-away portions are opposed to each other. By the revolution of the rolls their curved faces seize the rail or bar, and give it a taper figure, which rail or bar is returned to the workmen at that side of the rolls where it was introduced. An adjustable stop is placed in front of the rolls so as to arrest the rail or bar at the proper point on its introduction between the rolls. Instead of making both rolls eccentric, one only of them may be eccentric, and the other have a cylindrical figure. The top roll may be raised and lowered by means of screws acting on the bearings or journals in which the roll works. In tapering railway bars to make switches, the inventors subject both ends of the same to the action of the rolls, thereby tapering it at both ends: by then dividing the bar into equal parts, two switches are made therefrom.

Crystal Palace in Winter.—An influential shareholder of the Crystal Palace, says the *Morning Star*, sends us the following:—"The experience that has been gained at the Surrey Gardens, and other similar institutions, clearly proves that winter opening of the Palace would be a step well patronised by the public, and would increase the value of the season tickets, and become an extra source of profit to the company. To carry out such a project successfully, it would be requisite that the main promenades should be well lighted, and that at various points in the building a series of side courts should be fitted up, at each of which either theatricals, marionets, vocal and instrumental music, poetical illustrations, conjuring, ventriloquism, equestrianism, cosmoramas, and panoramas, or dissolving views, might take place, while at other places a series of scientific and popular experimental lectures might be arranged, so that the taste of all visitors would be gratified. The grounds might afterwards be illuminated, and fireworks, baloon ascents, and other out-door amusements arranged. The extra cost of these fêtes need not be very great to the company: no extra attendants would be necessary above those required in summer for the flower-shows, &c. as the Palace need not be opened until noon on each day. The cost of the various performers and lecturers may easily be ascertained, and supposing 20,000 lights to be required for five hours, and that the gas could be obtained at the usual price of 5s. per 1,000 feet, the cost of lighting would amount to only 125*l.* per night. The Palace might be opened for these fêtes at five o'clock, and close at ten or eleven o'clock, trains on the railways arranged both to the City and West End, and thus this magnificent building would become the chief place of amusement in the metropolis." Were the Crystal Palace to require gas, the company could supply themselves with it, by the erection of an apparatus for the purpose, at probably one-half of 125*l.* per night. By means of gas, very novel and brilliant effects might be brought out at the Crystal Palace. The suggested arrangements for winter, we may add, could also be made available for evening entertainments almost all the year round, thus contributing a new class of frequenters, namely, those closely and continuously engaged all day in business, who would be glad of such an opportunity of breathing country air in the evening, and relaxing their care-worn minds at same time by varied amusement and instruction.

Antiquities from Kertch.—Some spoils from the Museum at Kertch have arrived which will possess considerable interest. The *Hampshire Telegraph* says,—"They are the full-sized figures, in marble, of a lion and lioness; and although the hand of Old Time has told upon them, they still possess in their outlines proofs of the skill with which they were sculptured. There is nothing to the uninitiated eye in the way of inscription to indicate their date or place of sculpture, but those who have some knowledge of such matters attribute them to the period of the ancient kings of Pontus, of whose realms the Crimea was a portion: probably they date from the time of that celebrated monarch Mithridates, surnamed the Great. However near the fact this conjecture of their date may be, it is impossible to gaze on these relics of an age long since gone by without deep feelings and reflections being excited. They are destined for the British Museum, and will no doubt attract much attention from antiquaries."

The Department of Art.—Your correspondent, C. H. W. who writes upon the subject of the prize medals of the Department of Science and Art, has fallen into a slight error, caused, doubtless, by the obscure manner in which the returns and tables of that department are presented to the public. In the Metropolitan Spring Exhibition of 1855, 195 medals were awarded among 991 works, and 186 of the premiated drawings were selected to form an exhibition, which was sent wandering through the provincial towns of the kingdom.* The subject, however, requires an investigation, as, indeed, does the whole system of Government superintendence of art and science as administered by the Department of Science and Art.—Crusty.

Tenders for Wells. — The following tenders have been received by the Board of Works for the Wandsworth district, for sinking fourteen wells, 20 feet deep, 7 feet in clear the digging: half-brick steining:—

	For each well.
Tickner	£53 11 3
Denning	39 0 0
Thompson	30 10 0
Speller	27 0 0
Bailey	26 0 0
Baxter	18 15 0
	Labour digging only.
Brown	£ 9 0 0
Jux	7 10 0

* 3 Rep. D. S. A. p 232.

Destruction of Weeds in Paved Paths and Courts.—The following method is said to be adopted at the mint in Paris, and elsewhere, with good effect: 100 lbs. of water, 20 lbs. of quick-lime, and 2 lbs. of flour of sulphur, are boiled in an iron vessel; the liquor allowed to settle; the clear part drawn off; and, being more or less diluted, according to circumstances, it is to be used for watering the alleys and pavements. The weeds will not reappear for several years. The liquid, however, will be death to the box or other plants upon the borders of such plots or paths, if it be allowed to reach the roots.

MESSRS. CLARK and CO.
15, Gate-street, Lincoln's-inn-fields.

Gentlemen, — After eight years' trial of your Patent Revolving Shutters, erected here, I can safely pronounce them most effectual in their action, and they have given me the utmost satisfaction.

I am, Gentlemen, yours truly,
Geo. Downe.

155, Leadenhall-street, August 7th, 1856.

TENDERS

For warehouse and premises, Fetter-lane, Fleet-street, for Messrs. Shaw and Son. Mr. T. H. Donaldson, architect. Quantities supplied:—

Wm. Cubitt and Co.	£2,900 0 0
I'Anson	2,884 0 0
Lucas, Brothers	2,849 0 0
Myers	2,787 0 0
Jay	2,690 0 0
Lawrence	2,640 0 0
G. Mansfield and Son	2,640 0 0
Piper and Son	2,427 0 0

For building a warehouse for Mr. Horn, Hounsditch. Messrs. Tress and Chambers, architects.

Nagle	£1,369 0 0
Sands and Co.	1,355 0 0
Ring and Stanger	1,342 0 0
Hawks	1,300 0 0
Raley	1,238 0 0
Turner	1,219 0 0
Evans	1,195 0 0
Keast and Moore	1,183 0 0
Wood and Son	1,170 0 0
Downs	1,160 0 0
S. H. Hocken	1,129 0 0
Furnival	1,060 0 0
Harmer	1,057 0 0
Freeman	1,050 0 0
Civil	957 0 0

For the extension of weaving-sheds and enlargement of shopping, at Worcester-cross, Kidderminster. Messrs. Biddlake and Lovatt, architects:—

Elliott, Wolverhampton	£1,405 0 0
Smith, Stourbridge	1,390 0 0
Ankrett, Kidderminster (accepted)	1,250 0 0
Walker, Evesham	1,233 0 0
Burkitt, Wolverhampton	1,157 0 0
Edmunds & Son, Kidderminster	1,110 0 0

For the erection of a new Congregational Church, at Sedgley, Staffordshire. Same architects. The carriage of materials given:—

Elliott, Wolverhampton	£1,638 0 0
Nelson, Dudley	1,546 0 0
Peacock, Sedgley	1,546 0 0
Cox and Sons, Tipton	1,457 0 0
T. and G. Lilley, Ashby-de-la-Zouch	1,428 0 0
Blackham, Sedgley	1,405 0 0
Burkitt, Wolverhampton (accepted)	1,331 0 0

For rebuilding 17 and 18, Cornhill. Mr. John Barnett, architect. Quantities prepared by Mr. Richard Roberts:—

	Bath Stone.	Portland Cement.
Carter	£10,477 10 0	£9,023 0 0
Bowley	10,289 10 0	8,916 0 0
Messrs. Lawrence	9,450 0 0	8,100 0 0
Hayward and Nixon	9,299 0 0	8,420 0 0
Lawrence and Sons	9,081 0 0	7,887 0 0
Jay	9,007 0 0	7,643 0 0
Wilson	8,974 0 0	7,329 0 0

Oades and Son (Egham)	749 0 0	59 0 0

TO CORRESPONDENTS.

"*Inferior Paint.*"—Sir: I have been much troubled of late with the continued soft and sticky state of painting, with a tendency to come off with the hand, and not bear washing. If any of your correspondents could give a reason why it does so, it would confer a great boon to the trade generally. I have been in business nearly forty years, and am convinced that paint was very different formerly.—A House Painter.

*** White lead is much adulterated. The evil, however, may be with the oil.

"Zadig" (the Institute of Architects grant certificates of qualification *only* with reference to the appointment of district surveyors under the Metropolitan Building Act).—"S. P. X."—"W. B." (an ordinary arrangement, but not always effective).—"Constant Reader."—"P. E. D."—"Mr. D."—"J. H S"—"B. L." (a proper charge should of course be made, but we cannot pretend to determine the amount).—"T. M. R."—"A. A." (misreads the passage).—"P. K." (apply to Warner, Crescent, Jewin-street, London).—"A Practical Man" (what is the derivation of the term "*pilly*-moulding," if not jelly?)—"B. Z." (it is better to hold direct from the freeholder, and to employ an architect. The law charges would depend on circumstances, including the moderation of the solicitor).—"N. de O"—"Steam Rammer."—"Mr. E."—"J. G."—"R. R."—"J. B"—"J. W." (next week).—"¼ Scale."—"An Old Hand."—"P. and S."—"D. W. A."—"B. and H."—"B. and L."—"D."—"J. M."—"Common Sense"—"Mr. W. jun."—"E. W. G."—"R. M"—"R."—"J. M. R."—"J. S." (there is no royal road to the knowledge necessary).—"Westminster Abbey."—"H. W."—"J. J. M."—"W. P."—"Mr. S."—"S. P. T."—"S. R. X."

"*Books and Addresses.*"—We are forced to decline pointing out books or finding addresses.

NOTICE.—All communications respecting *advertisements* should be addressed to the "Publisher," and not to the "Editor:" all other communications should be addressed to the Editor, and not to the Publisher.

He is a good draughtsman, and can produce most satisfactory references as to his abilities and respectability. A small salary would be accepted where a good practice offered.—Address, H. M. Mr. Harding's, 25, New Broad-street, City.

TO ENGINEERS AND CONTRACTORS.

A HIGHLY-RESPECTABLE MAN, of general mechanical pursuits, who has been engaged several years in the carrying out some of the most important works in the country, viz. earth-works, bridges, tunnels, drainage, road-making, ballast-burning, also the erection of stations, warehouses, &c. is de-irous of meeting with a RE ENGAGEMENT. The highest testimonials can be produced for ability and integrity.—Address, R. E No. 8, Church-street, Upper-street, Islington.

TO ARCHITECTS, BUILDERS, AND OTHERS.

AN experienced Practical Man, well versed in construction, is a good draughtsman, can take levels, measure, &c. requires a SITUATION as CLERK of WORKS or GENERAL FOREMAN. No objection to a country town, or to go abroad.—Address, A. T. 41, Haliet-street, Hoxton.

N.B. Unexceptional testimonials.

MARBLE CHIMNEY-PIECES, and every other description of marble work, supplied to builders and the trade at about HALF the USUAL PRICE, in many instances less than slate.—Manufactured by the LONDON and CONTINENTAL MARBLE COMPANY, at their own Quarries in France and Belgium.—Office and Depôt, 3, Crooked-lane, London-bridge.—Estimates given for works to any amount.

MARBLE CHIMNEY-PIECES.—The nobility and gentry of the United Kingdom who are building or refitting their mansions are respectfully invited to inspect the most Extensive Collection of MARBLE CHIMNEY-PIECES lately imported from the Continent. They comprise Statuary, Giallo di Siena, Vert Rouge, Dove, Black and Gold, Rouge de Belmont, Bardiglio, and other choice foreign marbles; and are designed with great taste, and executed by first-class artists.—On sale, in the show rooms of Messrs. EVANS, SON, and CO. King William-street, London-bridge.

LLOYD'S MARBLE WHARF, Thames-bank, Pimlico, adjoining Vauxhall-bridge. – Italian Statuary, Veined, Sicilian, Dove, Sienna, and other Marbles, for Sale, at import prices. A resident manager on the wharf at all hours.

BUILDERS, ARCHITECTS, AND MASONS.

MARBLE. – The ITALIAN MARBLE COMPANY beg to call the attention of Architects, Builders, and others connected with the trade, to their large and well-assorted STOCK of VEIN SICILIAN, and other MARBLES. The liberal system of business adopted by this company, the superior quality of their marble, and their very moderate scale of prices are combined, to form an inducement to buyers. An inspection is solicited at the Depôt Bridge Wharf, Millbank, adjoining Vauxhall-bridge, where no other persons are authorised to sell except Mr. Baxter, Wharf Foreman, or the undersigned.

WILLIAM W. BONNIN, Secretary

PURBECK MARBLE can be had of Mr. JAS. VOSS, Corfe Castle, Dorset.

THE LIZARD SERPENTINE COMPANY manufacture and sell in block and slab the beautiful stone now raised from the lower beds of their quarries. Chimney-pieces, Columns, Fonts, and ornamental works on view, at 20, Surrey-street, Strand.

HENRY COX, Manager at the Lizard.
F. W. RUFFLE, Agent in London.

MARBLE WORKS by PATENT MACHINERY, Commercial-road, Pimlico, London.

THOMAS JACKSON begs to draw the attention of the public to the most extensive stock of Marble Chimney-Pieces in the Metropolis; consisting of a selection of upwards of two hundred, and manufactured by machine power from the finest Italian and other marble, and with that careful attention to the details and finish so necessary in good marble work. The Stock consists of elegant Fawley-Roon Chimney-Pieces in Statuary Marble; bold, massive Chimney-Pieces, in Black, Black and Gold, Bardilla, Sienna, Verd Antique, Brocatella, Dove, St. Ann's, and Serpentine Marble, suitable for Dining-Rooms, Libraries, Vestibules, and Entrance-Halls; and a great variety of others in Veined, San Juan, Emperor's Red and Amber Marble, for Boudoirs, Brenkfast-Rooms, best and secondary Bed-Rooms, &c.; also, Monuments, Tombs, Tablets, and Pedestals for Busts and Statues, and Slabs for Cabinet Work, &c.; the whole executed from the most classical designs, and in all the varieties of the finest Italian and British Marble, at the lowest remunerative prices.

BRAMLEY FALL! BRAMLEY FALL! On account of greater facilities than possessed by any one else, TRICKETT and PERRINS are prepared to supply in any quantity BRAMLEY FALL STONE, at greatly reduced prices, having opened the extensive quarries in the Hawksworth Cutting, on the North-Eastern Railway, near Horsforth. The stone is of the same quality as the well-known Old Bramley Fall and Horsforth Quarries, but has the advantage of being of a lighter and more uniform colour. The North-Eastern Railway Company have put side gauges on both sides of the railway. Powerful cranes are fixed, so that the stone can be got to any size, and the stone being loaded in the quarries at the railway sidings can be forwarded the same day to any part of the kingdom, or supplied in London river or Selby or Hull, in any quantity.—For particulars apply to JOHN TRICKETT, Stone Merchant, Headingley, near Leeds, or to SAMUEL TRICKETT, Victoria Stone Wharf, Isle of Dogs, London.

BANGOR WHARF, King's-road-bridge, Camden-town. STRINGFIELD and COOPER, late W. W. Rawlins, beg to call the attention of Builders and others to their stock of Bangor slates, lime, plaster, Roman, Portland, and Keene's cement, blue lias, Dorking and chalk lime, plasterers' hair, Yorkshire plain, pan, and ridge tiles, glazed sewer pipes, closets, and traps, Welsh bre-bricks, gravel and shells for garden paths, ballast, sand, &c. Materials landed, wharfed, and carted.

QUARRY WORKED STONE.—Architects, Masons, and Builders would effect a great SAVING in cost by ordering bases, plinths, templates, sills, corbels, imposts, cornices, copings steps, staircases of all kinds, moulded or plain, squares or spandril, from the quarries ready worked for fixing. Experienced foremen are kept, and the stone is clean worked, and carefully packed or stowed, and delivered direct to one bottom by vessel or rail, without transhipment. Estimates given on application, accompanied by plans or sketches, to SAMUEL TRICKETT, Stone-wharf, Isle of Dogs, or to JOHN TRICKETT, Headingley, Leeds, Yorkshire.

TO CONTRACTORS AND OTHERS.

YORKSHIRE PAVINGS, LANDINGS, STEPS, COPINGS, CURBS, SILLS, SINKS, and CHANNELS of Horsehill, Robin Hood, Park Spring, and Gaspay, in Blocks, Headstones, or Slabs; Purbeck Paving, Sinks, Curbs, Ricksto nes, Pitchers, and Squares; Caithness Flags, Firestone, Newcastle and Bilston Grindstones; Portland Stone in Blocks, Landings, Slabs, &c.; Darley Dale, Cean Stone, Bramley Fall, Bath, Huddlestone, Park-wood, and other Block Stones. Valentia Slate slabs, coarse Slates, Cornish, Aberdeen, Guernsey, and other Granites, Marble, in Block and Slabs, supplied from the Wharfs, Millbank-street, City Basin, and Deptford; also direct from the quarries by vessel or rail.—Address, FREEMAN'S WHARF, 27, Millbank street, Westminster.

RANSOME'S SILICIOUS STONE.—All kinds of ARCHITECTURAL EMBELLISHMENTS executed in this beautiful and indestructible material, at prices not exceeding the ordinary cements. Full particulars furnished on application to Mr. FIELD RANSOME, Whitehall wharf, Canon-row, Westminster; or Patent Stone Works, Ipswich.

GATES and GEORGE, CAEN, AUBIGNY, and GENERAL STONE MERCHANTS.
CAEN WHARF, ROTHERHITHE, LONDON.

CAEN and AUBIGNY STONE.—P. FOUCARD, Stone Merchant and Quarryman. Cargoes shipped to order from Caen to any port. Contracts taken for any quantities. Depôts: Granite Wharf, East Greenwich; Lett's Wharf, Waterloo-bridge. Office: 248, High-street, Southwark, near the Townhall.

TO CONTRACTORS, ROAD SURVEYORS, &c.—FOR SALE, about 800 YARDS BROKEN BOMBAY GRANITE, at present in Guernsey; 500 Broken Hobart Town; and 600 ditto Port Phillip. Also a Large Quantity of other Granites, broken or otherwise, at very reasonable rates, by the ton or yard.—Apply to Mr. CHARLES ROSS, 2, Stepney-causeway, Ratcliff; or at Folly-wharf, Isle of Dogs, Poplar.

WELSH GRANITE.—The Welsh Granite Company, Carnarvon, supplies Pitching or Paving Sets of this Material to order. The Sets, which have for several years been extensively used in Manchester, Bristol, Leeds, and other large towns, combine in a higher degree than any others, the qualities of roughness in wear and durability. The stone is also well adapted for foundation courses, plinths, &c. for public buildings and for mill-stones.

GRANITE.—King William and Nelson Monuments, Plinth and Steps of the Royal Exchange, and Terrace at the Royal Palace Slough, with the Heat or Cumnan under Royal Charter.—For terms apply to Mr. C. HOAR, Haytor Granite office, 4, Millbank-row, Westminster.

GRANITE.—The Cheesewring Granite Company, Liskeard, Cornwall.
London Agents—TREGELLES and TAYLOR, 84, Old Broad-street. Manager—JAS. J. TRATHAN, Liskeard
This Granite is selected for the New Westminster-bridge.

MARKET-WHARF, REGENT'S-PARK-BASIN—WEST-END DEPOT, for Yorkshire Paving Portland and Derby Stone, Bangor Slates, Slabs, &c. Ale Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods SCALES and WOOD invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

JOHN BAZLEY WHITE and BROTHERS, MARBLE MERCHANTS,
MILLBANK-STREET, WESTMINSTER.
Marble of all kinds and of best quality, in block and slab Marble mortars, &c.

SLATE.—An assortment of the best BANGOR ROOFING SLATE ON SALE, at Bridge-wharf, Millbank. Apply to Mr. GEORGE BAXTER, Foreman.

SLATE.—The Bangor Royal Slate Company have now on hand a LARGE ASSORTMENT of ROOFING SLATES, blue and green, of the usual sizes, which they are prepared to supply on the usual terms, for shipment from their depôt, at Bangor, or to transmit by railway. Also Slabs of all sizes.—Orders to be addressed to Mr. EDWARDS, Manager, Royal Slate Quarries, Bangor.

PARIS EXHIBITION. — ENAMELLED SLATE.—TWO FIRST-CLASS MEDALS!—Mr. MAGNUS is the only exhibitor whose productions received this double honour; also the Prize Medal at the Great Exhibition of 1851, and the Medal of the Society of Arts in 1843. This beautiful material, handsomer and more durable than marble, is now finding its way into palaces, into the mansions of the nobility at home and abroad, into the highest class of public buildings, as well as into humbler dwellings. The cost is immensurably less than that of any other production that can at all compete with it. It is applicable to a variety of useful and ornamental articles, too numerous to be separately specified. Among the chief are chimney-pieces and ornamental stoves for all apartments; plain and exquisitely decorated slabs for the tops of loo-tables, chiffoniers, consoles, &c.; baths, lavatories, washstands, cisterns, columns, vases, pedestals, and brackets; washstand tops, billiard tables, linings to halls, vestibules, and dairies. Price lists can be had on application to Mr. MAGNUS, 20 and 40, Upper Belgrave-place, Pimlico.
N.B. Plain slate work executed in any single article to the most extensive contracts, for home and abroad.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery Bethlem Hospital, various Lunatic Asylums, the ordnance Works, Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

WELSH SLATES for SALE.—A cargo of fine WELSH SLATES, about 200 tons, now in the river; sizes suitable for builders. Approved bills would be taken —Apply to Messrs. WILKINSON and CO. 23, Gresham-street, City.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars, Fleet-street, City. Sand, from above or below bridge, delivered by the yard or per barge. Ballast screened or unscreened, by the yard or per barge. Stocks, lime, and old bricks. Dry rubbish delivered per barge, in any quantity, alongside the Thames.

ASPHALTE.—GERVASE FOOTTIT TRINIDAD ASPHALTE WORKS, ROTHERHITHE, LONDON. Established 1834.—TRINIDAD, SEYSSEL, and BRITISH ASPHALTES, manufactured by steam power, laid down in the best manner, or supplied in any quantity. Information for using forwarded with material. Post-office orders or reference in London promptly attended to. Estimates given for every kind of the above work.

ASPHALTE, FOREIGN and BRITISH, for FLAT ROOFING and every description of PAVING, especially in damp situations,
FROM 2s. 9d. PER SQUARE YARD.
Country Builders supplied with Asphalte for footings and barn floors, with instructions for using it.
Apply to JOHN PILKINGTON, Peloneeau and Limmer Asphalte Office, Monument-chambers, 14, Fish-street-hill, London.
N.B. Importer of the PURE ROCK ASPHALTE, from the LIMMER Mines in Hanover.

Also, for Sale, a Quantity of Cocoa Matting for Churches, at greatly reduce prices.
Apply to H. PIGGOTT, 113, Fore-street, City.

ROYAL POLYTECHNIC. — Entire new Series of Novelties. — Lecture, with Experiments and Dissolving Diorama of Designs of New Pieces of Manufacturing Iron and Steel, by J. H. Pepper, esq. every Day, at Three, and every Evening, except Monday and Saturday, at Eight. New Entertainment by Leicester Buckingham, esq. entitled, "Life in the West," illustrated by Dissolving Views, painted by G. Harvey, esq. Montanari's Wax Figures, illustrating the Ethnology of Mexico.—Management of Miss Grace Alsop, and Mr. and Mrs. Cooper, for their Musical Lectures, entitled "Recollections of the Opera," and "Melodies from Many Lands," every Tuesday, Thursday, and Saturday Evening.—Monday Evening, Lecture by Mr. Walter Rowton, on the Writings of Charles Dickens.—The Evening Classes in connection with the Examination of the Society of Arts are delayed, for the convenience of pupils still joining, till the 20th inst. at seven, p.m.

BATH, PORTLAND, and ROMAN CEMENTS.—The London and West of England Cement Company can offer to the Trade the best natural HYDRAULIC CEMENTS at reduced prices. The Company particularly recommend the best quality of their Bath Cement for all modeling cornices, decorations &c. as having all the qualities requisite for an interior cement, and being quite unaffected by extremes of weather. The Company also supply BLUE LIAS LIME, lump and ground, which will carry more sand than any in the market.—Communications to be addressed to the General Offices, 80, Old Broad-street, London; to Mr. M'NEMENT, 4, Caroline-place, City-road; to Mr. TIMEWELL, the Depôt, 9, North Wharf-road, Paddington; or to the Works, Dunball, Bridgewater.

SOUTHAM BLUE LIAS LIME DEPOT.
Glazed Stoneware Sewage Pipes.
Brick, Lime, and Cement Merchants,
TATHAM and CO
14, South Wharf, Paddington.

PORTLAND and BATH CEMENTS.
TATHAM and CO,
14, South Wharf, Paddington.

PARIAN CEMENT, reduced in price 25 per cent. This article is valuable for inside stucco, and especially for skirtings, for flooring on brick arches, &c. It takes paint in a few hours after its application on walls or laths, is without efflorescence, and may be papered in a couple of days. A finer quality forms a beautiful Scagliola, with any admixture of colours.—Manufactured by FRANCIS, BROTHERS, Cement Works, Nine-elms, London.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale or retail, at his wharf, 8, Upper Thames-street, London; and also at the manufactory, Faversham, Kent.—N.B. These Cements supplied for shipment on advantageous terms.

THE PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. to WHOM THE PRIZE MEDAL WAS AWARDED in 1851, are prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes to which Cement is applicable. Orders received at Great Scotland-yard and at the Works.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland Cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brickwork, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

PORTLAND and ROMAN CEMENTS.—T. H. BOORMAN, WILD, and CO. MEDWAY LIME and CEMENT WORKS, LOWER HALLING, near Rochester. Agent at the Works Mr. THOMAS WEEKES.
Agents in London, Messrs. GEORGE POTTER and CO. Lime-merchants, Purfleet-wharf, Earl-street, Blackfriars, and No. 19, North wharf-road, Paddington.

PORTLAND and BATH CEMENT.—FULLWOOD THOMPSON and CO request the attention of Merchants and Contractors to the quality of their Portland and Bath Cements, which they manufacture on an improved system, securing regularity of strength and colour, and at a less cost than is attainable by most other makers.
These cements set under water in a few minutes, and are not affected by extreme heat or cold.
FULLWOOD THOMPSON & CO. will be happy to send prices and samples in reply to application by post. They deliver free into the Basin and Export Raiting Company's trucks at their works, or free on board in the Port of Bridgewater.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light, Dark, and Portland Cements equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Magic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire bricks, Grind-stones, Cement Chimney-tops, ditto Vases, Buttering, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

JOHNS and CO.'s PATENT PERMANENT STUCCO WASH (perfective non-absorbent). STUCCO, CEMENT, STUCCO PAINT.—CLARK and BENGOUGH, Manufacturers, Grand Surrey Canal Bridge, Old Kent-road. Office, 4, Goose-yard, Lombard-street.

PORTLAND and ROMAN CEMENT.
PLASTER of PARIS
Manufactured by J. M. BLASHFIELD, at Millwall, Isle of Dogs. Warehouse, No 1, Wharf, Paddington-basin.

11, Goose-yard, Lombard-street, City.

ELMLEY CEMENT WORKS.—ROMAN and PORTLAND CEMENT of the first quality, manufactured on the above works. Also STOCK and KILN-BURNT BRICKS, hand moulded and machine made, for shipment or otherwise.—Apply to G. BOOTH, Agent, as above.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements used at the Institute of Civil Engineers, to be obtained from the Makers, JOHN BAZLEY WHITE, and BROTHERS, Millbank-street, Westminster, who prepare one quality only, Portland Cement.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring.—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS Millbank-street, Westminster; and Seel street, Liverpool

CHARLES RICHARDSON, 3 & 4, SOUTH-WHARF, PADDINGTON BASIN.
COWLEY AND KENT BRICKS,
PORTLAND, ROMAN, AND OTHER CEMENTS,
TAMWORTH GLAZED SEWAGE PIPES
BLUE VITRIFIED BRICKS, COPINGS, PIPES, &c.

3 & 4, South Wharf, Paddington.

NOTICE.
CHARLES RICHARDSON takes the earliest opportunity of informing Engineers, Architects, Contractors, and others, that he is now building GREAVES'S BLUE LIAS LIME per the Great Western Railway from Harbury to Bull's bridge and Paddington, from whence it can be delivered alongside any part of the river Thames, canals, or railway stations in London the day after it is burnt and ground, in any quantity, and at a moderate price.
All applications for prices and terms will meet with prompt attention.
N.B. Please observe the lime is ground at the works, not in London.

BLUE LIAS LIME.—Messrs. GREAVES and KIRTHAW having completed their Works on the Birmingham and Oxford, one of the Great Western Railways, at Harbury, are now prepared to supply LUMP and GROUND LIME of the same fine quality from the Quarries on the Great Western Railway, at Greaves's Blue Lias Lime, Portland, Bath, and Lias Cement Works, at Harbury, Stockton, and Wilmcote.—Office, at Warwick.

HUBBUCK'S PATENT WHITE ZINC PAINT,
The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers, are enabled, by their process, which is patented, to supply Pure White Zinc Paint at the price of White Lead. Neither hear nor from all climes a t upon it. It is entirely free from any noxious or pernicious property. Those direful maladies paralysis and painters' colic, will be altogether avoided. The Powdered White Zinc may be had for grinding in Oil, and where it is used with Paint, Varnish, &c. To prevent the prejudice against Zinc paint, which the adulterated article must otherwise produce, it is now sold in the Wholesale Paint dealers in Original Packages, each cask stamped, HUBBUCK LONDON PATENT. And when so marked, the quality is guaranteed. THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers, Paint and Varnish Works, opposite the London Docks, London
N.B. OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT FOR REFINING.

CHADWICK'S CEMENTS.—To Railway and Dock Directors, Gas and Waterworks Companies, Coal-Mine Proprietors, Builders, Contractors &c.—JOHN CHADWICK, Manufacturer of the Patent Lithic, Roman, and Portland Cements, made on the same principle and from the same materials as used by the late firm of SWINDELLS and BROTHERS. J. C. is prepared to enter into contracts with any of the above branches that may favour him with their orders. The advantage to be derived from the above Cements, manufactured by J. C. over all others, are their extraordinary hydraulic properties.—Samples and references may be had on application either at the Works, Ashton New-road; or the Warehouse, 5, Broom-street, Shudehill Manchester.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS Millbank street Westminster

COLES, SHADBOLT, and CO.
CEMENT and PLASTER MANUFACTURERS,
LIME BURNERS
Brick, Tile, Drain-pipe, Hair Lath, and Fire Goods Merchants.
ST JAMES'S and THORNHILL WHARFS,
Caledonian road, London.

BLUE LIAS LIME.—CHAS. NELSON begs to offer to consumers a supply of Blue Lias Lime direct from his Quarries in Warwickshire, the quality of which has been tested by several of the largest building firms in the metropolis and approved by them; and the use who have favoured C. N. with their patronage during the last three years have always expressed themselves satisfied with his system of weighing or measuring the lime. When the lime is delivered by boat, the master has instructions to produce (on demand) the canal wagger's pass, by which the purchaser may know the exact weight delivered.—Orders addressed to the London Depôt, 16, South Wharf, Paddington, J. D. BLYTH, Sole Agent, will have immediate attention.—Quarries and Manufactories, Stockton, near Southham, Warwickshire.

DAVIES and NORMAN,
CROWN WHARF, GREAT SCOTLAND YARD.
ROMAN and PORTLAND CEMENTS,
LIME, BRICKS, TILES, SLATES, FIRE GOODS, &c.
STONEWARE PIPES, PANS, TRAPS, &c.
A Liberal Allowance to the Trade.

NOTICE.

TO BRICKMAKERS and OTHERS.—TO BE LET or SOLD, a BRICK FIELD, containing fifteen acres of ground, twelve acres of which are brick earth, commanding both railway and water carriage; low royalty; the field in full working order, with machinery, &c. complete.—For further particulars, apply to Messrs. SLOPER and CO. the Gresham Auction and Estate Offices, 34, Coleman-street, City.

IMPROVED AIR-BRICKS.

ILLIAM GILBERT, Manufacturer of all kinds and colours of Tiles, Quarries, Drain-pipes, Moulded Bricks, Brackets, Vases, Chimney-pots, Stoneware Glazed sewerage Pipes, Ornamental Quoin Blocks, &c.
Tividale, Staffordshire.

BEADON'S EAVES GUTTER TILES.—Mr. LAWES is prepared to CONTRACT for the EREC-TION of the above TILES on roofs of all descriptions, in the neighbourhood of London, at 9d. per foot; above 100 feet, 8d.—Office, 1, Adelaide place, London-bridge.

BEADON'S PATENT IMPERISHABLE GUTTER-TILES,
For Spouting Roofs of Houses (either old or new, whether of thatch, slate, or tile), and other structures.
SOLE AGENT,
J. B. LAWES, 1, Adelaide-place, London-bridge
This is the cheapest kind of spouting known; for, besides its lower cost, it will last without paint or repair as long as the building itself. It will bear the weight of any ladder; and in case of accident a labourer can repair it. It occupies the room of a large amount of roofing, effecting a great saving in slates, tiles, &c. It is especially applicable to the backs of houses in town, cottages, and agricultural buildings.
Price all each tile of about 18 inches long, stop-ends and outlets, so that any run can be put them up, or, if over 100 feet are required, a man will be sent to fix them at 6d. per foot. This charge to include tiles (delivered in Agent's yard), cement, and labour. May be had in London, Gloster, Bridgwater, and Rugby.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21, WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and, thirdly, that the "REPORTS OF THE JURORS," page 980, of the Great Exhibition, rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world

CONIAM'S PATENT IMPROVED ROOFING TILE.—These tiles are light from overlapping each other by a raised edge, which also prevents the drift of rain or snow, and at the same time, offers considerable saving in timber. To be obtained of C. PHILLIPS, Potter, Weston super-Mare.

HOGG'S GARDEN EDGE TILES: a cheap, elegant, and durable substitute for Box Edging, 13s. per Hundred, or 4d. per yard.

Exhibited at Court of Inventions, Crystal Palace; and at the Office of "The Builder."
Full particulars from Mr. R. BLACKET Witham, Essex.

PANTILES, PAVINGS, &c. — J. H. ANDREWS, Wisbeach, Cambridgeshire, begs to offer pantiles at 50s. per 1,000; floor bricks and 6-inch pavings, at 37s. 6d. per 1,000, 9-inch pavings, at 55s. 6d. per 1,000, plain tiles, at 45s. per 1,000, delivered Cambridge.—Delivered on trucks in London on Eastern Counties Railway.

PATENT TERRA-COTTA. Tracery for Parapets and Terraces, Mullions, Pinnacles, Moulded Bricks, Coats of Arms, Crosses, Label Mouldings, Panels, Transoms, Weeds, Balusters, Chamfered Bases of Columns, Pavings, Facings, Plain Bricks, and Dressings, Sills, Chimney Shafts, and Pots, and other Articles, manufactured by J. M. BLASHFIELD, the Adelaide Imperishable Terra Cotta, at Millwall Docks, and Island Wharf, No. 1, Wharf, Pratt-street, Paddington-basin.

GREAT REDUCTION IN PRICES

OF WHOLE OR HALF-SOCKET GLAZED STONEWARE DRAIN-PIPES.

WILLIAM NORTHEN'S

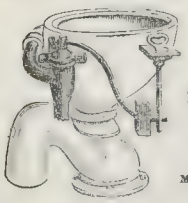
WHITE ENAMELLED STONEWARE,

UNION POTTERY, 14, VAUXHALL-WALK, LAMBETH, LONDON.

W. N. solicits an inspection of his IMPROVED WHITE ENAMELLED STONEWARE CLOSET-PANS, being an entire new description of stoneware, perfectly vitrified and highly glazed, far surpassing anything of the kind yet offered to the public.

SAME PRICE AS BROWN STONEWARE—Closet and Trap, 5s. 6d.; Closet, 3s. 6d.; Trap, 2s.

SALT-GLAZED STONEWARE, FIRE-CLAY, AND TERRA-COTTA WORKS,



NEAR BARNSLEY, YORKSHIRE.

The Proprietor, E. B. BEAUMONT, manufactures every description of STONEWARE for drainage, building, sanitary purposes, and fancy ware, from clays which have been subjected to the most searching analyses, and proved to be of the most tenacious and indissoluble qualities. The pipes are wrought by Spencer's Patent Machine, by which tube and socket are one, without a manipulated joint, and rendered the more compact by high pressure; and as every improved apparatus has been made available to secure the highest excellence with great economy of labour, the goods are put upon the market at a considerable reduction from the prices charged for others at all assimilating in quality, whilst the stock on hand is always sufficiently large to provide for works of the greatest magnitude. THE TRADE LIBERALLY TREATED WITH.

Price-lists and Diagrams sent free on application,—
At the WORKS.....To Mr. WM. FORD Darfield Fire clay Pottery, near Barnsley.
In LIVERPOOL.....To Mr. JOHN SIDDALL, 30, Shaw's-row.
In MANCHESTER...To Mr. B. CONSTERDINE, Hunt's bank.
In GLOUCESTER....To D. B. WILKINS, Westgate Wharf, Gloucester.
In LONDON.....To Mr. J. D. JONES, 27, Buckingsbury; and Goods Depot, No. 4 Warehouse, King's-cross (Great Northern Railway).

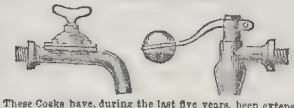
TO WATER COMPANIES AND PLUMBERS.

HIGH-PRESSURE COCKS & CLOSETS.



The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

PRIZE MEDAL, CLASS 2.

HIGH-PRESSURE VALVE COCKS.—LAMBERT'S PATENT.

These Cocks have, during the last five years, been extensively and most successfully used in many Towns under continuous high pressure, varying from 100 to 350 feet; their efficiency and durability is by experience established.

The Equilibrium Ball-valve is simple and certain in its action, and is cheaper than the common Cocks now in use.

Enamelled iron, self-acting, and other closets, upon economic arrangements, suitable for public buildings, cottages, asylums, &c.

THOMAS LAMBERT and SON,

Brass and Iron Founders, Short-street, New-cut, Lambeth.

Diving-dresses of superior make, and improved Vulcanized Rubber Supply-pipes for ditto.

Vulcanized Rubber, in sheets, from three to four feet wide, and of any thickness. Air-beds, Pillows, and Cushions inflating Portable Baths, Invalid Cushions, and Articles of this kind made to any pattern to order.

N.B. All communications and orders punctually attended to, addressed to the Manufactory, JAMES LYNE HANCOCK, Goswell-mews, Goswell-road, London.

MACINTOSH INDIA-RUBBER WAGON COVERS, at reduced prices. Stocks of different sizes are always ready, and can be inspected at our Warehouse, MOSES, SON, and DAVIS, 14 and 15, Aldgate High-street, and at the Factory, India-Rubber Steam Works, Bow-common.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter:—FROM SIR RAYMOND JARVIS, Bart., VENTNOR, ISLE of WIGHT.—Second Testimonial.—" March 10th, 1852.—In reply to your letter, received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state, with much satisfaction, it answers perfectly. Many Builders, and other persons, have lately examined it, and there is not the least apparent difference since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."

N.B. From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

THE GUTTA PERCHA COMPANY, PATENTEES, 18, WHARF-ROAD, CITY-ROAD, LONDON.

SALES BY AUCTION.

Very important and valuable Freehold Building Ground at Paddington, lying between the Grand Junction Canal and the Harrow-road.

MESSRS. NORTON, HOGGART, and TRIST have received instructions to OFFER FOR SALE, at the MART, on FRIDAY, OCTOBER 24, at TWELVE (unless previously disposed of by private contract) a very important and exceedingly valuable PLOT of FREEHOLD BUILDING GROUND, land-tax redeemed, having a very considerable frontage to the Harrow-road, commencing with it with the Queen's-road, Porchester-road, and Westbourne-terrace bridges, extending in depth about 120 feet, and lying immediately between the Grand Junction Canal and the Harrow-road. This valuable spot offers sites for about fifty houses. The buildings in the immediate neighbourhood consist chiefly of most respectable private houses, which is almost the only unoccupied space adapted for building.—May be viewed, and particulars, with plans, had of Messrs. Clayton, Cookson, and Wainwright, Lincoln's-inn; at the Mart; and of Messrs. Norton, Hoggart, and Trist, 69, Old Broad-street, Royal Exchange.

Valuable Water-side Premises on the Regent's Canal, Kingsland-road, with Cement Kilns, Steam Engines, &c., and an improved Rental of 90l a year

MESSRS. EVERSFIELD and HORNE are instructed by the Mortgagees to SELL by AUCTION, at the MART, in NOVEMBER, in two lots, the beneficial LEASE of the extensive PREMISES, known as Tussey Wharf, near the Kingsland Bridge, Kingsland, fitted up as a great expense by Messrs. Freeman and Co. for the manufacture of cement but equally applicable for many other purposes. Held for a long term, at a moderate ground-rent; also an improved rent of 90l a year, arising out of a plot of ground opposite Tussey Wharf. May be viewed; believe the tenants and particulars had of Messrs. Gwynn, Jay, and Salwey, Esqs. Solicitors, 12, New Broad-court; at the Mart; and of the Auctioneers, 40, Parliament-street, or Coal Exchange.

GRAYS-INN LANE.—Important Business Premises, suitable for Builders, Whitewrights, Pianoforte makers, Cab Proprietors, and others.

MESSRS. EVERSFIELD and HORNE are instructed to SELL by AUCTION, at the MART, in NOVEMBER next, an acceptable offer by private contract being previously made, the beneficial LEASE of the extensive PREMISES in Portsdown-place, Gray's-inn-lane, immediately occupied by the late firm of Locke and Nesham, and which comprises a large open yard, with two long ranges of well-lighted workshops, fitted up with planing and moulding machinery, worked by steam power, large covered drying-sheds, smith's, painter's, and plasterer's shops, counting-house, saw-pit, timber stages, and other conveniences; the whole inclosed with folding gates and lighted with gas. Held on lease for a long term, at the low ground-rent of 65l per annum.—May be viewed, and particulars had of Messrs. Kenrick, Solicitors, Kenrington-lane; at the Mart; and of the Auctioneers, 40, Parliament-street, or Coal Exchange.

TO BRICK AND LIME MERCHANTS, CONTRACTORS, BARGE OWNERS, AND OTHERS.

MESSRS. EVERSFIELD and HORNE are instructed by the Mortgagees to SELL by AUCTION, in NOVEMBER, TWELVE SAILING BARGES, adapted for the coasting trade, of about 70 tons each, and some of which will go into the docks. They may be viewed lying at anchor in that part of the river, and will be sold without reserve. The day of sale will be shortly announced, and parties wishing for particulars will have them sent by applying to the Auctioneers, 40, Parliament-street, or Coal Exchange.

CHELMSFORD.—TO FARMERS, BUILDERS, and OTHERS. TO BE SOLD BY AUCTION, by

VALPY and STOKES, on THURSDAY, the 23rd of OCTOBER, 1856, on the PREMISES, Prittlewell, by order of the Trustees under the Will of Mr. Abraham Wyer, for the benefit of his children, about 500,000 BRICKS and TILES, consisting of white and red kiln bricks, pollers and arch stocks, also an old pantile roof and drain-pipes; also, the brick kiln, as stood, William's pipe-machine, barrows, boards, brick tables, moulds, &c.; about ten tons of prime meadow hay, two horses, two fat heifers, thatched shed in yard, 5l, with drawings of the pipes, &c. Sale to commence at TEN for ELEVEN o'clock precisely.—Catalogues may be had at the Place of Sale; Office of the Auctioneers; and at the neighbouring Inns.

TO FARMERS, CARPENTERS, BUILDERS, AND OTHERS.

MR. LENGLAND will SELL by AUCTION, on the PREMISES, Highbury Cottage, Lower-road, Islington, on TUESDAY, OCTOBER 21st, at TWELVE for ONE o'clock precisely, the SECOND PORTION of valuable BUILDING MATERIALS, consisting of a large quantity of sound, old Oak Posts, Floor Boards, Joists, Rafters, Quartering, about 2000 Pan and Pin Tiles, Twenty Tons of Iron, Pebble, and other Paving; a large quantity of Scaffold Boards and Poles, Portland Cart, a large Cistern, a quantity of Christians and other Deals and Deal Planks, Iron Ranges, Register, and other Stoves; a quantity of Timber, Doors, Sashes, and Frames, Four-wheel Chaise, Couch house Gates, Twenty Stacks of Firewood, and various other useful articles.—May be viewed; catalogues had on the Premises, and of the Auctioneer, 3, Shepperton-street, New North-road, Islington.

VALUABLE FREEHOLD LAND, EAST BARNET.—TO BE SOLD by PRIVATE CONTRACT, about THIRTY ACRES of compact and valuable FREEHOLD BUILDING LAND, finely situated in the vicinity of the Great Northern Railway station and already partly in every way adapted for building purposes, being extensively fronted to the high road on each side of the railway, and also most well-formed roads. The situation is noted for its salubrity, scenery, and facility of communication with London.—For further particulars apply at Mr. MINNES'S Offices, 11, Great George-street, Westminster.

FREEHOLD LAND TO BE LET, on the Rise Thereof, between the river and the Victoria Docks, Canning-town, Essex.—To BUILDING LEASES for ninety-nine years. This land has not only the advantage of river frontage, but is surrounded on the land side by streets of the best class of houses, as will more fully appear by the Plans of the estate now to be seen, and upon which sites for 300 Villas, Shops, and Houses are marked out.—Apply to Mr. JOHN WOOLLEY, 6, Duke-street, Adelphi; or to Messrs. KING-FORD and FORMAN, 5 Bedford-row, Holborn.

FINCHLEY.—LAND fronting the Regent's Park-road, and East-end-road, TO BE LET on Building Leases, [illegible] Plots from one to four acres for large villa residences; smaller plots for semi-detached houses, and plots for shops in the village. Apply to W. A. BOULNOIS, Esq. Architect, 6, Waterloo-place, Pall-mall; or to Messrs. BARKER, BOWKER, and PEAKE, 1, Cornhill.

FREEHOLD LAND TO BE LET, on Building Lease for ninety nine years. Money advanced to responsible parties. Freehold Land to be Sold for building purposes in eligible situations.—Apply at the Offices of Messrs. MORGAN and PHIPSON, Architects, 3, Danes-Inn, St. Clement's, Strand.

TO BUILDERS and CAPITALISTS.—FOR SALE, by PRIVATE CONTRACT, about TWELVE ACRES of eligible BUILDING GROUND, situate in the township of Whitley, and adjoining the borough of Tynemouth. The ground lies on one of the most beautiful and extensive views on the east, overlooks the Whitley, or North Rocks, is about one mile distant from the Tynemouth Railway Station, and is approached by a good and level road.—Particulars may be obtained on application to Mr. WM. DUNN, Solicitor, Pilgrim-street, Newcastle-upon-Tyne, or to Messrs. J. CLARKE, Newcastle, and Ross, Architects, Darlington, with whom plans of the estate are deposited.

BUILDING LAND TO BE LET for 900 years, near the new Railway Station, Norwood, and elsewhere. Money and bricks, if required.—Apply to Messrs. BLAKE and SNOW, Solicitors, 22, College-hill, Cannon-street, City.

TO BUILDERS.—Some very eligible Lots of FREEHOLD LAND, suitable for the erection of houses of the value of from 2 or 300l each, situate at Tulse-hill; Lower Norwood; Walthamstow; near the Railway Station at Harrow; and Penge.—Also, TO BE LET on Building Leases at moderate ground-rents.—Apply to Mr. JAMES HIGHAM, 79, Farringdon-street.

BUILDING LAND TO BE LET, at HALLSVILLE....Term 1,000 years, for small cottages.
CANNING TOWN " 1,000 " for small cottages.
NORWOOD..... " 1,000 " for villa residences.
STRATFORD..... " 100 " for small cottages.
POPLAR..... " 98 " for fourth-rate houses.
Advances 70l. to 90l. at 5 per cent. on each cottage
Apply to Mr Wm ELLISON, Architect, Stansby road, Limehouse.

TO BE LET, or LEASE to be SOLD, very extensive PREMISES in BERMONDSEY, and within ten minutes' walk of London-bridge, well adapted for a contractor or builder. They consist of a large yard, twelve-roomed house, including two offices, with garden in rear, joiners' shop for two to thirty benches, scaffolding or deals, &c upwards of 200 feet long, two saw-pits, two large sheds, stabling for twenty horses, the whole containing nearly an acre of ground, and will be let at very low rent — Apply to ROBERT WARD and SON, Timber Merchants, 5, Oxford-street.

TO FIXTURE-DEALERS, UPHOLSTERERS, BUILDERS, and COACHMAKERS — TO BE LET, on Lease, or the FREEHOLD to be SOLD, those capital PREMISES late in the occupation of Archibald Hawke, in Great Queen-street, Lincoln's-inn-fields, extending into Peer-street, occupying an area of more than 6,000 feet, including capital light workshops for forty-five benches. Two convenient houses in front and two other dwellings, with stable behind, timber-yard, saw-pit, &c. — Apply to Mr. MASON, 8, Union-court, Old Broad-street.

WIMBLEDON. — Valuable BUILDING LAND TO BE LET on building leases, situate within a few minutes' walk of the railway station, commanding fine views and in a healthy situation. Immediate application is requisite. For particulars apply to Messrs. ASHPITEL and WHICHCORD, 2, Pooll's-corner, Westminster; or 22 Fenchurch-street.

REIGATE, SURREY, within Three Quarters of an Hour's Ride of London. — TO BE SOLD, a very desirable SITE for a RESIDENCE, with about TEN ACRES of FREEHOLD LAND, ornamentally timbered, situate on the southern slope of Reigate-hill, about half a mile from the Reigate Town Station, on the South Eastern Railway, commanding extensive views, and affording an opportunity for building a house in the most favourable locality rarely to be met with. Sold by Private Treaty. For particulars apply to Messrs. PAGE and LEES, Estate Agents and Auctioneers, Reigate and Dorking, Surrey.

GREEN-STREET, LEICESTER-SQUARE. — TO BE LET, the commodious BUSINESS PREMISES, No. 17, in the above street.—The premises may be viewed on application within, and particulars obtained of W. C. REED, Architect, 64, Old Broad street, City.

AN old-established SMITH-SHOP TO LET, with Shop-side, Two Fires, Tools, Stocks and Dies and Vice's to match. Coming in about 1st Apply at No 2, Meard's-court, Wardour-street.

TO CARPENTERS, BUILDERS, &c.—A BUSINESS TO BE DISPOSED OF as above, situated a few miles east of London: for stock, implements, goodwill, &c., together with three leasehold cottages, each let at 8l. The stock can be separated from the purchase, and a part of purchase remain unpaid, if preferred, to suit the convenience of parties; or the whole will be disposed of, if such is desired. Any one in want of a business will apply —Direct to G. A. at the Office of "The Builder."

BUILDER'S BUSINESS WANTED.—Any party wishing to dispose of an old-established JOBBING BUSINESS in or near the city, where over eight months' credit is not given, and which is of the value of 400l, may hear of a purchaser by sending particulars addressed to G. G. Office of "The Builder."

TO UPHOLSTERERS and CABINET-MAKERS.—TO LET, with immediate possession, an old-established BUSINESS in the above branches, situate in one of the most flourishing market towns in Kent where an extensive trade has been carried on for many years, and may still be increased. The premises are replete with every convenience. Satisfactory explanation given in consequence of the present proprietor leaving on account of ill health. Apply personally or by letter, post-paid, to J. L. 27, Mount-street, Grosvenor-square.

BUILDER'S BUSINESS for DISPOSAL.—TO BE DISPOSED OF, an old-established BUSINESS with a first-class connection, situate in a manufacturing town in Cheshire. The premises are complete in every respect, and may be had either with or without the house, which adjoins the yard. Rent moderate; stock well selected. The amount required will be about [illegible] Satisfactory reasons given for disposing of the same. Apply, if by letter, post-paid, to Messrs. [illegible] Solicitor, Macclesfield, Cheshire.

TOWN SURVEYOR WANTED.

The Commissioners for the Improvement of the Town of Scarborough are desirous to ENGAGE an experienced person as SURVEYOR and CLERK. He will be required to devote the whole of his time to the duties of his office, viz to take levels and draw plans, sections, specifications, and estimates for sewerage works, and the laying out and repair of streets, and must possess a sufficient knowledge of building to advise on and carry out ordinary works. He will be required to superintend the paving, flagging, macadamizing, sewering, and scavenging of the town. His duties as clerk will be to keep the accounts of the Commissioners, to convene the requisite meetings, keep minutes of proceedings, conduct correspondence, and to carry out generally the provisions of the Improvement Act. Salary, £150 per annum. Three months' notice required to terminate the engagement. Applications, stating age and qualifications, with testimonials, to be sent on or before the 3rd of NOVEMBER next, addressed to the Chairman of the Commissioners, 15, Queen-street, Scarborough.

Scarborough, 9th October 10, 1856.

BOROUGH of PRESTON.—LOCAL BOARD of HEALTH WANTED,

immediately, a SURVEYOR for the Borough of Preston, under the Public Health Act, 1858, at a salary after the rate of £200 a year. He will have to take charge of all works (including waterworks) within the Borough of Preston, and of such water works, or any portion of the same without the Borough as he may from time to time be required by the Board. He must also take charge of such other works without the Borough as he may from time to time be required by the Board. He must devote the whole of his time to the duties of his office, and not be engaged in any other office. Unless exemption may be obtained, he will be called upon to give security, pursuant to the 2nd section of the Public Health Act, 1848. The list of duties, as agreed upon by the Local Board, may be had on application to the Town Clerk of Preston.—Sealed applications and testimonials, endorsed "Application for the Office of Surveyor," must be sent to the Town Clerk of Preston, on or before SATURDAY, the 1st day of NOVEMBER, 1856.

ROBERT ASCROFT, Town Clerk.

Preston, 16th Oct 1856.

COMPETITIONS.

TO SURVEYORS and OTHERS.—PREMIUMS for PLANS.—The local authority of the borough of Lichfield, in the forgien of Regate, Surrey, require PLANS for the LAYING of SEWERS, with levels, sections, &c. the whole to be clearly defined on land drawn to a scale of one chain to the inch. The following particulars will be found useful in the preparation of the plans, &c. The sewerage proposed will be carried by the shortest line to the River Thames at Deptford, a distance of about [illegible] miles. The fall is about [illegible] feet per mile. The sewerage will be required to be laid to the depth of [illegible] feet at the Lichfield end, and [illegible] feet at the Deptford end

Sealed Tenders to be sent to me, superscribed "Tender for Corn-exchange," on before FRIDAY, the 31st instant. Security will be required for the due performance of the contract. The Council will not pledge themselves to accept the lowest, or any other Tender. No allowance for journeys.

ALEX. MEEK, Town-clerk.

Devizes, October 8, 1856.

BRADFORD CORPORATION WATER-WORKS.—To EXCAVATORS, MASONS, and GENERAL CONTRACTORS.—The Waterworks Committee of the Bradford Corporation will meet at their Room, in Oxford-row, on WEDNESDAY, the 29th DAY of OCTOBER, at ELEVEN o'clock in the FORENOON, for the purpose of receiving TENDERS or PROPOSALS for the following WORKS

CONTRACT D.—The excavating, forming, and completing a Storage Reservoir, on Scarr Hill, in the township of Bierley, Bierley Beck, in Bierley Road Park, in the township of Bierley and parish of Skipton, with Earthworks, Stone Retaining Walls, Culverts, Valve Well, Waste Weirs, Waste Channel, and other Works connected therewith; also, the building and completing of a Branch Conduit of about 720 yards in length, from such Storage Reservoir, No. 1 of the Contract mentioned.

CONTRACT E.—The excavating, forming, and completing of a MILLOWNERS' COMPENSATION RESERVOIR, of about 16 acres in extent, on Scarr Hill, in Bierley, in the township of Apperthwaite and Horton, in the parish of Bursall, with the Culverts, Valve Well, Waste Weir, Waste-Water Channel, Grate Basin, Resolvent Embankment, and other Works connected therewith.

CONTRACT F.—The forming and completing of about 171 miles in length of the main Aqueduct for bringing an improved supply of water to the town and borough of Bradford, whereof about 4 miles will have to be executed by means of tunnelling through hills, and about 3 miles will cross valleys on open embankments, and the Contract may be sub-divided as follows:

Division No. 1.—Main Conduit, from the end of Bierley Beck Branch, in the township of Horton, to Apperthwaite Moor, being a length of about 7,830 yards, including the Barden Tunnel of about 1,760 yards in length in the Branch from the Storage Reservoir, No. 1 of the Contract, to Clayton Heights, 1,320 yards in length, with the deep cutting down of about 80 yards in length of Clayton Pipe of 30 inches in diameter for crossing the Ing Beck Valley, near Draughton, and a Branch Conduit of about 132 yards in length for bringing the water from the above-named Chelker Reservoir into such Main Conduit.

Division No. 2.—Main Conduit from the end of Division No. 1, at Addingham low moor, to a public highway passing through Holden Wood, in the township of Silsden, and parish of Kildwick, in a length of about 2,277 yards, including the Silsden Tunnel of about 1,970 yards in length, the Swartha Tunnel of about 330 yards in length, the Lothersdale Tunnel of about 660 yards in length of Cast-iron Pipe of 30 inches in diameter, for crossing the Holden Beck Valley, near Holden Wood, and the Holden Beck Branch, Contract No. 4, of 70 yards in length, of which about 11 yards will be tunnelling.

Division No. 3.—Main Conduit, from the end of Division No. 2, at Holden Wood, in the township of Keighley, to the Stone Pipe of Mort in East and West, and parish of Bingley, being a length of 5,830 yards.

Division No. 4.—Main Conduit, from the end of Division No. 3, at East Morton, to a public highway at Heaton, near the Reservoir Reservoir now in progress there, being a total length of about 4,370 yards, including Thornbeck Tunnel, about 220 yards in length, the Cullingworth Tunnel of about 1,320 yards in length, the Cullingworth Pipe of 30 inches in diameter for leading and laying down of about 1,283 yards length of Cast-iron Pipe, of 30 inches in diameter, for crossing the Morton Beck, at East Morton; and a further length, of about 4,090 yards in length of Cast-iron Pipe, of 24 inches in diameter, for crossing the River Aire, and the Leeds and Liverpool Canal, below Hurst Mill, near Shipley.

The Committee is not bound themselves to accept the lowest or any of the Tenders, and the Plans may be seen, and further information may be had, from and after MONDAY, the 20th day of OCTOBER, on application to Mr. J. W. LEATHER, Civil Engineer, Leeds.—By order,

W. H. HUDSON, Town Clerk.

Bradford, September 24, 1856.

* Instead of the 22nd, as before advertised.

BOARD of WORKS.—WHITECHAPEL DISTRICT.—Notice is hereby given, that a meeting of this Board will be held on MONDAY, the 27th day of OCTOBER instant, at SIX o'clock in the evening, at the vestry-room, No. 15 Great Alie-street, Whitechapel, to receive TENDERS from persons willing to CONTRACT for the execution of the several WORKS required to be done in the SEWERS and DRAINS of the district, mentioned and described in the specification or schedules of contract prepared by the direction of the Board; such Tenders to particularise the terms of price (if any) for the respective items of service or materials, reserving to themselves the right to determine the term the period of the duration of the contract. A copy of the specification and form of Tenders may be obtained at the office of the Board, on application of his which sum will be returned to persons tendering. All Tenders must be delivered at the OFFICE of the Board before FOUR o'clock in the afternoon of the day of meeting, and any Tender which is not upon the printed forms prepared by the Board, and duly signed by the person or persons tendering, will be rejected. The Board, however, do not bind themselves to accept the lowest or any Tender.

ALFRED TURNER, Clerk.

15, Great Alie-street, Whitechapel, October, 1856.

CONTRACTS.

JAMES BELL, Clerk to the Commissioners

Dated the 17th day of October, 1856

TO OVEN BUILDERS.—The Guardians of the Poor of the Hudson Union are ready to receive TENDERS for the ERECTION of TWO OVENS, with the requisite flues, &c., on the premises of the Workhouse in Great Ilford-lane. The specification, plans, and form of contract, to be seen at No. 23, Fin place, Holborn, between TEN and FIVE o'clock on any day (Sunday excepted), and the workhouse premises can be viewed on application to the Master, at the Workhouse. Tenders, in sealed envelopes, marked, "Tender for Ovens," must be delivered at No. 23, Lin place, on or before MONDAY, 3rd NOVEMBER next; and parties tendering must attend at the Workhouse on WEDNESDAY, the 5th of NOVEMBER next, at SEVEN p.m. when the Tenders will be taken into consideration by the Guardians.—Dated 18th October, 1856.

EDWARD WALLWYN JAMES, Clerk.

REBUILDING of the CHURCH of ST. MICHAEL DERBY.—To BUILDERS.—The Committee appointed to carry out the REBUILDING of ST. MICHAEL'S CHURCH, will meet on MONDAY, the 10th DAY of NOVEMBER to receive TENDERS for the EXECUTION of the WORKS connected therewith. Parties desirous of tendering may inspect the plans and specifications at my Office, Post-office Chambers, Derby, after the 28th inst, where copies of the bills of quantities, form of Tender, and further instructions and information may be obtained. The committee do not bind themselves to accept the lowest or any Tender, and will require the usual securities for the due performance of the contract.

HENRY I. STEVENS, Architect.

Derby, October 23, 1856.

TO BUILDERS, HOUSE PAINTERS, AND DECORATORS.

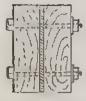
STOCQUELER and SAUNDERS' PATENT ELEVATOR and OBSERVATORY.—The earnest attention of all persons interested in effecting a great saving in the expenses of scaffolding, and the time expended in the erection and removal, is called to the advantages of the patented invention, consisting of a series of grooved and expanding lathes, supported by iron uprights, protected by a circular railing. The Elevator stands upon a triangular basis, of only 7 feet on each side, and can be worked from place to place by one pair of hands. The platform consists of seating capable of holding with perfect security, to a height of from 10 to 50 feet, or even 100 feet, in the course of two or three minutes, and depress it with equal rapidity. At any of the height thus attained, the inner and outer walls of churches, chapels, courts of justice, public halls, market-places, railway termini, manufactories &c. can be lath and plastered, painted, grained, cornices and capitals modelled, machinery fixed, &c. without interruption to the business carrying on within the edifice. The machine is likewise of great utility in the erection and repair of lofty walls and chimneys, and in carrying up bricks, mortar and building materials; also in painting, whitewashing, and repairing roofs of houses. The entire weight of the machine, at the highest elevation to effect an observation of 50 feet is not more than 15 cwt. in all. It can be drawn by a youth with the hire. It is firmer at the highest elevation than the mast of a ship, even unsupported by ropes. If necessary for purposes of transport, or admission to any building with a narrow entrance, it can be taken to pieces, and put together again in two or three hours. Full particulars as to prices, &c. may be known on application to ARCHER and CO. 2 Russell-court, St. James's Palace, from whom authority may be obtained to see the Elevator.

GASELIERS in GLASS or METAL.—The increased and increasing use of gas in private houses has induced WILLIAM BURTON to direct the attention of the various manufacturers in metal and glass all that is new and choice in BRACKETS, Pendants, and Chandeliers, adapted to dining, passage, and drawing-rooms, as well as to have some designed expressly for him; these are ON SHOW over his SIXTEEN LARGE ROOMS, and present, for novelty, variety, and purity of taste, an assemblage of the newest Tuition that is made in this country. The prices range from that with three lights to 36l. 10s. and there is not to be found in the kingdom a more elegant and most remarkable in the kingdom—the Guinea Lustre. At the same time additions to these extensive premises (already by far the largest in Europe), are of such a character that the entire of DR. FINCH'S late house to the Duke of Northumberland, NO. 39, NEWMAN-STREET, HOUSE RON MONGER (including Furniture), at auction. Fitted to Gas, Baths, Bricks, Tanners, Bedsteads, Cornices, Brass Beads, Gilt Mouldings, Bells, Hangings, Carpets, Kitchen Ranges, Large Stone Mantels, &c. to which is appended a large assortment of Gas Fittings, Lustres, Brackets, &c. purchased by WILLIAM BURTON in the selection of goods for the Establishment.

DR. FINCH'S Large Copper Cistern, Gas Fittings, Lustres, Brackets, &c. may be viewed on Tuesday and Wednesday, and Catalogues had on the premises, 39, OXFORD-STREET; 1, 1a, 2, and 3, NEWMAN-STREET; and 4, 5, and 6, PERRY'S PLACE, LONDON.

DR. FINCH'S Lease.

BRIDGE for SALE.—An IRON BRIDGE, with its substantial abutments of MASONRY, TO BE TAKEN DOWN and REMOVED. The Bridge consists of 2 spans of 24ft 10ins. each. The arch is segmental, 100 feet span, with a rise of 9 feet from the springing of the abutments to the soffit of the arch. The width from centre to centre of the outside ribs is 30 feet. The bridge and abutments are of the most substantial character, and the whole work has been built and is now in perfect order. For further particulars apply to DUNCAN and ENGLISH, Bow, Middlesex.



TO BELL-HANGERS, GAS-FITTERS, IRONMONGERS, &c.—The Trade supplied on the best and most liberal terms, with Bells, Cranked Wire, Gas Fittings, Brackets, and Joints of all descriptions; Brass Bending, Brass and Iron Turning, Cocks and Valves, Brass and Brass Plating, Coffin-plates, Rings and Lacquered Gas Tube for Picture Rods, Brass Rules, &c. &c.

Superior Rolled Brass for Engravers, Castings in Fine and Common Brass, Iron Metal, &c. &c.

RICHARD EVERARD'S, Brass and Bell Foundry and Metal Warehouses, Nos. 10, 11, and 12, Charles-street, Long-acre, London.

WROUGHT-IRON GIRDERS
For BRIDGES and BUILDINGS,
MANUFACTURED AND GUARANTEED AS TO STRENGTH.
CAST-IRON GIRDERS for BRIDGES and BUILDINGS.
Castings of every description.

ROLLED WROUGHT-IRON FLITCHES
For TRUSSING BETWEEN TIMBER.
SPIKES, RIVETS, CUT NAILS, WROUGHT DITTO SCREWS, BOLTS AND NUTS, BOND HOOPS, CHAINS, &c.
CONTRACTORS' PLANT, RAILS, EARTH WAGGONS,
And IRON WORK for WOOD WAGGONS, &c.

MATTHEW T. SHAW, 64, CANNON-STREET (late with C. J. Mare & Co.)
Such arrangements are made for Despatch and Punctuality that Orders can be executed in a few days.

ZINC ROOFING, INCLUDING TIMBER OR IRON FRAMEWORK,
IS AS
CHEAP AS SLATES OR GALVANIZED IRON, LIGHTER, AND MORE DURABLE.
Certificates, and Models of various descriptions, may be seen, and estimates obtained on application to
THE SURVEYOR OF THE VIEILLE MONTAGNE ZINC MINING COMPANY, 12, MANCHESTER BUILDINGS, WESTMINSTER.
ROOFS CONSTRUCTED UNDER HIS SUPERINTENDENCE GUARANTEED TO REQUIRE NO REPAIRS FOR AT LEAST TEN YEARS.
THE OLD METAL BEING ALWAYS RETAKEN AT HALF-PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.
Many roofs covered with zinc thirty-five years ago have never required repairs.

TYERMAN'S PATENT HOOP-IRON BOND,
FOR BUILDING PURPOSES.
ADOPTED BY SEVERAL DEPARTMENTS OF THE GOVERNMENT.

TARIFF OF PRICES

THE PATENT BOND (which is prepared from the ORDINARY HOOP IRON, by notching it at intervals of 11¼ inches) is now being extensively used for the fastening of TIMBER WORKS, DOCK BUILDINGS, BANKS, ASYLUMS, BRIDGES, VIADUCTS, PRISONS, ENGINE-HOUSES, and MANUFACTORIES, as well as in other PUBLIC and PRIVATE WORKS, in London and in all parts of the kingdom.

Sole Manufacturers—THOMAS PERRY and SONS, Highfields Works, Bilston.
London Depôt—ST. ANN'S WHARF, EARL-STREET, BLACKFRIARS.

NEW PATENT INVENTIONS FOR STABLE REQUISITES.
AWARDED A PRIZE AT THE PARIS EXHIBITION, AND PATRONISED BY THE ENGLISH AND FRENCH GOVERNMENTS.

COTTAM and HALLEN, of Winsley-street,

Are the original inventors of the PATENT ENAMELLED MANGER, WATER-TROUGH, and WROUGHT-IRON RACK, united to an iron top plate, and forming one complete and useful fixture having Cottam's Patent Noiseless Hayter Guide and Collar-Rein attached, the ball of which is taken to the back of the manger, and works with ease and free action up or down the guide-bar. Cottam's new Patent Seed-Box, of galvanized iron, is an important addition to the above fittings, being simple in construction, light and durable, promotes cleanliness, and is economical in its results. Also, the Patent Saddle and Harness Bracket combined, which can be used with great advantage where space is an object, as it can be turned up out of the way when not in use.
Improved Harness Holders, for preserving the shape of the harness, and preventing its cracking. Patent Loose-Box Fittings, Long and Durable Corn-Bins.
Improved Surface Drain, with safety covers, Sanitary Traps, and every article for the harness-room and stable, kept in stock, plain, galvanized, and enamelled. Iron Gates, Fencing, Hurdles, &c.
The new Illustrated Catalogue for 1856, and estimates drawn up on application to
COTTAM AND HALLEN, 2, WINSLEY-STREET, OXFORD-STREET.

BENJAMIN FOWLER and CO.
FIT UP HEATING-APPARATUS OF ALL KINDS,
For Public Buildings, Private Mansions, Offices, Manufactories, and Horticultural Buildings,
And for every purpose where artificial heat is required.
They also erect DRYING ROOMS for ASYLUMS, UNIONS, DOMESTIC and MANUFACTURING PURPOSES upon the most improved principles, and upon the largest or smallest scale.
STEAM COOKING and BATH APPARATUS FIXED;

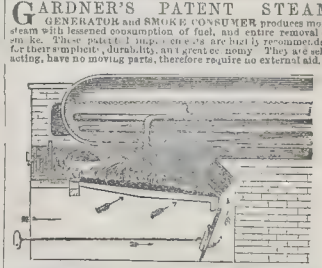
COLLINGE'S PATENT HINGES.—Manufacturers, CHARLES COLLINGE and CO. 64 and 65, Bridge-road, Lambeth, where a great variety are always on view for church, park, railroad, conchhouse, and other gates and doors of large and small dimensions, a ton weight moving with these hinges as easily as a wicket. Ornamental hinges adapted for drawing-rooms, &c.; doors fitted with them may be removed and replaced in an instant. Rising and double-acting spring hinges, and superior gate fastenings, at moderate prices. None genuine unless marked "Charles Collinge, Patent, Lambeth." Plain and ornamental cast and wrought iron-work for building and other purposes. Engines, machinery, patent axle-trees, sugar-mills, &c.

HEATING BY  HOT WATER.

JOHN WEEKS and CO. King's-road, Chelsea, HOT WATER APPARATUS MANUFACTURERS. Buildings of every description, and of the most extensive dimensions, can be effectually warmed by Hot Water. JOHN WEEKS and CO. can give numerous references to Churches, Dwelling-houses, Warehouses, &c. &c. where they have fixed their Hot Water Apparatus. Also to the seen in extensive operation at their Premises, King's-road, Chelsea.

BATHS and HOT-WATER APPARATUS. J. TALLOW and SONS' ILLUSTRATED CATALOGUE of BATH WORK, &c. to be had on application. Estimates and Plans for Fixing given. J. TALLOW and SONS, Manufacturers, Warwick-lane Newgate-street, London.



DR. ARNOTT'S SMOKE-CONSUMING GRATE.
Will this Grate be ever quite out-of-use?
It has advantages over every other extant, in—
1. A saving of 20 per cent. in fuel
2. Its being a cure for a Smoky Chimney
3. Its not requiring one half the attention of an ordinary fire.
4. Its being perfectly safe.
A Prospectus, with a Second Series of Testimonials, just issued, from all parts of the country, will be sent on application.
F. EDWARDS, SON, and CO. 42, Poland-street, Oxford-street.

VENTILATING STOVES! SUSPENSION STOVES!—Approved by thousands of purchasers, and recommended as the best, cheapest, most healthful, and economical for churches, chapels, halls, schools, warehouses, shops, greenhouses, bedrooms, libraries, &c. Prospectuses, with prices, sent post free. DEANE, DRAY, and CO. Stove Range, Ironmongery and Furnishing Warehouse, London-bridge.

HOT-WATER APPARATUS of the best construction, adapted for warming and ventilating hothouses, conservatories, public and private buildings, improved boilers, self-acting regulators, pipes, &c.; hot-air, drying, and hydraulic apparatus; portable engines; shafting and other machinery supplied or erected by S. S. PARKER, Bath.

REGISTER STOVES, with PATENTED IMPROVEMENTS.—DEANE, DRAY, and CO. invite the attention of purchasers to their Stock of STOVES for drawing and dining rooms; also, a large assortment of PATTERNS, suitable for sitting-rooms offices, bed-rooms, &c. In Fenders and Fire-irons, DEANE, DRAY, and CO. are constantly introducing every novelty at the lowest prices. DEANE, DRAY, and CO. Stove, Range, and General Ironmongery Warehouse, London-bridge. Established A.D. 1700.

GARDNER'S PATENT STEAM GENERATOR and SMOKE CONSUMER produces more steam with less coal, complete prevention of fuel, and entire removal of smoke. These patent improvements are highly recommended for their simplicity, durability, and great economy. They are self-acting, have no moving parts, therefore require no external aid.

They are applicable to all Furnaces, Locomotives, Marine Engines, Boilers, Hot-water Boilers, Open or Fire Kitchen Ranges, Hot-plates, &c. Can be applied to, or made to the PATENT No. 2, Norfolk-street, Middlesex Hospital; to Messrs. BRIDGWAY and BEALY, 198, Dorset-street, Fleet-street; or to Z. D. BERRY, Albion Works, Wilton-road, Pimlico.
Testimonials, &c. may be seen, or forwarded on application.

CAST-IRON PIPES, BRICKWORK FOR OUTFALLS, &c.
RAIN PIPES, &c.—F. A. TIDDEMAN and CO. St. Ann's Wharf, Earl-street, City, near Blackfriars-bridge, manufacture and have for sale Rain Pipe Heads, Shoes, Elbows, &c. half-round and O.G. Gutters, Socket Pipes for Water or Gas, Range Pipes, Hot Water Pipes and Cheese's Sash Weights, and other castings. Brickwork for Brooks' Drains of every description, Tide-way, Arches, &c. executed at short notice in parts of London. Price-list sent to all communications. Contracts taken to any extent. Goods delivered. A parcel-cart.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.
ANDREW CLARK and COMPANY, LEAD MERCHANTS,
THE BEAR GARDEN LEAD WORKS, SOUTHWARK,
Sole Manufacturers of Dellwik's Patent Autogenous Soldering Apparatus, and by the appointment of Messrs. Acturine Chemists to their Patent Leaden Q.
UNITING LEAD TO LEAD WITHOUT SOLDER.
Leaden Chambers or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.
PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

MR. S. EGAN ROSSER, Warming and Ventilating Engineer, &c (successor to the late Mr. John Sylvester, C.E.) has REMOVED from Great Russell street, Bloomsbury, to No. 6, CANNON-ROW, PARLIAMENT-STREET, WESTMINSTER.

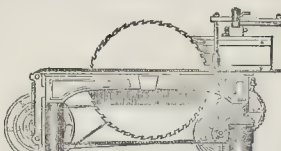
Patterns of Girders, Columns, Balconies, Railing, Ornamental Carriage and Park Gates, Lamp and Street Posts, Tanks, Pipes, Wheels, Pinions, Lathes, and Steam-engines; Ranges of Hot-plate Metal. An improved Soot Door, adapted for internal work.
A large stock of Rain-water Pipes, Plain and O G Gutters, Air-bricks, Sash Weights, Air-tight Sewer Grates, Stable Fittings, Hurdles, &c.
Plain and Ornamental Vases 20 per cent cheaper than Terra-cotta.
Estimates given for Iron Buildings, Wrought-iron Roofs, Greenhouses, Staircases, Wrought-iron Girders, Fireproof Doors Book Safes and Fire Resisting Iron Shutters. Ranges of various sorts for furnishing purposes, and the improvement with every attention to all orders.
GLOVERS' IRONWORKS,
165, DRURY-LANE, and CHARLES STREET.



PATENT MACHINES FOR WORKING in WOOD.—These celebrated Machines have been awarded a number of prize medals by many scientific institutions, and also by the Great Exhibition in London, and are now extensively used by the Indian, American, and all the principal governments in Europe; also by eminent Contractors, Builders, Shipwrights Mathematicians, and other workers in wood. Their operations are in every respect superior, either in hard or soft wood, for planing, squaring up, moulding, tenoning, mortising, grooving, rebating, sawing, and boring, which they perform in a very rapid and superior manner, at a greatly reduced cost.—Sold only by WILLIAM FURNESS, Patentee, 20, Lawton-street, Liverpool, from whom full particulars may be obtained, and all the machines can be seen at work

HART AND SON,
IRONMONGERS AND MANUFACTURERS,
53, 54, 55, & 57, WYCH-STREET, STRAND,
London.

PULPIT LIGHTS, CANDLESTICKS, GAS STANDARDS, and BRACKETS, CHURCHES, CHAPELS, &c. lighted with GAS or CANDLES in the Mediæval or Classic Styles.
First-class Prize Medal, Paris Exhibition, 1855.
Specimens at the Hardware Court, Crystal Palace, Sydenham. Illustrated Price-catalogues post-free on application.

MACHINERY for SAWING, PLANING, MOULDING, &c.

SAMUEL WORSSAM and CO. beg to call the attention of Contractors, Shipbuilders, proprietors of Saw-Mills, and others, to their Improved Inventions and Adaptions in Sawing Machines and Benches, Roller and Chain Planing Machines, Endless Saw Frames, and all other kinds of Machines, for Sawing, Planing, Grooving, and Moulding Wood. They have constantly on hand machinery, either wholly or partly made, so that they can at all times on short notice supply them. S. W. and CO. beg to state that they have hitherto obtained their attentions to this sort of machinery, and have had the honour of supplying some of the most distinguished companies, ship builders, and contractors in the world with their machines, for home and foreign use. One of their Saw Benches and also a smaller one, with Boring Apparatus, may be seen at the Machinery Department, Crystal Palace.—A descriptive Catalogue, with Drawings, may be had on application to SAMUEL WORSSAM and CO. Engineers, &c. King's-road, Chelsea, London.

WOOD-CUTTING MACHINERY,
JOHN M'DOWALL and SONS,
WALKINSHAW FOUNDRY, JOHNSTONE, near Glasgow,
MANUFACTURERS of VERTICAL SAW-FRAMES
(driven by straps),
For cutting balks of timber, from 5 feet on the side down to the smallest deal frame.
Patent vertical saw-frames, of the foregoing dimensions, with steam-power attached; circular cross-cut radial sawing machines; patent moveable ditto; patent horizontal cross cut sawing machines, for heavy timber; planing machines, for working boards from a ¼ of an inch thick to 6-inch deck plank; revolving planers, for squaring and shaping heavy timbers, as used by ship-builders, &c.; patent curvilinear sawing machines, for circles, sweeps, and straight cutting, well adapted for ship-builders; power mortising and tenoning machines; moulding machines, single and double; veneer mills of all sizes, with all appendages; scale-board machines, for hat-boxes, &c.; patent silent feed motions for saw-frames; and every description of machinery for cutting and shaping timber, all constructed of iron, of the best materials, and first-class workmanship. Mr. M'Dowall has been in the engineering and millwright business for upwards of 30 years, but during the last 24 years he has directed his attention particularly to the manufacture of wood-cutting machinery, as evidenced by the numerous patents he has obtained for its improvement, and by the extensive orders his firm has been favoured with from the British and other European Governments and private establishments in almost all parts of the world; and from their large and commodious premises, and first-class plant made for every department of the work without regard to cost, the largest contracts can be executed with a degree of accuracy, and despatch, which cannot be exceeded by any other firm in Europe.—Applications as above for further particulars, will be promptly attended to.

IRON CHURCHES, STORES, &c.—For SALE, Substantial Corrugated Iron Stores, Churches, Dwelling-houses, and every description of Buildings, adapted to all climates. Iron Roofs constructed for all parts of the world. An Iron Church with sittings for 750 people, for hire or sale.—To view and for further particulars apply to SAMUEL HEMMING, Cliff House Works, Bow, London.

LOSH, WILSON, and BELL,
NEWCASTLE-ON-TYNE.
Manufacturers of Bar Iron, Railway Bars, Forge and Engine Work, Cast-Iron Goods, and
STEWART'S PATENT CAST IRON TAPERED WATER PIPES
Office, No 7, Rose-lane, London.

COMPLETE IMMUNITY from FIRE, THIEVES, and FORGERY.—EDWIN COTTERILL, Inventor, Patentee, and Sole Manufacturer of the Royal Cumax Detector Lock. The only locks which prevent the use of false keys, however similar in appearance they may be to the genuine ones, with testimonials and full report of the unsuccessful attempt of Mr. Hobbs to pick the Cumax Detector Lock (an ordinary commercial one), at Manchester, forwarded free.—Manufacturer of Fire-proof Safes and Chests. Patent Double and Single-Action Door Springs, &c. &c.—A 16, Vittoria-street, corner of Regent-place, Birmingham.

FIRE-PROOF CONSTRUCTION.—FOX and BARRETT'S PATENT.
This improved system of fire-proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.
The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased durability, and many important advantages.
The floors and roofs are formed by a combination of joists of wrought or cast iron with concrete; so constructed that each floor becomes in effect a beam of artificial stone, with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring-boards, or of cement, asphalte, tiles, slate, or other material.
Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one.
Further information may be obtained of the Proprietor of the patent,—Mr. BARRETT, 12, York-buildings, Adelphi.

CLARK and HUNT'S IRONMONGERY, STOVE, and METAL WAREHOUSE, 168, Shoreditch.

And every material required in the building, bell-hanging, upholstery, and brass-foundry trades on the most reasonable terms.
List of Prices had on application at the Warehouse, or by letter prepaid.

LIGHTNING CONDUCTORS.—R. S. NEWALL and CO. Patentees of the Copper Rope Lightning Conductor, supply Lightning Conductors, with the most approved principles for fixing, at one shilling the foot, which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and of greater strength than has heretofore been accomplished.
Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, weight, singly or in peals.
TUNED BY MACHINERY
Stocked and wheeled ready for fixing. Old Bells recast or taken in exchange.—Cost thereof can be known on application.
MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and recast on a new system, which give superior tone and facility for ringing.
R. S. NEWALL and CO'S Patent Copper Rope Conductors being approved by architects, engineers, and scientific men in all parts of the world,
190, Strand,
67, Hyde-park-street, Glasgow.
27, Dale-street, Manchester.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and of greater strength than has heretofore been accomplished.
Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, weight, singly or in peals.
TUNED BY MACHINERY
Stocked and wheeled ready for fixing. Old Bells recast or taken in exchange.—Cost thereof can be known on application.
MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and recast on a new system, which give superior tone and facility for ringing.

Also Slabs of all sizes.—Orders to be addressed to Mr. EDWARDS, Manager, Royal Slate Quarries, Bangor

PARIS EXHIBITION. — ENAMELLED SLATE.—TWO FIRST-CLASS MEDALS! —Mr. MAGNUS is the only exhibitor whose productions received this double honour; also the Prize Medal at the Great Exhibition of 1851, and the Medal of the Society of Arts in 1848. This beautiful material, handsomer and more durable than marble, is now finding its way into palaces, into the mansions of the nobility at home and abroad, into the highest class of public buildings, as well as into humbler dwellings. The cost is immensurably below that of any other production that can at all compete with it. It is applicable to a variety of useful and ornamental articles, too numerous to be separately specified. Among the chief are chimney-pieces and ornamental stoves for all apartments; plain and elaborately decorated slabs for the tops of loo-tables, chiffoniers, consoles, &c.; bath-tablets, altar-tablets, pilasters, columns, vases, pedestals, and brackets; wash-stand tops, billiard tables, fumigo tables, vestibules, and dairies.—Price lists can be had on application to Mr. MAGNUS, 39 and 40, Upper Belgrave-place, Pimlico.
N.B. Plain slate work executed from a single article to the most extensive contracts, for home and abroad.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality They have been used at the British Museum, National Gallery Bethlem Hospital, various Lunatic Asylums, the Ordnance Works Model Prison, Pentonville, and other Penitentiaries; Malms Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars, Fleet-street, City. Sand, from above or below bridge, delivered by the yard or per barge. Ballast screened or unscreened, by the yard or per barge. Stocks, lime, and old bricks. Dry rubbish delivered per barge, in any quantity, alongside the Thames.

TO BUILDERS and CAPITALISTS.—FOR SALE, by PRIVATE CONTRACT, about TWELVE ACRES of eligible BUILDING GROUND, situate in the township of Whitkirk, and adjoining the borough of Thorpe. The ground commands one of the most beautiful and extensive views on the east, overlooks the Whitkey, or North Rocks, is about one mile distant from the Thorpe and Railway Station, and is approached by a good and level road.—Particulars may be obtained on application to MR. JOHN BUSH, the proprietor, Leeds street, New-market-yard, Leeds; or to Messrs. RICHARDSON and ROSS, Architects, Darlington, with whom plans of the estate are deposited.

GREEN-STREET, LEICESTER-SQUARE. TO BE LET, the room about BUSINESS PREMISES, No. 17, in the above street.—The premises may be viewed on application within, and particulars obtained of W. C. REED, Architect, 64, Old Broad street, City

FREEHOLD BUILDING GROUND, near Hampton Court Terminus, Palace, and Thames. — TO BE SOLD or LET, a most eligible piece of Land, with Thames, Dusher-pond, and other delightful Private Walks in it, and a good gravel soil.

NOTTING-HILL.—A PLOT of GROUND, in a most picturesque situation, commanding views of the open country and overlooking Ladbroke park. TO BE LET for one or two villas.—Apply to R. T. SWAIN, The Lodge, Notting-hill

TO MERCHANTS, PUBLIC COMPANIES REQUIRING LARGE PREMISES, BUILDERS, and OTHERS. - TO BE LET on lease, or building or other purposes, the extensive site so well known as FIELDHOUSE'S BREWERY, known as the Vine Yards, in Aldersgate-street, containing about 1,370 square yards; the frontage to Aldersgate-street, being Nos 96 and 100, is 56 feet 9 in.; the depth about 105 feet; width varying from 40 feet to 56 feet. The whole is substantially covered with capital warehouses, and other buildings, which can be removed.—For particulars, apply to Mr. EDWARD H. BURNELL, 33, Beaufort-row, where plans of the estate can be seen.

TO LANDOWNERS, AGENTS, and OTHERS.—A Gentleman wishes to obtain some PLOTS of GROUND, on BUILDING LEASES, suitable for the erection of villa residences in the suburbs of London, or adjoining to some railway station.—Particulars of the same, together with plans of the ground, to be sent, free of charge, to W. T. 5, Laurel-street, Queen's road, Dalston

PREMISES in OXFORD-STREET, of great depth, suitable for any manufacturing business requiring space, to let deep, with lofts and workpeople's house and gateway, and the privilege of a forge. TO BE LET on lease, with immediate possession.—Apply to Mr. BROOKS, Stationer, Old Cavendish-street, Oxford street.

TWICKENHAM. — FREEHOLD LAND TO BE LET, on Lease. Money advanced, if required. A Freehold Public House. Apply at the Offices of Mr. J. P. PAYMAN, 31, Great James street, Bedford-row.

ATLASES AND MAPS,
DESIGNED AND ARRANGED UNDER THE SUPERINTENDENCE OF
THE SOCIETY FOR THE DIFFUSION OF USEFUL KNOWLEDGE,
With the latest Corrections by eminent Geographers.

THE COMPLETE ATLAS,
Containing 168 Maps, 52 Plans of Towns, and 6 Star Maps, with Index to more than 25,000 Places.
In One Vol. half-russia, £9. 10s.; or in Two Vols. half-morocco, £10.

SMALLER ATLASES, — One, Three, Five, and Seven Guineas.
Single Maps, plain, Sixpence; coloured, Ninepence.

The Publishers with confidence assert that the Public have not in any other Atlases so large a number of Maps, at so moderate a price. To meet the requirements of the age, the Maps have been issued singly as well as in Atlases, and a most extensive sale has been the result, enabling the Proprietors to keep them in the highest state of accuracy, and, when necessary, to add New Maps. London has been engraved three times since the original Plan was published. Lately has been issued an entirely New Map of the Australian Colonies, showing the Gold Regions of Australia, its Divisions in Counties, the Distances by Sea to the most important Parts of the Globe; and in the Maps which contain the whole or any part of the Arctic Regions, the latest Discoveries have been inserted.

A Complete List of the MAPS and PLANS will be forwarded FREE by post, on application to the Publishers EDWARD STANFORD, 6, Charing-cross, London; or to GEORGE ROUTLEDGE and CO. Farringdon-street. Glasgow: RICHARD GRIFFIN and CO. Dublin: M'GLASHAN and GILL.

TO BUILDERS and OTHERS.—For SALE, on the Westbourne Estate, Paddington, at low prices and moderate ground rents, several Lewis-erected TEN-ROOM CARCASES. For particulars and to inspect apply to Messrs. ALLEN and NICOL, 88, Queen-street, Cheapside.

TO ENGINEERS, RAILWAY COMPANIES, MILLOWNERS, &c.—VULCANIZED INDIA RUBBER for all kinds of Steam and Hot-water Joints, is now becoming indispensable in Engineers' Establishments.—J. L. HANCOCK begs to offer the following Articles, which are now much improved from the Original Patent Process for such manufactures.—

FOR ENGINEERS.—Vulcanized Rubber Washers; Valves for Air-pumps, &c.; Stuffing Packing, to Sheet Rings, or Rope; Pump Buckets, any size to order; Hose Pipes, made to sustain any amount of pressure, and to stand heat up to 300 deg.

FOR RAILWAY COMPANIES Buffer and Bearing Springs, Tires for Trucks, Cart and Van Covers. Hose Pipes of improved make, for Engine and Tender. Connecting Hose of any required strength; Valves and Checks made any size to order. Gauge-glass Rings and Compound Packing of any size or thickness.

FOR MILLS AND FACTORY USE. Vulcanized Rubber Driving Bands, any length, width, or thickness. Rubber Washers of all sizes. Door and Machine Springs, Gas Bags, Flexible Gas Tubing, and Engine Hose

Air-Beds, Cushions, Bolsters, and Mattresses, of all sizes; Fishing Boots and Stockings. Any article of this class made to pattern.

All orders punctually attended to, addressed JAMES LYNE HANCOCK, Vulcanized Rubber Works Goswell road, London.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter: FROM SIR RAYMOND JARVIS, Bart., VENTNOR, ISLE of WIGHT —Second Testimonial.—" March 10th, 1853. In reply to your letter, received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state, with much satisfaction, it answers perfectly. Many Builders, and other persons, have lately examined it, and there is not the least apparent difference since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."

N.B. From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

THE GUTTA PERCHA COMPANY, PATENTEES,
18, WHARF-ROAD, CITY-ROAD, LONDON.

NOTICE.—All Public Schools for the Instruction of the Poorer Classes, may obtain an allowance towards providing Examples, &c. for teaching Elementary and Mechanical Drawing, by applying by letter to the Secretary of the Department of Science and Art, Cromwell-road, Kensington, London, W.

THE CENTRAL SCHOOL of ART for TRAINING TEACHERS, and for the PUBLIC, will OPEN at the two Premises, at Cromwell-road, Kensington Gore South, on MONDAY, the 3rd of NOVEMBER.—Prospectus may be obtained on application personally, or by letter.

NORMAN MAC LEOD, Registrar.

ARITHMETIC, ALGEBRA, GEOMETRY, MENSURATION, &c. TAUGHT by the Advertiser, who would arrange the time and place to suit the convenience of working men. He also prepares Pupils for the Examinations of the Society of Arts, and that without remuneration, unless successful.—Address, A. B. 187, High-street, Borough.

DRAWING CLASSES. — 24, Guildford-street.—For Architects, Builders, and Engineers' Sons, Assistants, Clerks of Works &c. At this Establishment Pupils are thoroughly instructed in Drawing of every description, Taking out Quantities, Measuring, Estimating, &c. &c. Terms, One Guinea per quarter.—For Prospectuses, &c. apply to Messrs. HYDE, SMITH, and LEWIS, Architects, Civil Engineers, Surveyors, &c. at the Offices.

ARCHITECTURE, CIVIL ENGINEERING, and SURVEYING CLASSES Established by Messrs HYDE, SMITH, and LEWIS, Architects, Civil Engineers, Surveyors, &c. For Preparing Gentlemen for Architects, Builders, Engineers, Surveyors, Draughtsmen, Measurers, &c and for giving EVENING INSTRUCTION in Architectural, Civil Engineering, and Mechanical Drawing; Colouring, Shading, and Tinting; Ornamental and Water Colour Drawing; Perspective, Isometrical, and Geometrical Drawing; Models. Finished and Working Drawings; Preparing Specifications, Taking out Quantities, Estimating, Builders' Work, &c. &c. Terms:—Day Pupils, Two Guineas per Quarter; Evening Pupils, One Guinea per Quarter. There are no extras, the terms include the whole of the above, with the use of Drawing Boards, T Squares, Plans, Drawings, Models, &c. PRACTICAL INSTRUCTION is given in the FIELD in Surveying, Levelling, Civil Engineering, &c.—For Prospectuses, apply at the Offices 24, Guildford-street, Russell-square.

MATHEMATICAL DRAWING INSTRUMENTS.—JOHN ARCHBUTT, 20, Westminster-Bridge-road, Lambeth (late Newman's), respectfully begs to call attention to his Stock of Instruments manufactured by superior workmen The Prices will be found considerably lower than ever charged for articles of similar quality and workmanship. Rules, scales, tapes, &c. at equally low prices. An illustrated price-list will be immediately forwarded, free, on application.

N.B. A few New and Second-hand Lewis and Theodolites always for Sale.

AN ACCOUNTANT, of ability and experience, undertakes to MAKE UP ACCOUNTS in arrear, and keep the books of builders, contractors, tradesmen, and others close posted upon very low terms. First-rate references to character, &c. given.—Address, S. V. Office of "The Builder."

NOTICE. — To LAND SURVEYORS and CIVIL ENGINEERS.—TO BE SOLD, a new Gravatto 10-inch DUMPY LEVEL, complete, for 7l. 15s.—It may be seen at BUCALOSSI and BROTHERS', No. 148, High Holborn.

IMPORTANT to the ENGINEERING PROFESSION.—SAFE and RAPID TRANSMISSION of DOCUMENTS. — Plans, Deeds, Law Papers, Samples, and Articles for private use, &c. forwarded daily at THREE p.m. to all parts of the Continent, with the Mails through out, by the "CONTINENTAL EXPRESS PARCELS AGENCY," of which the proprietors are the sole correspondents of the Royal Prussian Post-office, the Belgian Government Railways, and agents of the mail packets between Dover and Ostend. Rates fixed and moderate, tables of which, with every information, to be had gratis, on application at the Chief Office, 52, Gracechurch-street, London.

N.B. Parcels to be sent the same day must be at the Chief Office by THREE p.m.

A Companion Work to "Hints on House Property," will be ready 1st November, price 3s 6d.

LANDED PROPERTY: its Sale, Purchase, Improvement, and General Management; with advice respecting the Selection and Valuation of Houses and Estates.
By FRANCIS CROSS.
To be had of SIMPKIN and CO. Stationers'-hall-court; or direct from the Author, 53, Moorgate-street, City.

THE QUARTERLY REVIEW,
No. CXCVIII. is published THIS DAY.
CONTENTS.
I. WHATELY'S EDITION OF BACON'S ESSAYS.
II. FRENCH ALGERIA.
III. CHURCH BUILDING.
IV. NEW BIOGRAPHIES OF MONTAIGNE.
V. ANCIENT ROME.
VI. PHRENOLOGY OF THE HUMAN FORM.
VII. THE NUNS OF PORT ROYAL.
VIII. BUILDING EXPENSES OF PARLIAMENT.
JOHN MURRAY, Albemarle-street

NEW AND CHOICE BOOKS.
ALL the best NEW WORKS may be had without delay from PIPER'S SELECT LIBRARY, by every Subscriber of One Guinea per annum. The preference is given to works of History, Biography, Religion, Philosophy, and Travel. The best Works of Fiction are also freely added.
Literary Institutions and Book Societies supplied on liberal terms.
Prospectuses may be obtained on application.
CHARLES EDWARD MUDIE, 510, New Oxford-street, London; and 76, Cross-street, Manchester.

Part 76 in a neat Wrapper, with Advertisements, price 3s 6d,
EXAMPLES of BUILDING CONSTRUCTION, by HENRY LAXTON, will contain Four superroyal Plates of the Details of Window, Town-hall, Bursiem—Bay Window, Villa, Tunbridge Wells—Roof, Westleigh Church—and Bay Window, Furze-hill, by eminent architects. This part completes Division 4, sixteen plates, price 16s. The first volume will be completed with part 20.—19, Arundel-street, Strand.

NEW AND GREATLY IMPROVED EDITION OF
CHAMBERS'S INFORMATION for the PEOPLE.
On the 1st of NOVEMBER will be issued No. I of a New and Greatly Improved Edition of the "INFORMATION for the PEOPLE;" each subject having been carefully revised, and brought up to the latest discoveries and improvements in Science and Art.
The Work will also be embellished by many new Wood Engravings in the best style.
In Weekly Numbers at 1d. and Monthly Parts at 7d. To be completed in about 100 Numbers. The whole will form two handsome volumes.
W. and R. CHAMBERS, London and Edinburgh.

THE FREEMASONS' MAGAZINE and MASONIC MIRROR for OCTOBER, 1856, is now ready. Price 1s.
London: HENRY GEO. WARREN, 2, Red-lion-court, Fleet-street, and GEORGE ROUTLEDGE and CO. Farringdon-street.

1 Vol. Handsomely Bound. 21s.
BUILDINGS and MONUMENTS, Modern and Mediæval; being Illustrations of the Edifices of the Nineteenth Century, and of some of the Architectural Works of the Middle Ages.
By GEORGE GODWIN, F.R.S.
Fellow of the Royal Institute of Architects, &c. Editor of "The Builder," and Corresponding Member of several Societies.
With numerous Engravings.
Published at the Office of "The Builder," 1, York-street, Covent-garden.

Third Edition.
THE BUILDER'S FRIEND,
Price One Shilling.
Office of "The Builder," and of all Booksellers.

CHEAP and GOOD EDUCATIONAL ATLASES.—The Publisher of the Maps designed and arranged under the superintendence of the Society for the Diffusion of Useful Knowledge, has prepared for use in Harrow School, by the desire of the Head and other Masters, TWO ATLASES of MODERN GEOGRAPHY, selected from those valuable Maps; the larger containing 29 Maps, with Index of Places, price 12s 6d.; and the lesser, 14 Maps, with Index, price 7s. These Atlases are NOW READY, and the Publisher solicits a comparison with other Atlases at present in use for educational purposes.—They may be obtained of all Booksellers; or of EDWARD STANFORD, 6, Charing-cross, London; in Harrow, of Messrs CROSSLEY and CLARKE, Booksellers to the School; in Glasgow, of Messrs. GRIFFIN, Publishers to the University; Dublin, Messrs. M'GLASHAN and GILL.

The Builder.

Vol. XIV.—No. 716.

THE FIRST requisite to the efficient conducting of business, is a well-arranged office: the operation of *planning*, which is part of the architect's professional duty, must be preliminary; or inconvenience and attendant expense will follow on through every detail of official or mercantile affairs. Every man of business—every efficient secretary of a company—feels the force of this; and, had he no knowledge of what exists, would infer that the multifarious official business of the British empire demanded a local habitation in which the highest architectural talent of the world had worked on the problem of its *icnography*, or distribution. However, at length, conviction seems to have come to the intelligence of our governing classes, that an expenditure of tens of thousands of pounds annually on officerent, on repairs, alterations, and removals, does not involve any great ministerial wisdom: and we suppose it is even conceded by a British Government, that architectural effect and decoration are worth caring for in themselves; and that they really do not require, even with elaborate workmanship, an addition to that which may have been considered hitherto the requisite outlay, bearing any very gigantic proportion to it.

This, then, being the singularly happy state of progress, it is a matter of some interest to the country that the appeal to architects should be intelligibly and adequately expressed. But, assuming that by *the laws of supply and demand*, or "higgling of the market"—or whatever else is the *lingo* of the political economists,—competition affords the consumer the best article at the lowest price,—a result, however, which is not attained so long as *adulteration* prevails, and the consumer has not the ability to judge; assuming, and it is a very large assumption, that the difficulties of getting an honest, or, at least, a really *judicial* arbitrament, in architectural competitions, can be got over,—as they have never been yet,—there is much more than this to be attended to, for the success of the present project. Truly, as we took occasion to show, when noticing the drawings submitted in the Barracks' Competition,—if only the requisite *time* could be given by persons accustomed to examination of drawings, much of the injustice of the present system might be removed; and if exhibitions of designs were made sufficiently public, and if a copy of each set of drawings and specification were given to each competitor, each one, and the whole art, might gain somewhat by the system. As to the Barracks' Competition we may remark, that nothing of that kind has been done; and as the barracks now in progress seem to be going on without regard to any claims of either "successful" or "unsuccessful" competitors, we may point to that case as an instance of what occurs where Government offer premiums.

One difficulty as to competitions is, that neither the Government, nor municipal or parochial bodies, nor the profession itself, have the bulk of the *facts* of the existing practice before them. If competition is to be made use of in future, and if we were to look to its furnishing the best design in what is perhaps the most important case ever presented during the history of British architecture, it would have been well for the Government to know what has occurred, even though it could not *per saltum* institute the whole remedy. It might be supposed—considering that, in the present position of the profession, nearly all architects, at some time or other in their lives, look to competition as one means of success—that the circumstances as they arise must be accurately known, though opinions might differ as to the general advantage from competitions, or the means of making them contribute to the advancement of our art. Such, however, we continually find is far from the case: an architect knows just what has occurred to himself, or to an immediate circle of friends, and seems very quickly to forget even that small measure of experience. As some testimony that there is foundation for what we say, we may allude to the wonderment that seizes every one at the sight of the drawings in any competition. Could any man, professional or not, have believed in many recent cases, that so large a number of architects could be found ready to expend the labour necessary to the preparation of designs, and on the mere chance of getting an inadequate premium? Nay, this is a very moderate interrogatory. We have some claim to give the opinion, that few, even competitors, ever during the slight inspection which they are able to make of the drawings, reach apprehension of the amount of unrewarded merit and thankless labour uselessly put forth. Be it observed, that of this there were not even the means of knowing anything, until public exhibition of drawings became in certain cases the practice. Now, we are not going to pursue lamentations over this state of affairs, though we might well regret the fatality which allows the talent which is proved to exist in the profession, to have little direct influence upon the advancement of our art. It may be a contingency in all mundane things, that in the progress towards some general gain, much individual effort must be wasted. The point that we would advance is, that until *facts* are apprehended, it is impossible to word any announcement of a competition—as, for example, that for the proposed Government offices—so that the result shall bear any fair relation to the object, to the particular intentions of the projectors, and to the capabilities of British architects.

The first step which Government should take—which would secure results applicable to all future competitions,—a step which Government especially could take,—should be the collection of evidence and the collation of facts. This done, the terms of the announcement could be given, without some of the mistakes, which, we fear, are made in the recently issued notification and particulars.

Instead of this, everything seems to be doing in a hurry. The "junior members" of the profession—who are certainly not those least likely to be familiar with the working of competitions, and whose efforts it would be well to enlist—were hardly represented at the meeting with Sir Benjamin Hall; and they are, as announced at the last meeting of the Architectural Association, about to offer a memorial for further time for preparing their drawings,—the date named, even after the extension, being in any case altogether too near for study of the subject.

But we were about to refer to the plans and printed particulars. These, as most of our readers know, comprise a short announcement of the premiums offered and the subjects of competition, with some particulars of the area required for the accommodation of the several offices, and the sizes of the rooms in the case of the Foreign Office and War Office, for which complete drawings are wanted. "Some instructions," as to accommodation required, are of course necessary in such cases, — for opinions about sizes of rooms are dependent upon the habits of individuals, or particular methods of transacting business. Beyond this sort of information, however, and some general arrangements to assist the comparison of different designs, the less that there is in the way of "instructions," the better for the object.

Now the plain and logical mode of proceeding after deciding upon the general locality for the offices, and estimating the superficial area for each office, from some study of the wants by the departments themselves, would have been to invite designs for a general block plan of the buildings with the open spaces and the general street improvements connected with them. Afterwards, and not till then, the demarcation of the site or sites could have been made on the selected plan for the disposition of that part of the metropolis; and drawings could have been asked for, for the Foreign Office and War Office, or any other section of the scheme, upon the areas allotted to them; but, instead of that course, an attempt is made to mark out a general enclosing line, and to complicate the general scheme, and to negative its value by settling upon a site in the very midst of the whole ground for the Foreign Office and War Office. The *Times*, with somewhat more *acumen* than we generally find where architectural improvements are discussed, may well say about the two offices, that "it is quite possible that the two successful designs, if by different hands, may not exactly fit the space." Not merely is it possible,—it is very *improbable* that those two will accord, even with each other. If that is the case as to one part of the plan, what is the obvious inference as to the general scheme? What member of the Government would ask for plans and detailed drawings for a picture-gallery or drawing-room before he had decided upon the plan of the house of which the room was to be a part? Would he suppose that the one apartment designed, would *happen* exactly to niche in to some space left for it by magic, in the plan prepared by a different hand? Yet this is the sort of course which, in the Government competitions, it is assumed can be followed out.

Again, for the effect of street architecture, which must be realized by plan,—by grouping of buildings,—by placing them in certain positions with reference to lines of street,—no scheme can work well which does not operate on the whole of the area which may be required, unhampered by any restrictions either of circumscribing outline or internal filling-in.

In short, the present scheme is, as the newspapers seem to perceive, "rather indeterminate;" and the "terms of the invitation" are sufficiently "vague." But the error, as in other such cases, is in giving "instructions," whilst the *data* do not exist on which to base them: such *data*, except as to area of accommodation, can only be got from designs themselves.

A chief difficulty on looking at the plans of the site is—what is the precise meaning of the red line? It surrounds an area of most irregular form. It takes in the present Treasury buildings, and even the site of Sir Charles Barry's proposed buildings at the Houses of Parliament, south of Bridge-street; but it leaves it to be inferred that the Admiralty and the Horse Guards are to remain as at present. Thus the "concentration of departments" is not to be carried out as regards the Commander-in-Chief's department and War Office; and as "the Admiralty, Somerset House," is to have a certain number of superficial feet, whilst no mention is made of its head department, it must be supposed that a similar separation in that case is to be kept up. And, finally, it is stated that, "architects must, in addition to the offices above enumerated, provide for further buildings (to be afterwards appropriated as the Government may determine) to such an extent as may be consistent with proper open spaces and

thoroughfares;" all which may be clear to the Board of Works, but will hardly be so to architects here or abroad. Still, as we said, for the object of a competition, "instructions," in the ordinary sense, are not what should be given to architects, or looked for by them. The object should be not to fetter invention in any degree whatever: *information* should be given as to any views of the projectors on points such as those of convenience and area of accommodation, which peculiarly are based on extra-professional contingencies; and it may be well, where funds are limited, that the competitors should be apprised how much money there is to spend; but beyond this, "instructions" only interfere with the freedom of suggestion on one side, or the freedom of selection on the other; or in the sequel, they have to be cast aside altogether; and a flagrant injustice and robbery has to be committed, that the executed work may not suffer through the mistake of its own projectors.

Belonging to the objectionable sort of "instructions" in competitions, are those which are not uncommon, as to a matter—namely, the style—which it is sufficiently difficult for any one to convey an exact meaning about, and of which the definition, as we have held, tends to interfere with the exercise of invention—and all "instructions" that *dictate* any particular feature of plan or principle of arrangement. For example, it would be quite right for the committee in such a case as that of the Liverpool competition, to express an idea of preference for a dome, or for a certain distribution of plan opposed somewhat to the ordinary principle of concentration; but the reasons for the preference should be given; and then the committee of selection might fairly announce that they would not hold themselves as bound to any particular form or principle, seeing that the same objects might possibly, by those who had made architecture and icnographic distribution their study, be secured in some better way. "Instructions," however, are put forth with clauses, some of which express mere whims, and some of which are inserted as it would seem from the pure notion that competitors want something or other—it is not exactly known what; whereas all that architects should wish to know is what there is peculiar to the case in question as compared with buildings of the same class; or to have settled a few points which may facilitate comparison between the designs sent in; and to feel assured that he who produces the best design will receive the premium, and be engaged to superintend the work.

In the case of the Government offices, the announcement and "instructions" aim at far more than it is possible to attain at once. The subject of the *concentration of departments* is one of vast extent, and intricate in its ramifications; and the means to attain the object, or even the exact nature of the object to be attained, are not to be decided upon in a hurry,—as the Government itself has found. A subject of such difficulty requires more than a few months for its solution,—but that is not what we would immediately discuss. Every elaborate process of thought must go through successive stages,—generals and details cannot be aimed at together without resulting confusion. We assume that the vicinity of the Houses of Parliament is that which should be chosen as the site for Government offices. We will suppose, also, that the wants of the Government are definable to themselves,—recollecting that evidence has been collected, and much consideration given to the subject. The next step, according to all logic, surely would be to bring the evidence and the existing stage of the inquiry before the profession, and receive their professional contributions to the disentanglement of the matter.

That, however, is not done. The exact site of the general concentration of offices is marked out,—as witness the red line. The distribution of the several departments within such boundary, presumably the intention in offering 800*l.* in premiums for the block plan, design No. 1, is no object,—as witness the existence of "the part of the site tinted yellow," containing nearly 200,000 superficial feet, or nearly one-fifth of the whole. To ask for a design showing "the best mode of concentrating the principal Government offices on a site comprised within the space bounded by a red line," and having regard to improved communications with the Houses of Parliament and the Surrey side of the river, whilst one-fifth of the site stretching across into the middle of it, is appropriated, shows that want of clear-headedness somewhere in official quarters, which tends only, in time of peace, to national discredit for public works, and in war to recurring disasters.

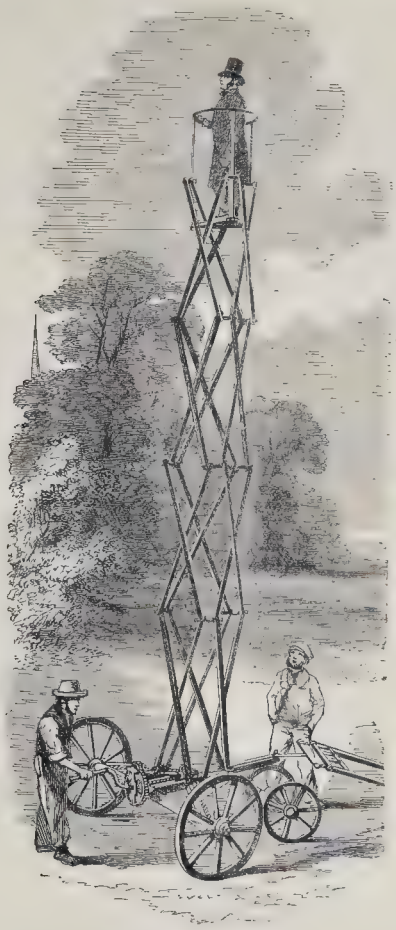
Plans will be received of course—more than Westminster-hall will hold. Somebody will get the 500*l.* first premium, and whoever he is, may thank his stars, seeing that he never in any other case could have hoped to get even 50*l.* so easily. For, from a problem of the greatest difficulty, as the really efficient arrangement of Government offices is, the projectors have cut out so much, or imposed directions in so many places, that what is left is no problem at all, so far as design is concerned. It is something novel for us to find premiums excessive in proportion to the labour: but as the "instructions" for the Government offices at present stand, the premiums involve mere squandering of public money. Sad it is to witness the alternate parsimony and wanton waste,—the apathy, and the hurry, which by turns, and with equal force, mar the growth of art, and the improvement of the metropolis. It is not British architects who are to be credited with the continual mistakes over which all good patriots grieve, and which all lovers of art lament. The architects err only in *assuming* that there exists in self-constituted "patrons," necessarily superior wisdom in questions—which are, perhaps, difficult,—but which belong, and peculiarly belong, to the employment and patronage of architects—whilst those "patrons" apparently do not give the obviously required and simple attention to the sense and effect of their "instructions,"—much less have they collected the evidence preliminary to the apprehension of one of the most difficult questions of the day—as that of competition in art, and especially in architecture, is. We do not know what may be esteemed necessary to be done at such a juncture as the present, for ministerial *éclat*, and a paragraph in a Queen's speech, or what for the making of *political capital*: but we too constantly see questions of art, as others of a different character, taken up in the merely factious spirit of "the ins" and "the outs,"—so that we are reasonably suspicious now, where we find so much that is hurriedly put forth, and in terms not the best for the asserted object.

Definite areas of accommodation for the several offices being given, competitors should have been allowed to make their own suggestions both as to the general site, and the mode of dividing and utilizing it. Probably, excellent suggestions might have been received for the conversion of ground including the south side of Great George-street. Suggestions have appeared in several quarters for the opening up of the end of St. James's-park, and its extension to the river. Is not something of the sort *desirable*, at least; and would it not have been well to allow the suggestion to appear on paper? Yet for any such plan, the site, as at present marked out, allows no chance. The site of Richmond-terrace, and the ground along the east of Whitehall, might be admirably well appropriated. Yet no competitor can offer a design making any use of that ground, and receive a premium, unless through an act of injustice to the other competitors. Sir C. E. Trevelyan, in his evidence, even suggested a plan for the concentration of the offices, in which he comprehended the full use of the Whitehall site, and new buildings for the Admiralty and Horse Guards. We should not have approved of his scheme in so far as it included a building, following Inigo Jones's design for Whitehall Palace;—because, with a full sense of the loss to art which there often is from the modification or abandonment of well-considered plans,—we doubt whether it is generally advisable to go so far back for designs, and whether existing architectural talent could not produce something equally good in art, original, and more appropriate. But the main idea deserved to be left for the consideration of architects. We are tempted to ask whether any supporters of the Government dwell in Richmond-terrace The Duke of Buccleugh, hard by, it was said, got his lease renewed, to the disadvantage of any project such as the present, during the time of the Derby-D'Israeli administration. Are there any supporters of the Government farther north, with whom it is not thought desirable to interfere? We have no business with the game of politics, some may say:—but if the present project fails, the failure which may originate with political arrangement will assuredly get laid on the shoulders of "our architects," like many another crime for which they have stood the scapegoats. To remove Sir Charles Barry's excellent work on the west side, would be quite in accordance with that which has been in public works the practice, without reference to architectural improvement or the economic application of public funds. But, it is not well to throw away anything of value that we have; a perfectly successful design might be carried out, retaining those buildings; or, were there proper freedom for suggestion,—providing another building as an opposite feature on the eastern side of Whitehall. All such points, we say, it was desirable to leave open, and to court suggestions upon. It would have been at the same time necessary to decide what would be done as to the departments of the Horse Guards and the Admiralty, if it be not even now necessary to make the intentions of the Government clear. In the large plan, the Horse Guards and the Banqueting House, like other public buildings, except those within the red line, are shown with a dark shade; whilst the Admiralty, from no explained or comprehensible reason, is left like ordinary buildings, with a light shade. Were Dover House to be removed, as suggested in the scheme of Sir C. E. Trevelyan, the portico and screen-wall would deserve to be preserved, and re-erected somewhere else.

The following letter will speak for itself. As we know it to come from a foreign architect, though not a Frenchman, we have given it in the writer's own idiom. We shall continue our observations next week:—

Monsieur l'Editeur,—Vous avez cautionné bien juste et à propos les architectes Anglais au regard le Programme pour un Palais d'Industrie à Amsterdam, leur indiquant sur l'expérience faite dernièrement avec les concours à Lille.

Je viens de recevoir le Programme pour "the concentration of the principal Government Offices, London," avec le clausule, p. 17, "*If the architect* to whom a premium may be awarded in respect of designs Nos. 2 and 3, or either of them, *shall be employed* to superintend the execution of the work, he will not be entitled to receive such premium, but he will be paid a commission at the rate of 5 per cent. upon the outlay."



Cette phrase, il me semble, indique que le Gouvernement Britannique réserve le pouvoir de faire exactement le même que vous venez de condamner, dans un de vos derniers nombres, dans les juges à Lille: c'est à dire, que si l'architecte couronné n'est pas *l'homme du Gouvernement*, on lui payera son dessin—le résult d'un génie supérieur et probablement de plusieurs années d'études—en disant pour la reste, allez-vous promener.

Il est possible que "the Commissioners of her Majesty's Works and Public Buildings" pénétrés de justice vis-à-vis les architectes, mais au même temps moralement responsable vis-à-vis la nation, pour les grandes frais des travaux, ont pris le sudit précaution en cas que l'auteur du projet couronné serait jeune homme, et qu'ils n'ont pas rêvé de l'injustice exposé; parceque supposez que l'architecte couronné serait jeune, tant mieux. Il s'est montré d'être un grand artist et les "clerks of works," qui sont généralement des hommes très expérimentés en Angleterre, suffiront pour assister dans l'exécution des détails pendant l'érection.

J'ai pris la liberté, Monsieur l'Editeur, de vous faire part de mes vues dans l'intérêt général des architectes, et si vous êtes de mon opinion, alors je vous prie, par le moyen de votre feuille admirable, de demander aux *commissioners* une résolution arrêter, ou qu'ils ont l'intention de donner la direction des travaux à l'architecte couronné—*oui* ou *non*? Bien entendu qu'ils peuvent sauver 1,600*l.* pour la caisse publique et faire justice au même temps, admittant, comme un rule, que l'architecte n'est pas payé pour le dessin s'il reçoit 5 per cent. sur les frais des travaux. S——.

THE PATENT ELEVATOR.

One day when the allied armies were before Sebastopol, Mr. Stocqueler, well known as a writer, and in connection with the "Gallery of Illustration," mentioned to us that he had conceived the idea of applying the principle of what is known as "the lazy-tongs" in the construction of a machine to raise an observer to a considerable height, so as to afford a view of the interior of the fortifications; and we agreed that even if it should be useless at Sebastopol, there were many purposes to which builders and surveyors might apply it. In conjunction with Mr. Saunders, it seems, he has carried out the idea, and has patented the machine produced,

THE PATENT ELEVATOR.

which is represented in the annexed engraving. A view having already appeared in our widely-spread and excellent contemporary the *Illustrated News*, it has been already seen by many of our readers, but, in the hope of being further useful to the inventor, we reproduce it.

It will be observed that a series of tiers of expanding laths, each lath 6 feet in length, worked by a wheel acting on a spindle, rises from the three sides of a triangular base, carrying up an individual, secured by a circular railing, to a height of 50 or even 100 feet, according to the dimensions of the base. Its utility in superseding scaffolding to a great degree is obvious. For cleaning the inside of the roofs of churches, chapels, halls, and museums; painting and repairing the fronts of houses; assisting firemen to direct the jets of water upon burning houses; facilitating reconnaissances and observations; rendering ladders and climbing unnecessary in gathering fruit, lopping the branches of tall trees, and watering conservatories; painting and caulking the sides of ships;—in fact, for all purposes in which a certain elevation, without the expense and incumbrance of scaffolding, is requisite, this invention will prove of much value. We do not know in what way the machine is prevented from tipping over, but doubtless this is placed beyond fear.

THE ARCHITECTURE AND SOCIAL CONDITION OF ENGLAND IN THE MIDDLE AGES.

In our notice of the meeting of the British Archæological Association in Bath, we mentioned that Mr. Tite, M.P. F.R.S. had read a communication on "The Architectural and Social Condition of England in the Middle Ages." We are now enabled to give the paper in full:—

I have had considerable difficulty in selecting a subject for the address which I have been requested to read this evening before the Archæological Association of Great Britain, especially in such a city as Bath, so abounding in learned archæologists and antiquaries.

My difficulty, as it respected the choice of a subject, arose also out of the consideration that almost every topic of antiquarian investigation, which I might undertake to place before you has been so completely illustrated by the society now residing with us, that on most subjects I must have unavoidably omitted many things which the greater part of the members do know, and it is not probable that I could say anything of importance which they do not. I have therefore rejected many such subjects which presented themselves to my mind, as being those with which the numerous associations for the preservation of antiquities, which characterize the present age, have made familiar even to their youngest members.

That which I have at length selected for your entertainment will consist of a slight sketch of the gradual improvement in the social manners and condition of the people of England during the Middle Ages, as evidenced by the improvement of their buildings and habitations, with a few remarks on the condition of the people themselves during the same period. Even this subject, however interesting, is, perhaps, not very novel; but you will probably allow me to plead the defence of Goldsmith's "George Primrose," and say, "the jewels of truth have been so often imported by others, that nothing is left for me to import but some splendid things that at a distance look every bit as well."

Whilst the Romans commemorated the coldness of the climate of Gaul by their proverb, "Colder than a Gallic winter," Cæsar expressly says of Britain that it was milder, and the cold not so intense; to which Tacitus adds, that the air was much loaded with vapours and obscured by mists and fogs. At this period the winter habitations of the aboriginal British were caverns and earth-houses; of which latter some specimens are considered to be still extant in Cornwall and in the western islands of Scotland. But the characteristic feature of the greater part of this country—the thick woodlands—must soon have led the inhabitants to reserve their subterranean excavations for granaries, and to commence that sylvan life in the "greenwood" which the romance of subsequent centuries has made almost immortal.

The island was at that time covered with those extensive forests which Leland has characterized as "horrida sylvis" (vi. 104), and even the very towns of the ancient Britons were a kind of forests, so much did the country abound with them, and so greatly did the people delight in them. In this rude and primitive state of society they formed also the most effectual national defences; and one of the principal difficulties the Romans encountered in pursuing their contest in Britain, was the making of their way through those woods, and guarding against the sallies of the inhabitants from their forests.

"That which the Britons call a town," say Cæsar and Strabo, "is a tract of woody country, surrounded by a mound and ditch, for the security of themselves and their cattle against the incursions of their enemies. The forests of the Britons are their cities, for when they have enclosed a very large circuit with felled trees, they build within it houses for themselves and hovels for their cattle." In the places where they resided, they also found the materials out of which, at least, the summer habitations of the most ancient British people were constructed; stakes of wood driven into the ground in a circle, interwoven with wattles, and covered over with boughs of trees. They had lofty tapering roofs, with an aperture at the top for the admission of light and the emission of the smoke.

The first improvement on these barbarous habitations was closing up the wattled walls with clay, for increasing both the warmth and substantiality of the cottage, and covering the clay after it was dry with a coating of lime, for of so ancient a date is the present practice of plastering and whitewashing in England. Then followed trunks of trees for the walls instead of boughs and wattles, and rude courses of stone for the foundations. To the stone period must also have belonged the practice—if indeed it ever existed—which a late antiquary considered as satisfactorily accounting for the gigantic monuments called cromlechs, and other kindred erections, that is, the stone houses which may have constituted some of the more substantial dwellings of the aboriginal British. If ever this practice did exist, the time of it must be limited, and not regarded as belonging to the forest-lands, but to the stony plains of England.

I have dwelt the longer on this age of earthworks and wigwam huts, because I consider it as the dark hour immediately preceding the dawn brought on by those enlightening arts which were introduced in consequence of the settlement of the Romans. Cæsar came hither solely for the advancement of his own glory and

the extension of the Roman power; but under the irresistible overruling direction of Almighty Providence, his ambition was made the means of first planting in Britain many of those noble arts of peace which at length became the ministering agents of civilization, of learning, and even of Christianity. When the Roman invaders are viewed in this light, we no longer behold a band of ruthless adventurers who came hither "for power, for plunder, and extended rule," but rather the personification of

> "The knight of arts and industry,
> And his achievements fair,"

by whose vigorous and wholesome, though rough exertions, the more virtuous of the captives in *The Castle of Indolence* were delivered and made happy.

Two of the most valuable improvements brought into Britain by the Romans were their military roads and their architecture. By their roads they penetrated an almost impassable country with four great highways, which the Saxons were always careful to maintain; and in the military stations erected on or near them, the Roman governors laid the foundation of many of our principal towns and cities. When the sanguinary struggles for superiority between the Britons and the Roman legions had at length subsided under Agricola, that enlightened general devoted his energies to the improvement of the natives of the country. He assisted them to build temples and market-places, courts and forums, and especially more convenient dwellings; some of which were villas, adorned with baths, porticoes, banquet-rooms, and mosaic pavements. Under the ameliorating influences of these improvements, he imparted to them an emulous desire for education, and some of the sons of the chiefs were induced to study letters, preferring, says Tacitus, "the natural genius of the Britons to the attainments of the Gauls." The Roman language was successfully cultivated, and those who lately disdained to use it were now ambitious of being thought eloquent. But with the civilisation of Rome came also her enervating luxuries, and the Britons gradually deviated into a taste for those indulgences—feasts and baths, and stately edifices, which they esteemed as refined politeness, though, in reality, adds Tacitus, "this constituted a part of their slavery."

Towards the middle of the fifth century the Romans left Britain; but they had constructed too many great architectural works during their long residence here, for any dependence to be placed on the statement that their art of building was lost in A.D. 298, when Constantius Chlorus sent away the artificers and mechanics to rebuild the cities in Gaul, and erect fortresses on the Rhine: certainly it continued long after; but there was an interval of misrule and confusion, in which but little could have been done for the comfort of the people in any way. The revival of architecture, however, has been often attributed to an ecclesiastic of very superior abilities, Benedict Biscop, who had spent several years in Rome, and was the first abbot of Wearmouth in the close of the seventeenth century.

After the arrival of the Roman clergy in Britain the first Christian churches erected in this country were of wood, as those of Northumbria and Holy Isle; and the prototype of Durham Cathedral was of split oak trunks, covered with reeds, like the walls of the wooden church at Greensted, in Essex. Hence it is not surprising to find that the Anglo-Saxon word for the erection of a building is "*getymbrian*"—to make of timber, which was retained even long after edifices were constructed of stone. But when Benedict had laid the foundation of his monastery at Wearmouth, in A.D. 675, he went into Gaul to inquire for *cæmentarii*, or masons, to erect for him a church of stone, after the Roman manner, which he well knew and admired, and thus introduced the Romanesque style into England. He sent also after other artificers, to make glass windows for the porches and cænaculum, and these foreigners taught their skill to the Saxons.

But, whilst ecclesiastical architecture existed in such a rude condition only down to the latter part of the seventh century, there can be no doubt that domestic edifices had been considerably improved, at least in size, arrangement, and convenience of form, though certainly not uniformly in material.

The period to which we wish especially to invite your attention is the Middle Ages, a time which is generally regarded to extend from the tenth to the end of the fifteenth century. There is not, however, anything like positive information extant on the subject of domestic architecture previous to the twelfth century, but it may be fairly considered that the general description of houses then existing was so well adapted to the ordinary state of society that their plan was established at a much earlier period. In prosecuting our subject from this date, I gladly take the opportunity of adding my testimony to the merit of the late Mr. Hudson Turner's "Account of Domestic Architecture in England from the Conquest to the end of the Thirteenth Century," and of acknowledging my obligations to that work in the present paper.

The circular hut of the Britain having become, under the Romans, a large rectangular apartment corresponding with the Italian atrium, the Saxons adopted it as the hall which formed the common chamber in the houses of the northern nations, and gave that familiar name and characteristic to English dwellings by which they have ever since been known. In the centre of the hall was the fire, and the smoke passed out at either an aperture immediately above it, or by any opening which it might find. By this fire sat the master of the house, with his servants, retainers, or hearth-companions. Here they ate in common, and at night they covered over the wood benches with beds and bolsters, and lay down to rest. In dwellings of more importance, the lord and his hearth-men went to their own sleeping apartment, which served also as a council-chamber; and hence originated that intense romantic fidelity between a chief and his followers, which, in general, nothing was capable of destroying. The "hearth-companions of the Saxon kings and nobles," says Mr. Hudson Turner, "have been compared, by writers of considerable erudition, to the counts of the palace of the Frank sovereigns;" and we may almost trace in them the prototypes of the Knights of Arthur's Round Table. Selden has a strong, nervous remark concerning the old English halls, and the benefit arising from the community of society. "The hall," says he, "was the place where the great lord used to eat; wherefore else were the halls made so big?—where he saw all his servants and tenants about him. He ate not in private, except in case of sickness. When once he became a thing cooped up, all his greatness was spoiled. Nay, the king himself used to eat in the hall, and his lords sat with him, *and then he understood men*."

The hall was usually constructed on the ground-floor, but a house is represented in the Bayeux tapestry, where it is erected over a lower story of three arches, and is entered by a flight of steps outside the building, being covered above by a pointed tiled roof. The other apartments of a large residence of this period comprised a private room, or bed-chamber; annexed to the hall, a kitchen, which opened out to the court or road; a larder, the sewery, and the cellar. The private chamber was frequently placed on the upper floor over these buildings, and was called a "solar," probably, a sun chamber; but the cellar was on a level with the hall. A manor-house of this description was sometimes entered through an outhouse, which subsequently became a porch, and was also surrounded by a court and wall. John Rous, the antiquary, attributes to the Normans a great improvement in the low and mean domestic dwellings of the Anglo-Saxons; but he probably alludes to the wooden buildings with wide porches, capacious halls, large parlours, and jutting-out stories of upper apartments, erected in cities and towns. At even this early date London began to exhibit some good houses, for security's sake erected in connection with each other. They were made of wood, but in some instances were surrounded with gardens, orchards, and private chapels.

But, whilst improvement in the houses erected in towns and cities went gradually and constantly forward, the people of England who resided in the country districts do not generally appear to have made much progress in the external construction of their dwellings during the remainder of the time called the Middle Ages. The cause of this circumstance may fairly be attributed to the calamities brought upon the nation by the York and Lancaster civil wars; but a very curious account of the rude appearance of the English country dwellings is contained in William Harrison's interesting "Description of England," prefixed to "Holinshed's Chronicle," in 1587:—

"In old time," says this valuable tract, "the houses of the Britons were slightly set up, with a few posts and many *radels* (rafters), with stable and all offices under one roof; the like whereof is still to be seen in the fenny countries and northern parts unto this day, where, for lack of wood, they are enforced to continue this ancient manner of building. It is not in vain, therefore, in speaking of building, to make a distinction between the woody and plain soils; for, as in these our houses are commonly strong and well-timbered, so that in many places there are not above 4, 6, or 9 inches between *stud* and stud,—so, in the open or champaign country, they are enforced, for want of stuff, to use no studs at all, but only frank-posts, raisins, beams, prick-posts, groundsels, summers (or dormants), transoms, and such principals, with here and there a girding, whereunto they fasten their splints-or radels, and then cast it all over with thick clay, to keep out the wind, which otherwise would annoy them. Certes, this rude kind of building made the Spaniards, in Queen Mary's days, to wonder; but chiefly when they saw what large diet was used in many of those so homely cottages, insomuch that one of no small reputation amongst them said after this manner;—'These English,' quoth he, 'have their houses made of sticks and dirt, but they fare commonly as well as the king.' In like sort as every country-house is thus apparelled on the outside, so is it inwardly divided into sundry rooms above and beneath; and, where plenty of wood is, they cover them over with tiles; otherwise with straw, sedge, or reed; except some quarry of slate be near hand, from whence they have for their money so much as may suffice them."'

"In plastering of our fairest houses over our heads we use to lay first a *laine* or two of white matter tempered with hair upon laths, which are nailed one upon another, or sometimes upon reed, though more dangerous for fire; and finally cover all with the aforesaid plaster, which, beside the delectable whiteness of the stuff itself, is laid on so even and smoothly as nothing can be done with more exactness. The walls of our houses on the inner sides, in the like sort, be either hanged with tapestry, arras work, or painted cloths, wherein either diverse histories, or herbes, beasts, knots, and such like are stained; or else they are ceiled with oak of our own, or wainscot brought hither out of the East countries; whereby the rooms are not a little commended, made warm, and much more close than otherwise they would be."

Fuller, with his usual quaint conceit, says, that in 1587 began beautiful buildings in England, as to the generality thereof, with "those whose homes were but homely before." It will be remembered, however, that many richly-decorated Tudor edifices had been erected more than half a century before; but it is possible that he refers to that plain external appearance of extensive residences which is thus mentioned by Harrison:—

"This also hath been common in England, contrary to the customs of all other nations, and yet to be seen—for example, in most streets in London,—that many of our greatest houses have outwardly been very simple and plain in sight, which inwardly have been able to receive a duke and his whole train, and lodge them at their ease. Hereby, moreover, it is come to pass that the fronts of our streets have not been so uniform and orderly builded as those of foreign cities, where, to say the truth, the utter-side of their mansions and dwellings have oft more cost bestowed upon them than all the rest of the house. Of old time our country-houses, instead of glass, did use much lattice, and that made of wicker or fine rifts of oak in chequer-wise. I read also, that some of the better sort, in and before the times of the Saxons, who, notwithstanding, used some glass; also, since the time

of Benedict Biscop, the monk that brought the feat of glazing first into this land, did make panels of horn instead of glass, and fix them in wooden frames. But as horn in windows is now quite laid down in every place, so our lattices are also grown into less use, because glass is come to be so plentiful, and within a very little as good, cheap, if not better than the other."

Then follows this noble testimony of the same author, as to the merits of English artificers, and the improved and stately edifices which were in progress at the period :—

"The ancient manors and houses of our gentlemen are yet, for the most part, of strong timber, in framing whereof our carpenters have been, and are, worthily preferred before those of the like science among all other nations. Howbeit, such as be lately builded are commonly either of brick, or hard stone, or both; their rooms large and comely, and houses of office farther distant from their lodgings. Those of the nobility are likewise wrought with brick and hard stone, as provision may best be made; but so magnificent and stately, as the basest house of a baron doth often match in our days with some honours of princes of old time."

With this extract, which conducts the story of English domestic architecture to the commencement of its prosperity, I will conclude this portion of these hastily compiled notices.*

THE ACCIDENT AT THE SURREY MUSIC-HALL.

Our readers have all, doubtless, heard of the frightful and distressing occurrences at the new Music-hall, in the Surrey-gardens, on Sunday evening last, when the hall being crowded with persons to listen to the preaching of Mr. Spurgeon, an alarm was created, and, in the rush to escape, six or more persons were killed on the stairs, and a large number injured. It is unnecessary for us to go further into particulars; but, serving as this melancholy accident should, to enforce the entreaties we have for years addressed to the proprietors of other places of amusement and general resort, we may not let it pass without one or two observations. The means of egress from the Surrey-hall are much more ample than in many other buildings: there are four staircases, for which, it will be remembered, we gave praise in our account of the hall (p. 396), but on the same occasion we pointed out very earnestly, as a matter for regret, the narrowness of the treads of the stairs (being "winders") next the handrail, and urged that accidents would occur if these were not altered. We have not the slightest desire to impute blame, or to cause annoyance, but we should not be doing our duty if we did not again point attention to this arrangement. Had the form of the stairs been different, disasters under the circumstances would, doubtless, have occurred, but that these were increased by it we cannot for a moment doubt. Indeed, we find one of the witnesses saying, "I was running downstairs, and fell. I had hold of the bannister, but leaving hold fell, owing to the stairs *being narrower at one end than the other*." The sister of the witness who was behind her, was killed. This form, indeed, might have contributed to the failure of the handrail, since it compelled all who were at the narrow end of the step to exert a force upon it.

What would be the consequence of a panic in some of our London theatres, where the arrangements are absolutely such as to prevent egress? Experience is wholly disregarded. Some years ago an alarm of fire was raised in the theatre at Newcastle-upon-Tyne. People living now remember the loss of friends on that fatal night. The staircase from the gallery was very steep, and on the cry of fire being raised, the people rushed down it. There were no other means of exit, and the confusion was terrific. It was by no means easy under ordinary circumstances, to get safely down this precipitous way. The barrier at the pay-box increased the difficulty, and, if we remember rightly, more than a dozen men, girls, and women, were hurried out of life. After that, various doors were made, leading from parts of the gallery, which could be thrown open in case of a similar accident.

Since that time many similar calamities have taken place,—those at old Sadlers Wells and at the theatre at Glasgow will be remembered,—but we have not been taught by these costly lessons. The population of large towns is increasing daily, and so is the tendency to erect large halls, theatres, and other places of assembly, and a warning is now more than ever needed.

We have received a number of letters touching the sad occurrence at the Surrey Gardens, and insert the following :—

I quite agree with the complaints so often made respecting the difficulty of *egress* from our public buildings, and you have long advocated a change in this respect. I could not help remarking when at the new Music Hall, Surrey Gardens, last season, that all the French casements on the ground-floor opened inwards, and to this, among other things, may be attributed the fearful loss of life on Sunday evening last. I do consider it is absolutely necessary for the security of the public that all the doors and accesses to all our places of public resort should be made to open outwards. Had this been the case on Sunday evening the result would have been very different, as nearly one-third of the enclosure around the lower floor is formed of doors and windows. I have often trembled at Exeter Hall when I have thought of the difficulty of egress in case of an alarm, and I am very glad to see that efforts are being made to arouse the proprietors to a sense of their duty to the public in this respect. Should an alarm be raised there, the consequences would, of necessity, be far more serious than those at the Surrey Gardens, on account of the long flights of stairs. What but an unwise economy should prevent a similar access to Exeter Hall on the other side of the building to the one from the Strand? Is it not very important that a survey of all public buildings should be at once made, having the question of *access* and *egress* more particularly in view? This question *cannot—ought not* to be left to remain in its present state.—E. O. S.

VENTILATION OF HOSPITALS.

It is not possible to over-estimate the advantage of such a position of the windows in a hospital as will permit of a thorough current of air through the wards whenever the weather is favourable for its admission. When this cannot be obtained, it is more especially essential that the permanent ventilation of the building should be provided for on the most liberal scale.

In almost all the hospitals that have been erected in this country, where permanent, or, as it has been termed, scientific ventilation has been introduced, the provisions have been far too limited for a successful result.

At a recently erected hospital in London, where a system of ventilation was incorporated into the building, the quantity of air admitted into a ward containing nineteen beds is not more than sufficient for the sanitation of the space occupied by a single patient. It is this homœopathic administration of the important element,—air, which has deservedly brought *scientific* ventilation into disrepute. The proportion of 3 to 5 cubic feet per individual per minute, assigned, by some of the chief authorities on the subject, as the proper quantity of fresh air necessary for the maintenance of a healthy action of the system, is, in all cases where apartments are continuously occupied, far too small. This calculation involves the widespread fallacy that the air vitiated by respiration may be withdrawn without contaminating the surrounding air. The air expired from the lungs has not a temperature sufficiently elevated to raise it to even a couple of feet above the head, without its undergoing diffusion from the combined influence of the general law of gases and of the rapidity with which it parts with its excess of temperature, and the disturbing effects of currents of air, the direction of which is only capable of being partially controlled.

When then we have the case of a large room, with a flat ceiling, and a single, or at most two or three openings for ventilation, the impregnated air, unable to move away with sufficient rapidity, floats about in the upper regions of the room until, becoming gradually cooled by contact with the ceiling, it ultimately joins the descending current always existing against the external walls, and falls to the lower part of the room, there to receive a second dose of contamination.

Ventilation of such places, to be effective, should be as much as possible approximated to that of the external atmosphere. In the open air, in its ordinary state, the noxious exhalations are rendered innoxious by their dilution in the atmosphere. Buildings which possess a large number of openings, freely communicating on all sides with the external air, admit of the full operation of this process of dilution; but such structures are obviously inapplicable in this climate, where the admission of direct currents of air is impracticable during two-thirds of the year.

Hence we are driven to scientific means for obtaining such an artificial ventilation as shall compensate, so far as may be, for the loss of natural ventilation.

The provision for permanent ventilation being, however, expensive, both in construction and maintenance, and the cost, in most cases, increasing with the quantities in which fresh air is supplied, it has been considered very necessary to ascertain the *minimum* proportions in which air may be admitted consistently with an adequate ventilation. These proportions have been determined by the practice of some eminent French engineers at from 10 to 20 feet per minute for each individual; and M. Peclet is of opinion that, for hospitals, a ventilation of about 18 feet per bed per minute would be fully effective. In this, however, he differs from M. Morin, who tested, by his experiments at the Hospital Beaujon, that the quantity of air discharged varied from 24 to 36 feet cube per patient per minute, and that this amount of ventilation was hardly sufficient.

In the left wing of the Hospital Lariboissaire, where the rate of ventilation varies from 12 to 24 feet per minute for each bed, I am able to state, from actual observations, that there is a decidedly perceptible taint in the atmosphere of the wards. In the newly-erected portion of Guy's Hospital, the ventilation ranges from 40 to 60 cubic feet per bed per minute, and no trace of taint exists in the air of any of the wards.

With an admission of air of from 40 to 60 cubic feet per patient per minute, the principle of dilution is so perfectly carried out that no special currents or veins of vitiated air exist; and under these circumstances it is of little importance, as regards sanitation, whether the ventilation is effected upon the *ascending* or *descending* systems, by current of air traversing horizontally (as would be the case if the ward were ventilated by open windows on each side) or in any other mode. There is, however, a manifest advantage in extracting from the vicinity of the beds, and so creating a movement of the air towards each bed, which tends to confine any unpleasant odours or vitiated products to the locality in which they are generated, and to prevent their diffusion throughout the general atmosphere of the ward. This object may generally be best accomplished by successive descending strata of air sinking from the upper part of the room towards the floor, and having their outlet near and below the level of each bed. The same end might be answered if an ascending movement were adopted, by placing an opening for extraction over each bed; but, in this case, the products of respiration, &c., mixing with the ascending currents, would be subject to the disturbance to which these currents are themselves liable in rising towards the ceiling. Where, as is generally the case, an upward ventilation is sought to be accomplished by one or two extraction-openings in a flat ceiling, it is impossible to prevent the vitiated air from being disseminated throughout the atmosphere of the ward; and then it is only by a system of dilution, effected by the introduction of a very large quantity of fresh air, that the proper sanitation of the ward can be accomplished.

In reference to the position of water-closets, it appears to be admitted* that noxious exhalations may be prevented from diffusing themselves, by establishing currents of air "always

* To be continued.

* Certainly not by us. Ed.

setting in from the wards to the water-closets;" but, in order to *ensure* the constant maintenance of such a current, it is necessary that the architect should adhere to two points. In the first place, he must have the courage to resist firmly all persuasion to render the windows of the water-closets capable of being opened. If they can be opened, it is certain that the attendants, under a mistaken idea of sweetening the place, will throw them open,—the probable consequence being that, instead of a movement of the air into the closet, there will be a current from the closet towards the ward. Many otherwise well-ventilated places have the purity of their atmosphere contaminated from this cause. The second point is to counteract the pumping action of the door every time it is opened. This may be effected by a lobby with double doors, opening inwards, and so contrived that one door cannot be opened until the other is closed; the lower panels of both doors being hung as valves also opening inwards. It is so often difficult, in planning a building, to find a suitable position for the water-closets against any of the external walls, that an arrangement which would prevent them from being offensive when surrounded by rooms or passages is worth study.

S. E. Rosser.

PARIS.

Exhibition of the great Prizes and Art Works from Rome.—Amongst the best calculated arrangements of the Paris *Académie des beaux Arts* is the sending of their pupils to Rome (and Athens), with the obligation to forward specimens of their progress home for public exhibition. The exhibition of the competitors for the prizes of this year is not much approved of, and an art-critic of note, M. Du Pays, expresses himself to the effect,—that "our young artists desert the *great gods* to serve the *dii minores*,"—a reproach which may be carried to a still more comprehensive extent. In the department of painting, the prize offered was the Return of young Tobias, accompanied by the angel Raphael. The first great prize was awarded to M. Clément, pupil of Messrs. Drolling and Picot. The subject for sculpture was Romulus, the vanquisher of Acron. M. Maniglier obtained the great prize, but although the nude figure is satisfactorily executed, an utter absence of pronounced character or personality is regretted. The first great prize in sculpture was awarded to M. Gaillard. The prize in architecture was for a Palace of the French Embassy at Constantinople—a most appropriate subject, connecting the students of art with the greater concerns of the State. In this department the pupils exhibited a good amount of imagination, carried nearly into the precincts of the *mille et un nuits*. The first great prize was awarded to M. Guillaume; the second to M. Moyaux.

Of the art-works sent from Rome, M. Du Pays says that they have nothing of Roman in them. Still, the *supplice* of a Vestal by M. Baudry is a picture of some good parts. Amongst the architectural works there is the design for a grand Post-office by M. Lenoit; studies after the temple of Erectheus by M. Ginain; and an interesting restoration after the funeral monuments of the Via Appia, by M. Ancelet.

The new Cascade, Longchamp, Bois de Boulogne, Paris.—The works of the cascade of Longchamp have been completed in five months. In the construction of the ornamental rocks and of the basin 2,000 cubic mètres of the grit of the Forest of Fontainebleau have been employed, and 4,000 cubic mètres of *béton*. The largest blocks, after having been cut in the quarry, were dressed more accurately at Longchamp. The superior basin, which serves as the reservoir to the cascade, has 7,000 square mètres of surface, and can contain about 10,000 cubic mètres of water. It is alimented by the surplus of the great lake, by means of a little rivulet, which traverses the *Mare aux Biches*, and forms, even at that place, a fine cascade. The main cascade spends, in its greatest effect, 1,200 cubic mètres in the hour. It is composed of a main waterfall of 9 mètres in height, and breaks over the rocks in a very picturesque manner, while lateral cascades issue from the rocks right and left. The waters then received in a basin situated more below, are conducted by a serpentine rivulet across the plain of Longchamp, and congregate in the three sheets of water situated along this plain, below the new Hippodrome. The completion of these works will consist in the planting of the different *pièces*, which surround the scenery. Until the great artesian well of Passy and the other hydraulic works in the neighbourhood are terminated, the lake and the cascades of Longchamp will be supplied by the steam pump of Chaillot.

METROPOLITAN BOARD OF WORKS.

Last week we expressed a doubt whether the Metropolitan Board of Works would ever bring the subject of their endless discussions, motions, and counter-motions, amendments, and negative resolutions, to a satisfactory conclusion. One very obvious reason for such a doubt (not to speak of others), consists in the number of its talking members, and a suggestion has been made, that the Board be divided into two parts, one to consider and decide upon the drainage question, and the other to deal with street improvements, the architects' reports, and such like. It is thought, with some reason, that thus there would be less display of talking talent and more of quiet judgment and decision. As the *Morning Herald*, in treating of this suggestion, justly remarks, the Board is either too small or too large: if it consisted of a much larger number, the passive force of many silent members, impatient of too much talk, would effectually put down all superfluous speaking; and if it consisted of fewer members, a great incentive to ambitious display would be removed, and much less talk and much more real work done.

Failing some such remedy as that suggested, it is thought probable that a less effectual and less satisfactory cure will be wrought from within,—that a large number of the more silent members, the actual men of business, will grow tired of meetings which last for five or six hours, and in which little real business is done, and will relax their attendance, while the press will report the proceedings with brevity, and so diminish the oratory and increase the business performed. The Board are altogether at sea on the drainage question: what they determine one day they undo the next: and having neither compass nor rudder aboard, drift at the will of every wind that blows. On the 22nd, the resolution of a previous meeting negativing the engineer's report as it relates to the outfall B, was rescinded by twenty-five to ten, and an amendment on a succeeding motion,—to the effect that the plan B (Erith Marshes) be adopted, and presented to the Chief Commissioner, with an intimation that the Board had had other plans under consideration for the discharge of the sewage below Gravesend, which would add one or two millions to the outlay, not for the benefit of the metropolis, but to meet the wishes of the inhabitants of Kent and Essex, residing on the banks of the river; but that, if the Government would provide for the additional expense, the Board would undertake the works,—was carried by 24 to 7. To chronicle such proceedings is simply waste of time and space.

We would mention the appointment of Mr. Alderman Cubitt on the Board to represent the City, in room of Mr. T. H. Hall, deceased; and that Mr. Woolrych, the Clerk to the Board, has confirmed the views we expressed last week as to the declaration of the Board touching general lines of front.

LIVERPOOL LIBRARY AND MUSEUM COMPETITION.

Several architects, who submitted sketch-designs in competition for the Liverpool Free Library and Museum, are anxious to obtain an exhibition of the ninety-nine rejected; and have asked us to mention the desire, and to invite those who concur in the idea to send the mottoes of their designs to our office, so that a judgment may be formed as to the wisdom of taking any further steps in the matter. We willingly comply with the request, and will render any further assistance in our power.

ANGMERING, SUSSEX.

Angmering Church has been rebuilt all but the tower. Like most Sussex churches in that neighbourhood, it is of flint. A north aisle was added, and it now consists of a chancel and mortuary chapel, with nave and south aisle, upon the original foundation; the north aisle not having before existed, and the tower stands west of the nave.

The church is seated with oak throughout: the chancel and mortuary are laid with glazed encaustic tiles. The mortuary has an enamelled cross on the stone communicating with the vault, and is enclosed with wrought-iron gates, gilded upon azure. The reredos has a good deal of colour, both in the texts and general surface. All the windows of the chancel and mortuary are glazed with subjects; the east window of the chancel recording the birth, death, and resurrection of our Lord; the north window the institution of the Lord's Supper; and the other three, six subjects of miracles. The east window of the mortuary (a three-light) contains the last acts of Abraham, Isaac, and Jacob; and the Ascension of our Lord in the head of the tracery. The two south windows have respectively "The Raising of Jairus's Daughter," and "The Widow's Son."

The arches throughout, both of arcading and windows, have texts illuminated upon the surfaces.

A lich gate is erected at the east end, the principal entrance from the village to the churchyard. Beside it is the sexton's house, overlooking the churchyard; and in connection with this is a vestry-hall for parish meetings.

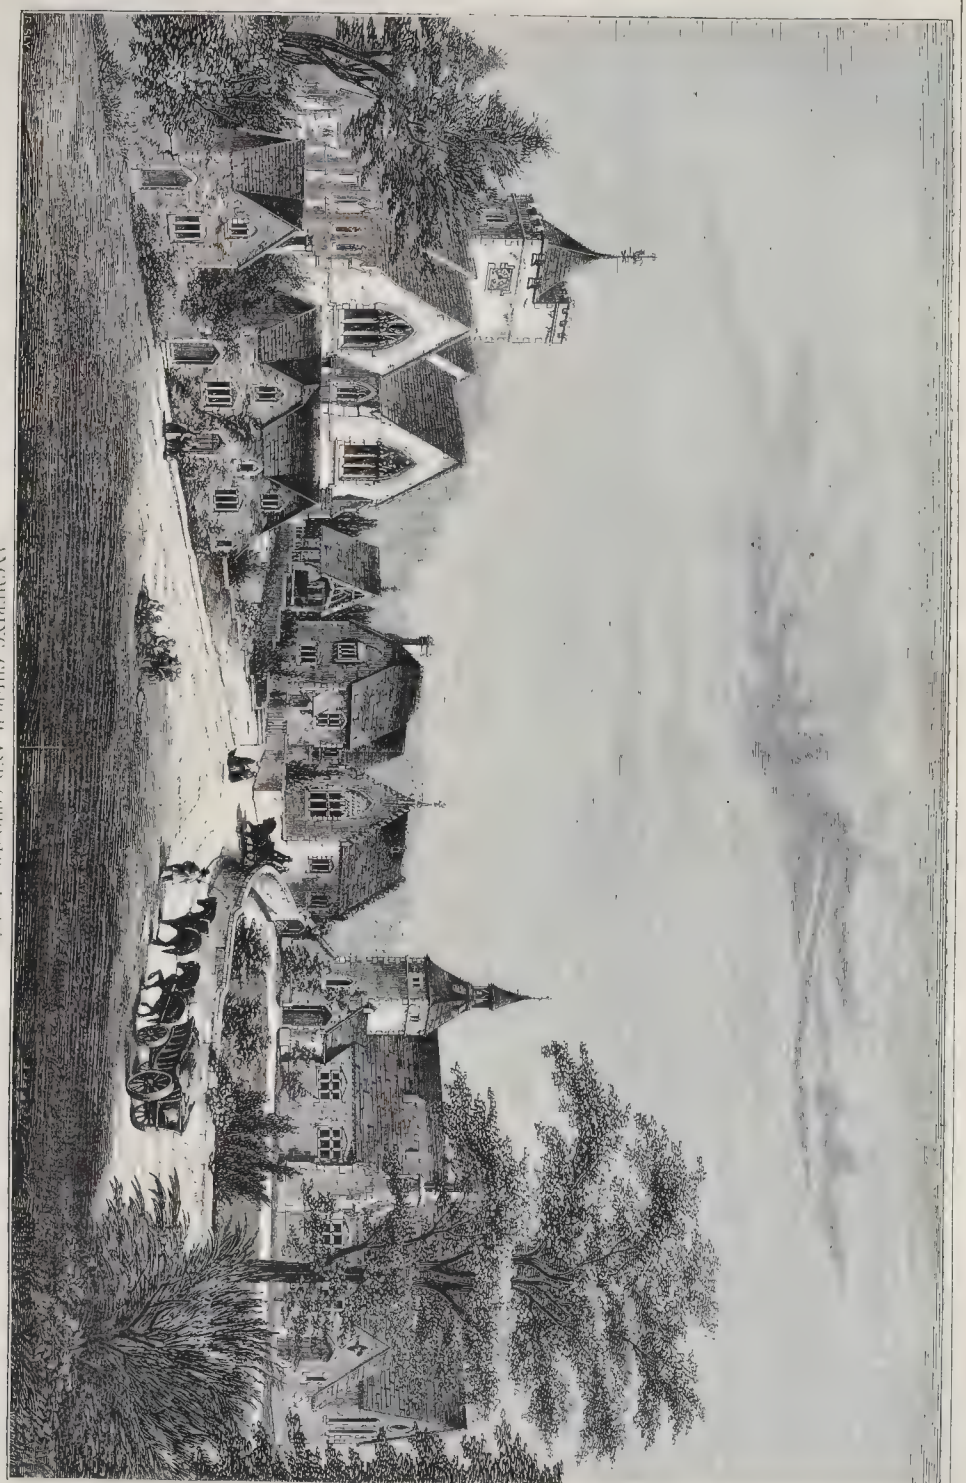
The road runs along the east side of these buildings; and immediately opposite are the National Schools; so that the whole forms one group, and is represented in our engraving. The most interesting feature is the fact, that the whole of this work was done through the munificence of a private gentleman resident in the parish, W. G. Kinleside Gratwicke, Esq. at whose entire cost the whole was carried out under the direction of Mr. S. S. Teulon.

"CHURCH BUILDING."

Under the title "Church Building," the current *Quarterly* has an article "against the improvidence which begins an undertaking without funds to complete it, and the disingenuousness which asks for subscriptions in the name of charity and necessity, and applies them to the purposes of taste,"—which, moreover, the writer urges is not usually shown. "The taste for architecture," writes the reviewer, "which is one of the characteristics of the present day, is indulged at any sacrifice of sense and prudence." With much truth in the article, the doctrine inculcated that the sums spent upon wood carving and stonework should be used to "alleviate the ills of the flesh, and to give immortal life to benighted souls," carried out thoroughly, would bring us again to log-huts and skins for clothing. The same number contains an interesting article on the topography of "Ancient Rome."

ROYAL INSTITUTE OF BRITISH ARCHITECTS.

The following is a list of the ordinary meetings for the Session 1856-7:—



1856. (Monday) November 3rd and 17th; and December 1st and 15th.

1857. (Monday) January 12th and 26th; February 9th and 23rd; March 9th and 23rd; April 20th; May 4th (the annual general meeting of members only) and 18th; June 1st and 15th.

The library is open to members from ten to five daily, between the 20th of October and the 31st of August (excepting the Easter and Christmas weeks), and on the evenings of Mondays, Thursdays, and Fridays during the Session, from seven to ten.

THE DINNER FOR THE BUILDERS' BENEVOLENT INSTITUTION.

We wish to draw special attention to the circumstance that the ninth anniversary dinner of the Builders' Benevolent Institution is to take place at the London Tavern on the 29th inst. (Wednesday next), Alderman Lawrence in the chair. The result, we feel assured, will not fall short of previous contributions in aid of this excellent charity. The number of members ought to be much larger, even, than it is.

ARDINGLY CHURCH AND SCHOOLS, SUSSEX.

CHURCH-BUILDING NEWS.

Grantham.—The cemetery committee has appointed a sub-committee to obtain information and report on the best mode of laying out the grounds. The chapel, or rather chapels, says the *Lincolnshire Chronicle*, have given rise to much criticism, for, as viewed from the road, they form one building, standing north and south, which is considered contrary to all rule for an ecclesiastical edifice. But the fact is, the Episcopal Church does stand east and west, with the door on the north side. The Nonconformist building is placed north and south, with the door at the south end, opposite to that of the Church. The small breadth of ground between the two doors is covered in, forming a grand entrance or vestibule to both edifices, and producing the appearance of one large instead of two small buildings.

Shearsby.—The chapel of Shearsby has just been restored. The old pews have been removed, and open seats erected in their stead. The screen has been restored, but has been removed farther into the chancel, to allow of more room for seats. The church formerly held about 120 persons, but will now seat 180. The chancel has been filled with oak stalls, the remaining seats in the body being of deal. A carved stone pulpit has been erected in the place of the old wooden one near to the screen, and also a new stone font. Thirty-seven new seats have been erected in the nave, and the seats now occupy the whole of the church. The church is paved throughout with plain red and black border tiles. A new east window has been put in. The roof, which was formerly of lead, has been raised several feet higher, and is now covered with tiles. The tower has not been touched. It is intended to restore the remaining feature of the church when funds can be raised. The total cost of the restoration is about 700*l.* and about 600*l.* were raised in donations.

Market-Rasen.—On the 10th inst. the parish church of East Keal, which had been for some time under extensive repair, was re-opened This edifice now consists of a tower (in which are five bells), a nave, north and south aisles, and a south porch. The expenses have been met by the subscriptions of the landowners and occupiers of the parish; the rector (the Rev. John Spence) having entirely rebuilt the chancel, and given, in addition, a contribution to the general repairs. The whole sum expended has been about 1,400*l.*

Bangor.—The church of Bangor, having become very dilapidated, has been restored. The nave has undergone thorough repair, with new oak sittings, and the chancel has been rebuilt, having a window of three lights in the east, with a narrow margin of coloured glass, at the expense of Mr. J. L. Davies, M.P. of Blaendyffryn, the member for the boroughs of Cardiganshire. On the 26th ult. the reopening took place.

Bridgnorth.—The new Roman Catholic chapel, erected outside the North-gate, has been opened. The chapel also answers the purpose of a school-room, the altar being screened off. The building is in the Early English style, and is of stone; that for walling being from Sir John Acton's quarry, at Oldbury; and the window dressings, crossings, &c. being of Bath stone. The chapel is 60 feet by 25 feet; and has an open timber roof of high pitch. The timber-work is stained and varnished. The gable of the chapel to the street has a four-light pointed window, and is terminated by a cross. Over the ridge is placed a bell-cot of wood, a few feet from the gable end. At the side of the chapel is a small vestry and house for the priest. The roofs are covered with Broseley tiles, in alternate bands of red and blue; the latter having rounded ends. The architect was Mr. Robert Griffiths, of Quatford.

Hanwood.—The parish church of Hanwood, near Shrewsbury, has been lately enlarged, repaired, and restored, and was reopened on Tuesday in week before last. The church, which is of brick, has been enlarged by lengthening the nave 13 feet, adding a porch on the north side, and a vestry on the south. The roof has been stripped, lined, and re-covered with blue and red tile; the ceiling re-covered, and the inside of the roof thrown open, repaired, and lined with red deal, and stained; the south wall partly rebuilt; the wood frames removed, and the window openings altered, and filled with Pointed windows, in Grinshill stone, except the east window. The old timber bell-turret was taken down to allow of the lengthening of the church, and has been replaced by a new one. The inside of the church has been re-floored and paved; the chancel raised two steps; the old tablets, wainscot, and rail, repaired and refixed. The gallery and sittings therein, and the seats and reading-desk in the nave, are new, of stained deal. The memorial windows in the chancel are the work of Mr. David Evans, of Shrewsbury. The whole of the works have been carried out by Mr. H. Thomas, from the plans and under the superintendence of Mr. Randal. The sum raised for the works was 500*l.*

Crewe.—The foundation-stone of the new church dedicated to St. Michael, about to be erected at Crewe, has been laid. The site is near Crewe-green. The church is intended to accommodate upwards of 200 people, and will be erected at the cost of Lord Crewe. It will be of Gothic architecture. The exterior will be of red brick, interspersed with blue; the interior, of white bricks interlined with red ones, with string courses of encaustic tiles. There will be a stone plinth round the building, and dressings of Hollington stone, with marble columns introduced at the angles of the buttresses, doors, and windows. There will be a bell-turret with a stone spire at the north-west angle of the church. The roof is to consist of open principals, covered with tiles of peculiar pattern.

Eastwood (Nottingham).—Upwards of 3,000*l.* out of 4,000*l.* required for the restoration of Eastwood church have been subscribed. Of this sum 1,000*l.* have been given by Mr. J. Pemberton Plumptre, of Fredville, Kent, brother of the rector. The Butterley Company have subscribed 400*l.* and another company, 250*l.*; Mr. R. Barber, of Eastwood, architect, 50*l.*; Lady Palmerston, 50*l.* &c. Designs have been prepared by Mr. Barber, and the corner-stone was to be laid on Friday in last week. The building will be of stone, and contain 800 sittings, and will cost 4,200*l.*

Jarrow.—Some time ago, says the *Shields Gazette*, a number of working men, chiefly belonging to Glasgow and its neighbourhood, members of the United Presbyterian Church, settled themselves at Jarrow for the purpose of following their avocation as iron shipbuilders, and there not being any place of worship in connection with their church at the place, it was resolved by them to form one. Feeling, however, the disadvantages connected with their present place of worship, it being far too small, they determined to take steps to erect a more commodious and central place of worship, together with a public school-room attached, the want of the latter of which they had long felt in the way of the education of their families. To accomplish this object a subscription list was opened, and which has met with very encouraging success, not only among the members themselves, but from their employers and others. The foundation-stone of the Presbyterian church and public school-room was laid on Monday before last. The edifice will be of brick, and will be in the Gothic style of architecture. The upper part will form the church, capable of seating about 400 persons,—the under portion of the building to form the school-room and vestry. Mr. Ellison presented the site on which the church will be erected, which is on the Jarrow Grange Estate, and adjoins the new road leading to the shipbuilding works. Messrs. Palmer, Brothers, provide the woodwork; Mr. Robert M'Vey, in the employment of Messrs. Palmer, designed the building. Mr. Charles Miles is the builder. On the occasion of laying the foundation-stone, all work in the building yard of Messrs. Palmer was for the day suspended, and the vessels on the stocks and in the river adjoining were decorated with flags.

Londonderry.—The foundation-stone of the new Congregational chapel, Great James-street, Londonderry, was to be laid on Thursday before last. The intended church will be in the Early English style of architecture, with a tower and spire. It will have two entrances,—one from Great James-street, the other from Queen-street, and be capable of affording accommodation to from 600 to 700 persons. There will be a school-house adjoining. The design was furnished by Mr. Raffles Brown, architect, and Mr. Robert Maxwell, of Londonderry, is the contractor. The cost of the building will be about 2,000*l.*

Tipperary.—The consecration of the (R.C.) church of St. Mary took place on Sunday before last. The structure is cruciform. The ceiling, according to the local *Free Press*, is stuccoed in a varied style. The pilasters at either side are plain, but present an enamelled and polished surface.

PROVINCIAL NEWS.

Stafford.—St. Mary's new National Schools, Stafford, were opened on Thursday in last week. The building occupies a site on the south side of the parish church. It is in the Decorated style, of brick, with casing of Weston stone, and Bath stone dressings. It forms two sides of a quadrangle. A wing forming a third angle was originally contemplated. The building includes a boys' school, 52 feet long by 18 feet wide; and girls' school, 66 feet long by 18 feet wide; with class-rooms attached to each; and a teacher's residence. The schools have open-timbered roofs and triplet windows. There is a hot-water apparatus for heating in winter. The schools are calculated to accommodate 350 children. The design for the building was furnished by Mr. Scott, and has been carried out under the superintendence of Mr. H. Ward, of Stafford, architect. Mr. C. Espley, of Stafford, was the contractor.

Ryde.—It is proposed to enlarge the town-hall at a cost of about 500*l.*

Coventry.—The corporation here have at last decided to erect at once the long-talked of lock-up for the city, the present one being most inconvenient and otherwise unsuitable. Plans were prepared by Mr. Murray, and a contract entered into for the proposed building, which has already been commenced, and is, we believe, to form part of an extensive range of corporate buildings contemplated to be built as an extension of St. Mary's Hall. We also notice that the old Blue-coat School has been pulled down and a new one erected, which is Gothic in style and of suitable design.

Derby.—The Midland Railway Company have a building in course of erection on the open space of ground between the Midland Hotel and the railway offices, which will be devoted to the purpose of a shareholders' meeting-room, and a mechanics' institution for the servants and workmen of the company. The foundation-stone of this building was laid by Mr. Ellis on Tuesday before last. By encouraging the game of cricket, the formation of a band, and the establishment of a library and reading-room, the directors have shown that whilst considering their own material interests, they are not neglectful of the moral and intellectual elevation of the servants in their employ; and the building now in progress will admit of lectures, classes, and concerts. The building is to be a substantial structure of stone and brick, the inner measurement being 80 feet by 40 feet. It is to be two stories high, the basement story comprising four class-rooms for the institution, heating apparatus, store-room, and porter and ticket offices. On the second floor will be a large room intended for the shareholders to meet in: the dimensions of this apartment are 65 feet by 40 feet: a platform for the directors will occupy a space at one end. Mr. George Thompson, of Derby, is the contractor. The design and plans were made by Mr. John Sandars, architect to the Midland Company.

Warrington.—The new Market-hall here was opened on Wednesday in last week. It is in the Italian style of architecture, and built by Mr. Bann, of Stockport, from the design of Mr. James Stevens, of Manchester. The cost of the building and site will be about 12,000*l.* Externally the structure is of brick, with polished stone dressings: it is divided into bays with pilasters having moulded caps and bases, and has a stone base running round it. There is a three-light window, 20 feet in height, in the gable front facing Cloth-hall, and the openings are filled in with ornamental cast-iron frames for glass. The other windows face Cheapside

and Golden-square. The principal entrance, which is opposite the new street out of Sankey-street, has a circular-headed doorway, on each side of which are rusticated columns with enriched capitals, supporting a carved pediment, bearing the arms of the corporation. The entrances have iron gates. Internally, the hall is divided into two parts, connected by an archway: the rooms severally measure 86 feet by 63 feet, and 34 feet by 22 feet. Besides the stalls, &c. there is in the larger hall an ornamental fountain, 6 feet 6 inches in diameter, supplied with a continuous stream of fresh water. In the basement story are ten cellars. A market shed, 130 feet by 50 feet, and 31 feet high, adjoins the hall: it is supported on cast-iron columns and pilasters, and is paved with hard sets.

Manchester.—A new warehouse, which is being erected on the east side of Ducie-bridge, says the local *Courier*, has suffered considerable damage from the bursting of a water-pipe, by which the foundation was rendered insecure; and the building gradually settled down, rendering its partial re-construction necessary. One of the pillars was washed away and an arch pushed in; a division wall shattered, although it was 2 feet thick and tied in with three bands of hoop iron 3 inches by 4½ inches; and the basement story, which had been fitted with shafting and some machinery, was flooded, and left covered several inches thick with mud. The brick flooring was also torn up. The damage was roughly estimated at 250*l.* or 300*l.* The contractor is Mr. Davison, of Cheetham.

Durham.—The contracts for the erection of the Durham County Lunatic Asylum have been signed. The works have been let to Mr. Neile, of Bradford, for 17,000*l.* There were four other contracts sent in for the erection of the whole of the works—one at 19,496*l.*; another at 22,662*l.*; a third at 23,276*l.*; and the fourth at 24,021*l.* The amount for which the works have been let—namely, 17,000*l.*—will not be the whole cost of the erection of the building. In addition, about 10,500*l.* will be required, including 4,800*l.* for bricks, 850*l.* for fire-proof floors, 300*l.* for gas fittings and pipes, 200*l.* for turret-clock and bell, 250*l.* for a steam-engine and pumps, and 200*l.* for gate-lodge, besides a per-centage for extras and other miscellaneous items.

Whitehaven.—There has been a movement on foot for some time for increasing the harbour accommodation at the port of Whitehaven, Cumberland, by the construction of a wet dock. Mr. Burrell, C.E. laid before the board of trustees lately an estimate of the cost of constructing the outer or sea wall of a wet dock, according to a plan prepared by Mr. Rendel, C.E. The total cost of this wall Mr. Burrell estimates at 34,980*l.* but he recommends the wall of the basin to be built along with it, and this, he believes, will cost 6,238*l.* more, making a total of 41,118*l.* In answer to a question from the Earl of Lonsdale, Mr. Burrell said he thought the work might be completed in about two years. The subject was referred financially to the harbour committee.

Lochee.—A local correspondent of the *Dundee Warder* says, in reference to this place,—"No small amount of ornament has been added to our High-street, by the erection of a few respectable-looking buildings, among which the U.P. [United Presbyterian] Church stands conspicuous. The alterations and additions to this structure are after a design furnished by Mr. M'Laren, architect, Dundee."

Nairn.—The approach of railway communication from the south has stimulated the residents in Nairn to exert themselves in the improvement of their harbour. The town council have, for some time, had under consideration a plan for the erection of a low-water pier, at which steamers could touch at all times of the tide, and they have got a plan from Messrs. Stephenson and Leslie, engineers, by which, at the cost of 9,000*l.* such a desirable improvement may be secured. At a public meeting, lately held, according to the *Banffshire Journal*, a full approval of the scheme was given. The work will, therefore, it is expected, be commenced shortly. A similar improvement is to be made on the harbour at Invergordon, on the opposite side of the Firth.

ARCHÆOLOGICAL SOCIETIES AND ARCHITECTS.

The architect of St. Clement's School, at Worcester, and the Lickey Church,—Mr. Day, complains loudly of the abuse of these buildings in the report of the Worcester Diocesan Architectural Society. He says,—"I am informed that the author of this report is an adult student in architecture, and am much surprised that the committee should adopt any opinion not supported by professional ability of high standing, seeing that a professional man's reputation is everything to him, and that mine in this instance has been grossly assailed." And he adds that, "If the committee of the Architectural Society have any desire to foster and encourage architecture, in the broad sense of the term, they would respect its professors, however humble, and treat their work with proper consideration; and in future, I trust they will confine themselves to the carrying out the objects of their society, according to their rule."

We are unable to speak of the justice or injustice of the criticism on the present occasion, but we can bear witness to the reckless expression of condemnatory opinions on the part of other societies, founded on half knowledge, and would endorse the advice that they should be careful how they assail a professional man's reputation, without knowing all the circumstances under which the work was executed, and the conditions he was called upon to fulfil.

LIVERPOOL ARCHITECTURAL AND ARCHÆOLOGICAL SOCIETY.

At the second meeting of this society, held on Wednesday evening, the 15th, the president, Mr. S. Huggins, in the chair, it was proposed that the society should memorialise the town council, to take into consideration the propriety of amending the local Building Act. After some discussion, it was agreed to postpone the question to the next meeting.

Mr. Picton made a communication on the subject of *architectural* ornament. He said one principal objection taken to the modern Italian style, as well as the ancient classical, was the entire want of flexibility in regard to its ornament. One ornament in a building was a copy of every other, and the natural effect was insipidity and sameness, and the want of imagination. In one respect that was just, and attempts had been made by modern architects to introduce something more of nature into the style adopted. He had lately been attempting something in a humble way in that direction, and he had some photographs of what he had been doing, which he would submit to the meeting. They were capitals arranged from natural foliage. The capitals were executed in Caen stone. The capitals were all from natural foliage, that of the vine, the hop, and other plants. The designs were for the Italian style.

The President remarked that there was one objection—the angle of the tile being supported by flowers. He thought there should be something inorganic. There was a great deal of English foliage which was applicable to ornament. He did not see why they should be confined to the acanthus, and felt convinced that all the ornaments of the Gothic were applicable to the classical styles.

Mr. Verelst then read a paper "On Farm Buildings," and introduced and explained plans of such buildings.

ACCIDENTS AND FAILURES.

Bishopsgate-street, London.—On Saturday, the 11th, a disaster occurred at No. 191, Bishopsgate-street, which might have been attended with very serious results. Some time ago the house in question was burnt, and it is now being restored by Messrs. W. Cubitt and Co. As we understand, it had been found necessary to put in new girders to carry the third floor. One end of one of these had been let into the party-wall: the other end had been shored up until the wall was made ready for it, when suddenly the girder came down and carried the under floors and all beneath it to the ground, burying a number of men in the ruins. Most providentially the timbers fell in an inclined direction, so as not to crush the men, who thus all escaped with their lives, though in some cases injured. The girder and old floors had been overloaded, and we have received some severe strictures on the carelessness which led to the accident.

St. Mark's, Torquay.—In the night of Monday, the 13th inst. the greater part of the tower of this church, then in progress, and just ready for the roof, fell down, doing considerable damage to the adjoining parts. The tower stood on arches, at the intersection of the transepts with the body of the church. Indications of something wrong were seen by one of the committee on the preceding Friday, in the Bath stone jambs and arches of the tower, and these were more obvious on Saturday. The builder, however, apprehended no danger, but went on erecting the upper part of the tower, completing it on Monday night; and on Tuesday morning it was all down. It is thought that the work was pressed on too rapidly for the nature of the materials used, and that the portion immediately above the main arches gave way under the pressure of the upper part. It appears that, although the drawings were furnished by a London architect, he had nothing to do with the execution of the work. There was no clerk of the works, even; the committee having great confidence in their builder. It would be useful to know the nature of the stone used, the thickness of the walls above the arches, and the weight of the superincumbent portion.

STEAM PAVING-RAMMER.

On reading your remarks respecting the ramming of pavement by steam power, it is very clear there would be no difficulty about it. Mr. Reddin, the contractor, has a machine in his yard at work which, if it were on wheels, would do exactly: the rammers would, however, have to be of wood instead of iron. This machine is employed at present for stamping all the broken stone and earthenware picked up in London by the dust-carts into fire-proof sand; and, what is remarkable, they tell me that they get upwards of twenty tons a week. Gentlemen living in the country, who are building and making roads, should inspect this machine at work: it will give them, as it has me, a very different idea about stamping-machines.

A. B.

Observing in your number of the 4th inst. an article upon "Street Paving by Steam-power," I am reminded of a machine which I saw in action in Birmingham, some thirty years ago or more. I cannot remember the name of the inventor, but doubtless some of your readers in that neighbourhood, upon being reminded of the fact, will do so. The machine was moved by steam at pleasure, and the rammers were about six in number, of some 12 to 18 inches square, working in a line close to each other, and capped or wrung with iron, to prevent the bursting of the base of the working piles: they were also weighted to give the necessary driving power. The piles or rammers were lifted and fell in succession, and the effect of ramming down any part of the pavement which had arisen was to lift that part which had been sunk, thus restoring the road to a level.

R. M. B.

SHELLAC FOR BUILDING PURPOSES.

In a recent number of your valuable journal, under the heading, "Notices of New Patents," it appears that a Mr. J. E. Cook, on the 27th December, 1855, took out a patent for a novel and original chemical compound (to wit, Shellac and Methylated Spirit), applicable for building and other purposes. The object of this gentleman in protecting his invention is obvious, and I should not trouble you by writing on the subject, had I not, on recommending the preparation in question, lately been cautioned against infringing the identical patent. I have not the least desire to damp Mr. Cook's ardour in publishing (and protecting ere he does so), any useful invention of which he is the real originator, but I do strongly protest against his arrogating to himself a position he has no right or title to assume. In contradistinction to Mr. Cook's patent rights (although he really has no *locus standi*, either in law or equity), I beg to assert my right to be known as the first person who introduced and practically applied this composition to building purposes, and consequently ought to receive that modicum of praise (if any), that interested parties might feel disposed to award. To substantiate my claim, I beg to call your attention, and that of your readers generally, to the following facts:—In June, 1842, while engaged on a large Government contract, in which marine glue was specified to be used, I found it solidified long before the workmen could possibly make a joint. Owing to this failure, I and a professional friend racked our wits to ascertain the best

method of rendering the glue sufficiently fluid to enable the work in hand to be completed in accordance with the conditions. Numerous experiments were made to find a solvent, resulting, by accident, in the discovery now (after a lapse of fourteen years) coolly appropriated by Mr. Cook, without search or inquiry, and unblushingly trumpeted forth to the world as an emanation from his fertile brain. It may not be irrelevant to remark, that the secret has been published far and wide, that patent liquid glue, patent knotting, and numerous other patents (all infringements, by the bye, on Mr. Cook's), have been in use several years, and that I have used the composition in engineering and architectural work; and, in fact, applied it in all ways and for all purposes where such a material was required. In conclusion, I consider the patent compound (when properly manufactured), so truly valuable to all parties connected with the building business generally, that I should at the first have sent full particulars for insertion in your widely-circulated paper, if in its preparation great care was not required to prevent dangerous accidents.

F. G. Mulholland.

COMPETITIONS.

Norwich Union. — The following is the present state of the new workhouse competition: — At the last monthly meeting of the guardians, Mr. Wilde gave notice, that he would move that a resolution, passed at a previous meeting, that the plans should be examined by a gentleman to be appointed by Sir John Walsham, should be rescinded; and at a meeting held on Tuesday, the court rejected this proposition, and decided to adhere to the former arrangement. The committee appointed to examine the plans had resolved, nearly unanimously, to recommend the designs of "Humanitas," as deserving of the first prize of 100*l.* and those of "X," as deserving of the second prize of 50*l.*; but after the decision to which the court came, their recommendations were not entertained. This will serve as an answer to several correspondents.

St. Helen's.—The Burial Board has selected the designs of Mr. Thomas D. Barry for the erection of the three chapels, lodges, &c. and also for the laying out of the grounds.

ARCHITECTURAL EXHIBITION.

The committee announce, very properly, to those intending to apply for space in the department for models, carvings, decorations, specimens of manufactures, and inventions connected with building that in all cases they will expect a contribution for space occupied, and that it should be stated whether floor, ceiling, wall, or counter room, is required. Workmen will be allowed to set up or fix from 1st to 29th of November, but no longer; and applications must be made before the 1st of that month. We attach considerable importance to this branch of the Exhibition, and we hope to find it largely increased. It can scarcely be doubted that exhibitors benefit largely.

Several gentlemen have agreed to deliver lectures on the Tuesday evenings during the season; and, as before, the last lecture evening will be reserved for a description of the articles exhibited.

THE SANITARY STATE OF LONDON.

Dr. Letheby, medical officer of health for the City, presented his first annual report on this subject to the City Sewers Commission, on the 14th instant. From this interesting and instructive document, it appears that the total mortality of the year is 2,910; and that this number is 490, or nearly 70 per cent. less than the average of the last eight years: the death-rate of the whole city has been thus reduced from a general average of 24 per 1,000 of the inhabitants to 22. Satisfactory as this diminution of mortality to a certain extent is, there are various considerations peculiar to London which moderate one's gratification very considerably in the circumstances. Thus, London is perpetually reinvigorated by the infusion of fresh blood from the country, which, though it raises the per cent d gree of healthfulness in the community already there domiciled, is itself soon reduced to the average standard, while the mortality of the infantile life native to London is fearful. Thus, while in England the mortality of children under five years of age is about 68 in 1,000, and *in the country districts only* 37, *in the city of London it is* 82, *and in the western division of it, it is* 104! This represents a mortality that is 52 per cent. over the average of England, and 181 per cent. over that of the country. In short, for every single death that should occur among the inhabitants of the city of London, there are nearly three deaths! and while in all England, towns included, the mean duration of life, even with men who have reached the twentieth year of their age, is forty years, in London it is but thirty; and in the west of London only twenty-eight — twelve years, of so short a life as even forty is, being thus cut off by the noxious influences of the City! Taking a man of twenty from the country districts of England, the consequence is still more fearful, such a man having the fair average expectation of living to sixty, or no less than thirty-two years more than a west of London man of twenty, and thirty more than any average Londoner of twenty; in other words, a man of twenty, because he has lived and continues to live in London till he dies, at thirty, sacrifices an additional thirty years' lease of life by the time he himself reaches the average London limit of life. Let us ever remember that an immense proportion of this difference is quite preventible, or within the power of practicable sanitary amendment. In eight years 2 per cent. per 1,000 of mortality has been *deducted* from twenty-four mainly by sanitary measures.

THE MEMORIAL CHURCH AT CONSTANTINOPLE.

We understand that it was proposed to collect, at the Royal Institute of Architects, information respecting the construction and materials applicable to the memorial church at Constantinople, together with samples, to enable competitors to judge of the nature, colour, and cost of the various stones, marbles, &c. to be obtained. We, doubtless, in common with many of your provincial subscribers, have been anxiously expecting to find in your pages some report as to the results of that proposition; as, without any information upon these and other points, it is impossible that we can enter the lists of the competition upon anything like equal terms with those of our professional brethren, who may have access to such a collection as that proposed.

We have heard it suggested, that the prejudice of the Turks to the sound of bells would preclude the use of towers and spires; but we presume the same objection would apply equally to the church itself and the doctrines to be preached there. Surely, unnecessary concession of the principles of Christian architecture is to be deprecated. P. and B.

*** The Institute of Architects expressed their willingness to receive information on the subject, specimens of materials, &c. for the advantage of competitors, but up to this time nothing has been sent. The honorary secretaries of the committee for the church are the parties to apply to.

THE ARCHITECTURAL SOCIETY OF THE ARCHDEACONRY OF NORTHAMPTON.

The autumn meeting of this society, in conjunction with the Northampton Photographic Society, was held at Northampton, on Wednesday in last week. The Rev. Lord Alwyne Compton was in the chair. There was a good attendance. The Lecture Hall, in Gold-street, where the meeting was held, contained an interesting collection of objects, including a photographic exhibition.

The Chairman, in opening the proceedings, mentioned that a Photographic Society had been formed in connection with the Architectural Society, and that this was their first united meeting. The spring meeting of the Architectural Society had been held in conjunction with other societies at St. Albans, when interesting papers were read on the Abbey, by Mr. Scott; and by Mr. Poole, on colour in building materials.

The Rev. T. James, one of the secretaries, then read the annual report, which stated that there was nothing in the proceedings of the past year to modify the usual congratulatory tone of their report; nor had the year been marked by any extraordinary occurrence beyond the common routine of the society's labours and results.

The report was adopted, and a report of the Photographic Society read and also adopted.

A paper on a Greek helmet found, in 1854, in the river Tigris, near the track of the retreat of the 10,000, was read by Mr. M. H. Bloxham, a report of which, and of the other proceedings, appears in the *Northampton Herald*.

A paper by Sir H. Dryden, on the parsonage at Eydon and parsonages generally, was then read, in which the design of Eydon parsonage was criticised as that of a Cockney, which, the reader said, would probably explain its ignorance of country requirements. Many of the supposed defects in the original design, however, were the result of the reduction of the estimate, and not attributable to the architect at all, as testified by the rector of Eydon himself at the close of the paper.

An evening meeting was held, Sir H. Dryden in the chair, when the attendance was small.

A paper on church bells and belfries, by the Rev. Abner Brown, was read; after which another on improvements in hanging church bells by Mr. W. L. Baker, C.E. was read by the brother of that gentleman, who stated, towards the close of it, that the substance of Mr. Baker's plan had been used for the Westminster great bell, by Mr. Denison, Q.C. without leave and without acknowledgment. He accused Mr. Denison of infringing the patent of his brother, whom, however, he advised not to spend his money in a prosecution for piracy. At considerable length, he proceeded to point out the piracy, lamenting that his brother's means prevented him seeking compensation from the law, and appealing to the public for a decision. A few remarks upon the preservation of bell towers concluded the paper.

Mr. W. T. Maunsell hoped that the public would not condemn Mr. Denison unheard. Our readers have already heard something on both sides.

THE PUBLIC HEALTH ACT AND TOTTENHAM.

My attention was on Friday (10th) drawn to a paragraph in your paper of the 11th inst. containing a communication from the chairman of the Local Board of Health of Tottenham with reference to the working of the Public Health Act, and the success of Mr. Pilbrow in carrying out its provisions in this parish. I can scarcely presume that the "chairman" intended his communication to represent the opinions of *the whole Board* upon this subject, for I am not aware that he submitted it to the Board, of which I was a member at the time he forwarded it to you. I have since—that is, on Saturday, the 11th—after seeing the paragraph in your paper, sent in my resignation to the chairman, not, however, being induced to do so by the paragraph in question, but because I cannot conscientiously be a party concerned in the expenditure of an additional sum of 10,000*l.* to the 26,000*l.* and upwards already expended upon our parish, to continue a system of the successful working of which I entertain the *strongest* doubts, and which by the report I now take the liberty to enclose for your perusal is as strongly opposed by the parishioners. John Fullagar.

*** The report in question confirms in the fullest manner the only complaint made in our observations which led to the letter from the chairman of the Board, namely, shortness of water; and strengthens our exhortion to remedy the evil, because "a short water supply is liable to make people look with impatience at the means in progress, however wise." We have since received a letter from Mr. Charles D. Johnson, a ratepayer, objecting even more strongly than Mr. Churchwarden Fullagar to the way in which the Local Board have acted.

OXFORD.

COLLEGE AND CITY IMPROVEMENTS.

The work of alteration and improvement has been very active at some of the colleges during the long vacation.

The restorations of Christ Church Cathedral have now been carried out. The interior displays features hitherto obscured by the bad arrangement of the stalls and pews, and the interposition of the organ and screen, and exhibits fully the architectural proportions of the building. The seating, formerly containing room for about 100, is now increased to 220; and about 150 sittings have been erected in the north transept for the public. The present position of the organ in the south transept is regarded as an improvement. Still these alterations may be termed incomplete, the present being simply a temporary arrangement, the other portions of the design remaining to be carried out at a future period. Another improvement at Christ Church is the laying down of a complete hot-air warming apparatus beneath the hall.

Exeter College, within the quadrangle, presents, says the *University Herald*, a curious appearance, scarce anything being visible, but heaps of stone and piles of masonry in course of rapid demolition. When the works now in progress are carried out, all that will remain of the old college will be the three sides of the large quadrangle. Mr. Scott is the architect, and Mr. Symm, of Oxford, the builder.

At Balliol, the new College Chapel, the foundations of which were scarcely completed at the end of last term, has arisen to within 7 or 8 feet of the intended height of its side walls, and will, is all probability, be roofed about Christmas. The material of which the structure is built is Bath stone and red stone, the latter from Staffordshire and Warwickshire quarries. The white and red are intermixed with each other in irregular and eccentric courses in the process of building. The style of the edifice is Early Decorated, and it will be 74 feet in length by 29 feet wide in the interior. The architect is Mr. W. Butterfield, of London, and the builders are Messrs. Ruddle and Thompson, of Peterborough.

At Magdalen College, the Founder's Tower has

been thoroughly repaired, from designs by Mr. Scott. A quantity of mouldering tapestry has been taken from the walls, where it had hung for centuries.

At Brasenose, the old stained glass window, which adorned the eastern end of the chapel, has been removed into a corresponding situation in the ante-chapel, its place being filled by an entirely new window by Messrs. Hardman, of Birmingham. The window is illustrative of different passages in the last stage of our Lord's history, and comprises the entry into Bethlehem, the Last Supper, the Agony in the Garden, Judas betraying Him, the blindfolding and scourging, the journey to the Cross, the bearing of the Cross, the Crucifixion, and the laying in the tomb.

Worcester College has received the addition of a clock, one dial of which faces Beaumont-street, the other overlooks the colonnade, in the quadrangle. A Pives' Court has been erected in the Common-room Garden, for the use of the Fellows, and another (but a much larger one) in the College-close, for the recreation of the undergraduates.

Wadham has been lighted with gas.

New College hall has been repainted and decorated.

At Queen's College, the pediment surmounting the east side of the great quadrangle, which was in danger of falling, is in the course of being strengthened and restored.

In the City, several improvements have also been executed, but the majority of them, though very desirable, hardly call for especial mention, except the widening of Pacey's-bridge. The new erection is supported by iron girders, and railed with the same material: it allows an additional width of road of about 8 feet, with pavements for foot-passengers, and a good granite thoroughfare for vehicles. The designs and specifications were prepared by the city surveyor, Mr. J. Galpin.

STEREOSCOPIC EFFECTS WITHOUT THE STEREOSCOPE.

I am happy in being able to corroborate your correspondent, "J. E. D." as to the stereoscopic effects without the stereoscope. I have discarded that instrument for some months, as being both cumbersome and useless; and while my friends, who have not had patience to obtain the effect with the naked eye, are fumbling over one subject with the stereoscope, and complaining that stooping over the instrument makes their heads ache, I can look at half a dozen pictures. The only hindrance to an almost unlimited enjoyment, is the cost of the dual pictures: if these could be produced at a cheap rate, the entertainment would be greatly extended.

Being an invalid, and confined to my bed, I found it difficult at a distance from the window to get a sufficient light to fall upon the opening of the stereoscope, and still more difficult to twist myself round so as to bring my eyes in the right line to look through the lenses. Under these circumstances, it occurred to me I might possibly do without the stereoscope. I, therefore, turning my eyes from the window, took the pictures in my hand, and looked at them intently for a few seconds. At first I found it difficult to keep my gaze steady, and the pictures underwent a variety of phases, but by perseverance I at last succeeded in fixing the centre picture, when it came out clear, sharp, and in beautiful relief. The lateral pictures were not quite so distinct as the central one, but they also stood out in considerable relief. From that time I have found no difficulty.

I. W.

SANITARY STATE OF NETHER KNUTSFORD.

A meeting of the ratepayers of this place was called together recently, in compliance with a requisition from the chairman of the local Nuisances Removal Committee, to consider and decide as to what was to be done in consequence of the prevalence of epidemics in the town and the bad state of its drainage, the prevalence of cesspools, the state of the swampy moor adjoining the town, &c. on all of which subjects the Nuisances Removal Committee had previously reported to their constituents, the ratepayers. Letters from the medical men of the town were read, complaining of the bad state of health of the town, and strongly urging that something should be forthwith done to get rid of the foul air and fœtid gases to which that bad health was attributable. There was a good deal of "discussion," if it can be so called, in which the strongest reasons against doing anything were clearly traceable to the pockets of the ratepayers, and in course of which their Nuisances Removal Committee were repeatedly reproached for expending the immense sum of 30*l.* in preliminary investigations and advice given by a competent engineer, a "Manchester Man," as he was rather sarcastically called by contrast with "Old George *Potter*," who, Mr. Swineburne maintained, was "fully competent to make a plan for a drain in the town," or their "own (highway) surveyor, Joshua Hewitt, with a bricklayer," who were equally competent—not to *survey* those *highways* the sewers and drains of Knutsford, and suggest a connected scheme for their improvement, but,—"to *make* any drain or sewer that might be required." Mr. Swineburne appears to have thought that the Knutsford sewerage should have been Pottered for the 36*l.* expended on "the Manchester Man," for he complained that it had been spent "without raising a single stone in Knutsford." It will excite no surprise, under these circumstances, that a resolution to the effect "That a general survey of the town is necessary; that Mr. Shorland ['the Manchester Man'] be instructed to make such survey, and to furnish the committee with his report and working drawings for such alterations in, or addition to, the present sewerage as he may think necessary," was indignantly rejected, and an amendment, moved by a Mr. Ashton, and seconded by a *Major* Hope, to the effect "That no such sewer is necessary," at once carried by the ratepayers present; and, moreover, that six out of what appears to have been eleven of their "Nuisances Removal Committee" resigned in disgust. Some of the voters were overheard at the meeting privately jeering as to the absurdity of cesspools, &c. being imagined to be unhealthy; and one gentleman, according to the *Macclesfield Courier*, which reports the whole proceedings, triumphantly asked,—"What is more healthy than a pig's-stye close to your door?" Well done *Nether* Knutsford!

THE CEMETERIES IN THE EAST OF LONDON.

A few weeks back you remarked upon the disgraceful state of the cemeteries in the east of London. Having to superintend some works in Bethnal-green, I can endorse your statement, and think it high time that something should be done to put a stop to an evil which will surely some day breed disease of the most dreadful nature. You state in your article that, on an average, 130 bodies are buried every Sunday in the Victoria-park Cemetery. The smallness of this burial-ground must surely open the eyes of the public to the disgraceful manner in which the corpses are interred.

The cemetery is surrounded by habitations occupied by the working-class, chiefly consisting of weavers who toil in doors all day; and what few open spaces are in the neighbourhood, they are being built over as fast as possible. In some hot summer, the exhalations from this mass of corruption will bring on the plague, or some other frightful calamity.

To prove that the Government are aware of the disgraceful manner in which funerals are conducted in this place, I will quote from a Report of one of their officers to the Home Office. He states:—"I stayed on the ground about an hour, and during that short time saw from thirty to forty coffins put into graves,—I cannot say buried, for nearly all of them were left uncovered while I stayed." In another portion of the Report, the officer gives us an idea of the decency shown to the feelings of the mourners, he says, "I noticed a funeral party following to the grave the coffin of a young child, and while the bereaved mother was leaning over to take a last look of that which contained what was so dear to her, one of the men (without waiting a minute until the poor woman had left), lowered upon her child's another coffin, and hid it from her sight."

I leave the public to judge of the manner in which the last feelings of respect are paid to the dead, and ask of you, as an old advocate of local improvements, to use your most powerful pen, by pointing out the evil which will surely ensue from the dreadful nuisance situate amongst a class of people who breathe the nauseous air from morn to night. Amongst so many Government officials, surely there is somebody in office who can command sufficient authority to prevent this burial-ground to receive further interments.

A Clerk of Works.

A DAM FOR THE RIVER THAMES.

In submitting this my plan to you, I beg to state I have been for years considering of the best remedy for the state the river is in at the present time. My plan is to lock, dam, and flush it.

Take for this purpose possession of the river above Battersea-bridge and Chelsea-bridge. Form two working locks on the Surrey or Battersea side of the river, and place the piers and flood-gates *at an angle*, bringing the line to the Middlesex shore, to the upper side of Kensington-creek, in order to have the longest space in the widest part of the river above Battersea-bridge. The last starling or pier would end there, and the whole dam be formed of self-acting gates, to allow of the free passage of the flood tide, when high enough to open them, and when the tide recedes, they would close of themselves.

The weir I would form by excavating the marsh land on the Middlesex shore, above Cremorne-gardens: this should be nearly a quarter of a mile long, forming a tumbling-bay for the surplus water that might be on the upper side the dam-gates. After high water, the locks should be large enough to take several barges or other vessels at the same time.

The starlings or piers should be made of piles driven into the bed of the river, to ordinary low-water mark: on the top of these place an iron pipe of 5 or more feet diameter, in an oblique direction, fitted with sluice-traps, and finishing with masonry to above high water mark. The piers should be of an oblong shape, and so placed that the lower end of one should be even with the upper end of the other, to allow the dam-gates to close upon the next pier at the ebbing of the tide. By this plan all the surplus water that was left from the flood-tide, as well as the water of the river, would only come over the weir except in cases of much land water being out, and then the flood-gates in the piers might be made use of to get rid of any excess.

Having formed the lock-dam and weir, it would make the river navigable for barges, steam-boats, as well as other craft, to above Richmond, at all times; and having a great body of water always at command, five minutes would suffice to form a lock, which steam-boat proprietors would sooner do than scratch over the ground as they now do for two or more hours: at the same time you would form a river that any might envy.

Then, as to flushing the river below Battersea, I would propose to open all the flood-gates in the pipes in the centre of the piers, at one hour before it is low water at London-bridge, which would effectually rid the bed of the Thames of what had been accumulating for ten hours before. If some such plan as this is not adopted before the piles of the new bridge at Westminster are drawn, there will be no possibility of navigation above Battersea-bridge, and I fear very little below. The whole river now above is more like a dry ditch for seven or eight hours per day, and the poor fish seem parboiled without any place where to find shelter.

John Dyer.

Miscellanea.

Gas Purification.—A new mode of purifying and increasing the quantity of illuminative coal gas has been invented by Mr. Basford, engineer, and patented. According to the specification of the patent and other printed documents, it appears that he has substituted charcoal, saturated with lime-water and brought to a red heat, for the lime used in the ordinary process; that he has reduced the cost of the apparatus by two-thirds; that the gas he produces is absolutely free from sulphur and ammonia—realising an amount of gas to the extent of 15,000 cubic feet per ton of coal, which formerly, in the best of the old processes, produced little more than 8,000 feet; that there are no waste products, the tar itself being converted into gas, or, in combination with the charcoal, into a valuable pigment which may be used in the arts.

Gas.—The Stockton Council met on 9th instant, to consider the propriety of purchasing the old gas-works. A committee was appointed to inquire as to the works; and an examination of the accounts of the company, says the *Gateshead Observer*, showed that, with every successive reduction in price, from the old charge of 6*s.* 8*d.* per 1,000 cubic feet, the consumption and profits had increased—the most profitable reduction of all being the latest, viz. to 4*s.* 6*d.* Thus, as in so many other instances, has our confident and oft-reiterated prediction been completely justified,—without any thanks, we may note, from even a single one of the gas companies so largely benefited by the wholesome compulsion under which alone almost all of them have been induced, in consequence of the efforts of their imaginary *enemy*, but real friend the *Builder*, to reduce their exorbitant charges. At a public meeting, since held, a vote was given in favour of purchase by the Corporation; and at an adjourned meeting of the Council, on 16th instant, it was resolved, almost unanimously, to purchase the works.

Value of Land, Oldham. — On Saturday, a special jury case was tried at the Town-hall, before Mr. J. J. Aston, barrister, respecting the value of a plot of land required for the new waterworks. The land measures 8*a.* 3*r.* 21*p.* and is situated at Norman-hill Farm, and belongs to Mr. John Taylor, surgeon, Liverpool. Mr. Taylor claimed 2,600*l.* for the land: this was considered exorbitant, and the corporation offered 400*l.* which was thought to be more than its worth. Mr. Thomas Chaffer, surveyor and bridgemaster for the hundred of Blackburn, valued the land at 1,786*l.* Various other estimates were tendered. Mr. C. E. Cawley, C.E. valued it at 238*l.* and Mr. W. Bell, surveyor, at 272*l.* The jury gave a verdict for 435*l.* The verdict being above 400*l.* the expenses have to be borne by the corporation.

Improved Band Saws.—Mr. W. Exall, of Reading, Berks, says the *Mechanics' Magazine*, has patented several improvements in belt saws. The improvements consist, first, in heating by blow-pipes or lamps the cast or forged hoop or ring out of which the band saw is to be made during its passage through rollers or dies, for the purpose of reducing it to the proper thinness; secondly, in giving the blade its proper temper by continued rolling between hard rollers, or by repeated drawing through dies as in drawing wire; thirdly, tempering the hoop in its entire shape by heating it when in that shape in a suitable oven, and then plunging it into oil or other suitable fluid.

"Projection" Cases.—Your very just remarks cannot fail to have been duly appreciated by your numerous readers, professional and non-professional. A section, and I believe a small one only, of the Metropolitan Board, have put a construction on the Building Act it will not bear,—and one which is legally untenable. Even for projections, porticoes, &c. &c. as was observed some time ago, a strong *primâ facie* case exists, as they are not illegal under the Act, the consent of the Board *simply* being required for them. Surely, with the adjoining owners' consent, these matters might have been left in the district surveyors' hands. As regards the sewage question, why, sir, let me ask, is not the best engineering advice had? Rendel, Simpson, Cubitt, Hawkshaw, Brunel, Stephenson should be appealed to without delay: the matter is one with which the Board is not competent to deal.—O. P.

Careless Procedure as to Ruinous Buildings. — A correspondent, "R. S. T." points attention to the very dangerous state of premises on the west side of Garlic-hill, Thames-street, which have been in the course of demolition for the last four weeks, at least, but the removal of which for some reason or other has been stopped. The walls are, it seems, nothing but a mass of rubbish, which a blast of wind might blow down; and directly underneath is an entry which leads up to some inhabited houses, warehouses, &c. and numbers of people pass and repass through this place during the day; while, at dinner times, a dozen or more boys may be seen playing about the ruins. The imminent risk of some serious accident is but too obvious, and it is to be hoped that the attention of the authorities will forthwith be given to this, to say the least, careless procedure.

Glass in Farm-steadings.—A homestead has just been erected on the farm of Bucklerhole, on the estate of Rockall, says the *Border Advertiser*, on a plan which is new in that district, although not to our readers. The whole buildings, in fact, suited for a farm of 200 acres, are comprised in a shed 90 feet in length by 72 feet in breadth. The shed is divided into four parts by three rows of iron pillars, which support the roof. Each of these parts is 18 feet in breadth and 90 feet in length. Each part is covered with a ridge roof, one-half of slate and the other of glass, so that ample light is given through the whole interior without any windows in the walls. The outer walls and interior supporting pillars are 11 feet in height, and in addition to this there is the height of the sloping roof. Each pillar is hollow, and rain falling upon the roof descends through, and is carried off by drains below the flooring. Once within the steading there is light, dryness, and complete shelter from the weather for animals and implements; while, under such agreeable circumstances, a considerable portion of the operations of the farm can be carried on. Ample ventilation is secured by openings both in the walls and roofs.

Improvement of Exeter Cathedral Precincts.—At a recent meeting of the Exeter Commissioners of Improvement, it was unanimously resolved to agree to and second a proposal made in a memorial by certain influential gentlemen to the Dean and Chapter, requesting that the unsightly wall of Chancellor Harington's garden on the north be lowered, so as to effect a great public improvement, without sacrificing the privacy of the Chancellor's house. A correspondent of the *Exeter Flying Post* ("Common Sense"), says, in reference to this matter: "The whole thing appears a bit of burlesque: the object of the memorialists is to obtain a better view of our cathedral, a most praiseworthy object; but taking down a bit of wall will not effect this object: the Rev. Chancellor's house ought to come down, and the citizens of Exeter, in conjunction with the Dean and Chapter, ought to pay for it. The east end of the cathedral ought to be entirely free. I trust, therefore, the Dean and Chapter will consider this matter, and see whether they cannot make some offer to the commissioners by which a really great and necessary improvement could be made." Besides the ugly and unsightly house of Chancellor Harington, there is another inhabited by the Rev. J. Corfe, which ought also to come down, and a better view of the cathedral could then be obtained on that side.

Legal Times of Work, Meals, and Sleep for Artificers in the Reign of Henry the Eighth.—The following may interest some of your readers. [*Notes and Queries.*] I copy it from a small and very old black-letter tract, printed by "Robert Wyer for Rycharde Bankes," without date, entitled,—"The Ordynal or Statut, concernynge Artyfycers, Seruauntes, and Labourers, newly prynted with dyuers other thing therunto added." "Item. It is enacted by ye sayd statute made in the vi yere of kyng Henry the viii. the iii. chaptyre, that euery artyfycer and labourer shal be at his worke betwene the myddes of Marche and the myddes of Septembre before fyue of the clocke in the mornynge, and that he shall haue but halfe an houre for his brekefaste, and an houre and an halfe for his dyner at such tyme as he hath to slepe by the statute, and when he hath no season to hym appoynted to slepe, then he shall haue but one houre for his dyner, and halfe an houre for his noone meate, and that he departe not from his worke tyll betwene vii. and viii. of the clocke at nyght. And that from the myddes of Septembre to the myddes of Marche, euery artyfycer and labourer to be at their worke in the spryngynge of the daye, and departe not tyll nyght. And yf that any of the sayde Artyfycers or labourers do offende in any of these Artycles, that then theyre defaultes to be marked by hym or his deputy that shall paye theyr wages, and at the wekes ende theyr wages to be abated after the rate. And that the sayde artyfycers and labourers shall not slepe in the day, but onely from the myddest of Maye vnto the myddest of August." Robert Wyer and Richard Bankes were printers and publishers who flourished *circa* 1530. I fancy *The Ordynal* above mentioned has escaped the notice of Dibdin, as it is not to be found in the list he gives of the works executed by Wyer and by Bankes. *The Ordynal* must have been published between 1530 and 1540.—Henry Kensington.

Coventry School of Art.—A public meeting of the subscribers and friends of this institution was held in St. Mary's Hall, Coventry, on Friday before last, Sir Joseph Paxton in the chair. The secretary read the report, which stated that, notwithstanding the annual Government grant had been withdrawn by the Department of Science and Art, and other great changes made, the committee are enabled to report the continued progress and increase of the school, and that all claims upon the funds of the institution had been liquidated. Upwards of fifty new subscribers had been added to the list. The number of students entered on the books during the past year (including the four public schools), amounted to 384, against 349 the preceding year. Sir Joseph Paxton's prize had created considerable competition among the ladies, had produced some excellent designs, and had tended to direct the art learnt in the schools to the local wants of the town. In reference to this, Sir Joseph said he could not allow any of those ladies who had honoured him by coming forward at his request, to go without a prize. He hoped they would all accept some little token of his esteem for their ingenuity. In order to stimulate the talent of the city, he intended to offer a prize of 10*l.* for which any ribbon designer would be eligible to compete, during the ensuing year. He also proposed to offer a prize of 10*l.* for competition among warehousemen. He proposed, also, in order to attract attention to that branch of the trade, to give a prize of 10*l.* for the best design for a watch-case. The competitors, in each case, must for the time be in the school, as he wished to encourage the school as well as the staple trades of the city. They wanted a better building for the school, and they wanted more attention from the 20,000 persons who were engaged in the ribbon trade, and those wants must be supplied if the Coventry School of Art was to progress as hitherto it had progressed.

Plumstead Central Schools.—These schools are now open. They comprise schools for 1,000 children and adults, with residences for the teachers, and cover nearly half an acre of ground. Messrs. Fox and Henderson were the builders. The building funds comprised 1,000*l.* from the War Department, 1,000 shilling and 1,500 sixpenny subscriptions from Plumstead parishioners, and 100*l.* from Sir Charles Fox. Mr. Henderson gratuitously furnished the plans and superintended the erection. The vicar of Plumstead complains of the *Times* calling these schools the "Woolwich National Schools, upon Plumstead-common," and thinks it bad enough that the Royal establishments at Plumstead should be called "Woolwich Arsenal:" Plumstead, he remarks, is something more than either a marsh or a proposed Metropolitan cesspool.

Balmoral.—The furniture of the new Castle of Balmoral is, it appears, of a peculiar character. All the draperies and coverings of the apartments are of one pattern, though different in costliness of fabric. The design is a tartan, with red and white check. There is no paint on any of the internal doors: the wood is highly polished.

Goat Island-bridge at Niagara.—The *Niagara Falls Gazette* gives the following description of this structure:—This bridge across the east branch of the Niagara River is situated in the rapids, about 60 rods above the cataract, on the site of the old wooden bridge. It is 360 feet long, and consists of four arches, of 90 feet span each, supported between the abutments on three piers. The piers above water are built of heavy cut stone, and are 22 feet long and 6 feet wide, tapering one foot in the height. The foundations are formed of foot square oak timber, strongly framed and bolted together in cribs filled with stone, and covered with timbers at the surface of the water. These timber foundations are protected against wear and injury from ice by heavy plates of iron, and, being always covered with water, will be as durable as the stone. The superstructure is of iron, on the plan of Whipple's iron-arched bridge. The whole width is 27 feet, affording a double carriageway of 16⅔ feet, and two foot-ways of 5½ feet each, with iron railings. The arches are of cast iron, and the chords, suspenders, and braces of wrought iron. The abutments and piers were erected under the plan and direction of Mr. A. H. Porter, one of the proprietors, and the superstructure under Messrs. S. and J. M. Whipple, the patentees.

Builders' Clerks. — Please to lend us poor builders' clerks a helping hand towards deriving some little benefit from the Early Closing Movement. Our hours generally are longer than any other clerks—half-past eight to seven, and in some places eight; and on Saturdays, owing to have to pay at different jobs in town and country—often later. I think it would be to our employers' interest to allow us to work until five, and then leave, instead of the present system of dining in the middle of the day, which generally unfits us for anything like work for an hour or two afterwards: it would also give us an opportunity for a little self-improvement, and would be received as a boon by builders' clerks generally, including—¼ Scale.

The New Theatre at Moscow.—This immense building has six ranges of boxes, combining Italian privacy with French openness. The grand tier is immediately above the pit tier. In the body of the house there are 480 stalls, and the theatre altogether accommodates 2,300 persons, with abundance of room for each. The style of decoration is a combination of the Renaissance and the Byzantine. The colours are mainly white and gold and light blue, with crimson damask draperies. The ornaments are all embossed with gilding: there are none painted. The state-boxes are magnificent saloons on either side of the stage: a third box facing it is reserved for the Imperial household. The stage is said to be the broadest in Europe, being 22 French mètres broad: it is not so deep, however, as the stage of La Scala at Milan. The architect was Mr. Albert Cavos, who also designed the St. Petersburgh theatre and the Grand Post-office.

St. Anne's Church, Limehouse.—The restoration of St. Anne's Church, Limehouse, is in active progress. Subscriptions amounting to about 800*l.* have been given. A penny subscription, collected at the church doors on Sunday before last, realised upwards of 10*l.*: 700*l.* are still required to complete the edifice.

The late Mr. Francis Wishaw, C.E.—We cannot allow another week to transpire without recording our regret on learning of the untimely and sudden death of Mr. Francis Wishaw. As Secretary of the Society of Arts at one time, and as the inventor of improvements in telegraphing, and of various other suggestions, and a claimant of the original idea of the Great Exhibition of 1851, Mr. Wishaw will be remembered by many of our readers. He was in the fifty-second year of his age at the time of his death, on the 6th inst. from apoplexy. Notwithstanding the possession of a highly inventive and suggestive mind, we are sorry to learn that, like too many other inventors, Mr. Wishaw did not realize much pecuniary profit from his life-long efforts.

Clearing Sewage Water.—A method, said to be new, is described by the *Hampshire Advertiser* as having been discovered by the Officer of Health at Southampton, by which he can render clear and almost inodorous the foulest sewage water. "At the cost of about 13*l.*" says the paper named, "he can precipitate, say the matter from 870 tons of sewage, about one-sixth, or 120 tons of which will be a fertilizing deposit of a valuable character for top-dressing."

Limited Partnerships and Agricultural Improvement.—As a means of overcoming the deficiency of labourers, and in order to keep pace with the times, a number of the principal farmers in Devonshire have formed a Steam-thrashing Company, under the Limited Liability Act, for the purpose of employing steam-thrashing machines in various parts of the county. The company, if successful, will also employ reaping-machines and other mechanical inventions.

New Buildings in Edinburgh.—There are several public structures in the course of erection in this city. Robertson's School, Newington, is now completed. The grounds are in the course of being laid out, and a janitor's lodge is to be erected at the entrance. The building is 74 feet in length, built of red stone, and, according to the local *Post*, which describes this and other improvements, is a sort of Gothic in design. In Cross-causeway, a new church of antique design is being built. The church of Dr. French, in College-street, is in course of being pulled down, and the new fabric will be on a line with the street. At Fountainbridge, a territorial church was erected some time back. Some other ponderous buildings have also been added to the street architecture in this quarter. Near St. Leonard's, several blocks of houses and shops have recently been erected. In Buccleuch-street, near the Meadow entrance, a large building has been raised, containing numerous houses for the less wealthy classes. At the Grange, on the property of Sir William Dick Lauder, quite a new town is springing up,—streets of villas and isolated houses. The Treasurer's office for the Edinburgh Parochial Board is being erected at the entrance of the workhouse. A wing of the house to the south is still wanting, says the paper just named; and had this defect been supplied, it would have spared the necessity of erecting buildings, now converted into a fatuous ward, in the centre of the street, thus precluding, as does the new Free Church, the retrieval of the ground—a measure which would have allowed of a grand broad approach to the Meadows, and have secured a fine, wide, and noble prospect; allowing, too, at this splendid entrance to the capital, of the erection of statuary or other ornamental works.

TENDERS

For New Wesleyan Chapel, Highbury. Mr. E. Laws, architect. Quantities not supplied:—

ADVERTISEMENTS.

ARCHITECTS, BUILDERS, ENGINEERS, and SURVEYORS, can be IMMEDIATELY SUPPLIED with COMPETENT ASSISTANTS (temporary or otherwise). Those only recommended whose efficiency and qualifications can be guaranteed. The registry is open to employers, or lists furnished therefrom (free), on application to Mr. RICHARD'S, Engineer and Surveyor, 4, Trafalgar-square.

ARCHITECT'S ASSISTANT WANTED, salary two guineas per week, quick, and thoroughly capable of preparing late and working drawings, specifications and estimates. Address, stating acquirements and references, to ARCHITECT, Post-office, Leigh-street, Burton-crescent.

AN APPRENTICE WANTED to a MARBLE and STONE MASON.—Address, J. B. No. 21, Cornwall-place, Holloway. A premium required.

WANTED, a FOREMAN of CARPENTERS, to take CHARGE of a SHOP, in the country.—Application to be made to S. D. Office of "The Builder," stating age and terms.

WHARF FOREMAN WANTED.—He must be married, and about 35 years of age; have a practical knowledge of slates in work; also of setting and measuring builders' materials; also [illegible] work, and if capable of making rough drawings [illegible] so, will be preferred.—Address by letter, A. B. care of J. J. Sanders, Stationary, New road, Fitzroy-square.

TO SURVEYORS.

WANTED, an experienced SURVEYOR and DRAUGHTSMAN.—Apply, by letter only, stating terms, &c. to Mr. J. HARDING, No. 3, Claremont-hill, Shrewsbury.

TO SHOP FOREMEN.

WANTED, as WORKING FOREMAN of CARPENTERS and JOINERS, a Practical Man, thoroughly acquainted with the trade in all its branches, competent to set out work, and convert materials to the best advantage.—Address, stating age, wages, and reference, to X. Y. Z. Post-office, Wolverhampton.

WANTED, by a CARPENTER and JOINER, a SITUATION in the COUNTRY. Wages moderate. Age 34 years. Has been good. Accustomed to taking charge of men in London. N. B. is often to take piecework.—Apply to H. F. Gardner and Co's, Southampton-street, Camberwell.

TO CARPENTERS, BUILDERS, &c.

WANTED, by a steady, active Man, aged 30, a SITUATION as SHOP or GENERAL FOREMAN. Has been accustomed to the setting out of work, and the management of a number of men. Moderate salary only required. Good references. No objection to the country. Address, A. Y. Office of "The Builder."

TO ARCHITECTS AND BUILDERS.

WANTED, a SITUATION, as CLERK, by a Young Man, aged 25, where he will be employed sometimes out of the office at measuring, superintending work, or otherwise. He can take out quantities, make finished and working drawings, measure up work, keep builders' accounts and books, and has worked as a carpenter and joiner. Has a knowledge of perspective, writes a fair hand, and well understands the routine of a builder's office. He was last employed as clerk of works at a gentleman's country-house.—Address, W. M. H. Office of "The Builder."

TO BUILDERS, CONTRACTORS, &c.

WANTED, a RE-ENGAGEMENT as DRAUGHTSMAN and GENERAL ASSISTANT, by a thoroughly practical Man, aged 33. References given to eminent firms in London.—Address, M. J. Office of "The Builder."

TO COUNTRY POTTERS.

WANTED, by a Gentleman of persevering and business habits, an AGENCY or COMMISSION, for the SALE of DRAIN-PIPES, in the London market, having represented a London manufacturer for some years. He could command a good amount of business.—Address, by letter, A. C. Post-office, Kennington-park, London.

WANTED, by a respectable Young Man, aged 24, a RE-ENGAGEMENT in an Engineer's or Surveyor's Office. Is a first-rate leveller and draughtsman, can measure up work, and pr pare quantities and estimates, having had, in combination with the above qualifications, considerable practical experience in the building business, having taken out making drawings, &c. First-rate test monials as to competency and integrity can be produced.—Address, A. B. 106, Paul-street, Finsbury square.

TO BUILDERS.

WANTED, by a Young Man, who has had five years' experience in the business, a SITUATION as GENERAL ASSISTANT to a Builder. Has been previously engaged in the superintendence of workmen, in taking out quantities, making drawings, and assisting in book-keeping. Salary not so much considered as a place of comfort, and where increased experience could be gained. The most satisfactory references could be given.—Address, Mr. H. MILLS, Builder, Egham, Surrey.

TO SUGAR-REFINERS, ENGINEERS, AND OTHERS.

WANTED, by a Young Man, aged 25, EMPLOYMENT in a REFINERY or ENGINEER'S FACTORY, having a thorough knowledge of refining, of book-keeping by double-entry, drawing, and French and German. Having been engaged in the City, and for upwards of seven years with an able engineer, from whom the highest testimonials would be given. No objection to go abroad.—Address, D. H. F. Beaumont Institution, Mile-end-road.

WANTED, a RE-ENGAGEMENT as GENERAL FOREMAN, or to Superintend the Erection of a Building, in town or country. Good references.—Address, A. Z. 489, Oxford-street.

WANTED, TASK-WORK—the Carpenters' Work of a large Job, in town or country, by two experienced hands, who have just completed the engagement. Good references, &c.—Address, J. P. 20, Edith-street, Great Cambridge-street, Hackney-road.

TO BUILDERS AND PAINTERS.

WANTED, by a Young Man, constant EMPLOYMENT. Has been accustomed to have charge of work, is a good house-painter and glazier, can hang paper, and do plain imitations of woods and marbles.—Address, M. B. Mr. Coleman's, Tobacconist, High-street, Wandsworth, Surrey.

TO CARPENTERS AND BUILDERS.

WANTED, by a respectable Young Man, aged 26, EMPLOYMENT as CARPENTER and JOINER. Wages no object.—Address, C. H. 30, Edward-street, Hampstead-road.

TO MASTER PLUMBERS AND BUILDERS.

WANTED, a SITUATION as IMPROVER, by a Young Man from the country, who has been five years in the trade. No objection to work as a plumber's labourer.—Address, R. A. D. 33, Eagle street, Red Lion square.

WANTED, a SITUATION as ASSISTANT in an ARCHITECT'S OFFICE, by a gentleman who has been articled and engaged in the profession twelve years.—Address, E. V. Office of "The Builder."

WANTED, EMPLOYMENT, by a CARPENTER and JOINER, age 28. Wages not so much an object as constant employment. Reference to last employer. Address, X. Y. Z. at Mr. Basten's, Baker, Brown-street, near Edgeware-road, St. Marylebone.

TO ARCHITECTS AND SURVEYORS.

WANTED, by a Gentleman, a SITUATION in an ARCHITECT'S OFFICE in town; has been accustomed to make fair working and detail drawings. Salary moderate.—Address, W. R. 34, Albert-street, Mornington-crescent, Regent's-park.

TO BUILDERS AND OTHERS.

WANTED, by a Young Man, a SITUATION as CLERK in a BUILDER'S OFFICE; can copy drawings, write a good hand, and is willing to make himself generally useful. Three years' good character from last employer. Address, ION, Post-office, Ilyth-place, Eaton-square.

TO BUILDERS, CONTRACTORS, &c.

WANTED, a SITUATION as CLERK of WORKS, or GENERAL FOREMAN of WORKS, by an experienced Practical Man, who has had considerable experience on railway works and buildings, being many years general foreman. Good references can be given. No objection to the country. Address, E. B. Post-office, No. 2, North-street, Grove-road, St. Marylebone.

TO ARCHITECTS, SURVEYORS, AND BUILDERS.

THE Advertiser, a good Designer in Ecclesiastical Architecture, and the various other styles, OFFERS his SERVICES to the above, to undertake drawings at his own residence or their offices. Designs furnished, together with working drawings, details, &c.; and perspectives made and coloured.—Address, L. X. Wilson's Library, Kentish-town.

TO ARCHITECTS.

THE Advertiser, who is a neat Draughtsman, qualified to prepare finished and working drawings, possessing a knowledge of Italian and Mediæval detail, and practised in letter-tinte and surveyors' out door work, is desirous of a RE-ENGAGEMENT.—Address, A. B. 8, Thorn hill-crescent, Islington.

TO ARCHITECTS AND SURVEYORS.

THE Advertiser, who has been lately engaged in the office of an architect and surveyor holding a public appointment in the City, is desirous of an ENGAGEMENT. No objection to country.—Address, A. B., 7, Southwood-lane, Highgate.

TO SMALL BUILDERS.—The Advertiser, who has been in the architectural profession some years, and has a small sum of money at command, is desirous of ENTERING the OFFICE of a BUILDER, with an increasing business, as CLERK, from whom he could acquire a more practical knowledge, and eventually be received as PARTNER.—Address, B. B. Office of "The Builder."

ESTATE or HEAD CARPENTER.—A thoroughly qualified person, who has had considerable experience in the above business, is in want of a SITUATION. He has held his present situation for upwards of nine years, and can be strongly recommended by his employer. He possesses a thorough practical knowledge of every branch of the business. Any gentleman requiring the services of a trustworthy and experienced tradesman, would find the advertiser well qualified to give the fullest satisfaction. Is married, age 34.—Address, A. B. Post-office, Leiston, Saxmundham, Suffolk.

BUILDER'S CLERK.—A highly respectable, middle-aged Gentleman, accustomed to the routine of a builder's office, an efficient accountant and valuer, wishes for an ENGAGEMENT, either wholly or occasionally.—Address, Z. Z. No. 2 Frederick place, Upper Clapton.

A LAND SURVEYOR is prepared to CONTRACT with Engineers and Board of Health for the EXECUTION of SURVEYS, and LEVELLING for RAILWAYS, or for SANITARY PURPOSES.—Address, A. B. Post-office, Mr. Clarke's, 139, Jermyn-street, St. James's, London.

TO CIVIL ENGINEERS AND CONTRACTORS.

A GENTLEMAN, who has had great experience on engineering works, wishes for a RE-ENGAGEMENT. Is thoroughly acquainted with levelling, setting out and measuring works, preparing estimates, taking out quantities, getting up detail and other drawings, also office business in general. No objection to go abroad.—Address, EDMUND LANCASTER, S. Office of "The Builder."

TO ARCHITECTS.

AN ASSISTANT is in want of an ENGAGEMENT. Is competent to manage an office, having been eight years in the profession.—Address, A. B. C. Post-office, Moorgate-street, City.

TO ARCHITECTS AND SURVEYORS.

A YOUNG MAN, who has been engaged ten years in the profession, and thoroughly conversant with all the routine of a country architect's and surveyor's practice, is open to ENGAGE in town or country. Can furnish good testimonials as to ability and moral character.—Address, P. Post-office, Worcester.

TO ARCHITECTS.

A DRAUGHTSMAN is open to an ENGAGEMENT. Is competent to prepare finished, detail, and perspective drawings, can design, and is also a good colourist, and generally acquainted with the duties of an office. First-class references.—Address, J. S. Post-office Boxford Suffolk.

TO CIVIL ENGINEERS, CONTRACTORS, &c.

AN experienced Surveyor, Leveller, and Draughtsman, is OPEN to an ENGAGEMENT. Tracings and quantities supplied.—Address, S. B. Office of "The Builder."

TO MASTER BRICKMAKERS, BUILDERS, CONTRACTORS OF RAILROADS, AND ALL OTHERS.

AN experienced Man wants a SITUATION as FOREMAN of a BRICKFIELD, or would rather take it by contract, to do all labour at so much per thousand, in either old or stiff clay, clamp, close, or Scotch kiln work. He understands all its branches, and can have a good reference to that effect.—Address to T. B. Mr. Rose, 56, West-street North, Bermondsey, near St. James's Church.

TO COUNTRY ARCHITECTS AND SURVEYORS.

A GENTLEMAN, aged 22 (who has served his articles with a respectable London surveyor), wishes to enter into an ENGAGEMENT with an ARCHITECT and SURVEYOR in good position, in the suburbs of London, at a nominal salary for a period to be agreed on, with view to an ultimate partnership, for which the advertiser would be willing to pay a premium according to the extent and bulk of the business.—Address, Mr. J. ROBINSON, 40, Princes-square, Kennington, London.

A THOROUGH PRACTICAL MAN, competent to prepare complete sets of architectural drawings, measure, level, &c. requires a SITUATION as CLERK of WORKS or General or shop Foreman, or General Superintendent on an Estate. Country not objected to. Unexceptional testimonials.—Address, ALPHA, 13a, East-road, Hoxton.

TO ARCHITECTS AND SURVEYORS.

A YOUNG MAN, now in the office of an architect of eminence, is desirous of a RE-ENGAGEMENT in London. He has been in the profession for nine years, is accustomed to prepare finished and working drawings, is well acquainted with perspective and the usual routine of an architect's office. Aged 24.—Address, Q. P. at T. Beall's, 23, Red Lion-square, Holborn.

TO ARCHITECTS AND SURVEYORS.

A GENTLEMAN, of long standing in the profession, having completed foreign engagements, is desirous of a PURCHASE or a SHARE of a well-established BUSINESS either in London or the provinces.—Address, L. P. care of the Housekeeper, 4, Lothbury, City.

TO LIME, TILE, BRICK, AND CEMENT MERCHANTS.

A YOUNG MAN, aged 26, who has had nine years' experience in the above trades, desires EMPLOYMENT; is com. etent to keep books by doub e entry, is used to collecting, and has some connection among builders, &c. Satisfactory references as to ability, integrity, &c. can be given. No objection to the country.—Address, prepaid, W. H. No. 15, Swinton-street, Gray's inn-road.

TO ARCHITECTS, &c.

AN Artistic Colourist, Draughtsman, and Designer, OFFERS his SERVICES in the preparation of Perspective Views with landscapes and figures; also in general drawing and lithographing.—Address, A. Z. Miller's Library, Little Coleman-street, Wenman-street.

TO CABINET MAKERS, BUILDERS, &c.

A PERSON of thorough business and sober habits, requires a RE-ENGAGEMENT as FOREMAN in a cabinet factory, being thoroughly acquainted with the business; or as Draughtsman and Decorator in a builder's office. Has been in that line, and is a good draughtsman.—Address, by letter, prepaid, H. R. 38, Wellington-street, Goswell-street.

TO ENGINEERS, &c.

A GENTLEMAN, who has completed his articles as an Engineer's Office in London, is now in want of an ENGAGEMENT. He has been accustomed to make working drawings, tracings, and other office work. References as to character and ability can be given, and salary at present is not so much an object as a permanent situation.—Address, L. Post-office, Altrincham.

BATH, PORTLAND, and ROMAN CEMENTS.—The London and West of England Cement Company can offer to the Trade the best natural HYDRAULIC CEMENTS at reduced prices. The Company particularly recommend the best quality of their Bath Cement for all modelling cornices, decorations, &c. as having all the qualities requisite for an interior cement, and being quite unaffected by extremes of weather. The Company also supply BLUE LIAS LIME, lump and ground, which will carry more sand than any in the market.—Communications to be addressed to the General Offices, 80, Old Broad street, London; to Mr. MONUMENT, 4, Caroline-place, City-road; to Mr. TIMEWELL, the Depôt, 9, North Wharf-road, Paddington; or to the Works, Dunball, Bridgewater.

SOUTHAM BLUE LIAS LIME DEPOT.
Glazed Stoneware Sewage Pipes.
Brick, Lime, and Cement Merchants,
TATHAM and CO.
14, South Wharf, Paddington.

PORTLAND and BATH CEMENTS.
TATHAM and CO.
14, South Wharf, Paddington.

PARIAN CEMENT, reduced in price 25 per cent. This article is valuable for inside stucco, and especially for skirtings, for flooring on brick arches, &c. It takes a paint in a few hours after its application on walls or laths, is without efflorescence, and may be papered in a couple of days. A finer quality forms a beautiful Scagliola, with any admixture of colours.—Manufactured by FRANCIS, BROTHERS, Cement Works, Nine-elms, London.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale or retail, at his wharf, 5, Upper Thames-street, London; and also at the manufactory, Faversham, Kent.—N.B. These Cements supplied for shipment, on advantageous terms.

THE PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and Co. to WHOM THE PRIZE MEDAL WAS AWARDED in 1851, are prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes to which Cement is applicable. Orders received at Great Scotland-yard and at the Works.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland Cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brickwork, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

PORTLAND and ROMAN CEMENTS.—T. H. BOORMAN, WILD, and CO. MEDWAY LIME and CEMENT WORKS LOWER HALLING, near Rochester. Agent at the Works—Mr. THOMAS WEEKES.
Agents in London, Messrs. GEORGE PUTTER and CO. Lime-merchants, Purfleet-wharf, Earl-street, Blackfriars, and No. 19, North-western-road Paddington.

PORTLAND and BATH CEMENT.—FULLWOOD THOMPSON and CO. request the attention of Merchants and Contractors to the quality of their Portland and Bath Cement, which they manufacture on an improved system, securing regularity of strength and colour, and at a less cost than is attainable by most other makers.
These cements set under water in a few minutes, and are not affected by extreme heat or cold.
FULLWOOD THOMPSON & CO. will be happy to send prices and samples in reply to application by post. They deliver free into the Bristol and Exeter Railway Company's trucks at their works, or free on board in the Port of Bridgewater.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light, Dark, and Portland Cements equal to any made. Manufacturers and Dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano

JOHNS and CO.'s PATENT PERMANENT STUCCO WASH (perfectly non-absorbent). STUCCO CEMENT, STUCCO PAINT.—CLARK and BENGOUGH, Manufacturers, Grand Surrey Canal Bridge, Old Kent-road, Office, 4, George-yard, Lombard-street.

PORTLAND and ROMAN CEMENT.
PLASTER of PARIS
Manufactured by J. M. BLASHFIELD, at Millwall Isle of Dogs.
Warehouse, No. 1, Wharf, Paddington-basin

11, George-yard, Lombard-street, City.
ELMLEY CEMENT WORKS.—ROMAN and PORTLAND CEMENT of the first quality, manufactured on the above works. Also STOCK and KILN-BURNT BRICKS, hand moulded and machine made, for shipment or otherwise.—Apply to G. BOOTH, Agent, as above.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Accounts of COMPARATIVE EXPERIMENTS on the strength of this and other Cements (read at the Institute of Civil Engineers), to be obtained from the Makers, JOHN BAZLEY WHITE, and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring. Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel-street, Liverpool.

CHARLES RICHARDSON,
3 & 6, SOUTH-WHARF, PADDINGTON BASIN.
COWLEY AND KENT BRICKS,
PORTLAND, ROMAN, AND OTHER CEMENTS,
TAMWORTH GLAZED SEWAGE PIPES
BLUE VITRIFIED BRICKS, COPINGS, PIPES, &c.

3 & 6, South Wharf, Paddington.
NOTICE.
CHARLES RICHARDSON takes the earliest opportunity of informing Engineers, Architects, Contractors, and others, that he is now bringing GREAVES'S BLUE LIAS LIME per the Great Western Railway from Harbury to Bull's bridge and Paddington, from whence it can be delivered alongside any part of the river Thames, canals, or railway stations in London the day after it is burnt and ground, in any quantity, and at a great reduction in price.
All applications for prices and terms will meet with prompt attention.
N.B. Please observe the lime is ground at the works, not in London.

BLUE LIAS LIME.—Messrs. GREAVES and KIRSHAW having completed their Works on the Birmingham and Oxford line of the Great Western Railway, at Harbury, are now prepared to supply LUMP and GROUND LIME of the best quality, direct from the kilns, to all the Stations on the Great Western Railway.—Greaves's Blue Lias Lime.—Portland, Bath, and Lias Cements.—Works, at Harbury, Stockton, and Wilmcote.—Office, at Warwick.

DAMP WALLS.
STENT'S COMPOSITION FOR PREPARING NEWLY-PLASTERED OR DAMP WALLS FOR PAPERING,
Is the result of practical experiments and long experience; it is unfailing in its application. Entire houses have been papered a few days after plastering. In repairs of old plastering it is invaluable. A moderate room can be papered for 2s. 6d.
Prepared only by W. J. STENT, Warminster.
London Agents: Messrs. GEO. and THOS. WALLIS, 64, Long-acre. Agent for Ireland: Mr. S. BOYD, 46, Mary-street, Dublin.

HUBBUCK'S PATENT WHITE ZINC PAINT,
The Permanent White of the Ancient Artist.
HUBBUCK and SON, the Original Manufacturers, are enabled, by their process, which is patented, to supply Pure White Zinc Paint at the price of White Lead. Neither heat nor tropical climes act upon it. It is entirely free from any poisonous or pernicious property. These fearful maladies peculiar to lead paint's colic, will be altogether avoided. The Improved White Zinc now offered for grinding in Oil, and Water as usual with Size, Varnish, &c. To prevent fraud in the genuine article must otherwise produce, it is now sold by the Wholesale Patentees in Original Packages, each cask stamped HUBBUCK—LONDON—PATENT. And when so marked, the quality is guaranteed. THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers, Paint and Varnish Works, opposite the London Docks, Limehouse.
N.B. OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT FOR REFINING.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster

COLES, SHADBOLT, and CO.
CEMENT and PLASTER MANUFACTURERS,
LIME BURNERS,
Brick, Tile, Drain-pipe, Hair Loth, and Fire Goods Merchants,
ST. JAMES'S and THORNHILL WHARFS,
Caledonian-road, London.

BLUE LIAS LIME.—CHAS. NELSON begs to offer to consumers a supply of Blue Lias Lime direct from his Quarries in Warwickshire, the quality of which has been tested by several of the largest building firms in the metropolis and approved by them; and those who have favoured C. N. with their patronage during the last three years have always expressed themselves satisfied with his system of weighing or measuring the same. When the sacks delivered by C. N. (the master has instructions to produce on demand) the canal charges pass, by which the purchaser may know the exact weight delivered.—Orders addressed to the London Depôt, 16, South Wharf, Paddington. J. D. BLYTH, Sole Agent, will have immediate attention.—Quarries and Manufactories, Stockton, near Southham, Warwickshire

DAVIES and NORMAN,
CROWN WHARF, GREAT SCOTLAND YARD.
ROMAN and PORTLAND CEMENTS,
LIME, BRICKS, TILES, SLATES, FIRE GOODS, &c.
STONEWARE PIPES, PANS, TRAPS, &c.
A Liberal Allowance to the Trade.

NOTICE.
SOUTHAM HYDRAULIC BLUE LIAS LIME.
WILLIAM OLDHAM begs to inform those parties requiring genuine Hydraulic Blue Lias Lime, that he is prepared to deliver the best quality of ground and lump into boats at the Works.—Address, WILLIAM OLDHAM, Blue Lias Lime and Cement Works, Southam.

GREY STONE LIME WHARFS,
12, UPPER GROUND-STREET, Blackfriars (Surrey side),
2, NORTH WHARF-ROAD, Paddington.
WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME in any quantities from the above wharfs, or per barge direct from the kilns.
Large Grey Stone, or Grey Chalk, free on board at Works, 1s. 9d. per ton.
Small ditto, ditto, 4d. per ton.
Barges loaded in a few minutes.
Wouldham-hall, Grey Stone Lime Works, on the Medway, near Rochester.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings of good and sound quality, constantly on sale at H. DODD'S Brick-fields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for them elves.
Malm Place, half-washed Stocks and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.
Apply to HENRY DODD and CO. at the Counting-house, Horton Brick-fields, Grange-walk, near the Rosemary Branch, Hoxton.
N.B. Light-coloured Pit Sand of a proved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

THE BEST HERTFORDSHIRE MALM SECONDS;
THE BEST WHITE SUFFOLK and RED FACINGS;
WHITE SUFFOLK PERFORATED BRICKS;
DEEP-RED RUBBING BRICKS.
Also COWLEY and KENT STOCKS, in any quantities.
J. EASTWOOD and SONS, Belvidere-road, Lambeth; and Surrey-canal-bridge, Old Kent-road, Surrey.

BRICK-FIELDS, QUEEN'S-ROAD, PECKHAM, SURREY
(Within a short distance of the five bridges).
THE BEST MALM CUTTERS, SECONDS, PICKINGS, and PAVIORS, in any quantity.
Also, STOCKS, of FIRST QUALITY.
J. EASTWOOD and SONS, Belvidere-road, Lambeth

BRICKS of all kinds (clamp-burnt or kiln-burnt), Lime, Chalk, Chalk Rubbish for brick-making, Flints for building and pottery work, Foundry Loam, Whiting, Whiting sand for whitewash, Lias Lime, Patent Drain Pipes, Gas Soil for brick-making, &c. &c. sent by barge from Messrs MEESON and CO.'S works at Grays, Essex, to any part of the Thames, the various canals, the river Lea, &c. or by rail to any station on the London and Southend and Eastern Counties lines, or any railway connected with them. Vessels of 300 to 600 tons can load alongside the wharves at Grays. At MEESON and CO.'S wharf and kilns, Bow-bridge, Stratford, Essex, the above-named articles can also be procured, as well as all kinds of fire goods (both Welsh and Newcastle), Fire-clay, Flare-burnt Lime, and Marble and Temper Lime; and here lime is packed in bags, heads, casks, &c. &c. for exportation.
General Office—No. 12, GEORGE-YARD, LOMBARD-STREET.
Letters addressed to Grays Essex, will meet with immediate attention.

THE PATENT BRICK MACHINE COMPANY invite orders for their IMPROVED MACHINES One of them is working in a field at Caterham, near Croydon, and arrangements are made with the owning for buyers of either from the Secretary, to see it in operation every Thursday and Friday. It is the most simple machine invented. Trains from London bridge to Warlingham-road station leave at 8 and 9.30 a.m. and 3 p.m.; return at 8.55 a.m. and 5.5 and 7.55 p.m.
HENRY C. SOUTER, Sec.
37, King William-street, City.

ROUPELL-PARK BRICKFIELDS, LOWER NORWOOD, SURREY, near the Crystal Palace entrance, Norwood end, Palace-road.—BRICKS of the first class. Red Kiln Bricks, Cutters, Dressings, Facings, and Paviors, Clamped ditto, Yellow and Pale, Seconds, Paviors and Pickings, Washed Stocks, Stocks, and Place.—Apply to TRUMAN and CO. Norwood Lodge, Palace road, Roupell-park, Lower Norwood, Surrey.

ARCH BRICKS, for SEWERAGE PURPOSES.—In consequence of a contractor having failed in the payment of his accounts, a large quantity of ARCH BRICKS are now open to public inspection. They are hard burnt, and well moulded, and are suitable to work in with the ordinary sized bricks. It is confidently believed that a saving of at least 10 per 1,000, in cement and labour, can be effected by using them for sewerage purposes. Their convenient size renders it possible to form arches of from 2 to 8 feet in diameter, while for medium sized arches a single ring of brickwork will be as strong and more solid than a double course formed by the ordinary method. Price 27s. per 1,000, cash on the ground. Malms, stocks, seconds, and a quantity of red place, together with deep-coloured rag facing bricks, at low prices. A large stock of Agricultural Draining Tiles made by Clayton's celebrated Pipe machine, including all useful sizes, from 1½ to 6 inches in diameter. They are manufactured from clay of a very superior character, are of perfect form, unusually hard and well burnt, and are confidently offered as specimens of what draining-pipes ought to be.—Address, Mr. LEWIS, at the Brentwood Railway Brick and Tile Works, Brentwood, Essex. All materials will be loaded into the railway-trucks at the Goods Station, which adjoins the works, at Brentwood, and they will be forwarded thence to any station on the Eastern Counties Railway.

IMPROVED AIR-BRICKS.

WILLIAM GILBERT, Manufacturer of all kinds and colours of Tiles, Quarries, Drain pipes, Moulded Bricks, Brackets, Vases, Chimney pots, Stoneware Glazed Sewerage Pipes, Ornamental Quoin Blocks, &c.
Tividale, Staffordshire.

MINTON and CO.'S ENCAUSTIC and other PATENT TILES, for Churches, Entrance Halls, Conservatories, Balconies, &c.; Antique, Geometrical, and Alhambric Mosaics, manufactures of a highly decorative character, and extreme durability. Slabs and Tiles for fireplaces and Hearths. Cornices for Tables, Door Furniture, White Glazed and Ornamental Tiles for Baths, Dairies, and Kitchen Ranges, may be had, in great variety at their Warehouse, 9, Albion-place, Blackfriars-bridge, London; and at their Manufactory, Stoke-upon-Trent, Staffordshire.

BEADON'S EAVES GUTTER TILES.—Mr. LAWES is prepared to CONTRACT for the DIRECTION of the above TILES on roofs of all descriptions, in the neighbourhood of London at 7d. per foot, above 100 feet, 6d.—Office, 1, Adelaide-place, London-bridge.

BEADON'S PATENT IMPERISHABLE GUTTER-TILES,
For Spouting Roofs of Houses (either old or new, whether of thatch, slate, or tile), and other structures.
SELF-ACTING.
J. B. LAWES, 1, Adelaide-place, London-bridge.
This is the cheapest kind of spouting known; for, besides its lower cost, it will last without paint or repair as long as the building itself. It will bear the weight of any ladder; and in case of accident a labourer can repair it. It occupies the room of a large amount of roofing, effecting a great saving in slates, tiles, &c. It is especially applicable to the backs of houses in town, cottages, and agricultural buildings.
Price 4d. each tile of about 23 inches long; stop-ends and outlets, 6d. Any mason can put them up, or, if over 100 feet are required, a man will be sent to fix them at 5d. per foot. This charge includes tiles (delivered in Agent's yard), cement, and labour. May be had in London, Gloster, Bridgwater, and Rugby.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21, WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and, thirdly, that the "RECORDS OF THE JURIES," page 931, of the Great Exhibition, rank the Manufacture known so long as "The Theories," Tunstall, Staffordshire, as the first of the kind in the world

CONIAM'S PATENT IMPROVED ROOFING TILE.—These tiles are light from over lapping each other by a raised edge, which also prevents the drift of rain or snow, and at the same time, forms a good ventilating channel. To be obtained of C. PHILLIPS, Potter, Weston super-Mare.

PATENT TERRA-COTTA.
Tracery for Parapets and Terraces, Mullions, Pinnacles, Moulded Bricks, Coats of Arms, Crosses, Label Mouldings, Friezes, Trusses, Vases, Balusters, Capitals and Bases of Columns, Pavior, Red and Brick, Copings, Kitchener, Chimney Shafts and Tops, and numerous other Articles, manufactured by J. M. BLASHFIELD, in Patent imperishable Terra-Cotta, at Millwall, Isle of Dogs; and sold at No. 1, Wharf, Praed-street, Paddington-basin

TALC.—A large quantity of this mineral product, including some fine specimens, is now on SALE, by Mr. MOORE, Whole-sale Ironmonger, 12 and 13, Earl-street, Seven dials, for the supply of Ironmongers, Engineers, Stove, Gas, and Philosophical Instrument Manufacturers, and others.

PATENT SOLID SWISS PARQUETERIE.
This beautiful, unique, economical, and elegant description of Flooring, so extensively used in Paris and other continental cities, is now introduced into this country; an extensive assortment of specimens and patterns commencing at 1s. per foot super. together with every particular of its cost and adaptation, can be obtained of Messrs. H. P. BURT and CO. 2, Charlotte-row, Mansion-house; or of Messrs. ARROWSMITH and CO. 80, New Bond-street.

CLARK AND CO. 15, GATE-STREET, LINCOLN'S-INN-FIELDS; AND LITTLE QUEEN-STREET, HOLBORN.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1855 was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

FACING FOR BUILDINGS COMPANY—TAYLOR'S PATENT.

BUILDINGS PERFECTLY RESISTANT TO WET WITHOUT ADDITIONAL EXPENSE, OR THE USE OF COMPO,

REQUIRING THE CONSTANT EXPENSE OF PAINTING. EXTERNAL WALLS FACED WITH AN INDESTRUCTIBLE MATERIAL.

STONE-FACED BUILDINGS AT LITTLE MORE COST THAN CEMENT.

No necessity for Iron Cramps and Bond stones, and the Stone Ashlar never injuriously weighted by the settlement of the Mortar joints of the inside Brickwork. The INSIDE of CHURCHES and OTHER BUILDINGS FACED WITH STONE instead of Plastering. Also Dining halls, Lobbies, Staircases, &c. of Private Residences, at less cost for carriage, &c. prepared at home. Can be used with the ordinary Bricks of any locality, and by the ordinary workman. The CHURCH faced inside and outside in this manner, and the other Buildings at SPRING GROVE HOUNSLOW, and elsewhere, can be inspected, and all particulars obtained, of

Mr. JOHN TAYLOR, ARCHITECT, OFFICES OF THE COMPANY, 40, KING-STREET, CORNER OF CHEAPSIDE.

CHEAP AND DURABLE ROOFING.

By Her Majesty's Royal Letters Patent.

F. McNEILL and CO. of LAMB'S-BUILDINGS, BUNHILL-ROW, LONDON, Manufacturers and ONLY Patentees of

THE PATENT ASPHALTED FELT, FOR ROOFING HOUSES, VERANDAHS, SHEDS, &c.

Patronized by

HER MAJESTY'S WOODS AND FORESTS,
HER MAJESTY COMMISSION OF CUSTOMS,
HONOURABLE EAST-INDIA COMPANY,
HONOURABLE BOARD OF ORDNANCE,
HER MAJESTY'S ESTATE, ISLE OF WIGHT,
ROYAL BOTANICAL GARDENS, REGENT'S PARK,

And by the most eminent members of the Royal Agricultural Societies of England, Scotland, and Ireland; at whose great national shows it has been exhibited, and OBTAINED THE PRIZE. For being the best and cheapest article for roofing; also used for under slates at the Royal Agricultural Society's House, Milman ver-square. Its advantages are lightness, warmth, durability and economy. It is impervious to rain, snow, and frost, and a non-conductor of heat and sound. The Felt can be cut to any length, by 32 inches wide. The price is only ONE PENNY PER SQUARE FOOT. Samples, with full directions as to its uses and the manner of applying it, with TESTIMONIALS, some of the first of seven years' experience, from Architects, Builders, Noblemen, and Gentlemen who have extensively used it, sent free to any part of the town or country. A Dry-hair Felt, for covering Boilers, &c. is also manufactured, by which a saving of about 33 per cent in fuel is effected. The TRADE are respectfully solicited to send their orders DIRECT to the FACTORY, as the surest means of having supplied with the genuine article, and in lengths best suited to their roofs. They are likewise CAUTIONED AGAINST MISREPRESENTATION, as ONLY WORKS in Great Britain where the above roofing is made are F. McNEILL and CO.'s Manufactories, LAMB'S-BUILDINGS, BUNHILL-ROW. Roofs covered with the Felt to be seen at the Factory, and at the new Vice-Chancellors' Courts, the passages and offices leading to Westminster Hall, and other buildings at the New Houses of Parliament.—A Liberal Discount allowed to the Trade.

LONDON.—83, KING WILLIAM-STREET.

CHAIRMAN OF THE BOARD
The Right Honourable the Earl of Aberdeen.

DIRECTORS.
Thomas H. Brooking, esq. 14, New Broad-street.
John Griffith Frith, esq. Austin Friars.
Alexander Gillespie, esq. 3, Billiter-court.
John Scott, esq. 4, Hyde-park-street.
Sir Anthony Oliphant, C.B.
Francis Le Breton, esq. 3, Crosby-square.

THE STANDARD LIFE ASSURANCE COMPANY was established in 1825, and its progress has been most successful. During the ten years from 1825 to 1835, the Assurances effected amounted to upwards of Four and Half Millions sterling; and during the year from 1854 to 1855 alone, the New Assurances amounted to upwards of 600,000l.; being the LARGEST BUSINESS transacted in Great Britain during that period by any Assurance Office.

The LARGE FUNDS which the Company have accumulated are invested on the security of Land and in Government Securities, and these securities are subject to investigations by professional gentlemen at intervals of five years. Such an investigation took place last year, when the Committee reported that "the whole of the Investments are of the very best and safest description, and they have no hesitation, in stating their belief that there is not one of them which would not be accepted as a security if it was now proposed to the Board for the first time."

The INCOME of the Company is about a quarter of a Million sterling.

The position of the STANDARD, and its whole terms and conditions, are such as to give it the strongest claims on public support.

WILL. THOS. THOMSON, Manager
H. JONES WILLIAMS, Resident Secretary.

Agents to all the principal Towns in the Kingdom

DRAUGHT and DUST EXCLUDER from 1d. to 6d. per yard, easily fixed to doors and windows. Sole Patentee, R. HELBRONNER, 265, Regent-street. Wholesale and retail; and at Messrs. BURGESS and KEY'S, 97, Newgate-street.

WOLSTON'S TORBAY IRON-PAINTS, warranted to stand the action of the Atmosphere, Steam, Gases, Sea or Vapours, Damps, and Salt Water; also intense Heat without blistering. These Paints have been tested for five years in Her Majesty's Dockyards, and two Official Reports made thereon, which testify that 6cwts of Wolston's Torbay Iron Paint will effectually cover as much surface as 14cwts. of either White or Red Lead, and that they resist atmospheric action better than Lead Paints. For all Iron Work, Gas-holders, Tanks, Boiler Iron Roofing, Fencing, Shipping purposes (Wood or Iron), Stucco and Cement Fronts, economy and durability will be secured. To Builders and Painters, for all priming purposes, the saving will be immense. May be obtained at the TORBAY IRON PAINT and ORE WORKS, Brixham, Devon; London Depôt, Chamberlain's Wharf. Letters or orders addressed to Mr. WOLSTON, at the Works, or No. 34, John-street, Bedford-row, will have immediate attention.

MR. ABRAHAMS, at KING'S HEAD INN, Twickenham, on THURSDAY, NOVEMBER 6th, at THREE o'clock precisely (unless sold previously by private contract), in the main road from Twickenham to Hampton, opposite Sir Wm. Clay's park, and within a convenient distance of Hampton Court, Bushey Park, and Richmond.—Half the purchase-money may remain on Mortgage, at 5 per cent.—Particulars, at the Auction-room; of Messrs. Johnson and Co. Clement's-lane, Lombard-street; and Mr. F. F. Toole, 3, Sutherland-street, Walworth-road.

COLNEY-HATCH, MIDDLESEX.—1,500, 60 Bricks, part to shoot.

MR. A. RICHARDS will SELL by AUCTION, on the PREMISES, Colney-hatch, Park, a short lease from the Great Northern Railway Company, on WEDNESDAY, OCTOBER 29, at TWELVE, 1,500 of STOCK and PICKED BRICKS, 10,000 MALM ditto, part stacked, in lots; also a large quantity of BATS.—May be viewed the day previous and morning of Sale; catalogues obtained of Messrs Chambers and Forbes, Surveyors, 7, Great Tower-street; also at the usual Inns; of Mr. Parsons, on the Estate; and of the Auctioneer, Tottenham.

KENTISH TOWN WHARF, CAMDEN TOWN.—about Lease of the extensive Wharf, Premises, &c.; Forty Cart, Van, and Nag Horses; Dung and Manure Carts; Water ditto; Seventy Ton Scale Beam; Barges; Barrows; Implements; Pheatons, Dog Carts, Vans, &c.

BAKER and SON will SELL by AUCTION, on TUESDAY, 4th NOVEMBER, at TWELVE, on the PREMISES, near Le Roi's Cap Inn, the New Cattle Market, and the North-Western Railway, the valuable LEASE (unless previously disposed of by private contract) of the extensive WHARF, STONE-YARD, TIMBER and DEAL YARDS, STABLING for eight horses, SHEDS, &c. &c. with the several important frontage to the Regent's Canal. Also, the excellent STOCK, consisting of fine timber, deals, battens, &c. including three valuable colts, fifteen dust and dung carts, eleven nearly new water or liquid manure carts, three strong timber carriages, one ditto, nearly new, with sliding seats, two chaise carts, two sliding carts seven ten waggon, harness, trucks, weighing machine, planks, skids, utensils, &c. &c.—May be viewed the day prior to the sale, and particulars had of Messrs. Lovell, 14, Gray's-inn; and of the Auctioneers, Kilburn.

PIMLICO.—Stock-in-Trade and Effects of a Stone-Merchant

MESSRS. EVERSFIELD and HORNE have received instructions to SELL by AUCTION, on the PREMISES, No. 4, Wilton-street, Grosvenor Bridge, on THURSDAY, OCTOBER 30, at ELEVEN for TWELVE, in consequence of the proprietor removing to Bridge-row Wharf, the whole of the excellent STOCK; comprising 5,000 feet of Portland York Paris Spruce, Peter Newton, and Gazeley stone, in block and scantling; 20,000 feet of tooled and self-faced York paving, landings, steps, cills, sinks, and other plain and ornamental work; also the carts, trucks, carts, and implements, two travelling cranes, and other effects.—May be viewed two days previous, and catalogues had on the Premises, and of the Auctioneers, 40, Parliament-street, or Coal Exchange.

Valuable Water-side Premises on the Regent's Canal, Kingsland-road, with Cement Kilns, Steam Engines, &c. and an improved Rental of 150*l.* a year.

MESSRS. EVERSFIELD and HORNE are instructed by the Mortgagee to SELL by AUCTION, at the MART, on TUESDAY, NOVEMBER 25, in two lots, the Benefit LEASE of the extensive PREMISES, known as Tuscany Wharf, near the Canal Bridge, City Road, fitted up at a great expense with Steam and Crane power, and admirably adapted for the Cement trade, or equally applicable for many other purposes. Held for a long term, at a moderate rent; also an improved rent for a term, arising out of a plot of ground opposite Tuscany Wharf.—May be viewed by leave of the tenants, and particulars had of Edwards and Reynolds, Esqs. Solicitor, 12, New Broad-court; at the Mart; and of the Auctioneers, 40, Parliament-street, or Coal Exchange.

GRAYS-INN LANE.—Important Business Premises, suitable for Builder, Wheelwrights, Pianoforte makers, Cab Proprietors, or a Dairyman.

MESSRS. EVERSFIELD and HORNE have received instructions from the Executors of the late Mr. Thomas Needham to SELL by AUCTION, at the MART, on TUESDAY, NOVEMBER 25 (unless an acceptable offer by private contract be previously made), the Beneficial LEASE of the extensive BUILDER'S PREMISES in Portpool-lane, Grays-inn-lane, lately occupied by the late firm of Locke and Needham, and which consist of Dwelling-house, with counting-house and board-room, workshops, fitted up with tenoning and mortising machinery, worked by steam-power, large covered drying-sheds, smith's, painter's, and plasterer's shops, coach-house, saw-pit, timber-sheds, and other convenient buildings, inclosed by handsome gates and lighted with gas. Held on lease for a long term, at a low ground-rent of 60*l.* per annum.—May be viewed, and particulars had of Messrs. Kingdon, Solicitors, 4, Bedford-row; at the Mart; and of the Auctioneers, 40, Parliament-street, or Coal Exchange.

TO BRICK AND LIME MERCHANTS, CONTRACTORS, BUILDERS, AND OTHERS.

MESSRS. EVERSFIELD and HORNE ... SELL by AUCTION, ... of the river, and will be sold without reserve. The day of ... Coal Exchange.

SALES BY AUCTION.

THE next LIVERPOOL PERIODICAL AUCTION SALE of MAHOGANY and other FURNITURE WOODS, Baltic and American WHITEWOODS, &c. will take place on WEDNESDAY MORNING, the 5th NOVEMBER next, at ELEVEN o'clock precisely, in the WOOD SALES-SHEDS, Brunswick-quay, Near the Docks, Liverpool.—Carriage-free steaming full fortnight's credit; may be had on application to EDWARD CHALONER, Wood Broker and Measurer, 6, Esplanade, Queen's Dock, Liverpool.

LANCING-TERRACE, MORTLAKE, SURREY.—Freehold House and Building Land.

MR. ATKINS is instructed by the Proprietors (with the consent of the Mortgagee) TO SELL by AUCTION, at the MART, opposite the R.E., on THURSDAY, OCTOBER 30, 1856, at TWELVE PRECISELY, THREE PRETTY GOOD Substantial, newly-erected, DWELLING-HOUSES, of handsome elevation, with bow windows to the whole height of the front, and lofty rooms and gardens in the rear. The houses are fitted up with all the modern improvements, which render them suitable for domestic comfort and economy.

N.B. The Premises have water supply and unexceptionable drainage. Also, THIRTY-TWO PLOTS of valuable FREEHOLD BUILDING LAND adjoining, with the exception of one lot free of building.

The above property is situate in the parish of Mortlake, Surrey, on the Lower Richmond-road, and within three minutes' walk of the Mortlake Railway Station.—The property may be viewed seven days previous to the Sale, on application at the Entrance Piers, particulars, and conditions of sale, at the Auction Mart; and of Messrs. Johnson and Co. Bedford-row; and Messrs. Mardon, Son, and Gribble, Solicitors, No. 2, Bedford-row; and Messrs. Mardon and Son, Lancaster-terrace, Mortlake, the Auctioneers, Richmond; Mr. Sawyer, Mortlake; Mr. Bidder, St. John's-grove, Richmond, the Auctioneer, Mart-yard of the Auctioneer, Surveyor, and Estate Agent, Lewisham, Kent.

TO BUILDERS, DECORATORS, PERSONS RE-PAPERING THEIR HOUSES, AND OTHERS.

JONES and BONHAM will SELL by AUCTION, on TUESDAY next, 28th OCTOBER, at TWO o'clock in the afternoon precisely, a large assortment of capital PAPER HANGINGS, in every variety, suitable for the Trade and private persons, consisting of stone, plain, velvet, and marble papers, for drawing-rooms, halls, dados, parlour staircase, and landings, with borders to match; they will be sold in lots, at the order of the manufacturer.—On view Monday and morning of sale, and catalogues at the Rooms, Leicester-street and Princes-street, Leicester-square.

OAK TIMBER.—Black Park, and Burley Farm, Langley, and Fulmer Common, Bucks.

MESSRS. HERON and SON will SELL by AUCTION, at the CROOKED BILLET, Iver Heath, Bucks, on FRIDAY, OCTOBER 31st, 1856, at ONE o'clock, by order of R. Harvey, Esq. the Proprietor, in lots, sixty-eight OAK TIMBER TREES and fifty-one OAK SAPLINGS, in the lane near Fulmer-common, leading to Oxford and Denham; nine oak trees and four oak saplings, on Fulmer-common; forty oak trees and seventy oak saplings at Roades Farm; fifteen oak trees and ten oak saplings in the field opposite Rowley Farm; sixteen oak trees and seven oak saplings, in Black Parkwood. The above trees and saplings are all felled and have been drawn close to good hard roads, about three miles from the Grand Junction Canal at Uxbridge, and will be found well worth the attention of railway contractors, builders, wheelwrights, and others requiring good timber, some of the trees being very large.—May be viewed seven days prior to the sale, by applying to Mr. George Payne, Fulmer Heath, Bucks; and of Messrs. Heron and Son, Auctioneers and Valuers, Uxbridge, Middlesex.

SCOTCH AND LARCH FIR POLES.—Iver Heath, Bucks.

MESSRS. HERON and SON will SELL by AUCTION, at the CROOKED BILLET, Iver Heath, Bucks, on FRIDAY, OCTOBER 31st, 1856, at ONE o'clock precisely, by order of G. Hanson, Esq. in lots, about 7,500 LARCH FIR POLES, and 1,000 SCOTCH FIR POLES, well lopped and top-rowed from Lord Boston's Plantation, Iver Heath, Bucks. The above are sold in order that the land may be used for agricultural purposes, and an excellent opportunity will thus be afforded to Contractors, Builders, Carpenters, and others, of obtaining straight useful poles. An excellent plantation, which is also for sale, adjoins the first-named, and is about two miles from Uxbridge. May be viewed seven days prior to the sale, and catalogues may be had at the Crooked Billet, Iver Heath, Bucks; and of Messrs. Heron and Son, Auctioneers and Valuers, Uxbridge, Middlesex.

TO ENGINEERS, BOILER-MAKERS, and OTHERS.—TO BE DISPOSED OF, the STOCK and PLANT of an ENGINEER and IRON FOUNDER, situate in a large seaport town in the south of England. The premises are spacious and well arranged, with great facilities for land and water carriage. The plant has at work a number of employing upwards of fifty hands. As the tools are all in good order, and the business is well established, this is a favourable opportunity for an enterprising engineer with a moderate capital.—Letters to be addressed to B. Taylor, Esq. Hampton-park, Surrey.

TO PLUMBERS, PAINTERS, DECORATORS, and GAS-FITTERS. A genuine BUSINESS TO BE SOLD (a bargain).—For particulars apply to Mr. J. Trott, 3, Charlotte-place, Queen's-elm, Brompton.

TO PLUMBERS, PAINTERS, and GLAZIERS. TO BE DISPOSED OF, an old established BUSINESS at the West end of London, in the above line. This presents a very valuable opportunity to any one with desire of commencing business on his own account. Parties desirous of treating privately only, on applying on to Mr. W. ROBERTSON, 36, Pall-mall, Hay-hill, St. Blackfriars.

IRON FOUNDRY and STOVE GRATE MANUFACTORY PREMISES. TO BE DISPOSED OF, a small but lucrative BUSINESS, established more than 30 years. In full operation. In full operation. The original proprietor is retiring in favour of his son, who has recently died, and in consequence the business is for disposal. It presents a most eligible opportunity to any one man possessing a knowledge of the trade. Age, 40 will be required. The stock, tools, and patterns, 200*l.*—Apply to Messrs. FULLER and HORSEY, Billiter-street, London.

TO ARCHITECTS and ENGINEERS.—For SALE, upon moderate terms, to a professional man able to work it, the OUT-FOURTH of a newly-patented PATENT DRIVEN IRON SCREW PILE, with Removable Screw-blades, &c. Reference, &c.

TO UPHOLSTERERS and CABINET-MAKERS.—TO LET, with immediate possession, an old-established BUSINESS, in the above line, situate in one of the best thriving market towns in Berkshire, an extensive trade has been carried on for many years, and may still be increased. The premises are replete with every convenience. Satisfactory explanation given on application to Messrs. Wyatt and Son, 31, Bow-lane, Cheapside; or to John Sarle, High-street, Basingstoke, Hants.

May be obtained of every respectable ironmonger in the kingdom. Manufactory, No. 37, Dale-end, Birmingham.

TO BUILDERS, CONTRACTORS, and OTHERS.—FOR SALE, the undernoted CAST-IRON GIRDERS, which, not having been properly, but are now not required, on account of the works being stopped:—

3 Girders, 26 ft. 6 in. long, by 11 in. deep at centre, and 8 in. at ends, weigh about 2½ cwt. each
12 Girders, 21 ft. 9 in. long, by 12 in. deep at centre, and 8 in. at ends, weigh about 19½ cwt. each
28 Girders, 19 ft. 6 in. long, and 11 in. deep at centre, and 8 in. at ends, weigh about 15 cwt. each
4 Girders, 16 feet long, by 10 in. deep at centre, and 7 in. at ends, weigh about 6½ cwt. each.
14 Girders, 14 ft. long, by 9 in. deep at centre, and 6½ in. at ends, weigh about 6½ cwt. each.
4 Girders, 13 feet 6 in. long, by 10 in. deep at centre, and 7 in. at ends, weigh about 6½ cwt. each
2 Girders, 13 feet long, by 10 in. deep at centre, uniform section, weigh about 18½ cwt. each.
18 Girders, 9 ft. 6 in. long, by 8 in. deep at centre, uniform section, weigh about 3½ cwt. each.

The above may be seen at Dunfermline Foundry; or any further information obtained, from JOHN WHITELAW, Dunfermline, N.B. who will receive offers for the whole, or any portion. The girders can be tested to the usual extent, according to the size, and certificate of proof furnished.

Dunfermline, October 28, 1856.

TESTIMONIALS.

"Commercial Mills, Cambrook, Manchester, Oct. 6, 1854.
"GENTLEMEN,—We have been using almost exclusively for the last three years, your Packing to our stuffing boxes and steam and water joints, previous to which time we used all the sorts which came under notice, but yours we consider decidedly the best and most economical.—We are, yours respectfully,
"JOSHUA SCHOFIELD and SONS."

"King and Queen Iron Works, Rotherhithe.
"London, Nov. 11, 1854.
"GENTLEMEN,—We have tried your Patent Packing for some time in our steam-engines, and also in steam-pipe joints, and find it effectual and economical, and to be much superior to the ordinary hemp packing. It is especially serviceable in the slide valve.—Yours truly, "HOWARD RAVENHILL and CO."
"Works, Deptford, Jan. 29, 1856.
"I have pleasure in stating that the Packing of Messrs. S. W Silver and Co. has been in use in the various parts of the engines on board the steam ships of the company, and it gives very satisfaction. "J. BRADBRIDGE, Engineer,
"General Steam Navigation Company."

Copies of further testimonials forwarded, on application to S. W. SILVER and CO. Nos. 3 and 4, Bishopsgate-street Within, opposite the London Tavern.

AUSTIN'S IMPERIAL

FACING FOR BUILDINGS COMPANY—TAYLOR'S PATENT.

BUILDINGS PERFECTLY RESISTANT TO WET WITHOUT ADDITIONAL EXPENSE, OR THE USE OF COMPO,

REQUIRING THE CONSTANT EXPENSE OF PAINTING. EXTERNAL WALLS FACED WITH AN INDESTRUCTIBLE MATERIAL.

STONE-FACED BUILDINGS AT LITTLE MORE COST THAN CEMENT.

No necessity for Iron Cramps and Bond-stones, and the Stone Ashlar never injuriously weighted by the settlement of the Mortar joints of the inside Brickwork. The INSIDE of CHURCHES and OTHER BUILDINGS FACED WITH STONE instead of Plastering. Also Dining halls, Lobbies, Staircases, &c. of Private Residences. It can be had ready for fixing from the quarries at a small cost for carriage, or prepared at home. Can be used with the ordinary Bricks of any locality, and by the ordinary workman. The CHURCH faced inside and outside in this manner, and the other Buildings at SPRING GROVE HOUNSLOW, and elsewhere, can be inspected, and all particulars obtained, of

Mr. JOHN TAYLOR, ARCHITECT, OFFICES OF THE COMPANY, 40, KING-STREET, CORNER OF CHEAPSIDE.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 185 was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT, has been extensively used and pronounced efficient, and particularly applicable for warm climates.

1st. It is a non-conductor.—2nd. It is portable, being packed in rolls, and not liable to damage in carriage.—3rd. It effects a saving of half the timber usually required.—4th. It can be easily applied by any unpractised person.—5th. From its lightness, weighing only about 49 lbs. to the square of 100 feet, the cost of carriage is small.—6th. Under slate, metal, or tiles, it is a most effective non conductor

INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths. Price ONE PENNY per Square Foot.

CROGGON and CO.'s PATENT FELTED SHEATHING, for Covering Shed Roofs, &c. [illegible]
